American Telephone and Telegraph Company. (See Toomey, John F., assignor.)

Anderson, William M., New York Mills, Minn. Trouble lamp for automobiles. 1,484,458; Feb. 19.

Andreucci, Carlo, Rome, Italy. Flycatcher. 1,484,369; Feb. 19.

Angus, Arthur R., London, England. Railway safe-running device. 1,484,349; Feb. 19.

Appel, Daniel, Cleveland Heights, assignor to The Cleveland-Akron Bag Company, Cleveland, Ohio. Square-bottom paper bag. 1,484,388; Feb. 19.

Archlok Looseleaf Company, The. (See Alden, Earle G., assignor.)

Armstrong, Joseph. (See Comins, F. B., and Armstrong.)

Arndt, Franklin E., assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio. Stone spreader. 1,484,459; Feb. 19.

Arnold, Charles A., assignor of one-half to H. A. Strassweg, Evansville, Ind. Car-door lock and seal. 1,483,928; Feb. 19.

Arrow Electric Company, The. (See Harrington, William H., assignor.)

Ash, Charles S., Detroit, Mich. Wheel hub. 1,483,863; Feb. 19.

Aspley, Walter B., assignor of one-half to J. E. Richardson, Glasgow, Ky. Rewinding machine for moving-picture films. 1,484,545; Feb. 19.

Auerbach, Zemach, New York, N. Y. Filing rack. 1,484,201; Feb. 19.

Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Insulator. 1,484,051; Feb. 19.

Austin, David L., Honolulu, Hawaii, assignor to Theo. H. Davies & Co., Ltd., San Francisco, Calif. Conveyer. 1,484,248; Feb. 19.

Avrutik, Joseph, Yonkers, N. Y. Apparatus for separating liquids from solids. 1,484,002; Feb. 19.

Babcock & Wilcox Company. (See Witz, Henry, assignor.)

Babcock-Davis Corporation. (See Davis, William A., assignor.)

Bader, Walter, Spondon, near Derby, assignor to Dr. H. Dreyfus, London, England. Manufacture of alkyl compounds. 1,484,249; Feb. 19.

Bailey Brake Co. (See Bailey, John W., assignor.)

Bailey, Frank H., Cincinnati, Ohio. Production of light. 1,484,287; Feb. 19.

Bailey, John W., assignor to Bailey Brake Co., Seattle, Wash. Automobile brake. 1,484,316; Feb. 19.

Baker, Hartley O., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Combination water column and water and fuel controller. 1,484,546; Feb. 19.

Baker, John, Paterson, N. J. Flexible connection. 1,484,202; Feb. 19.

Baker Steam Motor Car and Manufacturing Co., The. (See Baker, Hartley O., assignor.)

Bankers Supply Co., The. (See Chadwick, C. B., and MacPherson, assignors.)

Baur, Hugo J., Chicago, Ill., assignor to Johnson Fare Box Company. Fare register and detachable fare box. 1,484,052; Feb. 19.

Bayer, Frederick, Jacksonville, Fla. Pencil holder. 1,484,461; Feb. 19.

Bayley, William, Springfield, Ohio. Hanger insert. 1,484,053; Feb. 19.

Barbar, Angelo, Franklin, Pa. Sounding toy. 1,484,460; Feb. 19.

Barber-Colman Company. (See Peterson, Burt A., assignor.)

Barnes, James L., Fostoria, Ohio. Water wheel. 1,484,250; Feb. 19.

Barney, Edwin E., New Rochelle, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,484,203; Feb. 19.

Barney, Edwin E., New Rochelle, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,484,317; Feb. 19.

Barnhart, Andrew J., Placentia, Calif. Tractor cultivator. 1,484,318; Feb. 19.

Baron, Henri, Montreal, Quebec, Canada. Lady's bag. Des. 63,991; Feb. 19.

Bartlett, Francis A., Stamford, Conn. Composition substitute for wood, tile, or other building material. 1,484,370; Feb. 19.

Bastian-Morley Co. (See Birtch, Fred W., assignor.)

Beals, George C., Winchendon, assignor to Fibre Finishing Company, Boston, Mass. Brake band. 1,484,462; Feb. 19.

Beals, Harold S., assignor of one-half to W. H. Shepherd, Springfield, Mass. Skate. 1,484,054; Feb. 19.

Beatty, William F., Cincinnati, Ohio. Cabinet for brick or cake ice cream. 1,484,110; Feb. 19.

Beatty, William F., Cincinnati, Ohio. Water transport or ferry for automobiles and other self-propelled vehicles. 1,484,109; Feb. 19.

Beck, Arthur R. (See Brouillette, P. A., and Beck.)

Beck, Riley J. (See Brouillette, P. A., and Beck, assignors.)

Beckley-Ralston Co., The. (See Rector, Harlan S., assignor.)

Beede, Herman E., Arlington, Mass. Air preheater. 1,484,463; Feb. 19.

Bekken, Ole T., Bristol, S. Dak. Tool kit. 1,484,547; Feb. 19.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Steering mechanism. 1,484,319; Feb. 19.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Valve-operating mechanism for engines. 1,484,320; Feb. 19.

Benedict, Joseph A., Chicago, Ill. Receptacle. 1,484,288; Feb. 19.

Benkeser, Harry A. (See Carmel, Joseph, assignor.)

Bennett, George, Port Hope, Ontario, Canada. Cider mill. 1,484,003; Feb. 19.

Bennewitz, Karl, Charlottenburg, near Berlin, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Anerold barometer. 1,484,289; Feb. 19.

Benson, Ross L., Kansas City, Kans. Curtain fastener. 1,484,464; Feb. 19.

Berl, Ernst, Darmstadt, Germany. Production of products cellulose and alkylcellulose. 1,484,004; Feb. 19.

Bernstein, Leon. (See Stothart, J. R., and Bernstein.)

Bertas, Andrew. (See Bertas, Erik and A.)

Bertas, Erik and A., Minneapolis, Minn. Bucksaw. 1,484,168; Feb. 19.

Bertrand, Frederic E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole-molding machine. 1,483,965; Feb. 19.

Betz, Charles F., St. Louis, Mo. Method of and machine for making pastry cones. 1,484,205; Feb. 19.

Betz, Charles, St. Louis, Mo. Pastry-cone machine. 1,484,204; Feb. 19.

Beugler, Edwin F., assignor to E & B Holmes Machinery Co., Buffalo, N. Y. Fan. 1,484,055; Feb. 19.

Bickerstaff, William O., Smithville, W. Va. Blower attachment. 1,484,548; Feb. 19.

Billings, J. R., Iron and Steel Company. (See Billings, James R., assignor.)

Billings, James R., assignor to J. R. Billings Iron and Steel Company, Chicago, Ill. Treating molten cast iron or steel. 1,484,465; Feb. 19.

Birkholz, Joseph A., Orange, N. J. Building unit. 1,484,206; Feb. 19.

Birtch, Fred W., assignor to Bastian-Morley Co., Laporte, Ind. Hot-water-tank cover or jacket. 1,484,056; Feb. 19.

Birtch, Fred W., assignor to Bastian-Morley Co., Laporte, Ind. Valve or gas cock. 1,484,290; Feb. 19.

Bixby, Frederick L., T. R. Gibson, and E. W. Cheney, Reno, Nev. Nut lock. 1,483,924; Feb. 19.

Bixby, Matilee I., assignor to M. Lowenstein & Sons, Inc., New York, N. Y. Textile fabric. Des. 63,992; Feb. 19.

Blaine, John E., jr., Cincinnati, assignor to The Globe-Wernicke Company, Norwood, Ohio. Index tab. 1,484,611; Feb. 19.

Blake, James E., Company. (See Harmstone, John H., assignor.)

Blakeslee, George S., Chicago, Ill. Dish-holding basket. 1,484,291; Feb. 19.

Bock, Bertha M. (See Bock, William E., assignor.)

Bock, William E., Eagle Point Colony, assignor to B. M. Bock, Toledo, Ohio. Power-transmission mechanism and lubricating means therefor. 1,484,384; Feb. 19.

Boekel, Julius, Philadelphia, Pa. Weighing balance. 1,484,005; Feb. 19.

Booth, Louis C., Sheridan, Wyo. Sight base for firearms. 1,483,925; Feb. 19.

Borden, William A., and C. H. M. Roberts, U. S. Army. Bomb body. 1,483,864; Feb. 19.

Bowen, Adna G., Medina, N. Y. Means for lubricating incased universal joints. 1,483,865; Feb. 19.

Boyd, John S., assignor to John S. Boyd Co. Inc., Williamstown, Mass. Making ornamental pile fabrics. 1,484,293; Feb. 19.

Boyd, John S., assignor to John S. Boyd Co. Inc., Williamstown, Mass. Textile fabric. 1,484,292; Feb. 19.

Boyd, John S., assignor to John S. Boyd Co. Inc., Williamstown, Mass. Thread-holding means for pile-cutting machines. 1,484,294; Feb. 19.

Boyd, John S., Co. (See Boyd, John S., assignor.)

Boydelatour, George, Canton, Ohio. Lock for differential gears. 1,484,166; Feb. 19.

Breckenridge, James F., Englewood, N. J., assignor of one-half to F. E. Brett, New York, N. Y. Poultry perch and lice trap. 1,484,169; Feb. 19.

Brennan, Francis H., Albany, N. Y. Windshield wiper. 1,484,251; Feb. 19.

Brett, Frank E. (See Breckenridge, James F., assignor.)

Brey, Victor A., Minneapolis, Minn. Combined container and match carrier. 1,484,006; Feb. 19.

Brink, Carl A., Cranston, R. I., assignor, by mesne assignments, to The New England Trust Company, trustee. Clutch device. 1,484,467; Feb. 19.

Brogan, Byard F., Philadelphia, Pa. Finger ring. Des. 63,993; Feb. 19.

Brogden, Ricketts & Haworth Company. (See Ricketts, Homer C., assignor.)

Brooks, Walter R. (See Rauch, F. M., and Brooks.)

Bross, Ernest E., Detroit, Mich. Finger ring. Des. 63,994; Feb. 19.

Brothers, Edwin J., East Dulwich, London, assignor of one-half to J. H. Tucker & Company, Limited, Birmingham, England. Interlocking device for electric switch and plug. 1,484,468; Feb. 19.

Brouillette, Peter A., and A. R. Beck, assignors of one-third to R. J. Beck, Sioux City, Iowa. Combined paper and pencil holder. 1,484,321; Feb. 19.

Brown, Charles A., Gardner, assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass. Revolving chair. 1,484,371; Feb. 19.

Brown, Clement, Birmingham, Warwick, England. Carburetor for internal-combustion engines. 1,484,057; Feb. 19.

Brown, Hugh E., assignor to W. M. Welch Manufacturing Company, Chicago, Ill. Pressure-demonstrating apparatus. 1,484,111; Feb. 19.

Brown-Lipe-Chapin Co. (See Logue, Charles H., assignor.)

Brucelarie, Simon, West Hoboken, N. J. Clean-out device for pipes. 1,484,469; Feb. 19.

Bruns, Harold C., Lacombe, Alberta, Canada. Stump-pulling apparatus. 1,484,007; Feb. 19.

Buchanan, Hugh. (See Moir, D., and Buchanan.)

Buchanan, Leonard B., Woburn, assignor to The Chase-Shawmut Company, Boston, Mass. Renewable fuse. 1,484,058; Feb. 19.

Budd Wheel Company. (See Ledwinka, Joseph, assignor.)

Bugbee, Lucien W., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind. Making toric lenses. 1,483,866; Feb. 19.

Bull, William R., Springfield, Mass. Guide. 1,483,867; Feb. 19.

Bundy, Harry W., Detroit, Mich. Upset-tube fitting. 1,484,295; Feb. 19.

Burk, William D., assignor of one-half to J. Sass, Philadelphia, Pa. Toilet seat. 1,484,059; Feb. 19.

Burnam, Allen, assignor of one-half to C. M. Hocker, San Antonio, Tex. Air pump. 1,484,549; Feb. 19.

Butaud, Phelogan, West Columbia, Tex. Preheater. 1,484,296; Feb. 19.

Calder, John A., and W. H. Dayton, deceased, Torrington, Conn., by J. M. Dayton, administrator, Springfield, Mass., assignors to The Torrington Company, Torrington, Conn. Needle-latch-riveting machine. 1,484,478; Feb. 19.

Callahan, John M., assignor of one-third to P. P. Donovan and one-third to J. L. Donovan, Chicago, Ill. Gas-engine timer. 1,484,060; Feb. 19.

Campbell, Ernest P., Stockton, Calif. Adjustable cylinder reamer. 1,484,297; Feb. 19.

Candler, De Forest W., assignor to G. M. Holley, Detroit, Mich. Casting of iron in permanent iron molds. 1,484,297; Feb. 19.

Cannon, Roscoe S., Rock Hill, S. C. Electric stove. 1,484,170; Feb. 19.

Carmel, Joseph, assignor to H. A. Benkeser, New York, N. Y. Toy palette. 1,484,613; Feb. 19.

Carmichael, Robert E., Houston, Tex. Well cleaner. 1,484,601; Feb. 19.

Carson, Ashmead C., Columbia, S. C. Expansion plug for lamp sockets. 1,484,550; Feb. 19.

Carson, Ashmead C., Columbia, S. C. Glare shield for automobiles. 1,484,551; Feb. 19.

Carstens, Henry A., Ackley, Iowa. Cooling device. 1,484,171; Feb. 19.

Cary, James A. and J. C., Tupelo, Ark. Cotton chopper. 1,484,252; Feb. 19.

Cary, Jesse C. (See Cary, James A. and J. C.)

Casey Manufacturing Company. (See Wellington, Charles H., assignor.)

Chadwick, Clarence B., and J. R. MacPherson, assignors to The Bankers Supply Co., Chicago, Ill. Check-guaranty certificate. 1,483,926; Feb. 19.

Chadwick, Lee S., assignor to The Cleveland Metal Products Company, Cleveland, Ohio. Oil burner. 1,484,172; Feb. 19.

Chalk, George H., Philadelphia, Pa. Wire motion for looms. 1,484,008; Feb. 19.

Chapman, Clarence M., assignor to The Chapman Machine Company, Plymouth, Conn. Automatic screw machine. 1,484,604; Feb. 19.

Chapman, Clarence M., Terryville, assignor to The Chapman Machine Company, Plymouth, Conn. Stock-feeding mechanism. 1,484,602; Feb. 19.

Chapman, Clarence M., Terryville, assignor to The Chapman Machine Company, Plymouth, Conn. Turret mechanism. 1,484,603; Feb. 19.

Chapman Machine Company, The. (See Chapman, Clarence M., assignor.)

Chase-Shawmut Company, The. (See Buchanan, Leonard B., assignor.)

Chateauneuf, Frank, Lynn, Mass. Sole-positioning device for shoe-last jacks. 1,484,322; Feb. 19.

Cheney, Everett W. (See Bixby, F. L., Gibson, and Cheney.)

Chevalier, John F. (See Griswold, Albert A., assignor.)

Cincinnati Bickford Tool Company, The. (See Klausmeyer, David C., assignor.)

Clark, Baylies C. (See Hansbrough, George A., assignor.)

Clark, James R., Lexington, Ky. Gate-operating mechanism. 1,483,927; Feb. 19.

Clarke, Ira M., assignor to The New Martinsville Glass Mfg. Co., New Martinsville, W. Va. Sectional jar. Des. 63,995; Feb. 19.

Clefton, Claud J., Owatonna, assignor to R. P. Clefton, St. Paul, Minn. Acetylene burner. 1,483,928; Feb. 19.

Clefton, Ruth P. (See Clefton, Claud J., assignor.)

Cleland, Chester C., Cleveland, Ohio. Power transmitter. 1,484,061; Feb. 19.

Cleveland-Akron Bag Company, The. (See Appel, Daniel, assignor.)

Cleveland, David P., assignor to Universal Paint Remover and Motor Cleaning Company, a trust estate, Dallas, Tex. Cleaning and paint-removing apparatus. 1,484,470; Feb. 19.

Cleveland Metal Products Company, The. (See Chadwick, Lee S., assignor.)

Cleveland Rock Drill Company, The. (See Nell, Gustave M., assignor.)

Clifford, Victor, assignor to Petroleum Safety Appliance Company, Tulsa, Okla. Vent for liquid containers. 1,483,868; Feb. 19.

Clifton, William E., and J. S. Ewart, Nottingham, assignors to Cliftophone Limited, London, England. Sound recording and reproducing instrument. 1,484,471; Feb. 19.

Cliftophone Limited. (See Clifton, W. E., and Ewart, assignors.)

Coates, Ray G., Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa. Mold and casting steel ingots. 1,484,112; Feb. 19.

Cohn, Samuel, assignor to Mantle Machinery & Patents Company, New York, N. Y. Machine for stretching and drying tubular fabrics. 1,484,552; Feb. 19.

Coleman, William C., Wichita, Kans. Centrifugal machine. 1,483,929; Feb. 19.

Collins, Harry R., Allentown, Pa., assignor to Fuller-Lehigh Company. Pulverizer mill. 1,484,298; Feb. 19.

Collins, Richard C., Elmhurst, N. Y., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for removing dust. 1,483,966; Feb. 19.

Comins, Frank B., Newton, and J. Armstrong, Malden, assignors to American Moistening Company, Boston, Mass. Restriction valves. 1,484,253; Feb. 19.

Condit, Sears B., jr. (See Ainsworth, Chester D., assignor.)

Conklin, De Witt N., East Orange, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Invoice sheet. 1,483,869; Feb. 19.

Conner, Palmer A., Glendo, Wyo. Handle and fastener for can tops. 1,484,062; Feb. 19.

Consolidated Car-Heating Company. (See Oakley, George E., assignor.)

Corning, Henry W., Cleveland, Ohio. Hinge. 1,484,009; Feb. 19.

Cosgrove, John W., Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Applying apparatus. 1,483,967; Feb. 19.

Cowen, Miriam M., San Francisco, Calif. Combined case and rack for games. 1,484,472; Feb. 19.

Cowles, C., & Company. (See Gates, Louis W., assignor.)

Crawford, Earl A., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y. Article-carrying bag. 1,484,553; Feb. 19.

Crawley, Mansfield C., Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif. Typewriting machine. 1,484,113; Feb. 13.

Crimmel, Alvie C., Hartford City, Ind. Caster for furniture. 1,484,385; Feb. 19.

Crittenden, Horace G., Joslin, South Australia, Australia. Operating mechanism for the commutators of automobile engines. 1,483,870; Feb. 19.

Croning, Johannes, Hamburg, Germany. Cylinder lock. 1,484,473; Feb. 19.

Cross, Harry E., Rockton, Ill. Motor car. 1,484,474; Feb. 19.

Cross Metal Products Company. (See Webber, Harold S., assignor.)

Crouse, Emory, Wichita, Kans. Liquid-dispensing system. 1,484,010; Feb. 19.

Crown, William F., Chehalis, Wash. Automatic safety lock for air brakes. 1,484,475; Feb. 19.

Cummings, George C., East Orange, N. J., assignor to Western Electric Company Incorporated, New York, N. Y. Telegraph system. 1,484,386; Feb. 19.

Cummings, Martin L. (See Lagasse, J. N., and Cummings.)

Currie, Trenton B., Houlton, Me. Camp grill. 1,484,476; Feb. 19.

Curtiss, George E., assignor to Landers, Frary and Clark, New Britain, Conn. Coffeepot. Des. 63,996; Feb. 19.

Cusick, Charles M., Steubenville, Ohio. Valve packing. 1,484,350; Feb. 19.

Damm, Arvid G., Ronninge, Sweden. Apparatus for ciphering and deciphering code expressions. 1,484,477; Feb. 19.

Darco Corporation. (See Allien, Victor S., assignor.)

Darrow, Leo H., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Transmission equalization arrangement. 1,483,930; Feb. 19.

Davies, John B., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Core. 1,484,299; Feb. 19.

Davies, Theo. H., & Co. (See Austin, David L., assignor.)

Davis, Albert N., Providence, R. I. Plate for a wristband or similar article. Des. 63,997; Feb. 19.

Davis, Norris K., San Francisco, Calif. Treating fiber bearing material. 1,484,208; Feb. 19.

Davis, William A., Malden, Mass., assignor to Babcock-Davis Corporation, Boston, Mass. Elevator-gate mechanism. 1,483,871; Feb. 19.

Daylight Film Corporation. (See John, Robert, assignor.)

Dayton Engineering Laboratories Company. (See Hunt, John H., assignor.)

Dayton, James M., administrator. (See Calder, J. A., and Dayton.)

Dayton, William H. (See Calder, J. A., and Dayton.)

Dee, William T., Mecca, Ind. Punch. 1,484,114; Feb. 19.

Deer, A. J., Company. (See Hand, Ernest A., assignor.)

Delco-Light Company. (See Hunt, John H., assignor.)

Densmore, Albert A., Brookline, Mass. Power-transmission mechanism. 1,483,872; Feb. 19.

De Olaneta, Harold, assignor to Winchester Repeating Arms Company, New Haven, Conn. Dry cell. 1,484,173; Feb. 19.

Dessau, Morland M., London, England. Roadway, pavement, stairway, or the like and materials for the construction thereof. 1,484,011; Feb. 19.

Det Tekniske Forsøgsaktieselskab. (See Goldschmidt, Rudolf, assignor.)

Detroit Insulated Wire Company. (See Reissman, Paul, assignor.)

Dey, William H., Newark, N. J., assignor to United States Radium Corporation. Luminous device. 1,483,873; Feb. 19.

Dey, William H., Newark, N. J., assignor to United States Radium Corporation. Plate frame. 1,483,874; Feb. 19.

Diamond Drill Contracting Company. (See Stone, Frederick, assignor.)

Dickinson, Meriau H., Seattle, Wash., assignor to Lidgerwood Manufacturing Company, New York, N. Y. Cableway. 1,484,387; Feb. 19.

Dickson, George E., Chicago, Ill. Device for use in issuing premium insurance. 1,484,063; Feb. 19.

Dluklage, August, East Orange, N. J. Anchoring device. 1,484,209; Feb. 19.

Dinklage, August, East Orange, N. J. Rail anchor. 1,484,210; Feb. 19.

Disbrow, Clarkson A. (See Wolhaupter, B., and Disbrow.)

Ditchfield, Frank, Montreal, Quebec, Canada, assignor to American Steel Foundries, Chicago, Ill. Brake-beam fulcrum. 1,484,323; Feb. 19.

Divo, John J., Brooklyn, N. Y. Device for indicating the relative movements of the earth, sun, and moon. 1,484,174; Feb. 19.

Dixon, H. L., Company. (See Milner, Edwin E., assignor.)

Dodge Brothers. (See Huff, Russell, assignor.)

Doering, Frederick W., St. Louis, Mo. Device for reshaping crown caps. 1,484,388; Feb. 19.

Doman, Albert E., Eibridge, N. Y., assignor to Owen-Dyneto Corporation, Syracuse, N. Y. Electrical power-transmission device. 1,484,479; Feb. 19.

Donaggio, Alfredo, Winfield, Long Island, N. Y. Scaffolding. 1,484,480; Feb. 19.

Donovan, James L., et al. (See Callaghan, John M., assignor.)

Donovan, Paul P., et al. (See Callaghan, John M., assignor.)

Dormann, Otto, Stettin, Germany. Production of cement and the like. 1,484,254; Feb. 19.

Dressler, Conrad, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y. Continuous tunnel kiln. 1,484,118; Feb. 19.

Dressler, Conrad, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y. Method of and apparatus for bluing porcelain. 1,484,117; Feb. 19.

Dressler, Conrad, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y. Method of and apparatus for glazing and decorating. 1,484,116; Feb. 19.

Dreyfus, Dr. Henry. (See Bader, Walter, assignor.)

Dubbs, Carbon P., Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill. Treating hydrocarbons. 1,484,445; Feb. 19.

Dumond, Francisque, and C. Galvin, Lyon, France. Hydroglider. 1,483,931; Feb. 19.

Dunbar, Milo H., Canton, Ohio. Battery connection. 1,484,481; Feb. 19.

Dunkelberger, Milton S., Dayton, Ohio. Toy railway track. 1,484,012; Feb. 19.

Dunn, William G., Clarinda, Iowa. Luggage carrier. 1,484,482; Feb. 19.

Durant Motors Incorporated. (See Sturt, Alfred T., assignor.)

E & B Holmes Machinery Co. (See Beugler, Edwin F., assignor.)

Ecker, Clarence W., Rockford, Ill. Milk-bottle cover. 1,484,483; Feb. 19.

Edmunds & Jones Corporation. (See Godley, Charles E., assignor.)

Edwards, Wilbert J., assignor to Stover Manufacturing & Engine Co., Freeport, Ill. Hinge. 1,484,372; Feb. 19.

Eells, Albert F., Rochester, N. Y. Diaphragm pump. 1,484,115; Feb. 19.

Ehrhart, Raymond N., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Co. Ejector apparatus. 1,484,013; Feb. 19.

Ek, Arvid, Portland, Me. Water closet bowl. Des. 63,998; Feb. 19.

Electric Heating Corporation. (See Macy, Barnett W., assignor.)

Electrical Industries Manufacturing Co. (See Leach, Henry G., assignor.)

Elevator Company of America. (See Schakel, J. D., and Rice, assignors.)

Elevator Company of America. (See Schakel, Jacob D., assignor.)

Elias, Michael A., 2d. (See Elias, Percy I. and M. A.)
Elias, Percy I. and M. A., 2d, New York, N. Y. Electric-light fixture. 1,484,300; Feb. 19.
Ellegard, Kay P., Hartford, Conn. Internal-combustion engine. 1,484,255; Feb. 19.
Ellis, Axel E. (See Ellis, Oscar A., assignor.)
Ellis, Oscar A., San Francisco, Calif. Dry-crushing mill. 1,483,933; Feb. 19.
Ellis, Oscar A., San Francisco, Calif., assignor to A. E. Ellis, Boston, Mass. Rock and ore crushing mill. 1,483,932; Feb. 19.
Elmer, Harry H., Syracuse, N. Y. Internal-combustion engine and operating the same. 1,484,554; Feb. 19.
Elmendorf, Armin, Chicago, Ill., assignor to Haskelite Manufacturing Corporation. Means of joining metal-sheathed boards arranged edge to edge. 1,484,175; Feb. 19.
Emerson, Edwin L., Braintree, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Electric drying apparatus. 1,484,324; Feb. 19.
Emerson, Victor L., Philadelphia, Pa. Conversion of hydrocarbon oils and similar substances. 1,484,014; Feb. 19.
Erbes, William O., Everett, Wash. Sound resonator. 1,484,119; Feb. 19.
Erickson, Carl B., and C. J. Witt, Chicago, Ill. Locking device for pockets. 1,484,120; Feb. 19.
Erickson, Charley, and R. Taylor, Minneapolis, Minn. Tee plate for golf courses. 1,484,064; Feb. 19.
Erikson, Leonard, Malden, Mass. Showcase reflector. 1,484,211; Feb. 19.
Ewart, John S. (See Clifton, W. E., and Ewart.)
Ezekiel, Abram, S. Lubin, J. Warshner, and W. S. Neil, San Francisco, Calif. Watch carrier. 1,484,121; Feb. 19.
Fairbairn Lawson Combe Barbour Limited. (See Ryan, John W., assignor.)
Falk, Hilbert L., New Orleans, La. Telephone system. 1,484,122; Feb. 19.
Farnham, Stephen H., Brooklyn, N. Y., and A. F. Poole, Kenilworth, Ill., assignors to Remington Accounting Machine Corporation, New York, N. Y. Calculating and recording machine and record sheet. 1,484,123; Feb. 19.
Faunce, William C. (See Sprowles, F. W., and Faunce.)
Fear, Ralph G., Oakland, Calif., assignor to Jacobson & Fear. Engine. 1,484,212; Feb. 19.
Feldmann, Fred H. (See Fowle, G. W., and Feldmann.)
Felizianetti, Narsete, San Leandro, Calif. Machine for peeling and cutting pears. 1,484,446; Feb. 19.
Fenton, James T., Salt Lake City, Utah. Continuous system for the treatment of coal. 1,484,257; Feb. 19.
Fenton, James T., Salt Lake City, Utah. Intermittent system for treatment of coal. 1,484,256; Feb. 19.
Fenton, James T., Salt Lake City, Utah. Treatment of coal. 1,484,258; Feb. 19.
Ferguson, Clayton C., Jersey City, N. J. Tank gauge. 1,483,968; Feb. 19.
Ferguson, Milford B., assignor of one-half to E. Haas, Brooklyn, N. Y. Wrapping machine. 1,484,015; Feb. 19.
Fibre Finishing Company. (See Beals, George C., assignor.)
Finch, Paul R., Des Moines, Iowa. Movement-controlling device. 1,484,213; Feb. 19.
Firstone, Marx. (See Klein, David, assignor.)
Firestone Tire and Rubber Company. (See Davies, John B., assignor.)
Firestone Tire and Rubber Company, The. (See Steele, Charles W., assignor.)
Firestone Tire and Rubber Company. (See Stevens, William C., assignor.)
Fisher, Alexander D., Toronto, Ontario, Canada. Confectionery. 1,484,016; Feb. 19.
Fitz-Empire Double Pivot Last Company. (See Whipple, Leland B., assignor.)
Flagg, Ernest, New York, N. Y. Constructing concrete walls. 1,484,484; Feb. 19.
Flater, Alfred, present administrator. (See Rauchwetter, Franz.)
Flauder, Alfred J., assignor to The Weidlich Bros. Mfg. Co., Bridgeport, Conn. Pitcher or similar article. Des. 63,999; Feb. 19.
Flood, Samuel, Liverpool, England. Apparatus for treating plastic substances. 1,484,325; Feb. 19.
Flueso, Edythe, Allentown, Pa. Sprayer. 1,484,017; Feb. 19.
Flynn, Hobart. (See Parks, Glen, assignor.)
Foamite-Childs Corporation. (See Patterson, Duncan W., assignor.)
Folkers, Harm, Austinville, Iowa. Hayrack and wagon-box lifter. 1,484,389; Feb. 19.
Foster, Henry B., and J. G. Furstenberg, Omaha, Nebr. Rotary internal-combustion engine. 1,484,124; Feb. 19.
Fowle, George W., and F. F. Feldmann, San Jose, Calif. Exhaust box. 1,484,259; Feb. 19.
Fraser, George B., Wellington, Wash. Automatic motion recorder for automobiles. 1,484,125; Feb. 19.
Frear, Fred, Monett, Mo. Switchman's flag. 1,484,485; Feb. 19.
Freyn, Brassert & Company. (See Pilling, George P., assignor.)
Friedley Voshardt Co. (See Wellman, Lester R., assignor.)
Fuller-Lehigh Company. (See Collins, Harry R., assignor.)
Funk, Carlyle B., Chicago, Ill. Transmission control. 1,484,301; Feb. 19.
Furstenberg, Joseph G. (See Foster, H. B., and Furstenberg.)
G. & G. Fixture Co., The. (See Walker, Ernest A., assignor.)
G. & W. Electric Specialty Co. (See Gear, Harry B., assignor.)
Gadsby, John. (See Konshin, Alexis, assignor.)
Gallinowsky, Hugo, assignor to E. A. Heitkamp, St. Louis, Mo. Treating gypsum cement surfaces. 1,483,875; Feb. 19.
Galion Iron Works & Mfg. Co., The. (See Arndt, Franklin E., assignor.)
Gallagher, Frederick T. (See O'Neill, W. P., and Gallagher.)
Galvin, Clément. (See Dumond, F., and Galvin.)
Games, William, Providence, R. I. Automobile headlight shield. 1,484,486; Feb. 19.
Gander, William S., Russell, Pa. Wagon-brake-operating means. 1,484,487; Feb. 19.
Gardner, Henry A., Washington, D. C. Obtaining products from chlorinated hydrocarbons. 1,484,018; Feb. 19.
Garrett, Clarence Y., Fountain Inn, S. C. Fire kindler. 1,484,302; Feb. 19.
Gartlan, Stephen L., assignor of fifty-five one-hundredths to A. E. Gooderham, Toronto, Ontario, Canada. Treating hydrocarbons. 1,484,612; Feb. 19.
Gaskins, Palemon H., Jacksonville, Fla. Circulating system for internal-combustion engines. 1,484,488; Feb. 19.
Gaspard, René H., Chicago, Ill. Valve actuator. 1,484,126; Feb. 19.
Gates, Louis W., assignor to C. Cowles & Company, New Haven, Conn. Separable fastener. 1,484,214; Feb. 19.
Gear, Harry B., assignor to G. & W. Electric Specialty Co., Chicago, Ill. Strain insulator. 1,484,447; Feb. 19.
Geib, William, assignor to International Silver Company, Meriden, Conn. Table mat or similar article. Des. 64,000; Feb. 19.
Geib, William, assignor to International Silver Company, Meriden, Conn. Plate or similar article. Des. 64,001; Feb. 19.
Genett, Louis J., assignor of one-half to J. M. Longyear, Jr., Marquette, Mich. Vehicle spring mount. 1,484,127; Feb. 19.
Ghione, John B., New York, N. Y. Snow-removal device. 1,484,555; Feb. 19.
Gibbs, Edmund D., Akron, Ohio, and T. E. Wiederseim, Philadelphia, Pa. Instruction chart for playing golf. 1,484,390; Feb. 19.
Gibbs, Harry D., San Francisco, Calif., by mesne assignments, dedicated to the People of the United States for their free use and enjoyment. Apparatus for sublimation. 1,484,260; Feb. 19.
Gibson, Edward T., Brooklyn, N. Y. Automobile signal. Des. 64,002; Feb. 19.
Gibson, Thomas R. (See Bixby, F. L., Gibson, and Cheney.)
Gillespie, Frank A. (See Meyer, C., and Meade, assignors.)
Givens, Mary A., San Francisco, Calif. Finger ring for handling paper sheets or the like. 1,484,489; Feb. 19.
Globe-Wernicke Company. (See Blaine, John E., jr., assignor.)
Godley, Charles E., Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich. Lamp. 1,483,934; Feb. 19.
Goff, Harold W., assignor to Western Electric Company, Incorporated, New York, N. Y. Electromagnetic step-by-step switch with magnetic brake. 1,483,876; Feb. 19.
Goldberg, Morris L., Brooklyn, N. Y. Sanitary bath brush. 1,484,215; Feb. 19.
Golden, Charles F., Denver, Ind. Drafting instrument. 1,483,935; Feb. 19.
Golding, Edwin I., New York, N. Y. Textile fabric or similar article. Des. 64,003; Feb. 19.
Golding, Edwin I., New York, N. Y. Textile fabric or similar article. Des. 64,004; Feb. 19.
Golding, Edwin I., New York, N. Y. Textile fabric or similar article. Des. 64,005; Feb. 19.
Goldschmidt, Rudolf, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Ordrup, Charlottenlund, Denmark. Mechanical hammer. 1,484,490; Feb. 19.
Gooderham, Albert E. (See Gartlan, Stephen L., assignor.)
Gould, Edwin J., Oakland, Calif., assignor of one-half to C. T. Henry, J. B. Millard, and J. T. Henry, York, Pa. Automatic depth-drilling machine. 1,484,065; Feb. 19.
Government of the United States. (See Hall, Andrew T., assignor.)
Gracey, Harvey H., Fort Worth, Tex. Fluid-lift pump. 1,483,877; Feb. 19.
Graham, Charles W., Allendale, N. J., assignor to American Can Company, New York, N. Y. Apparatus for cutting and handling can-end liners. 1,483,969; Feb. 19.
Graham, William E., assignor of one-half to A. N. Orphan, Gary, Ind. Mixing device. 1,484,326; Feb. 19.
Grant, Frank W. (See Holmes, G. E., and Grant.)

Grantland, John W., Cincinnati, Ohio. Lubricating device. 1,484,391; Feb. 19.
Graves, Randel, Pittsburgh, Pa. Heating device. 1,483,970; Feb. 19.
Grella, Larie, Brooklyn, N. Y. Vehicle fender. 1,484,351; Feb. 19.
Griesbach, William, Greenfield, Mass. Label holder. 1,484,261; Feb. 19.
Grindle, Aubrey J., Chicago, Ill., assignor to Grindle Fuel Equipment Company, Harvey, Ill. Furnace. 1,484,019; Feb. 19.
Grindle Fuel Equipment Company. (See Grindle, Aubrey J., assignor.)
Griscom Russell Company, The. (See Price, Joseph, assignor.)
Griswold, Albert A., Providence, R. I., assignor of one-half to J. F. Chevalier, Brookline, Mass. Flexible undereave. 1,484,020; Feb. 19.
Grodin, Joseph J., East Cleveland, Ohio. Cutting machine. 1,484,262; Feb. 19.
Grossman, Joseph, Wallington, N. J. Braking mechanism for roller conveyers. 1,483,971; Feb. 19.
Gundlach, Henry R., Baltimore, Md., assignor to The United States Asphalt Refining Company, New York, N. Y. Means for forming expansion joints in roadways. 1,484,303; Feb. 19.
Gutermann, Jacob J., assignor to Weller Manufacturing Company, Chicago, Ill. Elevator leg. 1,484,491; Feb. 19.
Haas, Edward. (See Ferguson, Milford B., assignor.)
Haimes, William S., Washington, D. C. Computing device. 1,484,176; Feb. 19.
Hale, Joshua B., assignor to Textile Engineering Company, Providence, R. I. Braiding machine. 1,484,128; Feb. 19.
Hall, Andrew T., Newport, R. I., assignor to the Government of the United States. Torpedo. 1,484,304; Feb. 19.
Hall, Mabie H., et al. (See Seabolt, Frank J., assignor.)
Haller, Fritz, Bernardsville, N. J. Antiskid device. 1,484,392; Feb. 19.
Hammond, John H., jr., Gloucester, Mass. Radiodynamic receiving system. 1,484,605; Feb. 19.
Hammond, William P., Maplewood, N. J. Rear-view mirror. 1,484,021; Feb. 19.
Hand, Ernest A., assignor to A. J. Deer Company, Incorporated, Hornell, N. Y. Slicing machine. 1,483,878; Feb. 19.
Hanford, George B., Bloomfield, N. J. Receptacle and lining therefor. 1,484,606; Feb. 19.
Hannah, Alexander G., Warren Point, N. J. Weft tension-holding device for looms. 1,483,879; Feb. 19.
Hansbrough, George A., assignor of one-half to B. C. Clark, San Francisco, Calif. Electric snap plug. 1,484,492; Feb. 19.
Hansen, Hans L., and A. H. Voss, Hemingford, Nebr. Potato loader. 1,484,022; Feb. 19.
Hanson, Harry M., Duluth, Minn. Shovel-heating device. 1,484,393; Feb. 19.
Hapeman, Lincoln S., Waterbury, Conn. Button toggle. 1,483,880; Feb. 19.
Hardy, James G., New York, N. Y. Table cover or article of similar nature. Des. 64,006; Feb. 19.
Hargot, René, assignor to H. Mishoulam, Chicago, Ill. Portable light. 1,484,493; Feb. 19.
Harkey, Ira B., New Orleans, La. Bottle. Des. 64,007; Feb. 19.
Harley-Mason, Vernon B., Cheam, England. Construction of internal-combustion-engine cylinders. 1,484,263; Feb. 19.
Harmstone, John H., assignor to James E. Blake Company, Attleboro, Mass. Hand mirror or similar article. Des. 64,008; Feb. 19.
Harrington, James B., Norfolk, Va. Statuette. Des. 64,009; Feb. 19.
Harrington, Norman T., Cleveland, Ohio. Hoisting mechanism. 1,483,936; Feb. 19.
Harrington, William H., assignor to The Arrow Electric Company, Hartford, Conn. Separable attachment plug. 1,484,494; Feb. 19.
Hart, Alfred V., executor. (See Megill, Edward L.)
Hart, Gerald W., West Hartford, assignor to The Hart Manufacturing Company, Hartford, Conn. Combined switch and fuse block. 1,484,448; Feb. 19.
Hart, Henry R., Montclair, N. J. Football helmet. 1,483,881; Feb. 19.
Hart Manufacturing Company, The. (See Hart, Gerald W., assignor.)
Hartford, Edward V., Inc. (See Waterman, Arthur, assignor.)
Hartley Clock Company. (See Hartley, John S., assignor.)
Hartley, John S., Lynn, assignor to Hartley Clock Company, Boston, Mass. Clock case. Des. 64,010; Feb. 19.
Harvey, William F., East Patchogue, N. Y. Shingle. 1,483,882; Feb. 19.
Haskelite Manufacturing Corporation. (See Elmendorf, Armin, assignor.)
Hatherley, William L., San Bernardino, Calif. Lifting hook. 1,484,495; Feb. 19.
Haussler, Ludwig, Plauen, Germany, assignor to Robert Reiner Incorporated, Weehawken, N. J. Automatic bobbin-winding machine. 1,483,937; Feb. 19.
Haydock, James K., Danville, Va. Automatic loom stop. 1,484,496; Feb. 19.
Hayter, Willis, assignor of one-half to A. E. Penney, Carbonear, Newfoundland. Pipe cutter. 1,484,023; Feb. 19.
Hedman, Carl, Spokane, Wash. Door. 1,484,024; Feb. 19.
Heerwagen, Paul M., Fayetteville, Ark. Flexible relief decoration. 1,484,264; Feb. 19.
Heil Co., The. (See Heil, Julius P., assignor.)
Heil, Julius P., assignor to The Heil Co., Milwaukee, Wis. Dumping body for vehicles. 1,484,327; Feb. 19.
Heimbach, Albert H., St. Paul, Minn. Combined ventilating flue and chimney. 1,484,328; Feb. 19.
Heinrichs, Berg, Chicago, Ill., assignor to Mid-West Box Company, Anderson, Ind. Machine for making lamp wrappers and the like. 1,484,066; Feb. 19.
Heisey, A. H., & Company. (See Heisey, Edgar W., assignor.)
Heisey, Edgar W., assignor to A. H. Heisey & Company, Newark, Ohio. Tumbler. Des. 64,011; Feb. 19.
Heitkamp, Eugene A. (See Gallinowsky, Hugo, assignor.)
Hekking, Martin J., Brooklyn, N. Y. Flanged pipe or hose connection. 1,484,216; Feb. 19.
Hemleb, Martin, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Electric sewing machine. 1,484,217; Feb. 19.
Henry, Charles T., et al. (See Gould, Edwin J., assignor.)
Henry, Joseph T., et al. (See Gould, Edwin J., assignor.)
Hermann, Albert, Madison, Wis., and C. A. Menzel, Chicago, Ill., dedicated, by mesne assignments, to the People of the United States of America. Hygrometer. 1,484,129; Feb. 19.
Heywood-Wakefield Company. (See Brown, Charles A., assignor.)
Hickok Manufacturing Company. (See Shields, Lowell W., assignor.)
Hicks, Norman W., Malta, Mont. Road scraper. 1,484,497; Feb. 19.
Hildebrandt, Frank P., Saugerties, N. Y. Cutting and coiling crêpe paper. 1,484,498; Feb. 19.
Hillhouse, John T. E., New York, N. Y. Automatic control of internal-combustion engines. 1,483,883; Feb. 19.
Hilsee, Charles M., Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y. Combined typewriting and computing machine. 1,484,218; Feb. 19.
Hineline, Edson S., Apponaug, R. I., assignor to Hineline Engineering Company. Stop motion for textile machines. 1,484,329; Feb. 19.
Hineline Engineering Company. (See Hineline, Edson S., assignor.)
Hird, John B., and J. B., jr., Seattle, Wash., assignors to Ideal Machinery Company. Hydraulic jack. 1,484,265; Feb. 19.
Hird, John B., jr. (See Hird, John B., and J. B., jr.)
Hirst, James, Melrose, Mass. Tap wrench and diestock. 1,484,067; Feb. 19.
Hitchcock, Forrest L., assignor to The Marietta Manufacturing Company, Indianapolis, Ind. Smoothing machine for glassware. 1,483,884; Feb. 19.
Hochman, Jacob, assignor to I. Seeherman, Wilkes-Barre, Pa. Crate. 1,484,499; Feb. 19.
Hocker, C. M. (See Burnam, Allen, assignor.)
Hoen, Carl O., St. Paul, Minn. Electrolyte. 1,483,885; Feb. 19.
Hofer, Michael, Dean Lake, Minn. Grading machine. 1,484,025; Feb. 19.
Holden, Joseph B., Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,484,219; Feb. 19.
Holley, George M. (See Candler, De Forest W., assignor.)
Holmes, George E., and F. W. Grant, Dover, N. H. Measuring ice-cream disher. 1,483,938; Feb. 19.
Holmstrom, Carl E., Seattle, Wash. Wheel puller. 1,484,130; Feb. 19.
Holt, William H., Providence, R. I. Snap fastener. 1,484,131; Feb. 19.
Holtzbauer, Mathias A., Belmond, Iowa. Clutch-pedal mechanism for automobiles. 1,484,266; Feb. 19.
Hook, Charles H., and A. W. Miller, Pittsburgh, Pa.; said Miller assignor to said Hook. Boiler. 1,484,330; Feb. 19.
Hoover Company, The. (See Hoover, Howard E., assignor.)
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction cleaner. 1,483,972; Feb. 19.
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction sweeper. 1,483,973; Feb. 19.
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction sweeper. 1,483,974; Feb. 19.
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction sweeper. 1,483,975; Feb. 19.
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction sweeper. 1,483,976; Feb. 19.
Hoover, Howard E., Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio. Suction sweeper. 1,483,977; Feb. 19.
Hope, John, jr., Providence, R. I. Doorlock. 1,484,500; Feb. 19.

Hopkins, Frank H., Somerville, Mass., assignor, by mesne assignments, to American Schaeffer & Budenberg Corporation, Brooklyn, N. Y. Pressure gauge. 1,484,068; Feb. 19.

Hopkins, Warren B., Brookline, Mass. Grease container and gun therefor. 1,484,231; Feb. 19.

Horrocks Desk Company. (See Simmons, George P., assignor.)

Hoy, Clarence A., assignor to Peerless Husker Company, Buffalo, N. Y. Conveyer for the butt removers of corn huskers, etc. 1,484,273; Feb. 19.

Hudson, David W., Green Bay, Wis. Interfolding machine. 1,484,409; Feb. 19.

Huff, Russell, assignor to Dodge Brothers, Detroit, Mich. Transmission lock. 1,483,886; Feb. 19.

Hull, Charles H. (See Hull, William W. and C. H.

Hull, William W. and C. H., Denver, Colo. Engine cover. 1,484,267; Feb. 19.

Hulten, Charles J., assignor of one-half to O. S. Orrick, Oakland, Calif. Can-topping machine. 1,484,449; Feb. 19.

Hunt, John H., assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio. Ignition system. 1,484,608; Feb. 19.

Hunt, John H., Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company. Lubricating system. 1,484,607; Feb. 19.

Huntley, Ernest R., assignor, by mesne assignments, to Industrial Research Corporation, Toledo, Ohio. Odometer. 1,484,501; Feb. 19.

Huntley, Henry F. (See McClure, H. A., and Huntley.)

Huntoon, Frank M. (See Reichel, J., and Huntoon.)

Huyck, F. C., & Sons. (See Wilson, E. J., and Bees, assignors.)

Ideal Machinery Company. (See Hird, John B. and J. B., jr., assignors.)

Ihamuotila, K. Richard, Helsingfors, Finland. Multiphase translating device. 1,484,220; Feb. 19.

Ilgen, Grover F. (See Pauly, R. C., and Ilgen.)

Illig, John H., Buffalo, N. Y. Wrench. 1,484,374; Feb. 19.

Industrial Research Corporation. (See Huntley, Earnest R., assignor.)

Insley Manufacturing Company. (See Insley, W. H., and Rasmussen, assignors.)

Insley, William H., and A. C. Rasmussen, assignors to Insley Manufacturing Company, Indianapolis, Ind. Concrete-handling apparatus. 1,483,887; Feb. 19.

International Motor Company. (See Masury, Alfred F., assignor.)

International Precipitation Company. (See Welch, Harry V., assignor.)

International Silver Company. (See Geib, William, assignor.)

Israel, Floyd E., Le Roy, Kans. Safety clutch. 1,484,221; Feb. 19.

Ittig, George P., assignor to Albert Pick & Company, Bridgeport, Conn. Spoon or similar article. Des. 64,012; Feb. 19.

Izard, Henry, Mobile, Ala. Auger, bit, or drill. 1,484,352; Feb. 19.

Jacobs, Milton, Poplar Bluff, Mo. Fountain brush. 1,484,026; Feb. 19.

Jacobs, Milton, Poplar Bluff, Mo. Spiral fountain brush. 1,484,027; Feb. 19.

Jacobson & Fear. (See Fear, Ralph G., assignor.)

Jaeger, Anthony C., St. Louis, Mo. Urinal flush. 1,483,939; Feb. 19.

Jaeger, Gebhard, Columbus, Ohio. Concrete-mixing machine. 1,484,028; Feb. 19.

James, Henry M. L., Richmond, Va. Doorknob alarm. 1,484,502; Feb. 19.

Jaques, Fernando O., jr., Providence, R. I. Tool holder. 1,484,332; Feb. 19.

Järve, Paul A., Krylbo, Sweden. Mail-marking machine. 1,484,375; Feb. 19.

Jenckes Knitting Machine Company. (See Miller, Max C., assignor.)

Jenkins, Alexander F., Baltimore, Md. Pressure-translating device. 1,484,394; Feb. 19.

Jenkins, Alexander F., Baltimore, Md. Radiator trap. 1,484,395; Feb. 19.

Jensen, Ropert P., Seattle, Wash. Fireplace heater. 1,484,305; Feb. 19.

Jewett, Charles J. (See Williams, L. M., and Jewett.)

John, Robert, New York, N. Y., assignor to Daylight Film Corporation. Multiple-step process of photographic reproduction. 1,484,029; Feb. 19.

Johnson, Alfred. (See Plessman, John J., assignor.)

Johnson Fare Box Company. (See Baur, Hugo J., assignor.)

Johnson, Kenneth S., Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Substation circuits. 1,484,397; Feb. 19.

Johnson, Kenneth S., Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,484,396; Feb. 19.

Johnson, Leonard T., Jersey City, N. J. Weighing mechanism. 1,483,868; Feb. 19.

Jonas, Jacob F., Bellevue, Ky., assignor to The Krippendorf-Dittmann Company, Cincinnati, Ohio. Shoe last. 1,484,509; Feb. 19.

Jones, Clayton M., Jamestown, N. Y. Wrench. 1,484,132; Feb. 19.

Jones, Lloyd, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Billet manipulator. 1,484,503; Feb. 19.

Jones, Oscar E., Marysville, Calif. Safety fender for automobiles. 1,484,333; Feb. 19.

Jones, Randall H., Indianapolis, Ind. Ring. Des. 64,013; Feb. 19.

Jones, Randall H., Indianapolis, Ind. Ring. Des 64,014; Feb. 19.

Jorgensen, Hans G., Erie, Pa. Antirattler for automobile hoods. 1,483,940; Feb. 19.

Kahl, Albert P., Detroit, Mich. Valve-truing machine. 1,484,133; Feb. 19.

Karger, David, Milwaukee, Wis. Spat. Des. 64,015; Feb. 19.

Karr, Albert H., Kansas City, Mo. Inlaying machine. 1,483,889; Feb. 19.

Kasson, Mahlon O., Chicago, Ill. Carpet-strip anchorage. 1,483,941; Feb. 19.

Keckler, Charles W., Newark, N. J., assignor to Western Electric Company Incorporated, New York, N. Y. Telephone system. 1,484,134; Feb. 19.

Keenan, Patrick J., Chicago, Ill. Furnace-door frame. 1,483,978; Feb. 19.

Keil, Morris, New Orleans, La. Film and film support for motion-picture machines. 1,483,942; Feb. 19.

Keller, George W., Portsmouth, Ohio. Blow-out valve. 1,483,943; Feb. 19.

Kellerman, James M., Los Angeles, Calif. Underreamer. 1,483,944; Feb. 19.

Kelley, Oscar A., Omaha, Nebr. End gate for dumping wagons. 1,483,890; Feb. 19.

Kellner, William S., Baltimore, Md. Advertising novelty. 1,484,177; Feb. 19.

Kellogg, Hosford D., Haverford, Pa. Radiator. Des. 64,016; Feb. 19.

Kellogg Switchboard and Supply Company. (See Schoenwolf, Fred, assignor.)

Kemp, Leslie C., London, England. Means for regulating turboblowers and other apparatus for delivering fluid under pressure or suction. 1,484,504; Feb. 19.

Kennedy, Edward, New York, N. Y. Pipe fitting. 1,483,891; Feb. 19.

Kenyon, C., Company. (See Mitchell, Harold D., assignor.)

Kerber, Benjamin, Baltimore, Md. Sheet-metal building structure. 1,484,398; Feb. 19.

Kerner, Theodore, Milwaukee, Wis. Surfacing walls. 1,484,334; Feb. 19.

Kerrigan, William P., Astoria, N. Y. Spark plug. 1,484,335; Feb. 19.

Kewley, Arden. (See Walker, William J., assignor.)

Kidwell, Ira E., Pontiac, Mich. Honing device for bores of internal-combustion engines. 1,484,353; Feb. 19.

Kiefer, Karl, Cincinnati, Ohio. Vacuum trap. 1,484,505; Feb. 19.

Kightlinger, Walter R., Parsons, Kans. Cleat remover. 1,484,222; Feb. 19.

Killian, Pius F., Owensboro, Ky. Acetylene generator. 1,484,506; Feb. 19.

Kimball System, Inc., The. (See Quinn, James F., assignor.)

Kinney, Justus R., Allston, Mass. Strainer. 1,483,892; Feb. 19.

Kipp, Leonard, assignor to Waterbury Iron Works, Inc., Waterbury, Conn. Coke-handling car. 1,483,893; Feb. 19.

Kirk, William B. (See Sansom, Ray, assignor.)

Kitchen, John G. A., Lancaster, England. Means for controlling motion in fluid-pressure apparatus. 1,484,030; Feb. 19.

Kiwul, Charles, New York, N. Y. Motion-picture machine. 1,483,894; Feb. 19.

Klausmeyer, David C., assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio. Column-clamping mechanism. 1,484,450; Feb. 19.

Klein, David, New York, assignor to M. Finstone, Brooklyn, N. Y. Display stand or similar article. Des. 64,017; Feb. 19.

Kleinsmith, Frederick, Indianapolis, Ind. Operating means for automobile door latches. 1,484,031; Feb. 19.

Kleuser, Lawrence P., Greenville, Tex. Electric time switch. 1,484,135; Feb. 19.

Knight, Charles D., et al. (See Seabolt, Frank J., assignor.)

Knight Manufacturing Company, The. (See Ahlfors, John A., assignor.)

Koch, Charles G., Newark, N. J. Radiator-cap ornament. Des. 64,018; Feb. 19.

Koehn, Otto C. B., Williamsburg, Iowa. Running board for automobiles. 1,483,945; Feb. 19.

Koehring Company. (See Lichtenberg, Erich H., assignor.)

Kohn, Leo M., Philadelphia, Pa. Folding machine. 1,484,507; Feb. 19.

Kohnle, Frederick, assignor to The Monarch Marking System Company, Dayton, Ohio. Tag-marking machine. 1,484,136; Feb. 19.

Koushin, Alexis, Yokohama, assignor of one-half to J. Gadsby, Tokyo, Japan. Windproof match box. 1,484,032; Feb. 19.

Kranebeel, John V., Buffalo, N. Y. Water-power motor. 1,483,895; Feb. 19.

Krippendorf-Dittmann Company. (See Jonas, Jacob F., assignor.)

Kroha, Francis J., Danbury, Conn. Casting-tackle belt. 1,484,399; Feb. 19.

Krohn, Dewey S., Chicago, Ill. Spindle-body bolt and mounting therefor. 1,484,033; Feb. 19.

Kunsler, Charles J. (See Robb, Clyde S., assignor.)

La Bolteaux, Eugene M., Washington, D. C. Sorting machine. 1,484,187; Feb. 19.

Lafferty, Herbert D. (See Von Hambach, Ernest, assignor.)

Lagasse, Joseph N., and M. L. Cummings, Hyner, Pa. Antislipping means for shoes. 1,484,178; Feb. 19.

Landers, Frary and Clark. (See Curtiss, George E., assignor.)

Langhammer, Frank L., assignor to The Warner Brothers Company, Bridgeport, Conn. Hose supporter. 1,483,896; Feb. 19.

Lauserotti-Spina, Ettore, London, England. Internal-combustion engine. 1,484,376; Feb. 19.

Larson, Lewis E., Fargo, N. Dak., assignor to Sure Edge Stropper Company, Minneapolis, Minn. Razor-blade holder. 1,483,897; Feb. 19.

La Societe Anonyme de Produits Chimiques, Etablissements Maletra, Siege Social. (See Trevoux, Laurent E. M., assignor.)

Lasserre, Francis A., Grosse Tete, La. Key-ring holder. 1,484,508; Feb. 19.

Latham, John H., Marshall, Mo. Combined snap and buckle for harness. 1,484,557; Feb. 19.

Leach, Henry G., Brooklyn, assignor to Electrical Industries Manufacturing Co., New York, N. Y. Microphone transmitter. 1,484,509; Feb. 19.

Leadising Company. (See MacFarland, Helon B., assignor.)

Leaver, Albert E., Chicago, Ill. Light diffuser. 1,484,138; Feb. 19.

Ledwinka, Joseph, assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa. Making pressed-steel wheels. 1,484,223; Feb. 19.

Lenig, Charles I., Danville, Pa. Dust and cinder trap. 1,484,224; Feb. 19.

Lewers, Robert J., New York, N. Y. Moth-ball holder. 1,484,510; Feb. 19.

Liberty Machine Tool Co., The. (See McCann, Alfred R., assignor.)

Lichtenberg, Erich H., assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis. Machine for distributing concrete. Re15,768; Feb. 19.

Lichter, Adolph H., assignor to The Willys-Overland Company, Toledo, Ohio. Making seat covers. 1,484,336; Feb. 19.

Lidgerwood Manufacturing Company. (See Dickinson, Merian H., assignor.)

Liedtke, Louis C. (See Rispel, A., and Liedtke.)

Lieske, Frank J., Detroit, Mich. Lamp-shade support. 1,484,268; Feb. 19.

Lightburn, Robert W., Gans, Pa. Safety device. 1,484,511; Feb. 19.

Lightfoot, Lee L., Eau Claire, Wis. Device for cleaning sinks. 1,484,512; Feb. 19.

Ligot, Raymond R., Brussels, Belgium, assignor of one-half to J. Puleo, New York, N. Y. Acetylene generator. 1,483,898; Feb. 19.

Linton, Ernest O., Indiana Harbor, Ind., assignor to Linton Gasoline Process Company, Chicago, Ill. Continuous method of cracking hydrocarbon oils. 1,484,513; Feb. 19.

Linton Gasoline Process Company. (See Linton, Ernest O., assignor.)

Liverance, Frank E., jr. (See Plank, J. Raymond, assignor.)

Ljungström, Fredrik, Brevik, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden. Turbine plant provided with toothed gearing. 1,484,034; Feb. 19.

Lloyd, Henry G., Surbiton, England. Floor or paving for tennis courts and other purposes. 1,484,514; Feb. 19.

Logue, Charles H., assignor to Brown-Lipe-Chapin Co., Syracuse, N. Y. Intermeshing gear and pinion and generating the same. 1,483,899; Feb. 19.

Longstreth, Bevis, Kansas City, Mo. Salt box or the like. 1,484,139; Feb. 19.

Longyear, John M., jr. (See Genett, Louis J., assignor.)

Lounsbury, Edwin D., White Plains, and O. Zimmer, Brooklyn, N. Y. Making color plates for use in lithography, photoengraving, etc. 1,484,400; Feb. 19.

Lowenstein, M., & Sons, Inc. (See Bixby, Matilee I., assignor.)

Lozano, Manuel. (See Schlueter, F. J., and Lozano.)

Lord, Charles E., Tarrytown, N. Y. Textile fabric. Des. 64,019; Feb. 19.

Lord, Charles E., Tarrytown, N. Y. Textile fabric. Des. 64,020; Feb. 19.

Lord, Charles E., Tarrytown, N. Y. Textile fabric. Des. 64,021; Feb. 19.

Lubin, Samuel. (See Ezekiel, A., Lubin, Warshner, and Nell.)

Ludlow, George M., Evanston, assignor to Sanitary Scale Company, Chicago, Ill. Indicator line for cylindrical chart scales. 1,484,401; Feb. 19.

Lucey, Michael, New York, N. Y. Collapsible cot bed. 1,483,979; Feb. 19.

Lund, Clinton O., Yankton, S. Dak. Container for frozen confections. 1,484,515; Feb. 19.

Lundell, Alben E., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,483,900; Feb. 19.

Lundin, Carl, Pittsburgh, Pa. Producing gas. 1,484,225; Feb. 19.

Lyon, Nikolaus. (See Tauern, O. D., and Lyon.)

MacFarland, Helon B., assignor to Leadising Company, Chicago, Ill. Brake cylinder. 1,484,516; Feb. 19.

MacKenzie, William A., Long Beach, Calif. Self-sealing pole for storage batteries. 1,484,306; Feb. 19.

MacPherson, James R. (See Chadwick, C. B., and MacPherson.)

Macy, Barnett W., assignor to Electric Heating Corporation, Jacksonville, Fla. Liquid heater of the electrically-controlled type. 1,484,517; Feb. 19.

Majestic Electric Development Company. (See Shoenberg, Milton H., assignor.)

Mallory, Harry C., Bellport, N. Y. Thermostatic valve. 1,483,902; Feb. 19.

Mallory, Harry C., Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill. Expansible collapsible element. 1,484,140; Feb. 19.

Mallory, Harry C., Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill. Expansible collapsible element. 1,484,141; Feb. 19.

Mammen, Lawrence W., Chicago, assignor, by mesne assignments, to Altorfer Bros. Company, East Peoria, Ill. Driving mechanism for laundry machines. 1,484,142; Feb. 19.

Mantle Machinery & Patents Company. (See Cohn, Samuel, assignor.)

Manuel, Augustus, Alameda, Calif. Automobile theft preventive. 1,484,181; Feb. 19.

Margetson, Oliver, London, England. Cylinder construction of internal-combustion engines. 1,484,226; Feb. 19.

Margus, Julic, Berkeley, Calif. Fish toy. 1,484,182; Feb. 19.

Marietta Manufacturing Company, The. (See Hitchcock, Forrest L., assignor.)

Marley, Ernest L., Brighton, England. Signaling device. 1,484,143; Feb. 19.

Marlin Firearms Corporation, The. (See Rockwell, Hugh M., assignor.)

Marsh, George W., Oakland, Calif. Fuel-consumption indicator and cylinder primer. 1,484,144; Feb. 19.

Martin, Donald M., Winthrop, Mass. Scaffold bracket. 1,484,227; Feb. 19.

Martin, Harold T., assignor to Western Electric Company, Incorporated, New York, N. Y. Fastening for telephone key bases. 1,484,402; Feb. 19.

Mas, George N., Lynchburg, Va. Bottle. Des. 64,022; Feb. 19.

Mason, Richard C., Tulsa, Okla. Well-measuring apparatus. 1,484,036; Feb. 19.

Massey, Frank L., Watertown, N. Y. Governor. 1,484,145; Feb. 19.

Masury, Alfred F., assignor to International Motor Company, New York, N. Y. Mounting for steering posts and the like. 1,483,903; Feb. 19.

Mast, William E., Kansas City, Mo. Metal structural member. 1,484,070; Feb. 19.

Mastromarino, Nicola, Boston, Mass. Washing machine. 1,484,183; Feb. 19.

Matteson, Juan B., Jefferson, Iowa. Wheel. 1,484,228; Feb. 19.

Mattson, Jacob, Duluth, Minn. Grain door. 1,484,184; Feb. 19.

May, Ernest M. (See May, Herman N. and E. M.

May, Herman N. and E. M., Mineral Point, Wis. Sliding door. 1,483,946; Feb. 19.

Mayer, Emil, Charlottenburg, Germany. Method and arrangement for producing nondamped oscillations. 1,484,269; Feb. 19.

Mazzanovich, Anton, Los Angeles, Calif. Drop clamp. 1,484,307; Feb. 19.

McAllister, John E. (See Patton, J. F., and McAllister.)

McCann, Alfred R., assignor to The Liberty Machine Tool Co., Hamilton, Ohio. Variable-speed drive. 1,483,901; Feb. 19.

McCann, Ronald A., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,483,980; Feb. 19.

McClure, Harry A., and H. F. Huntley, assignors to Washington Automatic Doughnut Machine Company, Seattle, Wash. Doughnut machine. 1,484,179; Feb. 19.

McElrath, William W., jr., East Radford, Va., assignor to Turbo Motor Company, Trenton, N. J. Internal-combustion engine. Re15,769; Feb. 19.

McGowen, William R., assignor to American Bumper Co., Chicago, Ill. Automobile bumper. 1,484,035; Feb. 19.

McKiernan-Terry Drill Company. (See Riker, Malcolm D., assignor.)

McLean, David W., Los Angeles, Calif. Necktie holder. 1,484,354; Feb. 19.

McNary, Lawrence T., Cranston, assignor to Rex Manufacturing Company, Providence, R. I. Pencil. 1,484,180; Feb. 19.

Meade, Henry B. (See Meyer, C., and Meade.)

Meadows, John L., Hume, Ill. Collapsible house. 1,484,518; Feb. 19.

Megill, Edward L., deceased, New York, N. Y.; A. V. Hart, executor. Printing-press gauge. 1,483,981; Feb. 19.
Meister, Conrad L., Wilmington, N. C. Shaker bar. 1,484,519; Feb. 19.
Melville, Ward, New York, N. Y. Shoe sole. Des. 64,023; Feb. 19.
Memmen, Sonie J., Manito, Ill. Apparatus for use in washing automobiles. 1,484,071; Feb. 19.
Menzel, Carl A. (See Hermann, A., and Menzel.)
Metcalfe, Robert F., assignor to Skinner Patent Holding Company, Erie, Pa. Speed sensitive controlling device. 1,484,185; Feb. 19.
Meyer, Charles, and H. B. Meade, assignors to F. A. Gillespie, Los Angeles, Calif. Amalgamator. 1,483,982; Feb. 19.
Michod, Charles L., Chicago, Ill. Wall structure. 1,484,520; Feb. 19.
Mid-West Box Company. (See Heinrichs, Berg, assignor.)
Miles, George B., Washington, Ill. Swivel chair. 1,484,229; Feb. 19.
Milliard, J. Brooks, et al. (See Gould, Edwin J., assignor.)
Miller, Arnold W. (See Hook, C. H., and Miller.)
Miller, Ernest E., near Centerville, Ohio. Clutch-pedal lock for tractors. 1,484,146; Feb. 19.
Miller, Jannette, Eau Claire, Wis. Flowerpot holder. 1,484,403; Feb. 19.
Miller, Joseph, New York, N. Y. Lighting-fixture tassel. Des. 64,024; Feb. 19.
Miller, Max C., Cumberland Hill, assignor to Jenckes Knitting Machine Company, Pawtucket, R. I. Knitting machine. 1,483,904; Feb. 19.
Miller, Max C., Cumberland Hill, assignor to Jenckes Knitting Machine Company, Pawtucket, R. I. Web-holder mechanism. 1,483,905; Feb. 19.
Miller, Walter F., Dayton, Ohio. Wrench. 1,483,906; Feb. 19.
Milner, Edwin E., Scott Township, Allegheny County, assignor to H. L. Dixon Company, Carnegie, Pa. Charging door for ovens. 1,484,521; Feb. 19.
Minich, Henry D., Alma, Mich. Suitcase. 1,484,186; Feb. 19.
Minich Railway Appliance Corporation. (See Minich, Russell H., assignor.)
Minich, Russell H., assignor to Minich Railway Appliance Corporation, Philadelphia, Pa. Car brake. 1,483,907; Feb. 19.
Mishoulam, Hyman. (See Hargot, René, assignor.)
Mitchell, Harold D., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y. Tire tread. Des. 64,025; Feb. 19.
Moback Tool & Machine Manufacturing Corporation. (See Peterson, Victor H., assignor.)
Mobley, George W., Waynesboro, Ga. Boll-weevil eradicator. 1,484,270; Feb. 19.
Moir, Donald, and H. Buchanan, Rosario de Santa Fe, Argentina. Joint for concrete pipes and the like. 1,484,355; Feb. 19.
Monarch Marking System Company, The. (See Kohnle, Frederick, assignor.)
Montgomery, James H., San Francisco, Calif. Grease-dispensing device. 1,484,356; Feb. 19.
Mook, Dean, Rochester, N. Y. Feeding apparatus for hand or breast drills. 1,484,377; Feb. 19.
Moore, Arlington H., Dayton, Ohio. Fume generator for baths. 1,484,072; Feb. 19.
Moore, Ninian R., Dubois, Pa. Habitable camping vehicle. 1,484,523; Feb. 19.
Morgan & Wright. (See Abbott, Adrian O., jr., assignor.)
Morlock, Charles D., and A. Nord, Vancouver, British Columbia, Canada. Chesterfield bed. 1,484,337; Feb. 19.
Morrison, Budd L., Indianapolis, Ind. Boiler-feed-water purifier. 1,484,073; Feb. 19.
Morse, Alonzo C., Mansfield, Ohio. Reach rod and forming the same. 1,483,947; Feb. 19.
Mulford, H. K., Company. (See Reichel, J., and Huntoon, assignors.)
Mullen, Harry L., Baltimore, Md. Funnel. 1,484,357; Feb. 19.
Mumm, Bernard J. and B. J., St. Paul, Minn. Sausage casing and producing same. 1,484,523; Feb. 19.
Mumm, Bernard J. (See Mumm, Bernard J. and B. J.)
Mundell, John C., Elora, Ontario, Canada. Sanding device for scroll and fret work. 1,483,983; Feb. 19.
Murdock, Samuel B., Chicago, Ill., assignor to The American Cotton Oil Company, New York, N. Y. Process and apparatus for shredding soap. 1,484,271; Feb. 19.
Mutscheller, Arthur, New York, N. Y., assignor to Wappler Electric Co., Inc. Stereoscope. 1,484,404; Feb. 19.
Myers, Frank A., Plainville, assignor to The Stanley Works, New Britain, Conn. Butt hinge. 1,484,610; Feb. 19.
Naugle, Harry M., Canton, Ohio. Metal lath clip. 1,484,524; Feb. 19.
Neale, John A. (See Quackenboss, F. B., and Neale.)
Neil, Walter S. (See Ezekiel, A., Lubin, Warshuer, and Neil.)
Nell, Gustave M., assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Throttle-valve lock for rock drills. 1,484,378; Feb. 19.
Nelson, George F., Berkeley, Calif. High-vacuum pump. 1,484,147; Feb. 19.
Nethercut, Edgar S. (See Peterson, Burt A., assignor.)
New England Trust Company, trustee, The. (See Brink, Carl A., assignor.)
Newman, Edward D., New York, N. Y. Automobile tire. Des. 64,026; Feb. 19.
New Martinsville Glass Mfg. Co., The. (See Clarke, Ira M., assignor.)
Niemi, Matti, Seattle, Wash. Combined music-leaf holder and turner. 1,484,308; Feb. 19.
Nichols, James C., and E. Ryder, Chicago, Ill. Shock absorber. 1,483,984; Feb. 19.
Nock, Harold E., assignor to Towle Manufacturing Company, Newburyport, Mass. Bonbon dish or analogous article. Des. 64,027; Feb. 19.
Noeggerath, Jacob E., The Hague, Netherlands. Means for damming up semisolid substances. 1,484,525; Feb. 19.
Noetzel, Gustav A., assignor to Pressed Metal Mfg. Co., Waukesha, Wis. Shock absorber. 1,484,338; Feb. 19.
Nolan, Edmund, Detroit, Mich. Hood clamp. 1,484,074; Feb. 19.
Nord, Axel. (See Morlock, C. O., and Nord.)
Norris, Almon E., Brookline, Mass. Clutch. 1,483,948; Feb. 19.
Northrup, Joshua K., Ellicottville, N. Y. Paintbrush. 1,484,230; Feb. 19.
Norton, Frederick H., Langley Field, Va. Weighing apparatus. 1,484,358; Feb. 19.
Oakley, George E., assignor to Consolidated Car-Heating Company, Albany, N. Y. Train-door system. 1,483,908; Feb. 19.
O'Connor, Michael J., Bloomingdale, N. J. Muffler. 1,484,526; Feb. 19.
Ofeldt, August W., West Hoboken, N. J. Spark plug. 1,484,272; Feb. 19.
Ohio Brass Company, The. (See Austin, Arthur O., assignor.)
Olt, Philip S., South Pekin, Ill. Musical instrument. 1,484,148; Feb. 19.
O'Neill, William P., and F. T. Gallagher, Rockland, Mass. Cuff protector. 1,484,187; Feb. 19.
Onepiece Bifocal Lens Company. (See Bugbee, Lucian W., assignor.)
Optische Anstalt C. P. Goerz Aktiengesellschaft. (See Bennewitz, Kurt, assignor.)
Orne, Corydon O., Springfield, Mass. Assembling the parts of knitting-machine needles. 1,484,149; Feb. 19.
O'Rourke, John F., New York, N. Y. Method of and means for erecting tunnels. 1,484,188; Feb. 19.
Orphan, Alex N. (See Graham, William E., assignor.)
Orrick, Oliver S. (See Hulten, Charles J., assignor.)
Oswald, Arthur A., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Signaling system. 1,484,405; Feb. 19.
Ottinger, Leon, New York, N. Y. Handle-attaching means for door latches. 1,484,406; Feb. 19.
Otto, John J., Chicago, Ill. Boat. 1,484,075; Feb. 19.
Owen-Dyneto Corporation. (See Doman, Albert E., assignor.)
Owens Bottle Company, The. (See Rule, John F., assignor.)
Pace, Jefferson D., Shreveport, La. Well-drilling bit. 1,484,527; Feb. 19.
Palmer, John F., St. Joseph, Mich. Air bag for use in the manufacture of pneumatic tires. 1,484,407; Feb. 19.
Pamperin, Paul M., La Crosse, Wis. Shirt. 1,484,408; Feb. 19.
Paquette, Herman A., Chicago, Ill. Gas-iron hose connecter. 1,484,528; Feb. 19.
Parkes, William N., Brooklyn, N. Y. Hook mechanism for lock-stitch sewing machines. 1,484,151; Feb. 19.
Parks, Glen, assignor of one-half to H. Flynn, Seattle, Wash. Machine for nailing metal straps to wooden slats. 1,484,150; Feb. 19.
Patterson, Duncan W., assignor to Foamite-Childs Corporation, New York, N. Y. Fire extinguisher. 1,484,529; Feb. 19.
Patton Company, The. (See Patton, J. F., and McAllister, assignors.)
Patton, James F., and J. E. McAllister, Cleveland, Ohio, assignors to The Patton Company. Ironing machine. 1,483,949; Feb. 19.
Pauly, Robert C., Dayton, and G. F. Ilgen, Springfield, Ohio. Heater. 1,484,152; Feb. 19.
Peelle Company, The. (See Peelle, Robert S., assignor.)
Peelle, Robert S., Hollis, assignor to The Peelle Company, Brooklyn, N. Y. Elevator door. 1,484,273; Feb. 19.
Peerless Husker Company. (See Hoy, Clarence A., assignor.)
Penney, Albert E. (See Hayter, Willis, assignor.)
People of the United States. (See Gibbs, Harry D.)
People of the United States. (See Hermann, A., and Menzel.)
Perham, Arthur L., East Moseley, assignor to Vickers Limited, Westminster, London, England. Level-correction device for ordnance. 1,484,274; Feb. 19.
Perry, Clarence E., Irasburg, Vt. Computing machine. 1,484,530; Feb. 19.
Perry, John E., Sharon, assignor to Valley Mould & Iron Corporation, Sharpsville, Pa. Inverted horisontal ingot and casting. 1,484,076; Feb. 19.
Peters Bros. Rubber Co. (See Weniger, Frank S., assignor.)

Petersen, Olaf W., assignor to Petersen Stoker Company, Buffalo, N. Y. Grate. 1,483,900; Feb. 19.
Petersen Stoker Company. (See Petersen, Olaf W., assignor.)
Peterson, Burt A., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill. Warp beam. 1,484,154; Feb. 19.
Peterson, Burt A., Rockford, assignor to E. S. Nethercut, Evanston, Ill. Warp beam. 1,484,153; Feb. 19.
Peterson, Burt A., Rockford, assignor to E. S. Nethercut, Evanston, Ill. Warp beam. 1,484,155; Feb. 19.
Peterson, Victor H., Belmont, assignor to Moback Tool & Machine Manufacturing Corporation, Boston, Mass. Rotary cutting tool. 1,483,950; Feb. 19.
Peto, Louis, Vestaburg, Pa. Pipe bender. 1,484,558; Feb. 19.
Petroleum Safety Appliance Company. (See Clifford, Victor, assignor.)
Phelan, Louis A. M., Beloit, Wis. Electrical apparatus. 1,484,156; Feb. 19.
Piccirilli, Joseph, Plainfield, N. J. Safety-seal envelope. 1,484,359; Feb. 19.
Pick, Albert, & Company. (See Ittig, George P., assignor.)
Pickett, Smith D., Atlanta, Ga. Bottle. Des. 64,029; Feb. 19.
Pickford, Edward F., et al. (See Seabolt, Frank J., assignor.)
Pierce, Benjamin F., Pine Bluff, N. C. Pincushion. Des. 64,028; Feb. 19.
Pierce, Earl F., Chicago, Ill., assignor to The Wahl Company, Wilmington, Del. Lead pencil. 1,484,077; Feb. 19.
Pierce, Frank M., Chicago, Ill. Wrapping and unwrapping machine. 1,484,409; Feb. 19.
Pilling, George P., Philadelphia, Pa., assignor to Freyn, Brassert & Company, Chicago, Ill. Gas-cleaning apparatus. 1,484,078; Feb. 19.
Pistocco, Veno L., Wichita Falls, Tex. Sign supporting and suspending means. 1,484,231; Feb. 19.
Plank, J Raymond, assignor to F. E. Liverance, Jr., Grand Rapids, Mich. Bumper construction. 1,484,157; Feb. 19.
Plessman, John J., Oakland, Calif. Mold. 1,484,233; Feb. 19.
Plessman, John J., assignor of one-half to A. Johnson, Oakland, Calif. Molding machine. 1,484,232; Feb. 19.
Poole, Arthur F. (See Farnham, S. H., and Poole.)
Polzien, Elmer H., Manilla, Iowa. Electric socket plug. 1,484,360; Feb. 19.
Powell, James R., Los Angeles, Calif. Broom shield. 1,484,531; Feb. 19.
Powers Regulator Company, The. (See Snediker, Morton O., assignor.)
Prentiss, William A., Holyoke, Mass. Means for attaching labels to spools or other articles. 1,484,234; Feb. 19.
Pressed Metal Mfg. Co. (See Noetzel, Gustav A., assignor.)
Price, Earl L., Oakland, Calif. Can-draining machine. 1,483,951; Feb. 19.
Price, Joseph, assignor to The Griscom Russell Company, New York, N. Y. Making spiral coils. 1,483,985; Feb. 19.
Pridgen, Otto S., Richmond, Va. Marine vehicle. 1,484,410; Feb. 19.
Proctor, John A., Lexington, assignor to Wireless Specialty Apparatus Company, Boston, Mass. Radio receiving apparatus. 1,484,189; Feb. 19.
Puleo, James. (See Ligot, Raymond R., assignor.)
Quackenboss, Frank B., and J. A. Neale, Nashville, Tenn. Accelerator. 1,483,952; Feb. 19.
Quigley, James B., Independence, Mo. Key ring. 1,484,532; Feb. 19.
Quinn, James F., assignor to The Kimball System, Inc., Lowell, Mass. Outdoor sign. Des. 64,030; Feb. 19.
R. & S. Valve Company, The. (See Richardson, Edward E., assignor.)
Raba, Ernest, Pawnee, Okla. Mixing device. 1,484,235; Feb. 19.
Rail Joint Company, The. (See Thomson, William P., assignor.)
Rail Joint Company, The. (See Wolhaupter, B., and Disbrow, assignors.)
Rail Joint Company, The. (See Wolhaupter, Benjamin, assignor.)
Rainey, Austin E., Grove City, Pa. Screw driver. 1,484,379; Feb. 19.
Rainey, Lillus B., Gadsden, Ala. Cap for liquid receptacles. 1,483,953; Feb. 19.
Randall, Samuel J., Youngstown, Ohio. Hydraulic valve plunger. 1,484,533; Feb. 19.
Raschick, Charles T., St. Paul, Minn. Check holder and cutter. 1,483,910; Feb. 19.
Rasmussen, Alvin C. (See Insley, W. H., and Rasmussen.)
Ratterree, Alexander H., Charlotte, N. C. Cushion tire. 1,484,037; Feb. 19.
Rauch, Frederick M., and W. J. Brooks, Washington, D. C. Means for holding garments on hangers. 1,484,534; Feb. 19.
Rauchwetter, Anna, née Böhme, administratrix. (See Rauchwetter, Franz.)
Rauchwetter, Franz, deceased, Berlin, by A. Rauchwetter, née Böhme, administratrix, Berlin-Friedenau, Germany; A. Flater, present administrator. Adding machine. 1,484,237; Feb. 19.
Rauchwetter, Franz, deceased, Berlin, by A. Rauchwetter, née Böhme, administratrix, Berlin-Friedenau, Germany; A. Flater, present administrator. Transfer mechanism for calculating machines. 1,484,236; Feb. 19.
Ray, Arthur B., Flushing, N. Y. Solidification of organic liquids. 1,484,190; Feb. 19.
Read, Harry S., Ithaca, assignor to Western Electric Company, Incorporated, New York, N. Y. Radio receiving system. 1,484,411; Feb. 19.
Reardon, John F., St. Louis, Mo. Faucet. 1,484,079; Feb. 19.
Rector, Harlan S., assignor to The Beckley-Ralston Co., Chicago, Ill. Luggage carrier for bicycles. 1,484,559; Feb. 19.
Reddig, Charles E., Kew Gardens, assignor to Western Electric Company, Incorporated, New York, N. Y. Prime-mover dynamo plant. 1,484,412; Feb. 19.
Rees, Edwin A. (See Wilson, E. J., and Rees.)
Reichel, John, Philadelphia, and F. M. Huntoon, Swarthmore, assignors to H. K. Mulford Company, Philadelphia, Pa. Product and process for the recovery of bacterial antibodies. 1,484,038; Feb. 19.
Reiner, Robert, Incorporated. (See Haüssler, Ludwig, assignor.)
Reiser, Sigmund, Cincinnati, Ohio. Locking device for motor vehicles. 1,484,560; Feb. 19.
Remington Accounting Machine Corporation. (See Farnham, S. H., and Poole, assignors.)
Remington Typewriter Company. (See Barney, Edwin E., assignor.)
Remington Typewriter Company. (See Holden, Joseph B., assignor.)
Revor, Fred J., Lyon Mountain, N. Y. Silencer for valve mechanism. 1,484,080; Feb. 19.
Rex Manufacturing Company. (See McNary, Lawrence T., assignor.)
Rice, Joseph. (See Schakel, J. D., and Rice.)
Richardson, Edward E., Toledo, Ohio, assignor to The R. & S. Valve Company, Elyria, Ohio. Throttling valve. Re15,770; Feb. 19.
Richardson, Ernest, College Hill Borough, Pa. Billboard. 1,484,561; Feb. 19.
Richardson, John E. (See Aspley, Walter B., assignor.)
Ricketts, Homer C., assignor to Brogden, Ricketts & Haworth Company, Winterhaven, Fla. Apparatus for treating fruit and the like. 1,484,562; Feb. 19.
Riddle, Edward N., Company, The. (See Riddle, John K., assignor.)
Riddle, John K., assignor to The Edward N. Riddle Company, Toledo, Ohio. Mounting device for lighting fixtures. 1,484,275; Feb. 19.
Riddle, Maxwell, Ravenna, Ohio. Centrifugal nut-cracking machine. 1,484,563; Feb. 19.
Riffert, Raymond H., Philadelphia, Pa. Pack of game cards. 1,484,564; Feb. 19.
Riker, Malcolm D., assignor to McKiernan-Terry Drill Company, Dover, N. J. Multiple-speed handle. 1,484,565; Feb. 19.
Ringe, John C., Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Needle guard for sewing machines. 1,484,191; Feb. 19.
Ringquist, Alvin O., Fitchburg, Mass. Reversible wrench. 1,484,192; Feb. 19.
Riotte, Eugene A. (See Smith, Benjamin C., assignor.)
Rispel, Alexander, and L. C. Liedtke, Chicago, Ill. Meat compressor. 1,483,911; Feb. 19.
Risser, Andrew A., Wisner, Nebr. Hay pusher. 1,483,986; Feb. 19.
Rissman, Paul, assignor to Detroit Insulated Wire Company, Detroit, Mich. Doorcheck. 1,483,912; Feb. 19.
Robb, Clyde S., Charleroi, assignor of one-half to C. J. Kunzler, Pittsburgh, Pa. Manufacture of glass cylinders. 1,484,339; Feb. 19.
Roberge, Alphonse, Somersworth, N. H. Ticket holder. 1,484,418; Feb. 19.
Roberts, Claudius H. M. (See Borden, W. A., and Roberts.)
Roberts, Stanley C. H., London, England. Sound-reproducing mechanism. 1,484,340; Feb. 19.
Robinson, Joseph V., New Haven, Conn. Automatic train-pipe connecter. 1,484,082; Feb. 19.
Robinson, Joseph V., Santa Monica, Calif. Train-pipe coupling. 1,484,081; Feb. 19.
Rockwell, Hugh M., assignor, by mesne assignments, to The Merlin Firearms Corporation, New Haven, Conn. Turret mount for automatic guns. 1,483,987; Feb. 19.
Roebuck, Alvah C., Chicago, Ill. Motion-picture apparatus. 1,484,083; Feb. 19.
Rohrbach, Franklin L., Spokane, Wash. Grass catcher for lawn mowers. 1,484,084; Feb. 19.
Roper, Geo. D., Corporation. (See Zander, John, assignor.)
Roth, Louis, assignor to Sterling Bronze Company, New York, N. Y. Theater chair. 1,484,566; Feb. 19.
Rothenbucher, George E. R., Chicago, Ill. Reversible pump valve. 1,484,238; Feb. 19.
Ruckel, Phillip K., Saginaw, Mich. Air motor. 1,484,414; Feb. 19.

Rule, John F., assignor to The Owens Bottle Company, Toledo, Ohio. Producing formed charges of molten glass. 1,484,085; Feb. 19.
Runck, John P., Casselton, N. Dak. Snowplow. 1,484,380; Feb. 19.
Rushmore, Samuel W., Plainfield, N. J. Cam-actuated diaphragm horn. 1,484,276; Feb. 19.
Rutherford, Frank H., Chicago, Ill. Switching apparatus for railway switch yards. 1,484,086; Feb. 19.
Ruttenberg, Edward C., Chicago, Ill. Shade support. Des. 64,031; Feb. 19.
Ryan, Francis M., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Radio broadcasting equipment. 1,484,087; Feb. 19.
Ryan, John W., assignor to Fairbairn Lawson Combe Barbour Limited, Leeds, England. Gill box or frame. 1,484,567; Feb. 19.
Ryan, Walter D., Schenectady, N. Y. Vehicle lamp. 1,484,309; Feb. 19.
Ryder, Elmer. (See Nichols, J. C., and Ryder.)
Sakelaropoulos, Vasilios, New York, N. Y. Foldable box or container. Des. 64,032; Feb. 19.
Sammons, Walter H., Philadelphia, Pa. Hair-dressing device. 1,483,988; Feb. 19.
Sand, Martin, Tenbridge, N. Dak. Cultivator. 1,484,039; Feb. 19.
Sanitary Scale Company. (See Ludlow, George M., assignor.)
Sansom, Ray, Cusick, assignor of one-half to W. B. Kirk, Usk, Wash. Footstool. 1,484,040; Feb. 19.
Sass, John. (See Burk, William D., assignor.)
Savage, Edward S., Rochester, N. Y. Printing. 1,484,568; Feb. 19.
Savage, John C., Ryde, Isle of Wight, England, assignor to The Skywriting Corporation of America. Producing visual effects in the air and apparatus therefor. Re15,771; Feb. 19.
Scanes, Arthur E. L., Ashton-on-Mersey, England, assignor to Westinghouse Electric and Manufacturing Company. Ejector condensing apparatus. 1,483,989; Feb. 19.
Schakel, Jacob D., and J. Rice, assignors to Elevator Company of America, Chicago, Ill. Electric automatic door-locking system. 1,484,277; Feb. 19.
Schakel, Jacob D., assignor to Elevator Company of America, Chicago, Ill. Elevator-door-locking device. 1,484,278; Feb. 19.
Scheid, Johannes F., assignor to the Firm: H. Schomburg & Sohne, Margarethenhutte, Grossdubrau, Germany. Ceramic body. 1,484,569; Feb. 19.
Schevenell, James, New York, N. Y. Protective binding for collars. 1,484,570; Feb. 19.
Schlueter, Frank J., and M. Lozano, Houston, Tex.; said Lozano assignor of one-fifth of his right to said Schlueter. Guard for railway crossings. 1,484,279; Feb. 19.
Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company. Refrigerating machine. 1,483,990; Feb. 19.
Schnoebelen, Oscar E., Leetonia, Ohio. Transmission-band adjuster. 1,483,954; Feb. 19.
Schoenwolf, Fred, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Telephone system with automatic ringing disconnect. Re15,774; Feb. 19.
Schomburg, H., & Sohne. (See Scheid, Johannes F., assignor.)
Schumacher, John W., assignor to Acme White Lead and Color Works, Detroit, Mich. Lead compound and forming the same. 1,484,088; Feb. 19.
Schwartz, Max, New York, N. Y. Auto bumper. 1,483,913; Feb. 19.
Schweinert, Maximilian C., New York, N. Y. Adapter for pump couplings. 1,484,342; Feb. 19.
Scott, Walter C., Plainfield, N. J. Shock absorber. 1,484,193; Feb. 19.
Seabolt, Frank J., Schenectady, N. Y., assignor of one-fourth to E. F. Pickford, Washington, D. C., one-fourth to M. H. Hall and one thirty-second to C. D. Knight, Schenectady, N. Y. Electric clock-setting means. 1,484,441; Feb. 19.
Searle, Edward C., Hilo, Hawaii. Headlight. 1,484,571; Feb. 19.
Seeberman, Isador. (See Hochman, Jacob, assignor.)
Serra, Augustin, Essomes-sur-Marne, France. Warp-knitting machine. 1,484,381; Feb. 19.
Servis, Oscar E., Chicago, Ill. Electrode suspension device. 1,484,194; Feb. 19.
Severson, Martin, Galesville, Wis. Crank holder for cars. 1,484,341; Feb. 19.
Sexton, Isaac E., Winchester, Mass. Sheet-metal can. 1,484,195; Feb. 19.
Shaeffer, Harry B., Altoona, Pa. Shock absorber. 1,484,572; Feb. 19.
Sharpe, Lewis C., Kerrville, Tex. Valve-stem washer. 1,484,573; Feb. 19.
Shaw, Solomon B., Los Angeles, Calif. Vehicle signal. 1,484,089; Feb. 19.
Shepard, John W., Tucson, Ariz. Vehicle wheel. 1,484,535; Feb. 19.
Shepherd Chemical Company. (See Shepherd, John P., assignor.)
Shepherd, John P., Chicago, Ill., assignor, by mesne assignments, to Shepherd Chemical Company. Tooth paste. 1,484,415; Feb. 19.
Shepherd, William H. (See Beals, Harold S., assignor.)
Shields, Lowell W., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt-buckle frame. Des. 64,033; Feb. 19.
Shipley, Grant B., Pittsburgh, Pa. Wood-treating plant. 1,484,574; Feb. 19.
Shoenberg, Milton H., San Francisco, Calif. Electric water heater and switch. 1,484,451; Feb. 19.
Shoenberg, Milton H., San Francisco, Calif. Lighter. 1,484,453; Feb. 19.
Shoenberg, Milton H., San Francisco, Calif. Combined lighting and heating unit. 1,484,454; Feb. 19.
Shoenberg, Milton H., assignor to Majestic Electric Development Company, San Francisco, Calif. Electric iron. 1,484,452; Feb. 19.
Shulin, Neal P., Butte, Mont. Discharge member for use in irrigating systems. 1,484,575; Feb. 19.
Simmons, Frank L., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I. Rotary magnetic chuck. 1,484,090; Feb. 19.
Simmons, George P., assignor to Horrocks Desk Company, Herkimer, N. Y. Lubricator. 1,484,576; Feb. 19.
Singer Manufacturing Company, The. (See Hemleb, Martin, assignor.)
Singer Manufacturing Company, The. (See Binge, John C., assignor.)
Skaer, Moyle, Augusta, Kans. Carburetor. 1,484,577; Feb. 19.
Skillins, John T., Westbrook, Me. Belt buckle. 1,484,416; Feb. 19.
Skinner Patent Holding Company. (See Metcalfe, Robert F., assignor.)
Skywriting Corporation of America. (See Savage, John C., assignor.)
Slattery, Donald W., East Cleveland, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio. Valve. 1,483,991; Feb. 19.
Small, Frank E., Jamaica, N. Y. Piston packing. 1,484,578; Feb. 19.
Smillie, Robert H., Oakland, Calif. Eye guard. 1,484,042; Feb. 19.
Smith, Benjamin C., Bayonne, N. J., assignor to E. A. Riotte, Douglaston, N. Y. Refrigeration apparatus. 1,484,091; Feb. 19.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,483,914; Feb. 19.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,484,196; Feb. 19.
Snead, Emmett H., Danville, Va. Movable headlight. 1,484,417; Feb. 19.
Snediker, Morton O., assignor to The Powers Regulator Company, Chicago, Ill. Graduated-movement regulator. 1,484,092; Feb. 19.
Solomon, Dorothy, New York, N. Y. Curtain stretcher. 1,484,418; Feb. 19.
Soss, Joseph, New York, N. Y. Hinge. 1,484,093; Feb. 19.
Soss, Joseph, Brooklyn, N. Y. Manufacturing hinge butts. 1,484,343; Feb. 19.
Söyland, Alf, Bergen, Norway. Combined tent and sleeping bag. 1,484,361; Feb. 19.
Spahr, Otto, Philadelphia, Pa. Electric sadiron. 1,484,280; Feb. 19.
Spencer, Harold, Detroit, Mich. Tool holder. 1,484,810; Feb. 19.
Sperry, Elmer A., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Means for spinning up gyroscopes on aircraft. 1,483,992; Feb. 19.
Sperry Gyroscope Company, The. (See Sperry, Elmer A., assignor.)
Spiro, Walter J., White Plains, N. Y. Light-control switch. 1,484,239; Feb. 19.
Sprague Foundry & Manufacturing Company. (See Smith, Albert B., assignor.)
Sprowles, Frank W., and W. C. Faunce, Philadelphia, Pa. Permutation lock. 1,483,993; Feb. 19.
Stadniczek, John, Elizabeth, N. J. Violin bow. 1,483,994; Feb. 19.
Stanbrough, William M., Newburgh, N. Y. Upper dental plate. 1,484,344; Feb. 19.
Stanley, Joseph F., Minneapolis, Minn. Bed brace. 1,484,158; Feb. 19.
Stanley Works, The. (See Myers, Frank A., assignor.)
Steele, Charles W., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Tire-boot-building machine. 1,483,915; Feb. 19.
Stefani, Carlo, Milan, Italy. Change-speed transmission. 1,484,197; Feb. 19.
Steiger, Andrew W., Hartford, Conn., assignor to Underwood Computing Machine Company, New York, N. Y. Combined typewriting and computing machine. 1,484,281; Feb. 19.
Steiner, George A., assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah. Towel cabinet. 1,484,159; Feb. 19.
Steiner Sales Company. (See Steiner, George A., assignor.)
Sterling Bronze Company. (See Roth, Louis, assignor.)
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Method and apparatus for manufacturing tires. Re15,772; Feb. 19.
Stewart-Warner Speedometer Corporation. See Whittington, Frederik G., assignor.)

Still, Frederick R., assignor to American Blower Company, Detroit, Mich. Fan wheel and making the same. 1,484,579; Feb. 19.
Still, William J., London, England. Construction of internal-combustion-engine cylinders. 1,484,240; Feb. 19.
Stirling, Sarah V. D., New York, N. Y. Folding chair. 1,484,419; Feb. 19.
Stitzel, Frederick, Louisville, Ky. Spring wheel. 1,484,580; Feb. 19.
Stoelting Brothers Co. (See Stoelting, Gustav, assignor.)
Stoelting, Gustav, assignor to Stoelting Brothers Co., Kiel, Wis. Jet mechanism. 1,484,345; Feb. 19.
Stone, Frederick, assignor to Diamond Drill Contracting Company, Spokane, Wash. Rotary drill. 1,484,362; Feb. 19.
Stothart, James R., and L. Bernstein, Coushatta, La. Egg crate. 1,484,581; Feb. 19.
Stoughton Harp Company. (See Stoughton, William B., assignor.)
Stoughton, William B., assignor to Stoughton Harp Company, Dubois, Pa. Harp. Des. 64,034; Feb. 19.
Stover Manufacturing & Engine Co. (See Edwards, Wilbert J., assignor.)
Strassweg, Herbert A. (See Arnold, Charles A., assignor.)
Sturt, Alfred T., Flint, Mich., assignor to Durant Motors Incorporated. Motor-vehicle engine-supporting structure. 1,484,582; Feb. 19.
Suderov, Max M., New York, N. Y. Wrist watch. 1,484,420; Feb. 19.
Sure Edge Stropper Company. (See Larson, Lewis E., assignor.)
Szafranski, Joseph, Danielson, Conn. Potato-peeling machine. 1,484,094; Feb. 19.
Taft-Peirce Manufacturing Company, The. (See Simmons, Frank L., assignor.)
Tapley, James M., Charleswood, Manitoba, Canada. Crank case for internal-combustion engines. 1,484,043; Feb. 19.
Tateoka, Mitsuji, Gardena, Calif. Brooder-heating device. 1,484,583; Feb. 19.
Tauern, Odo D., and N. Lyon, Freiburg, Germany. Finder for motion-picture cameras and similar optical appliances. 1,484,584; Feb. 19.
Taylor, Harvey B., Philadelphia, Pa. Composite spiral casing. 1,483,995; Feb. 19.
Taylor, Robert. (See Erickson, C., and Taylor.)
Textile Engineering Company. (See Hale, Joshua B., assignor.)
Thaler, Wilhelm, Heidenheim-on-the-Brenz, Germany. Wood grinder. 1,484,585; Feb. 19.
Thew Shovel Company, The. (See Weber, Charles A., assignor.)
Thomas, Buck C., Shiro, Tex. Box closure. 1,484,586; Feb. 19.
Thomas, Horace T., Lansing, Mich. Curtain for automobiles. 1,484,095; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,421; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,422; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,423; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,424; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,425; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,426; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,427; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,428; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,429; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,430; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,431; Feb. 19.
Thompson, James S., Pelham, N. Y. Manufacture of brake shoes. 1,484,432; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,433; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,434; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,435; Feb. 19.
Thompson, James S., Pelham, N. Y. Brake-shoe mold. 1,484,436; Feb. 19.
Thompson, James S., Pelham, N. Y. Mold. 1,484,437; Feb. 19.
Thompson, James S., Pelham, N. Y. Mold. 1,484,438; Feb. 19.
Thompson, James S., Pelham, N. Y. Mold for making castings. 1,484,439; Feb. 19.
Thompson, James S., Pelham, N. Y. Mold for making castings. 1,484,440; Feb. 19.
Thompson, Ray W., New York, N. Y. Combined lamp shade and stand. Des. 64,035; Feb. 19.
Thomson, William P., assignor to The Rail Joint Company, New York, N. Y. Construction for rail joints. Re15,773; Feb. 19.
Thrasher, Orville A., American Fork, Utah. Drinking fountain or trough. 1,484,160; Feb. 19.
Tischer, Frank V., Dayton, Ohio. Apparatus and method of making laminated structures. 1,484,311; Feb. 19.
Toborg, Alfred G., Chicago, Ill. Coin holder. 1,484,044; Feb. 19.
Toler, William E., Pawnee, Okla. Attachment for thrashing machines and clover hullers. 1,483,955; Feb. 19.
Tompkins, Frank M., Dufield, Va. Fruit picker. 1,484,241; Feb. 19.
Tongue, Gordon W. R., Seattle, Wash. Marking coal. 1,483,996; Feb. 19.
Toomey, John F., New York, N. Y., assignor to American Telephone and Telegraph Company. Telephone system. 1,483,956; Feb. 19.
Torrington Company, The. (See Calder, J. A., and Dayton, assignors.)
Towle Manufacturing Company. (See Nock, Harold E., assignor.)
Trent, Harold E., Lansdowne, Pa. Electrical fuse and method. 1,484,198; Feb. 19.
Trevoux, Laurent E. M., assignor to La Societe Anonyme de Produits Chimiques, Etablissements Maletra, Siege Social, Petit-Quevilly, France. Process and apparatus for the continuous production of sulphates. 1,484,587; Feb. 19.
Troidl, Nellie Y., Niagara Falls, N. Y. Educational appliance. 1,483,916; Feb. 19.
Trojan, Joseph E., Columbus, Tex. Demountable rim. 1,484,588; Feb. 19.
Trubek, Leo, Hasbrouck Heights, N. J. Bottle. 1,484,589; Feb. 19.
Trygge, Nils T., Chicago, Ill. Pencil eraser. 1,483,957; Feb. 19.
Tubbs, John A., Ellis, Kans. Trap. 1,484,363; Feb. 19.
Tucker, Ernest E., New York, N. Y. Oxyhydrogen steam generator. 1,483,917; Feb. 19.
Tucker, J. H., & Company. (See Brothers, Edwin J., assignor.)
Tueckmantel, Hugo, Newark, N. J. Bag frame. 1,483,997; Feb. 19.
Turbo Motor Company. (See McElrath, William W., jr., assignor.)
Tyson, Frederick S., assignor to Tyson Mfg. Co., Lock Haven, Pa. Automobile radiator cover. 1,484,199; Feb. 19.
Tyson Mfg. Co. (See Tyson, Frederick S., assignor.)
Uhlemann Optical Company. (See Uhlemann, William R., assignor.)
Uhlemann, William R., Evanston, assignor to Uhlemann Optical Company, Chicago, Ill. Angle-measuring instrument. 1,484,364; Feb. 19.
Uhlemann, William R., Evanston, assignor to Uhlemann Optical Company, Chicago, Ill. Optician's angle gage. 1,484,365; Feb. 19.
Uhlemann, William R., Evanston, assignor to Uhlemann Optical Company, Chicago, Ill. Optician's measuring instrument. 1,484,366; Feb. 19.
Ullmann, Max, Zwickau, Germany, assignor to K. Werth, The Hague, Netherlands. Producing negatives from nontransparent originals for use in preparing printing plates. 1,484,346; Feb. 19.
Ullmann, Max, Zwickau, Germany, assignor to K. Werth, The Hague, Netherlands. Producing negatives from nontransparent originals for use in preparing printing plates. 1,484,347; Feb. 19.
Underwood Computing Machine Company. (See Steiger, Andrew W., assignor.)
Underwood Typewriter Company. (See Conklin, De Witt N., assignor.)
Underwood Typewriter Company. (See Hilsee, Charles M., assignor.)
Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)
Union Bag & Paper Corporation. (See Crawford, Earl A., assignor.)
Union Switch & Signal Company, The. (See McCann, Ronald A., assignor.)
Union Switch & Signal Company, The. (See Zabel, William, assignor.)
United Engineering & Foundry Company. (See Jones, Lloyd, assignor.)
United Shoe Machinery Corporation. (See Bertrand, Frederic E., assignor.)
United Shoe Machinery Corporation. (See Collins, Richard C., assignor.)
United Shoe Machinery Corporation. (See Cosgrove, John W., assignor.)
United Shoe Machinery Corporation. (See Emerson, Edwin L., assignor.)
United States Radium Corporation. (See Dey, William H., assignor.)
United States Asphalt Refining Company, The. (See Gundlach, Henry R., assignor.)
Universal Oil Products Company. (See Dubbs, Carbon P., assignor.)
Universal Paint Remover and Motor Cleaning Company a Trust Estate. (See Cleveland, David P., assignor.)
Unkel, H. W. (See Alber, George, assignor.)
Valley Mould and Iron Corporation. (See Coates, Ray G., assignor.)
Valley Mould & Iron Corporation. (See Perry, John E., assignor.)
Van Der Voort, Pearl, Oakland, Calif. Vanity box. 1,484,161; Feb. 19.

Van Heusen, John M., Boston, Mass., assignor to Van Heusen Products, Inc. Collar. 1,484,590; Feb. 19.
Van Heusen Products, Inc. (See Van Heusen, John M., assignor.)
Van Horn, Blaine, Philadelphia, Pa. Drumstick. 1,484,096; Feb. 19.
Van Nuis, Alfonso C., Cleveland, Ohio. Tread-rest foot grip. 1,483,913; Feb. 19.
Van Slyke, Merritt, Jacksonville, Fla. Spark plug. 1,484,501; Feb. 19.
Van Stelten, Harry, Arco, Minn. Shipping tag. 1,484,162; Feb. 19.
Varland, Martin, Radcliffe, Iowa. Ironing board. 1,484,592; Feb. 19.
Vebraaten, Elmer O., Vang, N. Dak. Bolster. 1,484,242; Feb. 19.
Vickers Limited. (See Perham, Arthur L., assignor.)
Victorius, Myer L., New York, N. Y. Counting hosiery. 1,484,097; Feb. 19.
Vincent, Sidney C., Baltimore, Md. Umbrella. 1,484,367; Feb. 19.
Vincke, Enrique, Barcelona, Spain. Tile and producing same. 1,484,200; Feb. 19.
Vinçon, Gustavo, Turin, Italy. Automatic firearm. 1,484,163; Feb. 19.
Von Brockdorff, Rudolf F., Munich, Germany. Electrode for liquid resistances. 1,484,243; Feb. 19.
Von Hambach, Ernest, Chicago, Ill., assignor to H. D. Lafferty, Oakland, Calif. Timer. 1,484,556; Feb. 19.
Voss, Albert H. (See Hansen, H. L., and Voss.)
Wagner, Earl J., Tamaqua, Pa. Coal jigger. 1,483,958; Feb. 19.
Wahl Company, The. (See Pierce, Earl F., assignor.)
Wakefield, F. W., Brass Company, The. (See Wakefield, Frederick W., assignor.)
Wakefield, Frederick W., assignor to The F. W. Wakefield Brass Company, Vermilion, Ohio. Lighting fixture. 1,484,441; Feb. 19.
Walker, Charles J., Gary, Ind. Electric riveter. 1,483,919; Feb. 19.
Walker, Ernest A., assignor to The G. & G. Fixture Co., Newark, N. J. Arm for lighting fixtures. Des. 64,036; Feb. 19.
Walker, William J., assignor of one-sixth to A. Kewley, Bradford, Pa. Cup for working valves. 1,483,998; Feb. 19.
Walters, James, Birmingham, Ala. Demountable-rim pulley. 1,484,593; Feb. 19.
Wamser, Charles J., Wauwatosa, Wis. Hinged window. 1,483,920; Feb. 19.
Wappler Electric Co. (See Mutscheller, Arthur, assignor.)
Warburton, Howard, Hamilton, Ontario, Canada. Washing machine. 1,484,594; Feb. 19.
Wardwell, William E., Worcester, Mass. Top roll for spinning frames. 1,484,045; Feb. 19.
Wark, Albert R., Rexford, Kans. Planter. 1,484,244; Feb. 19.
Warner Brothers Company, The. (See Langhammer, Frank L., assignor.)
Warshner, Joe. See Ezekiel, A., Lubin, Warshner, and Neil.)
Washburn, Herbert I., Laurel Springs, N. J. Syn-motor. 1,484,312; Feb. 19.
Washington Automatic Doughnut Machine Company. (See McClure, H. A., and Huntley, assignors.)
Waterbury Iron Works, Inc. (See Kipp, Leonard, assignor.)
Waterman, Arthur, East Orange, N. J., assignor to E. V. Hartford, Inc., New York, N. Y. Demonstrating device. 1,484,595; Feb. 19.
Waters, George H., Glenfield, N. Y. Tire chain. 1,484,596; Feb. 19.
Watkins, James A., assignor to American Blower Company, Detroit, Mich. Centrifugal fan. 1,484,597; Feb. 19.
Waugh, James M., Chicago, Ill. Draft-gear friction-plate holder. 1,484,098; Feb. 19.
Way, Alban W., Philadelphia, Pa. Hinge. 1,484,536; Feb. 19.
Webber, Harold S., assignor to Cross Metal Products Company, New York, N. Y. Machine for making metal articles. 1,484,282; Feb. 19.
Weber, Charles A., assignor to The Thew Shovel Company, Lorain, Ohio. Power shovel hoisting mechanism controlling means. 1,484,245; Feb. 19.
Webster, Robert, Philadelphia, Pa. Dirigible headlight. 1,484,442; Feb. 19.
Weidlich Bros. Mfg. Co., The. (See Flauder, Alfred J., assignor.)
Weigel, George P., Cleveland, Ohio. Bottle cap. 1,484,099; Feb. 19.
Weller, Peter B., Detroit, Mich. Multiple-fuse plug. 1,484,443; Feb. 19.
Welch, Harry V., assignor to International Precipitation Company, Los Angeles, Calif. Recovering metals from their ores. 1,483,999; Feb. 19.
Welch, Lewis C., Portland, Me. Variable-speed compensating device for the control of differential and brake mechanisms. 1,483,950; Feb. 19.
Welch, W. M., Manufacturing Company. (See Brown, Hugh E., assignor.)
Weller Manufacturing Company. (See Gutermann, Jacob J., assignor.)
Wellington, Charles H., Ventura, assignor to Casey Manufacturing Company, Oxnard, Calif. Starting switch. 1,484,048; Feb. 19.
Wellman, Lester R., assignor to Friedley Voshardt Co., Chicago, Ill. Plate for lighting fixtures. Des. 64,037; Feb. 19.
Wellman-Seaver-Morgan Company, The. (See Slattery, Donald W., assignor.)
Wells, John V., New York, N. Y. Automatic repouring coffee urn. 1,484,537; Feb. 19.
Welsh, Charles R., Schofield Barracks, Hawaii. Shoulder-patch-insignia-attaching mechanism. 1,484,313; Feb. 19.
Weniger, Frank S., Binghamton, assignor to Peters Bros. Rubber Co., New York, N. Y. Fabric cutter. 1,484,598; Feb. 19.
Werth, Karl. (See Ullmann, Max, assignor.)
Wertz, James C., Kansas City, Mo. Cinder tongs. 1,484,100; Feb. 19.
Westbury, William, Caney, Kans. Glass-drawing device. 1,484,101; Feb. 19.
Western Electric Company. (See Cummings, George C., assignor.)
Western Electric Company. (See Goff, Harold W., assignor.)
Western Electric Company. (See Johnson, Kenneth S., assignor.)
Western Electric Company. (See Keckler, Charles W., assignor.)
Western Electric Company. (See Lundell, Alben E., assignor.)
Western Electric Company. (See Martin, Harold T., assignor.)
Western Electric Company. (See Oswald, Arthur A., assignor.)
Western Electric Company. (See Read, Harry S., assignor.)
Western Electric Company. (See Reddig, Charles E., assignor.)
Western Electric Company. (See Ryan, Francis M., assignor.)
Westinghouse Electric & Manufacturing Co. (See Ehrhart, Raymond N., assignor.)
Westinghouse Electric and Manufacturing Company. (See Scanes, Arthur L., assignor.)
Westinghouse Electric and Manufacturing Company. (See Schmidt, Henry F., assignor.)
Wetmore, Charles P., assignor to Wetmore Mechanical Laboratory Company, Milwaukee, Wis. Razor-blade knife. 1,484,538; Feb. 19.
Wetmore Mechanical Laboratory Company. (See Wetmore, Charles P., assignor.)
Whipple, Leland B., Rochester, N. Y., assignor to Fits-Empire Double Pivot Last Company, Auburn, Me. Pattern-copying machine. 1,483,960; Feb. 19.
Whitaker, William H., Shelbyville, Ill. Self-agitating hopper. 1,484,599; Feb. 19.
Whittington, Frederik G., Evanston, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Instrument dial plate. Des. 64,038; Feb. 19.
Whittington, Frederik G., Evanston, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Instrument dial plate. Des. 64,039; Feb. 19.
Wickham, Frank L., Lennon, Mich. Trestle. 1,484,164; Feb. 19.
Wiedeman, Oscar, Narberth, Pa. Method of and apparatus for finishing hats. 1,484,283; Feb. 19.
Wiederselm, Theodore E. (See Gibbs, E. D., and Wiederselm.)
Wight, Jarvis S., Brooklyn, N. Y. Vaporizer. 1,484,000; Feb. 19.
Wilkes, George, Calgary, Alberta, Canada. Barn-door construction. 1,484,047; Feb. 19.
Williams, Loy M., and C. J. Jewett, Fort Smith, Ark. Automatic starting device for motors. 1,484,539; Feb. 19.
Willys-Overland Company, The. (See Belden, Edward H., assignor.)
Willys-Overland Company, The. (See Lichter, Adolph H., assignor.)
Wilson, Cora E., executrix. (See Wilson, John M.)
Wilson, Ezekiel J., East Greenbush, and E. A. Rees, Albany, assignors to F. C. Huyck & Sons, Rensselaer, N. Y. Paper-making machine. 1,483,961; Feb. 19.
Wilson-Imperial Company. (See Wilson, John M., assignor.)
Wilson, John M., deceased, Montclair, N. J.; C. E. Wilson, executrix, assignor to Wilson-Imperial Company. Composition of matter. 1,484,444; Feb. 19.
Wilson, Lorraine Q., Baltimore, Md. Arch-supporting insole. 1,484,165; Feb. 19.
Winchester Repeating Arms Company. (See De Olaneta, Harold, assignor.)
Wireless Specialty Apparatus Company. (See Proctor, John A., assignor.)
Wise, Joseph B., New York, N. Y. Refrigerating barrel. 1,484,314; Feb. 19.
Witt, Carl J. (See Erickson, C. B., and Witt.)
Witte, Meinhard, Minneapolis, Minn. Radiator-fin-forming machine. 1,484,600; Feb. 19.
Witz, Henry, Oberhausen, Germany, assignor to Babcock & Wilcox Company, New York, N. Y. High-pressure water-tube boiler. 1,484,540; Feb. 19.

Wolhaupter, Benjamin, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y. Method and machine for making step joints. 1,484,541; Feb. 19.
Wolhaupter, Benjamin, New Rochelle, assignor to The Rail Joint Company, New York, N. Y. Abrasion unit for rail joints. 1,484,542; Feb. 19.
Wolhaupter, Benjamin, and C. A. Disbrow, New Rochelle, assignors to The Rail Joint Company, New York, N. Y. Insulated rail joint. 1,484,543; Feb. 19.
Wolk, Samuel, Dorchester, Mass. Scraper. 1,484,166; Feb. 19.
Wood, Frank W., Montclair, N. J. Means for indicating the integrity of circuits. 1,483,962; Feb. 19.
Wood, James E., Fairmont, W. Va. Casting machine. 1,484,544; Feb. 19.
Yardley, Charles F., Larchmont, N. Y. Rail anchor. 1,484,102; Feb. 19.
Young, Daniel, Brooklyn, N. Y., assignor to Young Inventions, Inc. Hosiery. 1,484,103; Feb. 19.
Young, Daniel, Brooklyn, N. Y., assignor to Young Inventions, Inc. Hosiery. 1,484,104; Feb. 19.
Young, Daniel, Brooklyn, N. Y., assignor to Young Inventions, Inc. Hosiery. 1,484,105; Feb. 19.
Young Inventions, Inc. (See Young, Daniel, assignor.)
Young, John R., Akron, Ohio. Wheel. 1,484,106; Feb. 19.
Youngblood, Orion, Boonville, Ind. Seed-hulling device. 1,483,963; Feb. 19.
Zabel, Bertha, executrix. (See Zabel, William.)
Zabel, William, deceased, by B. Zabel, executrix, assignor to The Union Switch & Signal Company, Swissvale, Pa. Circuit controller. 1,484,048; Feb. 19.
Zaikoski, Bernard, New York, N. Y. Starting mechanism for internal-combustion engines. 1,484,284; Feb. 19.
Zander, John, Chicago, assignor to Geo. D. Roper Corporation, Rockford, Ill. Gas-burning apparatus. 1,484,107; Feb. 19.
Ziegler, Leonard, Nutley, N. J. Spark indicator. 1,484,246; Feb. 19.
Zimmer, Otto. (See Lounsbury, E. D., and Zimmer.)
Zimmerman, Arthur, Waterbury, Conn. Nipple-attaching device. 1,484,050; Feb. 19.
Zimmerman, Harry C., Washington, D. C. Gun carriage. 1,483,921; Feb. 19.
Zoltowski, Antoni, Newark, N. J. Cap lock. 1,484,108; Feb. 19.
Zworykin, Vladimir K., Kansas City, Mo. Electric high-frequency signaling apparatus. 1,484,049; Feb. 19.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 19TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Accelerator. E. B. Quackenbess and J. A. Neale. 1,483,952; Feb. 19.
Acetylene burner. C. J. Clefton. 1,483,928; Feb. 19.
Acetylene generator. P. F. Killian. 1,484,506; Feb. 19.
Acetylene generator. R. R. Ligot. 1,483,898; Feb. 19.
Adding machine. F. Rauchwetter. 1,484,237; Feb. 19.
Advertising novelty. W. S. Kellner. 1,484,177; Feb. 19.
Aircraft, Means for spinning up gyroscopes on. E. A. Sperry. 1,483,992; Feb. 19.
Air motor. P. K. Ruckel. 1,484,414; Feb. 19.
Air preheater. H. E. Beede. 1,484,463; Feb. 19.
Alarm: *See*—
Doorknob alarm.
Alkyl compounds, Manufacture of. W. Bader. 1,484,249; Feb. 19.
Amalgamator. C. Meyer and H. B. Meade. 1,483,982; Feb. 19.
Anchoring device. A. Dinklage. 1,484,209; Feb. 19.
Angle gauge, Optician's. W. R. Uhlemann. 1,484,365; Feb. 19.
Antiskid device. F. Haller. 1,484,392; Feb. 19.
Apparel, Clip for attaching articles of wearing. T. B. Allitt. 1,484,382; Feb. 19.
Applying apparatus. J. W. Cosgrove. 1,483,967; Feb. 19.
Auger, bit, or drill. H. Izard. 1,484,352; Feb. 19.
Auto bumper. M. Schwartz. 1,483,913; Feb. 19.
Automobile brake. J. W. Bailey. 1,484,316; Feb. 19.
Automobile bumper. W. R. McGowen. 1,484,035; Feb. 19.
Automobile curtain. H. T. Thomas. 1,484,095; Feb. 19.
Automobile hoods, Antirattler for. H. G. Jorgensen. 1,483,940; Feb. 19.
Automobile radiator cover. F. S. Tyson. 1,484,199; Feb. 19.
Automobile signal. E. T. Gibson. Des. 64,002; Feb. 19.
Automobile theft preventive. A. Manuel. 1,484,181; Feb. 19.
Automobiles and other self-propelled vehicles, Water transport or ferry for. W. F. Beatty. 1,484,109; Feb. 19.
Automobiles, Apparatus for use in washing. S. J. Memmen. 1,484,071; Feb. 19.
Automobiles, Automatic motion recorder for. G. B. Frazer. 1,484,125; Feb. 19.
Automobiles, Clutch-pedal mechanism for. M. A. Holtzbauer. 1,484,266; Feb. 19.
Automobiles, Glare shield for. A. C. Carson. 1,484,551; Feb. 19.
Automobiles, Running board for. O. C. B. Koehn. 1,483,945; Feb. 19.
Automobiles, Safety fender for. O. E. Jones. 1,484,333; Feb. 19.
Bacterial antibodies, Product and process for the recovery of. J. Reichel and F. M. Huntoon. 1,484,038; Feb. 19.
Bag: *See*—
Carrying bag. Paper bag.
Bag frame. H. Tueckmantel. 1,483,997; Feb. 19.
Bar: *See*—
Shaker bar.
Barometer, Aneroid. K. Bennewitz. 1,484,289; Feb. 19.
Barrel, Refrigerating. J. B. Wise. 1,484,314; Feb. 19.
Basket, Dish-holding. G. S. Blakeslee. 1,484,291; Feb. 19.
Baths, Fume generator for. A. H. Moore. 1,484,072; Feb. 19.
Battery connection. M. H. Dunbar. 1,484,481; Feb. 19.
Batteries, Self-sealing pole for storage. W. A. MacKenzie. 1,484,309; Feb. 19.
Bearing material, Treating fiber-. N. K. Davis. 1,484,208; Feb. 19.
Bed brace. J. F. Stanley. 1,484,158; Feb. 19.
Bed, Chesterfield. C. O. Morlock and A. Nord. 1,484,337; Feb. 19.
Bed, Collapsible cot. M. Luery. 1,483,979; Feb. 19.
Belt, Casting-tackle. F. J. Kroha. 1,484,399; Feb. 19.
Bicycles, Luggage carrier for. H. S. Rector. 1,484,559; Feb. 19.
Billboard. E. Richardson. 1,484,561; Feb. 19.
Billet manipulator. L. Jones. 1,484,503; Feb. 19.
Binder, Loose-leaf. E. G. Alden. 1,483,862; Feb. 19.
Bit: *See*—
Drilling bit.
Blower attachment. W. O. Bickerstaff. 1,484,548; Feb. 19.
Board: *See*—
Ironing board.
Boards arranged edge to edge, Means of joining metal-sheathed. A. Elmendorf. 1,484,175; Feb. 19.
Boat. J. J. Otta. 1,484,075; Feb. 19.
Bobbin-winding machine, Automatic. L. Hallmler. 1,483,937; Feb. 19.
Boiler. C. H. Hook and A. W. Miller. 1,484,330; Feb. 19.
Boll-weevil eradicator. G. W. Mobley. 1,484,270; Feb. 19.
Bolster. E. O. Vebratten. 1,484,242; Feb. 19.
Bomb body. W. A. Borden and C. H. M. Roberts. 1,483,864; Feb. 19.
Bottle. I. B. Harkey. Des. 64,007; Feb. 19.
Bottle. G. M. Mas. Des. 64,022; Feb. 19.
Bottle. S. D. Pickett. Des. 64,029; Feb. 19.
Bottle. L. Trubek. 1,484,589; Feb. 19.
Bottle cap. G. P. Weigel. 1,484,099; Feb. 19.
Bottle cover, Milk-. C. W. Ecker. 1,484,483; Feb. 19.
Box: *See*—
Exhaust box. Vanity box.
Match box.
Box closure. B. C. Thomas. 1,484,586; Feb. 19.
Box or frame, Gill. J. W. Ryan. 1,484,567; Feb. 19.
Brace: *See*—
Bed brace.
Bracket: *See*—
Scaffold bracket.
Braiding machine. J. B. Hale. 1,484,128; Feb. 19.
Brake: *See*—
Automobile brake. Car brake.
Brake band. G. C. Beals. 1,484,462; Feb. 19.
Brake-beam fulcrum. F. Ditchfield. 1,484,323; Feb. 19.
Brake cylinder. H. B. MacFarland. 1,484,516; Feb. 19.
Brake-shoe mold. J. S. Thompson. 1,484,421–31; Feb. 19.
Brake-shoe mold. J. S. Thompson. 1,484,433–6; Feb. 19.
Brake shoes, Manufacture of. J. S. Thompson. 1,484,432; Feb. 19.
Brakes, Automatic safety lock for air. W. F. Crown. 1,484,475; Feb. 19.
Broom shield. J. R. Powell. 1,484,531; Feb. 19.
Brush, Fountain. M. Jacobs. 1,484,026; Feb. 19.
Brush, Sanitary bath. M. L. Goldberg. 1,484,215; Feb. 19.
Brush, Spiral fountain. M. Jacobs. 1,484,027; Feb. 19.
Buckle, Belt. J. T. Skilling. 1,484,416; Feb. 19.
Buckle frame, Belt. L. W. Shields. Des. 64,033; Feb. 19.
Bucksaw. E. and A. Bertas. 1,484,168; Feb. 19.
Building structure, Sheet-metal. B. Kerber. 1,484,398; Feb. 19.
Building unit. J. A. Birkholz. 1,484,206; Feb. 19.
Bumper construction. J. R. Plank. 1,484,157; Feb. 19.
Burner: *See*—
Acetylene burner. Oil burner.
Button toggle. L. S. Hapeman. 1,483,880; Feb. 19.
Cabinet, Towel. G. A. Steiner. 1,484,159; Feb. 19.
Cableway. M. H. Dickinson. 1,484,387; Feb. 19.
Calculating and recording machine and record sheet. S. H. Farnham and A. F. Poole. 1,484,123; Feb. 19.
Calculating machines, Transfer mechanism for. F. Rauchwetter. 1,484,236; Feb. 19.
Cameras and similar optical appliances, Finder for motion-picture. O. D. Tauern and N. Lyon. 1,484,584; Feb. 19.
Can: *See*—
Sheet-metal can.
Can-draining machine. E. L. Price. 1,483,951; Feb. 19.
Can-end liners, Apparatus for cutting and handling. C. W. Graham. 1,483,969; Feb. 19.
Can-topping machine. C. J. Hulten. 1,484,449; Feb. 19.
Can tops, Handle and fastener for. P. A. Connor. 1,484,062; Feb. 19.
Cap lock. A. Zoltowski. 1,484,108; Feb. 19.
Car brake. R. H. Minich. 1,483,907; Feb. 19.
Car, Coke-handling. L. Kipp. 1,483,893; Feb. 19.
Car door lock and seal. C. A. Arnold. 1,483,923; Feb. 19.
Car, Motor. H. E. Cross. 1,484,474; Feb. 19.
Cars, Crank holder for. M. Severson. 1,484,341; Feb. 19.
Carburetor. M. Skaer. 1,484,577; Feb. 19.
Cards, Pack of game. R. H. Riffert. 1,484,564; Feb. 19.
Carpet-strip anchorage. M. O. Kasson. 1,483,941; Feb. 19.
Carrier: *See*—
Watch carrier.

Interfolding machine. D. W. Hudson. 1,484,069; Feb. 19.
Internal-combustion engine. K. F. Ellegard. 1,484,255; Feb. 19.

Internal-combustion engine. E. Lanserotti-Spina. 1,484,376; Feb. 19.
Internal-combustion engine. W. W. McElrath, jr. Re-15,769; Feb. 19.
Internal-combustion engine, Rotary. H. B. Foster and J. G. Furstenberg. 1,484,124; Feb. 19.
Invoice, Sheet. D. N. Conklin. 1,483,869; Feb. 19.
Iron: *See*—
Electric iron.
Iron in permanent iron molds, Casting of. D. W. Candler. 1,484,297; Feb. 19.
Iron or steel, Treating molten cast. J. R. Billings. 1,484,465; Feb. 19.
Ironing board. M. Variand. 1,484,592; Feb. 19.
Ironing machine. J. F. Patton and J. E. McAllister. 1,483,949; Feb. 19.
Irrigating systems, Discharge member for use in. N. P. Shulin. 1,484,575; Feb. 19.
Jack: *See*—
Hydraulic jack.
Jet mechanism. G. Stoelting. 1,484,345; Feb. 19.
Joint: *See*—
Rail joint.
Joints, Means for lubricating incased universal. A. G. Bowen. 1,483,865; Feb. 19.
Joints, Method and machine for making step. B. Wolhaupter. 1,484,541; Feb. 19.
Key ring. J. B. Quigley. 1,484,532; Feb. 10.
Key-ring holder. F. A. Lasserre. 1,484,508; Feb. 19.
Kiln, Continuous tunnel. C. Dressler. 1,484,118; Feb. 10.
Knife, Razor-blade. C. P. Wetmore. 1,484,538; Feb. 19.
Knitting machine. M. C. Miller. 1,483,904; Feb. 19.
Knitting-machine needles, Assembling the parts of. C. O. Orne. 1,484,149; Feb. 19.
Knitting machine, Warp-. A. Serra. 1,484,381; Feb. 19.
Label holder. W. Griesbach. 1,484,261; Feb. 19.
Labels to spools or other articles, Means for attaching. W. A. Prentiss. 1,484,234; Feb. 19.
Lady's bag. H. Baron. Des. 63,991; Feb. 19.
Laminated structures, Apparatus and method of making. F. V. Tischer. 1,484,311; Feb. 19.
Lamp. C. E. Godley. 1,483,934; Feb. 19.
Lamp for automobiles, Trouble. W. M. Anderson. 1,484,458; Feb. 19.
Lamp shade and stand, Combined. R. W. Thompson. Des. 64,035; Feb. 19.
Lamp-shade support. F. J. Lieske. 1,484,268; Feb. 19.
Lamp sockets, Expansion plug for. A. C. Carson. 1,484,550; Feb. 19.
Lamp, Vehicle. W. D. Ryan. 1,484,309; Feb. 19.
Lamp wrappers and the like, Machine for making. B. Heinrichs. 1,484,066; Feb. 19.
Last jacks, Sole-positioning device for shoe-. F. Chateauneuf. 1,484,322; Feb. 19.
Latches, Handle-attaching means for door. L. Ottinger. 1,484,406; Feb. 19.
Latches, Operating means for automobile-door. F. Kleinsmith. 1,484,051; Feb. 19.
Lath clip, Metal. H. M. Naugle. 1,484,524; Feb. 19.
Lathe, Wood-turning. G. Alber. 1,484,286; Feb. 19.
Laundry machines, Driving mechanism for. L. W. Mammen. 1,484,142; Feb. 19.
Lead compound and forming the same. J. W. Schumacher. 1,484,088; Feb. 19.
Leers, Charging door for. E. E. Milner. 1,484,521; Feb. 19.
Lenses, Making toric. L. W. Bugbee. 1,483,866; Feb. 19.
Lifting hook. W. L. Hatherley. 1,484,495; Feb. 19.
Light: *See*—
Portable light.
Light-control switch. W. J. Spiro. 1,484,289; Feb. 19.
Light diffuser. A. E. Leaver. 1,484,138; Feb. 19.
Light fixture, Electric-. P. I. Elias and M. A. Elias, 2d. 1,484,300; Feb. 19.
Light, Production of. F. H. Bailey. 1,484,287; Feb. 19.
Lighter. M. H. Shoenberg. 1,484,453; Feb. 19.
Lighting and heating unit, Combined. M. H. Shoenberg. 1,484,454; Feb. 19.
Lighting fixture. F. W. Wakefield. 1,484,441; Feb. 19.
Lighting-fixture arm. E. A. Walker. Des. 64,036; Feb. 19.
Lighting-fixture plate. L. R. Wellman. Des. 64,037; Feb. 19.
Lighting-fixture tassel. J. Miller. Des. 64,024; Feb. 19.
Lighting fixtures, Mounting device for. J. K. Riddle. 1,484,275; Feb. 19.
Liquid containers, Vent for. V. Clifford. 1,483,868; Feb. 19.
Liquid-dispensing system. E. Crouse. 1,484,010; Feb. 19.
Liquid heater of the electrically-controlled type. B. W. Macy. 1,484,517; Feb. 19.
Liquid receptacles, Cap for. L. B. Rainey. 1,483,953; Feb. 19.
Liquids from solids, Apparatus for separating. J. Avrutik. 1,484,002; Feb. 19.
Liquids, Solidification of organic. A. B. Ray. 1,484,190; Feb. 19.
Lithography, photoengraving, etc., Making color plates for use in. E. D. Lounsbury and O. Zimmer. 1,484,400; Feb. 19.
Lock: *See*—
Cap lock. Permutation lock.
Cylinder lock. Transmission lock.
Nut lock.
Loom stop, Automatic. J. K. Haydock. 1,484,496; Feb. 19.
Looms, Weft tension-holding device for. A. G. Hannah. 1,483,879; Feb. 19.
Looms, Wire motion for. G. H. Chalk. 1,484,008; Feb. 19.
Lubricating device. J. W. Grantland. 1,484,391; Feb. 19.
Lubricating system. J. H. Hunt. 1,484,607; Feb. 19.
Lubricator. G. P. Simmons. 1,484,576; Feb. 19.
Luggage carrier. W. G. Dunn. 1,484,482; Feb. 19.
Luminous device. W. H. Dey. 1,483,873; Feb. 19.
Mail-marking machine. P. A. Järve. 1,484,375; Feb. 19.
Mat or similar article, Table. W. Gelb. Des. 64,000; Feb. 19.
Match box, Windproof. A. Konshin. 1,484,032; Feb. 19.
Measuring apparatus, Well-. R. G. Mason. 1,484,036; Feb. 19.
Measuring instrument, Angle-. W. R. Uhlemann. 1,484,364; Feb. 19.
Measuring instrument, Optician's. W. R. Uhlemann. 1,484,366; Feb. 19.
Meat compressor. A. Rispel and L. C. Liedtke. 1,483,911; Feb. 19.
Metal articles, Machine for making. H. S. Webber. 1,484,282; Feb. 19.
Metal structural member. W. E. Mast. 1,484,070; Feb. 19.
Microphone transmitter. H. G. Leach. 1,484,509; Feb. 19.
Mill: *See*—
Cider mill. Pulverizer mill.
Crushing mill.
Mirror or similar article, Hand. J. H. Harmstone. Des. 64,008; Feb. 19.
Mirror, Rear-view. W. P. Hammond. 1,484,021; Feb. 19.
Mixing chambers, Attachment for. J. H. Ahlers. 1,484,247; Feb. 19.
Mixing device. W. E. Graham. 1,484,326; Feb. 19.
Mixing device. E. Raba. 1,484,235; Feb. 19.
Moccasin. D. B. Abbott. 1,484,285; Feb. 19.
Mold: *See*—
Brake-shoe mold.
Mold. J. J. Plessman. 1,484,233; Feb. 19.
Mold. J. S. Thompson. 1,484,437–8; Feb. 19.
Molding machine. J. J. Plessman. 1,484,232; Feb. 19.
Moth-ball holder. R. J. Lewers. 1,484,510; Feb. 19.
Motor: *See*—
Air motor. Water-power motor.
Motors, Automatic starting device for. L. M. Williams and C. J. Jewett. 1,484,539; Feb. 19.
Movement-controlling device. P. R. Finch. 1,484,213; Feb. 19.
Movement regulator, Graduated-. M. O. Snediker. 1,484,092; Feb. 19.
Mowers, Grass catcher for lawn. F. L. Rohrbach. 1,484,084; Feb. 19.
Muffler. M. J. O'Connor. 1,484,526; Feb. 19.
Multiple-speed handle. M. D. Riker. 1,484,565; Feb. 19.
Music-leaf holder and turner, Combined. M. Niemi. 1,484,308; Feb. 19.
Musical instrument. P. S. Olt. 1,484,148; Feb. 19.
Necktie holder. D. W. McLean. 1,484,354; Feb. 19.
Nipple-attaching device. A. Zimmerman. 1,484,050; Feb. 19.
Nut-cracking machine, Centrifugal. M. Riddle. 1,484,563; Feb. 19.
Nut lock. F. L. Bixby, T. R. Gibson, and E. W. Cheney. 1,483,924; Feb. 19.
Odometer. E. R. Huntley. 1,484,501; Feb. 19.
Oil burner. L. B. Chadwick. 1,484,172; Feb. 19.
Oils and similar substances, Conversion of hydrocarbon. V. L. Emerson. 1,484,014; Feb. 19.
Oils, Continuous method of cracking hydrocarbon. E. O. Linton. 1,484,513; Feb. 19.
Ordnance, Level-correction device for. A. L. Perham. 1,484,274; Feb. 19.
Ores, Recovering metals from their. H. V. Welch. 1,483,999; Feb. 19.
Oscillations, Method and arrangement for producing non-damped. E. Mayer. 1,484,269; Feb. 19.
Packing, Piston. F. E. Small. 1,484,578; Feb. 19.
Paintbrush. J. K. Northrup. 1,484,230; Feb. 19.
Paper and pencil holder, Combined. P. A. Brouillette and A. R. Beck. 1,484,321; Feb. 19.
Paper bag, Square-bottom. D. Appel. 1,484,383; Feb. 19.
Paper, Cutting and coiling crêpe. F. P. Hildebrandt. 1,484,498; Feb. 19.
Paper-making machine. E. J. Wilson and E. A. Rees. 1,483,961; Feb. 19.
Paper sheets or the like, Finger ring for handling. M. A. Givens. 1,484,469; Feb. 19.
Pastry-cone machine. C. F. Betz. 1,484,204; Feb. 19.
Pastry cones, Method of and machine for making. C. F. Betz. 1,484,205; Feb. 19.
Pattern-copying machine. L. B. Whipple. 1,483,960; Feb. 19.
Pears, Machine for peeling and cutting. N. Felisianetti. 1,484,446; Feb. 19.
Pencil. L. T. McNary. 1,484,180; Feb. 19.
Pencil holder. F. Bayer. 1,484,461; Feb. 19.
Pencil, Lead. E. F. Pierce. 1,484,077; Feb. 19.
Perch and lice trap, Poultry. J. F. Breckenridge. 1,484,169; Feb. 19.
Permutation lock. F. W. Sprowles and W. C. Faunce. 1,483,993; Feb. 19.

Photographic reproduction, Multiple-step process of. R. John. 1,484,069; Feb. 19.
Picker: *See*—
Fruit picker.
Picture apparatus, Motion-. A. C. Roebuck. 1,484,083; Feb. 19.
Picture films, Rewinding machine for moving-. W. B. Aspley. 1,484,245; Feb. 19.
Picture machine, Motion-. C. Kiwul. 1,483,894; Feb. 19.
Picture machines, Film and film support for motion-. M. Keil. 1,483,942; Feb. 19.
Pile-cutting machines, Thread-holding means for. J. S. Boyd. 1,484,294; Feb. 19.
Pin cushion. B. F. Pierce. Des. 64,028; Feb. 19.
Pipe bender. L. Peto. 1,484,558; Feb. 19.
Pipe cutter. W. Hayter. 1,484,023; Feb. 19.
Pipe fitting. E. Kennedy. 1,483,891; Feb. 19.
Pipes, Clean-out device for. S. Brucelarie. 1,484,469; Feb. 19.
Pitcher or similar article. A. J. Flander. Des. 63,999; Feb. 19.
Planter. A. R. Wark. 1,484,244; Feb. 19.
Plastic substances, Apparatus for treating. S. Flood. 1,484,325; Feb. 19.
Plate frame. W. H. Dey. 1,483,874; Feb. 19.
Plate or similar article. W. Geib. Des. 64,001; Feb. 19.
Plug, Electric snap. G. A. Hansbrough. 1,484,492; Feb. 19.
Plug, Separable attachment. W. H. Harrington. 1,484,494; Feb. 19.
Pockets, Locking device for. C. B. Erickson and C. J. Witt. 1,484,116; Feb. 19.
Porcelain, Method of and apparatus for bluing. C. Dressler. 1,484,117; Feb. 19.
Portable light. A. Hargot. 1,484,498; Feb. 19.
Potato loader. H. L. Hansen and A. H. Voss. 1,484,022; Feb. 19.
Potato-peeling machine. J. Szafranski. 1,484,094; Feb. 19.
Power-transmission device, Electrical. A. E. Doman. 1,484,479; Feb. 19.
Power-transmission mechanism. A. A. Densmore. 1,483,872; Feb. 19.
Power-transmission mechanism and lubricating means therefor. W. E. Bock. 1,484,384; Feb. 19.
Power transmitter. C. C. Cleland. 1,484,061; Feb. 19.
Preheater. P. Bataud. 1,484,296; Feb. 19.
Pressure-demonstrating apparatus. H. E. Brown. 1,484,111; Feb. 19.
Pressure gauge. F. H. Hopkins. 1,484,068; Feb. 19.
Pressure-translating device. A. F. Jenkins. 1,484,394; Feb. 19.
Printing. E. S. Savage. 1,484,568; Feb. 19.
Printing plates, Producing negatives from nontransparent originals for use in preparing. M. Ullmann. 1,483,346–7; Feb. 19.
Printing-press gauge. E. L. Megill. 1,483,981; Feb. 19.
Puller: *See*—
Wheel puller.
Pulley, Demountable-rim. J. Walters. 1,484,593; Feb. 19.
Pulverizer mill. H. R. Collins. 1,484,298; Feb. 19.
Pump, Air. A. Burnam. 1,484,549; Feb. 19.
Pump-coupling adapter. M. C. Schweinert. 1,484,342; Feb. 19.
Pump, Diaphragm. A. F. Ecks. 1,484,115; Feb. 19.
Pump, Fluid-lift. H. H. Gracey. 1,483,877; Feb. 19.
Pump, High-vacuum. G. F. Nelson. 1,484,147; Feb. 19.
Punch. W. T. Dee. 1,484,114; Feb. 19.
Rack: *See*—
Filing rack.
Radiator. H. D. Kellogg. Des. 64,016; Feb. 19.
Radiator-cap ornament. C. G. Koch. Des. 64,018; Feb. 19.
Radiator-fin-forming machine. M. Witte. 1,484,600; Feb. 19.
Radiator trap. A. F. Jenkins. 1,484,395; Feb. 19.
Radiodynamic receiving system. J. H. Hammond, jr. 1,484,805; Feb. 19.
Radio broadcasting equipment. F. M. Ryan. 1,484,087; Feb. 19.
Radio receiving apparatus. J. A. Proctor. 1,484,189; Feb. 19.
Radio receiving system. H. S. Read. 1,484,411; Feb. 19.
Razor-blade holder. L. E. Larson. 1,483,897; Feb. 19.
Rail anchor. A. Dinklage. 1,484,210; Feb. 19.
Rail anchor. C. F. Yardley. 1,484,102; Feb. 19.
Rail-joint construction. W. P. Thomson. Re15,773; Feb. 19.
Rail joint, Insulated. B. Wolhaupter and C. A. Disbrow. 1,484,543; Feb. 19.
Rail joints, Abrasion unit for. B. Wolhaupter. 1,484,542; Feb. 19.
Railway crossings, Guard for. F. J. Schlueter and M. Lozano. 1,484,279; Feb. 19.
Railway safe-running device. A. R. Angus. 1,484,349; Feb. 19.
Railway switch yards, Switching apparatus for. F. H. Rutherford. 1,484,086; Feb. 19.
Railway-traffic-controlling apparatus. R. A. McCann. 1,483,980; Feb. 19.
Reach rod and forming the same. A. C. Morse. 1,483,947; Feb. 19.
Reamer, Adjustable cylinder. R. P. Campbell. 1,484,307; Feb. 19.
Receptacle. J. A. Benedict. 1,484,288; Feb. 19.
Receptacle and lining therefor. G. B. Hanford. 1,484,606; Feb. 19.
Reflector, Showcase. L. Erikson. 1,484,211; Feb. 19.
Refrigerating apparatus. B. C. Smith. 1,484,091; Feb. 19.
Refrigerating machine. H. F. Schmidt. 1,483,900; Feb. 19.
Regulator: *See*—
Movement regulator.
Reversible wrench. A. O. Ringquist. 1,484,192; Feb. 19.
Revolving chair. C. A. Brown. 1,484,371; Feb. 19.
Rim, Demountable. J. E. Trojan. 1,484,588; Feb. 19.
Ring: *See*—
Key ring.
Ring. R. H. Jones. Des. 64,013–14; Feb. 19.
Riveter, Electric. C. J. Walker. 1,483,919; Feb. 19.
Riveting machine, Needle-latch-. J. A. Calder and W. H. Dayton. 1,484,478; Feb. 19.
Roadway, pavement, stairway, or the like and materials for the construction thereof. M. M. Deeman. 1,484,011; Feb. 19.
Roadways, Means for forming expansion joints in. H. R. Gundlach. 1,484,303; Feb. 19.
Rock and ore crushing mill. O. A. Ellis. 1,483,932; Feb. 19.
Rotary drill. F. Stone. 1,484,362; Feb. 19.
Sadiron, Electric. O. Spahr. 1,484,280; Feb. 19.
Safety device. R. W. Lightburn. 1,484,511; Feb. 19.
Salt box or the like. B. Longstreth. 1,484,139; Feb. 19.
Sausage casing and producing same. E. J. and B. J. Mumm. 1,484,523; Feb. 19.
Scaffold bracket. D. M. Martin. 1,484,227; Feb. 19.
Scaffolding. A. Donaggio. 1,484,480; Feb. 19.
Scales, Indicator line for cylindrical chart. G. M. Ludlow. 1,484,401; Feb. 19.
Scraper. S. Wolk. 1,484,166; Feb. 19.
Scraper, Road. N. W. Hicks. 1,484,497; Feb. 19.
Screw driver. A. E. Rainey. 1,484,379; Feb. 19.
Screw machine, Automatic. C. M. Chapman. 1,484,604; Feb. 19.
Scroll and fret work, Sanding device for. J. C. Mundell. 1,483,963; Feb. 19.
Seat: *See*—
Toilet seat.
Seat covers, Making. A. H. Lichter. 1,484,236; Feb. 19.
Sectional jar. I. M. Clarke. Des. 63,995; Feb. 19.
Seed-hulling device. O. Youngblood. 1,483,963; Feb. 19.

Spat. D. Karger. Des. 64,015; Feb. 19.

Speed compensating device for the control of differential and brake mechanism, Variable-. L. C. Welch. 1,483,959; Feb. 19.
Speed drive, Variable-. A. R. McCann. 1,483,901; Feb. 19.
Speed sensitive controlling device. R. F. Metcalfe. 1,484,185; Feb. 19.
Speed transmission, Change-. C. Stefani. 1,484,197; Feb. 19.
Spindle-body bolt and mounting therefor. D. S. Krohn. 1,484,033; Feb. 19.
Spinning frames, Top roll for. W. E. Wardwell. 1,484,045; Feb. 19.
Spiral casing, Composite. H. B. Taylor. 1,483,995; Feb. 19.
Spoon or similar article. G. P. Ittig. Des. 64,012; Feb. 19.
Sprayer. E. Flueso. 1,484,017; Feb. 19.
Spring wheel. F. Stiltzel. 1,484,580; Feb. 19.
Starting switch. C. H. Wellington. 1,484,046; Feb. 19.
Statuette. J. B. Harrington. Des. 64,009; Feb. 19.
Steam generator, Oxyhydrogen. E. E. Tucker. 1,483,917; Feb. 19.
Steering mechanism. E. H. Belden. 1,484,319; Feb. 19.
Steering posts and the like, Mounting for. A. F. Masury. 1,483,903; Feb. 19.
Stereoscope. A. Mutscheller. 1,484,404; Feb. 19.
Stock-feeding mechanism. C. M. Chapman. 1,484,602; Feb. 19.
Stone spreader. F. E. Arndt. 1,484,450; Feb. 19.
Stove, Electric. R. S. Cannon. 1,484,170; Feb. 19.
Strainer. J. R. Kinney. 1,483,892; Feb. 19.
Straps to wooden slats, Machine for nailing metal. G. Parks. 1,484,150; Feb. 19.
Stump-pulling apparatus. H. C. Bruns. 1,484,007; Feb. 19.
Sublimation, Apparatus for. H. D. Gibbs. 1,484,260; Feb. 19.
Substances, Means for damming up semisolid. J. E. Noeggerath. 1,484,525; Feb. 19.
Suction cleaner. H. E. Hoover. 1,483,972; Feb. 19.
Suitcase. H. D. Minich. 1,484,186; Feb. 19.
Sulphates, Process and apparatus for the continuous production of. L. E. M. Trevoux. 1,484,587; Feb. 19.
Sweeper, Suction. H. E. Hoover. 1,483,973–7; Feb. 19.
Switch: *See*—
Light-control switch. Time switch.
Starting switch.
Switch and fuse block, Combined. G. W. Hart. 1,484,448; Feb. 19.
Switch and plug, Interlocking device for electric. E. J. Brothers. 1,484,468; Feb. 19.
Swivel chair. G. B. Miles. 1,484,229; Feb. 19.
Syn-motor. H. I. Washburn. 1,484,312; Feb. 19.
Tag-marking machine. F. Kohnle. 1,484,136; Feb. 19.
Tank gauge. C. C. Ferguson. 1,483,968; Feb. 19.
Tap wrench and diestock. J. Hirst. 1,484,067; Feb. 19.
Telegraph system. G. C. Cummings. 1,484,386; Feb. 19.
Telephone-exchange system. A. E. Lundell. 1,483,900; Feb. 19.
Telephone key bases, Fastening for. H. T. Martin. 1,484,402; Feb. 19.
Telephone system. H. L. Falk. 1,484,122; Feb. 19.
Telephone system. K. S. Johnson. 1,484,396; Feb. 19.
Telephone system. C. W. Keckler. 1,484,134; Feb. 19.
Telephone system. J. F. Toomey. 1,483,956; Feb. 19.
Telephone system, Machine-switching. F. Aldendorff. 1,484,348; Feb. 19.
Telephone system with automatic ringing disconnect. F. Schoenwolf. Re15,774; Feb. 19.
Tent and sleeping bag, Combined. A. Söyland. 1,484,361; Feb. 19.
Textile fabric. M. I. Bixby. Des. 63,992; Feb. 19.
Textile fabric. J. S. Boyd. 1,484,292; Feb. 19.
Textile fabric. C. E. Lord. Des. 64,019–21; Feb. 19.
Textile fabric or similar article. E. I. Golding. Des. 64,003–5; Feb. 19.
Textile machines, Stop motion for. E. S. Hineline. 1,484,329; Feb. 19.
Theater chair. L. Roth. 1,484,566; Feb. 19.
Thrashing machines and clover hullers, Attachment for. W. E. Toler. 1,483,955; Feb. 19.
Ticket holder. A. Roberge. 1,484,413; Feb. 19.
Tie and rail fastener, Combined. F. G. Alford. 1,484,315; Feb. 19.
Tile and producing the same. E. Vincke. 1,484,200; Feb. 19.
Time switch, Electric. L. P. Kleuser. 1,484,135; Feb. 19.
Timer. E. Von Hambech. 1,484,556; Feb. 19.
Tire, Automobile. E. D. Newman. Des. 64,026; Feb. 19.
Tire-boot-building machine. C. W. Steele. 1,483,915; Feb. 19.
Tire-building machine. J. A. Ahlfors. 1,484,456; Feb. 19.
Tire chain. G. H. Waters. 1,484,596; Feb. 19.
Tire, Cushion. A. H. Ratterree. 1,484,037; Feb. 19.
Tire flaps, Method and apparatus for marking. A. O. Abbott, jr. 1,484,455; Feb. 19.
Tire tread. H. D. Mitchell. Des. 64,025; Feb. 19.
Tires, Air bag for use in the manufacture of pneumatic. J. F. Palmer. 1,484,407; Feb. 19.
Tires, Method and apparatus for manufacturing. W. C. Stevens. Re15,772; Feb. 19.
Toilet seat. W. D. Burk. 1,484,059; Feb. 19.
Tongs, Cinder. J. C. Wertz. 1,484,100; Feb. 19.
Tool holder. F. O. Jaques, jr. 1,484,332; Feb. 19.
Tool holder. H. Spencer. 1,484,310; Feb. 19.
Tool kit. O. T. Bekken. 1,484,547; Feb. 19.
Tooth paste. J. P. Shepherd. 1,484,415; Feb. 19.
Torpedo. A. T. Hall. 1,484,304; Feb. 19.
Toy, Fish. J. Margus. 1,484,182; Feb. 19.
Toy palette. J. Carmel. 1,484,613; Feb. 19.
Toy railway track. M. S. Dunkelberger. 1,484,012; Feb. 19.
Toy, Sounding. A. Barbar. 1,484,460; Feb. 19.
Tractors, Clutch-pedal lock for. E. R. Miller. 1,484,146; Feb. 19.
Train-pipe connecter, Automatic. J. V. Robinson. 1,484,082; Feb. 19.
Train-pipe coupling. J. V. Robinson. 1,484,081; Feb. 19.
Transformer, Oil-insulated. C. D. Ainsworth. 1,483,922; Feb. 19.
Translating device, Multiphase. K. R. Ihamuotila. 1,484,220; Feb. 19.
Transmission-band adjuster. O. E. Schnoebelen. 1,483,954; Feb. 19.
Transmission control. C. B. Funk. 1,484,301; Feb. 19.
Transmission-equalization arrangement. L. H. Darrow. 1,483,930; Feb. 19.
Transmission lock. R. Huff. 1,483,886; Feb. 19.
Trap: *See*—
Radiator trap. Vacuum trap.
Trap. J. A. Tubbs. 1,484,363; Feb. 19.
Tread-rest foot grip. A. C. Van Nuis. 1,483,918; Feb. 19.
Trestle. F. L. Wickham. 1,484,164; Feb. 19.
Tube fitting, Upset-. H. W. Bundy. 1,484,295; Feb. 19.
Tumbler. E. W. Heisey. Des. 64,011; Feb. 19.
Tunnels, Method of and means for erecting. J. F. O'Rourke. 1,484,188; Feb. 19.
Turbine plant provided with toothed gearing. F. Ljungström. 1,484,034; Feb. 19.
Turboblowers and other apparatus for delivering fluid under pressure or suction, Means for regulating. L. C. Kemp. 1,484,504; Feb. 19.
Turret mechanism. C. M. Chapman. 1,484,603; Feb. 19.
Typewriting and computing machine, Combined. C. M. Illisee. 1,484,218; Feb. 19.
Typewriting and computing machine, Combined. A. W. Steiger. 1,484,281; Feb. 19.
Typewriting machine. E. E. Barney. 1,484,203; Feb. 19.
Typewriting machine. E. E. Barney. 1,484,317; Feb. 19.
Typewriting machine. M. C. Crawley. 1,484,113; Feb. 19.
Typewriting machine J. B. Holden. 1,484,219; Feb. 19.
Typewriting machine. J. A. B. Smith. 1,483,914; Feb. 19.
Typewriting machine. J. A. B. Smith. 1,484,196; Feb. 19.
Umbrella. S. C. Vincent. 1,484,367; Feb. 19.
Undereave, Flexible. A. A. Griswold. 1,484,020; Feb. 19.
Underreamer. J. M. Kellerman. 1,483,944; Feb. 19.
Urinal flush. A. C. Jaeger. 1,483,939; Feb. 19.
Vacuum trap. K. Kiefer. 1,484,505; Feb. 19.
Valve. D. W. Slattery. 1,483,991; Feb. 19.
Valve actuator. R. H. Gaspard. 1,484,126; Feb. 19.
Valve, Blow-out. G. W. Keller. 1,483,943; Feb. 19.
Valve mechanism, Silencer for. F. J. Revor. 1,484,080; Feb. 19.
Valve or gas cock. F. W. Birtch. 1,484,290; Feb. 19.
Valve packing. C. M. Cusick. 1,484,350; Feb. 19.
Valve plunger, Hydraulic. S. J. Randall. 1,484,533; Feb. 19.
Valve, Restriction. F. B. Comins and J. Armstrong. 1,484,253; Feb. 19.
Valve, Reversible pump. G. E. R. Rothenbucher. 1,484,238; Feb. 19.
Valve-stem washer. L. C. Sharpe. 1,484,573; Feb. 19.
Valve, Thermostatic. H. C. Mallory. 1,483,902; Feb. 19.
Valve, Throttling. E. E. Richardson. Re15,770; Feb. 19.
Valve-truing machine. A. P. Kahl. 1,484,133; Feb. 19.
Valves, Cup for working. W. J. Walker. 1,483,998; Feb. 19.
Vanity box. P. Van Der Voort. 1,484,161; Feb. 19.
Vaporizer. J. S. Wight. 1,484,000; Feb. 19.
Vehicle fender. L. Grella. 1,484,351; Feb. 19.
Vehicle, Habitable camping. N. R. Moore. 1,484,522; Feb. 19.
Vehicle, Marine. O. S. Pridgen. 1,484,410; Feb. 19.
Vehicle signal. S. B. Shaw. 1,484,089; Feb. 19.
Vehicle spring mount. L. J. Genett. 1,484,127; Feb. 19.
Vehicle wheel. J. W. Shepard. 1,484,535; Feb. 19.
Vehicles, Dumping body for. J. P. Heil. 1,484,327; Feb. 19.
Vehicles, Locking device for motor. S. Reiser. 1,484,560; Feb. 19.
Violin bow. J. Stadniczek. 1,483,994; Feb. 19.
Visual effects in the air and apparatus therefor, Producing. J. C. Savage. Re15,771; Feb. 19.
Wagon-brake-operating means. W. S. Gander. 1,484,487; Feb. 19.
Wagons, End gate for dumping. O. A. Kelley. 1,483,890; Feb. 19.
Wall structure. C. L. Michod. 1,484,520; Feb. 19.
Walls, Surfacing. T. Kerner. 1,484,334; Feb. 19.
Warp beam. B. A. Peterson. 1,484,153–6; Feb. 19.

Washer: *See*—
Valve-stem washer.
Washing machine. N. Mastromarino. 1,484,183; Feb. 19.
Washing machine. H. Warburton. 1,484,594; Feb. 19.
Watch carrier. A. Ezekiel, S. Lubin, J. Warshner, and W. S. Neil. 1,484,121; Feb. 19.
Watch, Wrist. M. M. Suderov. 1,484,420; Feb. 19.
Water-closet bowl. A. Ek. Des. 63,998; Feb. 19.
Water column and water and fuel controller, Combination. H. O. Baker. 1,484,546; Feb. 19.
Water heater and switch, Electric. M. H. Shoenberg. 1,484,451; Feb. 19.
Water-power motor. J. V. Kranebeel. 1,483,895; Feb. 19.
Water purifier, Boiler-feed-. B. L. Morrison. 1,484,073; Feb. 19.
Water-tank cover or jacket, Hot-. F. W. Birtch. 1,484,056; Feb. 19.
Water-tube boiler, High-pressure. H. Witz. 1,484,540; Feb. 19.
Water wheel. J. L. Barnes. 1,484,250; Feb. 19.
Web-holder mechanism. M. C. Miller. 1,483,905; Feb. 19.
Weighing apparatus. F. H. Norton. 1,484,358; Feb. 19.
Weighing balance. J. Boekel. 1,484,005; Feb. 19.
Weighing mechanism. L. T. Johnson. 1,483,888; Feb. 19.
Well cleaner. R. E. Carmichael. 1,484,601; Feb. 19.
Wheel: *See*—
Spring wheel. Water wheel.
Vehicle wheel.
Wheel. J. B. Matteson. 1,484,228; Feb. 19.
Wheel. J. R. Young. 1,484,106; Feb. 19.
Wheel puller. C. R. Holstrom. 1,484,130; Feb. 19.
Wheels, Making pressed-steel. J. Ledwinka. 1,484,223; Feb. 19.
Window, Hinged. C. J. Wamser. 1,483,920; Feb. 19.
Windshield wiper. F. H. Brennan. 1,484,251; Feb. 19.
Wood, tile, or other building material, Composition substitute for. F. A. Bartlett. 1,484,370; Feb. 19.
Wood-treating plant. G. B. Shipley. 1,484,574; Feb. 19.
Wrapping and unwrapping machine. F. M. Pierce. 1,484,409; Feb. 19.
Wrapping machine. M. B. Ferguson. 1,484,015; Feb. 19.
Wrench: *See*—
Reversible wrench.
Wrench. J. H. Illig. 1,484,374; Feb. 19.
Wrench. C. M. Jones. 1,484,132; Feb. 19.
Wrench. W. F. Miller. 1,483,906; Feb. 19.
Wristband or similar article, Plate for a. A. N. Davis. Des. 63,997; Feb. 19.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 19, 1924.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 1: 1,484,150
2— 41: 1,484,408
67: 1,484,570
79: 1,484,187
149: 1,484,042
151: 1,484,120
192: 1,483,881
4— 108: 1,483,930
237: 1,484,059
255: 1,484,512
5— 21: 1,484,337
115: 1,483,979
306: 1,484,158
343: 1,484,361
10— 116: 1,484,067
12— 22: 1,483,955
33: 1,484,322
133: 1,484,609
15— 8: 1,483,972
1,483,973
1,483,974
1,483,975
1,483,976
9: 1,483,977
128: 1,484,026
1,484,027
130: 1,484,215
169: 1,484,230
175: 1,484,531
265: 1,483,918
16— 42: 1,484,335
82: 1,483,912
128: 1,483,920
131: 1,484,536
136: 1,484,610
149: 1,484,009
164: 1,484,093
189: 1,484,372
17— 45: 1,484,523
18— 45: 1,484,299
1,484,407
48: 1,484,200
54: 1,484,004
59: 1,484,569
19— 120: 1,484,567
142: 1,484,045
20— 19: 1,483,871
1,484,047
24: 1,483,946
34: 1,484,184
35: 1,484,024
74: 1,483,941
91: 1,484,175
22— 73: 1,484,544
92: 1,484,439
1,484,440
101: 1,484,423
102: 1,484,297

CLASSIFIED LIST OF TRADE-MARKS REGISTERED.

CLASS 1.

Coal. Kalamazoo Ice & Fuel Company. 180,258; Feb. 26; Serial No. 185,595; published Dec. 11, 1923.

CLASS 4.

Cleaning and polishing preparation. J. Carr. 180,452; Feb. 26.

Papers or cloths, Abrasive. H. H. Barton and Son Co. 180,294; Feb. 26; Serial No. 170,001; published Dec. 4, 1923.

Polish and dressing, Shoe. S. M. Bixby & Co. 180,396; Feb. 26; Serial No. 187,083; published Dec. 4, 1923.

Soap. E-Z-Way Co. 180,266; Feb. 26; Serial No. 183,648; published Dec. 4, 1923.

Soap. Northern Jobbing Company. 180,475; Feb. 26.

Soap cream for shaving. Andron Hygienic Company. 180,385; Feb. 26; Serial No. 186,265; published Dec. 11, 1923.

CLASS 6.

Alteratives. Parke, Davis & Company. 180,216; Feb. 26; Serial No. 184,180; published Nov. 27, 1923.

Antiseptic and healing preparation. H. D. Clark. 180,344; Feb. 26; Serial No. 183,962; published Nov. 27, 1923.

Antiseptic solution. M. Vavra. 180,176; Feb. 26; Serial No. 182,622; published Dec. 4, 1923.

Antiseptics and germicides. Parke, Davis & Company. 180,217; Feb. 26; Serial No. 184,182; published Nov. 27, 1923.

Aspirin tablets. J. T. Noell. 180,168; Feb. 26; Serial No. 184,473; published Nov. 27, 1923.

Baking powder and cream of tartar. Reid, Murdoch & Co. 180,174; Feb. 26; Serial No. 184,422; published Nov. 27, 1923.

Baking powder, cream of tartar, bluing, and ammonia. Oakford & Fahnestock. 180,289; Feb. 26; Serial No. 169,920; published Dec. 4, 1923.

Brilliantine. Marinello Company. 180,170; Feb. 26; Serial No. 184,979; published Dec. 4, 1923.

Carbon remover, Liquid. National Compound Co. 180,231; Feb. 26; Serial No. 179,312; published Nov. 20, 1923.

Chemical preparation. Boyce & Veeder Company. 180,418; Feb. 26; Serial No. 182,127; published Oct. 30, 1923.

Chemical preparations used for deodorizing and disinfecting. W. J. Howell. 180,207; Feb. 26; Serial No. 185,252; published Nov. 27, 1923.

Clay, Complexion. Wonderlite Products Company. 180,191; Feb. 26; Serial No. 184,484; published Dec. 4, 1923.

Clay face pack, hair dressing and tonic, almond lotion, etc., Creo-. Van Vleet Mansfield Drug Co. 180,330; Feb. 26; Serial No. 179,609; published Dec. 4, 1923.

Color-stripping or dye-removing compound. John Campbell & Co. 180,160; Feb. 26; Serial No. 184,590; published Dec. 4, 1923.

Color-stripping or dye-removing compound. John Campbell & Co. 180,187; Feb. 26; Serial No. 184,589; published Dec. 4, 1923.

Compound for treating eyelashes and eyelids. J. B. Gattas. 180,218; Feb. 26; Serial No. 184,130; published Nov. 27, 1923.

Corn remedy. J. D. Zemp. 180,157; Feb. 26; Serial No. 184,702; published Dec. 4, 1923.

Cream and hair dressing, Greaseless cold. Graves Bros. 180,227; Feb. 26; Serial No. 179,196; published Nov. 20, 1923.

Cream, Cold. Bonded Products Corporation. 180,184–5; Feb. 26; Serial Nos. 184,585–6; published Dec. 4, 1923.

Cream for cleansing the skin, etc. Gilbert Bros. & Co. 180,278; Feb. 26; Serial No. 183,375; published Dec. 4, 1923.

Creams. Dakin Laboratories. 180,224; Feb. 26; Serial No. 184,896; published Dec. 4, 1923.

Creams, powders, rouges, etc. Palmers, Limited. 180,172; Feb. 26; Serial No. 184,292; published Nov. 27, 1923.

Disinfectants, deodorants, cleaners, etc. Pheno-Bane Products Co. 180,208; Feb. 26; Serial No. 183,720; published Dec. 4, 1923.

Dyes and dyestuffs. Grasselli Chemical Company. 180,180; Feb. 26; Serial No. 154,506; published Nov. 27, 1923.

Dyestuffs. Geigy Company. 180,158; Feb. 26; Serial No. 184,721; published Dec. 4, 1923.

Expectorant. Jno. B. Daniel Inc. 180,275; Feb. 26; Serial No. 183,518; published Dec. 4, 1923.

Germicide and worm remedy for stock. C. Hoepfner. 180,159; Feb. 26; Serial No. 184,729; published Dec. 4, 1923.

Glycerin and rose water, sweet spirits of niter, and turpentine. Warren P. Rash Co. 180,229; Feb. 26; Serial No. 177,620; published Nov. 27, 1923.

Hair cream. Youngstown Barber Supply Co. 180,333; Feb. 26; Serial No. 176,811; published Dec. 4, 1923.

Hair grower and scalp massage. J. Carrozza. 180,165; Feb. 26; Serial No. 185,073; published Dec. 4, 1923.

Hair growers temple growers, and pressing oil. M. F. Glenn. 180,188; Feb. 26; Serial No. 184,548; published Dec. 4, 1923.

Hair preparations. M. E. Thompson. 180,228; Feb. 26; Serial No. 177,246; published Nov. 20, 1923.

Hair-restorer compounds. J. Childers. 180,163; Feb. 26; Serial No. 185,004; published Dec. 4, 1923.

Hair tonic. A. De Brûle. 180,343; Feb. 26; Serial No. 183,961; published Nov. 27, 1923.

Halogen-bearing food for the thyroid gland. Thyro-Logen Laboratories. 180,360; Feb. 26; Serial No. 181,576; published Nov. 20, 1923.

Insecticide. I. D. Russell. 180,175; Feb. 26; Serial No. 184,424; published Nov. 27, 1923.

Insecticide. Standard Oil Company (New Jersey). 180,361; Feb. 26; Serial No. 181,872; published Nov. 27, 1923.

Insecticide preparation. B. Heller & Company. 180,219; Feb. 26; Serial No. 184,131; published Nov. 27, 1923.

Insecticides. Boll Weevil Destroyer Co. 180,214; Feb. 26; Serial No. 184,322; published Nov. 27, 1923.

Insecticides. Moth K-L Co. 180,236; Feb. 26; Serial No. 168,721; published Dec. 4, 1923.

Insecticides. C. A. B. Zook. 180,148; Feb. 26; Serial No. 184,885; published Dec. 4, 1923.

Insecticides. C. A. B. Zook. 180,149–50; Feb. 26; Serial Nos. 184,887–8; published Dec. 4, 1923.

Insecticides and fungicides. General Chemical Company. 180,345; Feb. 26; Serial No. 183,967; published Nov. 27, 1923.

Laxative herbal compound. B. E. Sherman. 180,223; Feb. 26; Serial No. 184,106; published Nov. 27, 1923.

Liniment and preparation for increasing growth of the hair. F. H. Colburn. 180,220; Feb. 26; Serial No. 184,161; published Nov. 27, 1923.

Lotion, Face. E. J. Jahn Company. 180,153; Feb. 26; Serial No. 184,861; published Dec. 4, 1923.

Lotion, Face and hand. G. F. Meyer. 180,408; Feb. 26; Serial No. 182,763; published Dec. 4, 1923.

Lotion, Skin. D. G. Israel. 180,152; Feb. 26; Serial No. 184,960; published Dec. 4, 1923.

Lye products. J. Picot. 180,328; Feb. 26; Serial No. 180,774; published Dec. 4, 1923.

Medicinal capsule. N. P. Steckler. 180,177; Feb. 26; Serial No. 182,682; published Dec. 4, 1923.

Medicinal powder. W. S. Pollard. 180,363; Feb. 26; Serial No. 180,140; published Nov. 20, 1923.

Medicinal preparation. Fluensol Proprietary Ltd. 180,233; Feb. 26; Serial No. 169,896; published Dec. 4, 1923.

Medicinal preparation for the treatment of the stomach. Kleker Chemical Company. 180,440; Feb. 26.

Medicine for coughs, etc. G. C. O'Neil. 180,193; Feb. 26; Serial No. 184,511; published Dec. 4, 1923.

Medicine for the relief of pain. J. E. Hammond. 180,303; Feb. 26; Serial No. 167,916; published Dec. 4, 1923.

Medicine for treatment of syphilis. Parke, Davis & Company. 180,215; Feb. 26; Serial No. 184,181; published Nov. 27, 1923.

Medicine, Rheumatism. Blackburn Products Company. 180,183; Feb. 26; Serial No. 181,473; published Nov. 27, 1923.

Moth and insect preventive. Lawlor-McCormick Co. 180,357; Feb. 26; Serial No. 181,899; published Nov. 27, 1923.

Ointment. A. Malcuit. 180,192; Feb. 26; Serial No. 184,507; published Dec. 4, 1923.

Ointment for burns, cuts, etc. Columbus Chemical Company. 180,238; Feb. 26; Serial No. 165,745; published Dec. 4, 1923.

Perfume extract, toilet water, lotions, etc. L. T. Piver, Inc. 180,212; Feb. 26; Serial No. 184,183; published Nov. 27, 1923.

Perfume, toilet water, sachet, cold cream, etc. Adolf D. Lindemann & Son. 180,359; Feb. 26; Serial No. 181,951; published Nov. 20, 1923.

Perfumes, toilet water, face powder, etc. Coty, Inc. 180,226; Feb. 26; Serial No. 180,101; published Nov. 20, 1923.

Perfumes, toilet water, face powders, etc. L. Philippe. 180,171; Feb. 26; Serial No. 184,096; published Nov. 27, 1923.

Perfumes, toilet water, sachet, etc. M. V. Anderson & Company. 180,323; Feb. 26; Serial No. 180,955; published Dec. 4, 1923.

Perfumes, toilet waters, face and talcum powders, etc. George W. Button Corporation. 180,167; Feb. 26; Serial No. 184,434; published Nov. 27, 1923.

Powder, bath talcum, and perfume, Talcum and face. Lournay, Inc. 180,405; Feb. 26; Serial No. 181,448; published Nov. 27, 1923.

Powder, cold and vanishing cream, lip stick, etc., Face. P. Antle. 180,413; Feb. 26; Serial No. 182,894; published Dec. 4, 1923.

Powder, Conditioning. Gilbert Bros. & Co. 180,283; Feb. 26; Serial No. 183,373; published Dec. 4, 1923.

Powder, Face. Friedrich-Friedrich Co. 180,151; Feb. 26; Serial No. 184,819; published Dec. 4, 1923.

Powders and creams, perfumes, toilet waters, etc., Face. W. H. Johnson. 180,242; Feb. 26; Serial No. 162,929; published Nov. 20, 1923.

Powders, face creams, perfumes, etc., Face and talcum. P. E. Page. 180,147; Feb. 26; Serial No. 184,982; published Dec. 4, 1923.

Powders, rouges, etc., Face. Loesser Manufacturing Company. 180,371; Feb. 26; Serial No. 169,159; published Oct. 17, 1922.

Preparation for polishing and dyeing shoes and leather articles. L. F. Christman. 180,173; Feb. 26; Serial No. 184,382; published Nov. 27, 1923.

Preparation for the removal of superfluous hair. Jean Jordeau Inc. 180,441; Feb. 26.

Preparation for treatment of indigestion. Dr. R. Arcularius. 180,182; Feb. 26; Serial No. 175,697; published Dec. 4, 1923.

Preparation intended to remove superfluous fat. Modern Pharmacal Co. 180,161; Feb. 26; Serial No. 184,616; published Dec. 4, 1923.

Preparation used for gland invigorator treatments. O. S. Schmidt. 180,162; Feb. 26; Serial No. 184,623; published Dec. 4, 1923.

Preparations for germicidal, insecticidal, and deodorant purposes, etc. G. T. Wilson. 180,166; Feb. 26; Serial No. 185,277; published Nov. 27, 1923.

Rouge. Armand Company. 180,284; Feb. 26; Serial No. 183,244; published Dec. 4, 1923.

Saline preparation for rheumatism, kidney disorders, etc. Saltrates Limited. 180,276; Feb. 26; Serial No. 183,598; published Dec. 4, 1923.

Salts, Bath. L. S. Thomas. 180,155; Feb. 26; Serial No. 184,628; published Dec. 4, 1923.

Salves and ointments. Endazoin Company. 180,346; Feb. 26; Serial No. 184,026; published Nov. 27, 1923.

Scenting purposes, Natural and synthetic products used for. Ungerer & Company. 180,265; Feb. 26; Serial No. 184,998; published Dec. 4, 1923.

Serum, Anti-hog-cholera. Anchor Serum Company. 180,222; Feb. 26; Serial No. 184,053; published Nov. 27, 1923.

Shampoo preparations. G. Pagonis. 180,285; Feb. 26; Serial No. 183,312; published Dec. 4, 1923.

Solution, composition, or mixture for the removal or prevention of incrustation or corrosion in steam generators, etc. Hughes and Hancock. 180,230; Feb. 26; Serial No. 178,667; published Nov. 20, 1923.

Tablet, Liver. T. E. Smith. 180,179; Feb. 26; Serial No. 181,541; published Nov. 20, 1923.

Tablets, Cold. C. R. Birchfiel. 180,181; Feb. 26; Serial No. 167,377; published Nov. 27, 1923.

Tablets for nervousness, headaches, anæmia, etc. Taylor Gland Research Laboratories. 180,274; Feb. 26; Serial No. 183,457; published Dec. 4, 1923.

Tea, Medicinal. F. Forowicz. 180,282; Feb. 26; Serial No. 183,370; published Dec. 4, 1923.

Toilet powders, toilet waters, after-shaving lotions, etc. J. B. Williams Company. 180,410; Feb. 26; Serial No. 182,525; published Dec. 4, 1923.

Tonic, General. Metropole Drug Company. 180,248; Feb. 26; Serial No. 151,279; published Nov. 20, 1923.

Tooth paste. A. L. Graham. 180,280; Feb. 26; Serial No. 183,448; published Dec. 4, 1923.

Tooth paste. S. S. White Dental Manufacturing Company. 180,164; Feb. 26; Serial No. 185,044; published Dec. 4, 1923.

Vermin exterminators. M. Maillard. 180,221; Feb. 26; Serial No. 184,033; published Nov. 27, 1923.

Waving and curling preparation for the hair. G. Pagonis. 180,281; Feb. 26; Serial No. 183,313; published Dec. 4, 1923.

CLASS 11.

Colors and marbling sizes, Ruling, edge, and marbling. H. Behlen & Bro. 180,259; Feb. 26; Serial No. 185,285; published Dec. 11, 1923.

Ink, Concentrated writing. Standard Ink Mfg. Co. 180,417; Feb. 26; Serial No. 181,871; published Nov. 20, 1923.

Inks, Stencil. R. E. Beckert. 180,424; Feb. 26; Serial No. 183,134; published Dec. 11, 1923.

Rubber-stamp pads and pad inks. E. Baumgarten. 180,304; Feb. 26; Serial No. 167,223; published Nov. 20, 1923.

CLASS 12.

Ganister. Keystone Refractories Company. 180,145; Feb. 26; Serial No. 184,944; published Dec. 11, 1923.

CLASS 13.

Door holders. Richards-Wilcox Manufacturing Company. 180,490; Feb. 26.

Nails and staples. G. X. Wendling. 180,254; Feb. 26; Serial No. 185,683; published Dec. 11, 1923.

Pipe lines, Expansion joints for. Howard Iron Works. 180,306; Feb. 26; Serial No. 186,233; published Dec. 11, 1923.

Rivets. Crescent Belt Fastener Company. 180,293; Feb. 26; Serial No. 169,200; published Dec. 11, 1923.

CLASS 14.

Steel and iron sheets and plates, Ingot molds, etc. Allegheny Steel Company. 180,380; Feb. 26; Serial No. 165,518; published Dec. 11, 1923.

CLASS 16.

Polish, Auto. Lee's Auto Polish Co. 180,435; Feb. 26.

CLASS 19.

Automobile bodies. Pullman Company. 180,384; Feb. 26; Serial No. 187,267; published Dec. 11, 1923.

Automobile bumper. Eaton Axle & Spring Company. 180,404; Feb. 26; Serial No. 186,632; published Dec. 11, 1923.

Automobile rear-view mirrors and windshield wings. Komomo Automotive Mfg. Co. 180,386–7; Feb. 26; Serial Nos. 186,278–9; published Dec. 11, 1923.

Cab bodies, Commercial. McCrea Mfg. Co. 180,300; Feb. 26; Serial No. 173,572; published Dec. 11, 1923.

Journal boxes and lids for railway cars. Allegheny Steel Company. 180,290; Feb. 26; Serial No. 169,795; published Dec. 11, 1923.

Shock absorbers. C. C. Cannan. 180,420; Feb. 26; Serial No. 182,331; published Dec. 11, 1923.

CLASS 21.

Automobiles, etc., Electrically-operated signals for. H. Leiser. 180,169; Feb. 26; Serial No. 184,975; published Dec. 4, 1923.

Batteries and parts thereof, Electric storage. Blue Ribbon Battery Company. 180,225; Feb. 26; Serial No. 179,652; published Nov. 20, 1923.

Cat whiskers. Foote Mineral Co. 180,205; Feb. 26; Serial No. 185,823; published Nov. 13, 1923.

Condensers, Variable. Fett & Kimmel Co. 180,209; Feb. 26; Serial No. 184,330; published Nov. 13, 1923.

Cookers, Electric. Excel Electric Co. 180,210; Feb. 26; Serial No. 184,716; published Nov. 20, 1923.

Detector crystals. Foote Mineral Co. 180,206; Feb. 26; Serial No. 185,822; published Nov. 13, 1923.

Electric-cable hangers. Everstick Anchor Company. 180,492; Feb. 26.

Electric hot plates. Liberty Gauge and Instrument Company. 180,355–6; Feb. 26; Serial Nos. 182,711–12; published Nov. 20, 1923.

Electrical and telephone apparatus. Cook Electric Company. 180,244; Feb. 26; Serial No. 152,785; published Nov. 20, 1923.

Electrical apparatus. City Electric Company. 180,354; Feb. 26; Serial No. 182,399; published Nov. 20, 1923.

Electrical starting, lighting, and ignition apparatus and parts thereof. Dayton Engineering Laboratories Company. 180,358; Feb. 26; Serial No. 181,942; published Nov. 20, 1923.

Electrical switches. Hart & Hegeman Manufacturing Company. 180,368; Feb. 26; Serial No. 161,728; published July 24, 1923.

Fireplaces, Artificial log for. W. E. Marshall. 180,351; Feb. 26; Serial No. 182,979; published Nov. 20, 1923.

Fuses, protective devices for radio apparatus, adapters, loud speakers, etc. M. B. Cohen. 180,353; Feb. 26; Serial No. 183,195; published Nov. 20, 1923.

Headlights of automobiles and motor cycles, Switch for dimming the. M. O. Devers. 180,211; Feb. 26; Serial No. 185,247; published Nov. 20, 1923.

Irons and toasters, Electric. Aagaard Distributing Corporation. 180,477; Feb. 26.

Lamps, Electric. Parch-O-Lite Co. 180,235; Feb. 26; Serial No. 174,026; published Nov. 20, 1923.

Lamps, Portable electric. Greist Manufacturing Co. 180,362; Feb. 26; Serial No. 180,978; published Nov. 20, 1923.

Locomotives. Mancha Storage Battery Locomotive Company. 180,469; Feb. 26.

Motors, generators, rotary converters, etc., Electric. Louis Allis Company. 180,349; Feb. 26; Serial No 183,790; published Nov. 13, 1923.

Motors, switchboards, etc., Electric. M. R. Rodrigues. 180,234; Feb. 26; Serial No. 172,123; published Nov. 20, 1923.

Ovens for the toasting of ice cream, Electric. Toasted Alaskas Corporation of America Limited. 180,241; Feb. 26; Serial No. 162,592; published Nov. 20, 1923.

Radio and telephone apparatus. Moss-Schury Mfg. Co. 180,352; Feb. 26; Serial No. 183,119; published Nov. 20, 1923.

Radio receiving and transmitting apparatus. Chicago Radio Apparatus Co. 180,236; Feb. 26; Serial No. 165,227; published Nov. 20, 1923.

Radio receiving apparatus. A. H. Grebe & Co. 180,237; Feb. 26; Serial No. 165,375; published Nov. 20, 1923.

Radio receiving apparatus and parts thereof. Pal Radio Company. 180,348; Feb. 26; Serial No. 183,537; published Nov. 20, 1923.
Radio receiving set to an electric-light circuit, Plugs for connecting a. U. S. Radio Company. 180,350; Feb. 26; Serial No. 183,565; published Nov. 20, 1923.

Wool and wool mixtures piece goods. William Hollins & Company. 146,506; Feb. 26.
Woolen goods in the piece. Worumbo Manufacturing Company. 190,325; Feb. 26.
Woolen piece goods. Ely & Walker Dry Goods Company. 128,630; Feb. 26.
Woolen piece goods. Forstmann & Huffmann Company. 190,251; Feb. 26.

CLASS 43.

Cotton, Mercerized sewing. James Nelson Limited. 189,333; Feb. 26.

CLASS 44.

Dental cementing materials. Great Western Gypsum Co. 190,335; Feb. 26.
Dentures, Artificial. Gold Sealed Denture Process Co. 188,413; Feb. 26.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Electric vibrators, manicure sets, hot-water bottles, etc. MacLean Drug Company. 178,754; Feb. 26.
Foot ailments, etc., Apparatus used for the treatment of. C. Cross. 189,152; Feb. 26.
Foot-arch supports. G. S. Barker. 189,385; Feb. 26.
Preparations for holding false teeth in place. Hart & Co. 190,587; Feb. 26.
Respirators. F. Foster. 190,500; Feb. 26.
Rubber gloves, Surgeons'. J. V. Miller. 190,172; Feb. 26.
Surgical splint. J. H. Prante. 190,518; Feb. 26.

CLASS 45.

Beverage sold as soft drink and sirup for making the same. K. P. Hilander. 189,406; Feb. 26.
Beverages, sirups and extracts for making same. Jas. M. Dupiech Bottling Co. 190,450; Feb. 26.
Flavoring for beverages. Frederick Stearns & Company. 190,819; Feb. 26.
Water, Sparkling. Electrified Water and Machine Company. 187,800; Feb. 26.

CLASS 46.

Apples, citrous fruits, grapes, melons, etc., Fresh. Smith & Holden. 187,778–9; Feb. 26.
Bread. P. G. Lewis. 176,297; Feb. 26.
Bread, cakes, fried cakes, and coffee cakes. Grennan Cake Corporation. 190,408; Feb. 26.
Bread, rolls, buns, and other pastry. Texas Bread Company. 179,067; Feb. 26.
Bread, rolls, cakes, etc. Greman Cake Corporation. 190,409; Feb. 26.
Cakes, cookies, coffee cakes, etc. Grennan Cake Corporation. 190,405–6; Feb. 26.
Candies. Anne Watrous & Co. 183,783; Feb. 26.
Candy. Chase Candy Company. 188,585; Feb. 26.
Candy. United Drug Company. 184,877; Feb. 26.
Candy and crackers. H. L. Schlesinger. 180,390; Feb. 26.
Candy and other candies, Mexican pecan. L. Kayton. 178,614; Feb. 26.
Canned and dried fruits and canned fish. Hunt Brothers Packing Company. 186,510; Feb. 26.
Canned fruits. Hunt Brothers Packing Company. 187,464; Feb. 26.
Canned fruits. Hunt Brothers Packing Company. 187,520; Feb. 26.
Canned sardines. Great Atlantic and Pacific Tea Company. 190,641; Feb. 26.
Canned sardines. F. B. Neuhoff. 171,861; Feb. 26.
Canned vegetables. Klute-Fleming Packing Co. 190,346; Feb. 26.
Canned vegetables and fruits. La Sierra Heights Canning Co. 169,638; Feb. 26.
Cereal products used as a binder in sausage, meat loaves, etc. B. Heller & Company. 171,758; Feb. 26.
Cheese. Brookshire Cheese Co. 188,359–60; Feb. 26.
Cheese. B. H. Locatelli. 188,764; Feb. 26.
Coffee and tea. H. G. Hill Company. 166,689; Feb. 26.
Corn meal. Holland-O'Neal Milling Co. 187,106; Feb. 26.
Extracts, Food-flavoring. Mineapo Co. 187,585; Feb. 26.
Feeds and grains. Flory Milling Company. 186,834; Feb. 26.
Flour. Flory Milling Company. 186,833; Feb. 26.
Flour, Prepared cereal. Societe Anonyme "Banania." 190,317; Feb. 26.
Flour, Self-rising wheat. Trenton Milling Company. 190,182; Feb. 26.
Flour, tea, coffee, and corn meal, Wheat. H. G. Hill Company. 166,690; Feb. 26.
Flour, Wheat. Bowen-Oglesby Milling Co. 188,659; Feb. 26.
Flour, Wheat. Ellinwood Milling Co. 173,817; Feb. 26.
Flour, Wheat. Hecker-Jones-Jewell Milling Company. 182,804; Feb. 26.
Fruits, Fresh citrous. G. V. Grieninger. 188,753; Feb. 26.
Fruits, Fresh citrous. Leeco Growers and Packers, Incorporated. 180,868; Feb. 26.
Ginger and marmalade, Preserved. B. S. Powell. 173,501; Feb. 26.
Honey. California Honey Distributors. 188,662; Feb. 26.
Ice-cream bars, Chocolate-coated. Chapin-Sacks Corporation. 164,867; Feb. 26.
Ice-cream products, Candy-coated. W. F. Billings. 181,932; Feb. 26.
Macaroni, spaghetti, and egg noodles. Goodmade Pure Food Co. Reg. 185,119; Feb. 26.
Macaroni, spaghetti, and tomato paste. Federico Macaroni Mfg. Co. 187,102; Feb. 26.
Milk, Evaporated skimmed. Oatman Condensed Milk Company. 185,761; Feb. 26.
Peanuts, peanut butter, and peanut-butter sandwiches, Salted. O. K. Jelks & Son. 189,901; Feb. 26.
Pie, making lemon butter, etc., Preparation for making a filling for lemon. E. G. Frank. 187,156; Feb. 26.
Sauce and pulp, Fruit. W. D. Kemp. 188,208–9; Feb 26.
Sirup, Table. Atlantic Syrup Refining Co. 189,880; Feb. 26.
Vegetables, deciduous and citrous fruits, Fresh. Gumperts & Gotfried. 184,609; Feb. 26.

Wafers. M. C. Cooke. 188,232; Feb. 26.

CLASS 50.

Plaques for decorative purposes and reproductions thereof. Winold Reiss Decorating Co. 190,140; Feb. 26.
Seed and plant protectors. W. R. Schindler. 190,210; Feb. 26.
Signs. Henderson Lithographing Co. 189,503; Feb. 26.
Stands, Portable collapsible lunch. J. G. Kirby. 189,129; Feb. 26.
Tents, Outing. Marshall-Wells Company. 189,798; Feb. 26.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 26TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Accetta, Antonio F., West Dover, Ohio. Burglarproof attachment for locks. 1,485,207; Feb. 26.
Adams, William F., Santa Monica, Calif. Automobile bumper. 1,485,326; Feb. 26.
Adland, Victor E., Chicago, Ill. Rotatable conveying truck. 1,484,615; Feb. 26.
Advance Automobile Accessories Corporation. (See Gray, Orrin D., assignor.)
Aeolian Company, The. (See Millington, William, assignor.)
Ahlbell Battery Container Corporation. (See Ahlgren, John M., assignor.)
Ahlgren, John M., Indianapolis, Ind., assignor to Ahlbell Battery Container Corporation, Waukegan, Ill. Manufacturing containers. 1,485,061; Feb. 26.
Aker, Evender S., Goshen, N. Y. Shock absorber. 1,484,859; Feb. 26.
Albach, Frank, assignor to Fred Medart Manufacturing Company, St. Louis, Mo. Track for gymnasium climbing poles. 1,485,135; Feb. 26.
Albert, Walter P., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,484,614; Feb. 26.
Aldeborgh, Erik H., assignor to C. E. Johansson, Inc., Poughkeepsie, N. Y. Gauge. 1,485,154; Feb. 26.
Alexander, Carl Z. and E. S., Newark, N. J. Steam boiler. 1,484,857; Feb. 26.
Alexander, Earl S. (See Alexander, Carl Z. and E. S.)
Alexander, Edward, Seattle, Wash. Portable table. 1,484,858; Feb. 26.
Alm, Einar E., Stockholm, Sweden. Apparatus for target practice with rifles and other firearms. 1,484,750; Feb. 26.
Altenburger, Carl, Morristown, N. J. Preheating piston for internal-combustion engines. 1,485,009; Feb. 26.
Altman, Ralph, W. L. Wooley, and O. F. Sotier, St. Louis, Mo. Stormproof door threshold. 1,485,206; Feb. 26.
American Bosch Magneto Corporation. (See Krauss, Adolf, assignor.)
American Can Company. (See Eberhart, F., Fleischer, and Bultman, assignors.)
American Cellulose and Chemical Manufacturing Company. (See Dickie, William A., assignor.)
American Gasaccumulator Company. (See Medén, Elof H., assignor.)
American Hardware Corporation. (See Coney, William T., assignor.)
American Hardware Corporation, The. (See Hurd, Norman B., assignor.)
American Laundry Machinery Company, The. (See Carson, William G., assignor.)
American Metals Corporation. (See Kline, Michael I., assignor.)
American Radiator Company. (See Mallory, Harry C., assignor.)
American Telephone and Telegraph Company. (See Gannett, Danforth K., assignor.)
American Telephone and Telegraph Company. (See Hamilton, Harold S., assignor.)
American Wood Rim Company, The. (See Lobdell, Edward J., assignor.)
American Wringer Company. (See Keltie, George R., assignor.)
Anchor Cap and Closure Corporation. (See White, William P., assignor.)
Anderson, A. E. (See Frisk, Otto, assignor.)
Anderson, Albert M., Seattle, Wash. Banjo resonator. 1,485,155; Feb. 26.
Andrick, Wallace P., Hohokus, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,484,751; Feb. 26.
Angus, Arthur R., London, England. Railway safe-running device. 1,485,108; Feb. 26.
Apperson, Alvie G., and M. Wolfe, San Francisco, Calif. Amusement device. 1,484,752; Feb. 26.
Armstrong, Sir W. G., Whitworth and Company. (See Lee, H. W., and Swindale, assignors.)
Arnold, Harold D., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. System of distribution. 1,485,156; Feb. 26.
Aronoff, Joseph, New York, N. Y. Fan. 1,485,241; Feb. 26.
Ash, Jesse E., Silver Grove, and J. M. Crowe, Covington, Ky., assignors to said Crowe and L. K. De Bus, Cincinnati, Ohio. Tool holder for pneumatic hammers. 1,485,010; Feb. 26.
Aske, Irving E., Duluth, Minn. Electric liquid and gas heater. 1,484,616; Feb. 26.
Aske, Irving E., Duluth, Minn. Electric liquid and gas heater. 1,484,617; Feb. 26.
Augustine, Addison E., Hackensack, N. J., assignor to Chester Machine Co., Inc., New York, N. Y. Gumbox drive mechanism for envelope-making machines. 1,484,753; Feb. 26.
Austin, F. C., Machinery Company. (See French, James C., assignor.)
Axtell, Clinton J., Schenectady, N. Y., assignor to General Electric Company. Overload protective device. 1,485,157; Feb. 26.
Babson, Roger D., Springfield, Mass., assignor to Baush Machine Tool Company. Gear. 1,485,158; Feb. 26.
Bach, Peter C. (See Roberts, P. A., and Bach.)
Baker, Daniel N., and J. Pariscan, assignors to W. G. Clark & Co., Inc., North Attleboro, Mass. Cuff button. 1,484,807; Feb. 26.
Bakken, Tollef O., Bode, Iowa. Chicken waterer and feeder. 1,484,860; Feb. 26.
Balda, Joseph O., assignor to A. H. Heisey & Co., Newark, Ohio. Goblet or similar article. Des. 64,040; Feb. 26.
Baldus, Paul C., Milwaukee, Wis. Wrench. 1,485,062; Feb. 26.
Ball, William E., Brunswick, Me. Attachment for spoolers. 1,485,242; Feb. 26.
Barber-Asphalt Company, The. (See Ritter, George, assignor.)
Barber, Osborn L. (See Kitselman, C. M., and Barber.)
Barchoff, Abraham, New York, N. Y. Metal border strip for a tray or similar article. Des. 64,041; Feb. 26.
Bardy Projector Co. (See Bardy, Samuel, assignor.)
Bardy, Samuel, assignor, by mesne assignments, to Bardy Projector Co., Philadelphia, Pa. Film-feeding mechanism for moving-picture machines. 1,484,754; Feb. 26.
Barlow & Seelig Mfg. Co. (See Seelig, John G., assignor.)
Barricklow, George W., Pittsburgh, Pa. Vehicle signal. Des. 64,042; Feb. 26.
Barrows, Hubert H., San Bernardino, Calif. Milling machine. 1,485,209; Feb. 26.
Bartelsmeyer, Elmer H., St. Louis, Mo., assignor to Board of Police Commissioners of the City of St. Louis, State of Missouri. Badge. Des. 64,043; Feb. 26.
Barthel, Oliver E., Detroit, Mich. Grease cup. 1,484,925; Feb. 26.
Bartholomew, Robert, Bridgeport, Conn. Heater or like utensil. 1,485,159; Feb. 26.
Bartlett, George W., assignor of one-half to H. C. Cronkrite, Tacoma, Wash. Charge forming and controlling mechanism for internal-combustion engines. 1,484,808; Feb. 26.
Basmaison, Pierre, San Francisco, Calif. Plane bit. 1,484,861; Feb. 26.
Bassan, Mordecai, Brooklyn, N. Y. Mask-supporting means. 1,485,160; Feb. 26.
Bassick Manufacturing Company, The. (See Fesler, Douglas F., assignor.)
Bauer, William M., Chicago, Ill. Pneumatically-played piano. 1,485,063; Feb. 26.
Bausch & Lomb Optical Company. (See Patterson, William L., assignor.)
Baush Machine Tool Company. (See Babson, Roger D., assignor.)
Beagle, Victor E., Alexandria, Va. Hoisting truck. 1,484,698; Feb. 26.
Beagle, Victor E., Alexandria, Va. Curb-box support. 1,484,699; Feb. 26.
Beattey, Earle J. R., assignor to Universal Optical Corporation, Providence, R. I. Ophthalmic mounting. Des. 64,044; Feb. 26.
Beatty, William R., Hammond, Ind. Floor crane. 1,485,011; Feb. 26.
Beck, Ernest T., assignor to International Silver Company, Meriden, Conn. Spoon or similar article. Des. 64,045; Feb. 26.
Beck, Ernest T., assignor to International Silver Company, Meriden, Conn. Spoon or similar article. Des. 64,046; Feb. 26.
Becker, Fred, Cleveland, Ohio. Macaroni and preparing the same. 1,484,863; Feb. 26.
Beeby, Frank F., assignor to Cement Gun Construction Company, Chicago, Ill. Chimney. 1,484,862; Feb. 26.
Beecher Milton F. (See Beth, H. W. H., and Beecher.)
Bellis, Arthur E. (See Roessel, L., Bellis, and Collins.)
Bellis Heat Treating Company. (See Roessel, L., Bellis, and Collins, assignors.)

Benham, George, and M. A. O'Mara, St. Louis, Mo.; said Benham assignor to said O'Mara. Cigar lighter. 1,485,342; Feb. 26.

Benner, Raymond C., Fremont, Ohio, assignor to National Carbon Co. Inc. Dry cell. 1,484,926; Feb. 26.

Benner, Raymond C., Bayside, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Storage-cell electrode and support for active materials. 1,484,928; Feb. 26.

Benner, Raymond C., Bayside, and G. W. Heise, Elmhurst, N. Y., assignors to Union Carbide & Carbon Research Laboratories, Inc. Storage-battery separator and making the same. 1,484,927; Feb. 26.

Berenson, Israel, Boston, Mass. Electric switch. 1,485,210; Feb. 26.

Berger, J. P. (See Berger, Thurston, assignor.)

Berger, John F., Trenton, N. J. Shotgun rib. 1,485,064; Feb. 26.

Berger, Thurston, assignor to J. P. Berger, Lindsay, Calif. Renewable electric fuse. 1,485,211; Feb. 26.

Bergman, Victor F. (See Koropp, L., and Bergman.)

Bermes, John W. (See Patrick, H. B., Peterson, and Bermes.)

Berrier, John L. (See Simpson, Cleveland, assignor.)

Beth, Hugo W. H., assignor to Norton Company, Worcester, Mass. Tunnel kiln. 1,485,110; Feb. 26.

Beth, Hugo W. H., and M. F. Beecher, assignors to Norton Company, Worcester, Mass. Tunnel kiln. 1,485,109; Feb. 26.

Bethenod, Joseph, Paris, France. Radio transmission system. 1,485,111; Feb. 26.

Besanny, Salvador G., Muskegon Heights, Mich. Clutch release for tractors. 1,484,929; Feb. 26.

Bickley, Everett H., Upper Darby, Pa. Automatic phonograph stop and start device. 1,485,065; Feb. 26.

Birnie, John J., Birnie, Manitoba, Canada. Shocking machine. 1,484,700; Feb. 26.

Bishop, George E., Cleveland, Ohio. Automobile inclosure. 1,485,012; Feb. 26.

Black, William M., Hanford, Calif. Lawn trimmer. 1,484,755; Feb. 26.

Blades, Robert, Chicago, Ill. Skinning knife. 1,484,618; Feb. 26.

Blake, Edwin T., Berkeley, Calif. Means for reenforcing excavator-bucket teeth. 1,485,248; Feb. 26.

Blake, Eli J., Buffalo, N. Y., assignor to Gould Coupler Company. Charging permanent magnets. 1,484,619; Feb. 26.

Blake, Eli J., Buffalo, N. Y., assignor to Gould Coupler Company. Electric regulation. 1,484,620; Feb. 26.

Blake, William A., Alexandria, Ind. Gambrel. 1,485,161; Feb. 26.

Blakeslee, Henry S., Hartford, Conn. Means for indicating load conditions of transformers. 1,485,013; Feb. 26.

Blennerhassett, John, Birmingham, England. Hollow wool-ball holder for domestic use. 1,485,327; Feb. 26.

Bliss, E. W., Company. (See Klocke, W., and Dobson, assignors.)

Bliss, Herbert R., Niagara Falls, N. Y. Constructing fiber shipping cases. Re15,775; Feb. 26.

Board of Police Commissioners of the City of St. Louis. (See Bartelsmeyer, Elmer H., assignor.)

Bock Bearing Company, The. (See Flaherty, John F., assignor.)

Bompart, Charles F., St. Louis, Mo. Hand truck. 1,484,864; Feb. 26.

Bond, Robert I., and F. W. Johnstone, Fort Smith, Ark. Vaginal syringe. 1,484,621; Feb. 26.

Bonelli, George A., Kingman, Ariz. Form for concrete construction. 1,484,865; Feb. 26.

Bonsom, Alfred, Montreal, Quebec, Canada. Oscillatory arc shaper. 1,485,162; Feb. 26.

Booty, Stuart B., East Perth, assignor of one-half to J. A. Turner, Perth, Western Australia, Australia. Magneto accelerator. 1,485,014; Feb. 26.

Borger, Elmer W., Palmerton, Pa. Adjustable folding stand. 1,485,244; Feb. 26.

Borovoy, Samuel, Lowell, assignor to Saco-Lowell Shops, Boston, Mass. Knee brake. 1,484,866; Feb. 26.

Bosch, Robert, Aktiengesellschaft. (See Koerber, Herman, assignor.)

Bower, John H. (See Walker, P. H., and Bower.)

Bowman, Levi M. (See Kotsebue, M. H., and Bowman.)

Boyd, Floyd D., Bloomfield, Nebr. Taking finger prints. 1,485,245; Feb. 26.

Bradley, Franklin F., assignor to Bradley & Vrooman Company, Chicago, Ill. Apparatus for coating objects. 1,484,867; Feb. 26.

Bradley & Vrooman Company. (See Bradley, Franklin F., assignor.)

Brady, John B., Somerset, Md., assignor to Morkrum Company, Chicago, Ill. Radiotelegraph system. 1,485,212; Feb. 26.

Brady, William H., Roselle, assignor to Diehl Manufacturing Company, Elizabeth, N. J. Lighting device for sewing machines. 1,484,868; Feb. 26.

Brandwein, Henry G., Chicago, Ill. Apparatus for filling mattresses. 1,484,869; Feb. 26.

Braun, Frank, Los Angeles, Calif. Flying machine. 1,485,163; Feb. 26.

Breninger, Dayton C., Massillon, Ohio. Support. 1,484,981; Feb. 26.

Bricken, John, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del. Automatic tinning machine. 1,485,066; Feb. 26.

Bright, George B., assignor to Detroit Ice Machine Co., Detroit, Mich. Combined dumping and refilling means for ice manufacture. 1,484,082; Feb. 26.

Bristol, Loris E., Gainesville, Fla. Balanced bicycle bag. 1,485,067; Feb. 26.

Britcher, John C., York, Pa. Turbine. 1,484,983; Feb. 26.

Brokate, Clarence W. (See Heise, G. W., and Brokate.)

Brooks, Winfred M., South Orange, N. J. Method and means for sealing. 1,485,328; Feb. 26.

Broscy, Arthur J., Chicago, Ill. Clamp for curtain stretcher. 1,485,015; Feb. 26.

Brown, Edward E., and D. J. Mooney, Westminster, England. Metal construction for aircraft. 1,485,246; Feb. 26.

Browne, Mayotta, San Francisco, Calif. Doll. Des. 64,047; Feb. 26.

Brumbaugh, Oliver, Louisville, Ohio. Silo or tank. 1,484,984; Feb. 26.

Bucyrus Company. (See Monahan, F. J., Ferris, and Lehman, assignors.)

Buhmann, Charles H. (See Eberhart, F., Fleischer, and Buhmann.)

Bunten, Claude L., Rawlins, Wyo. Toy pistol. 1,484,930; Feb. 26.

Burdick, Charles L., London, England. Coin counting and packeting machine. 1,484,870; Feb. 26.

Burgess, Edward W., Milwaukee, Wis. Interlocking tile slab. 1,485,068; Feb. 26.

Burrows, Robert J., assignor to Clark Tractractor Company, Buchanan, Mich. Tote box. 1,484,871; Feb. 26.

Burt, George W., Portland, Oreg., assignor, by mesne assignments, to The Crouse-Tremaine Company, Cleveland, Ohio. Manufacturing ice-cream mixes, milk-chocolate mixes, confection mixes and the like. 1,485,069; Feb. 26.

Burt, George W., Portland, Oreg., and C. R. Mabee, Toronto, Ontario, Canada; said Mabee assignor of his entire interest to Mabee Patents Corporation, Dover, Del. Apparatus for the treatment of materials. 1,485,070; Feb. 26.

Cairns, Joseph W. (See Cairns, Robert and J. W.)

Cairns, Robert and J. W., Watertown, Wis. Coin-delivery machine. 1,484,872; Feb. 26.

Caldwell, Mrs. Howard E., et al. (See Johnston, Horace G., assignor.)

Caldwell, William L., Canton, Ohio, assignor to United Alloy Steel Corporation, New York, N. Y. Metal-lath-attaching clip. 1,484,931; Feb. 26.

Campbell, Argyle, assignor to Enterprise Railway Equipment Company, Chicago, Ill. Railway-car construction. 1,485,329; Feb. 26.

Canton Culvert and Silo Company, The. (See Schlafly, Julius H., assignor.)

Carder, Frederick, assignor to Corning Glass Works, Corning, N. Y. Pitcher. Des. 64,048; Feb. 26.

Cardullo, Forrest E., and C. T. Hummel, assignors to The G. A. Gray Company, Cincinnati, Ohio. Gib for slides for machine tools and other mechanism. 1,485,016; Feb. 26.

Cargile, Chesley B., St. Paul, Minn. Drilling machine. 1,484,809; Feb. 26.

Carlson, Maurice J., Jersey City, N. J. Test indicator. 1,485,247; Feb. 26.

Carpenter, William J., assignor of one-half to Cree and Company, Gorman, Tex. Swab. 1,485,248; Feb. 26.

Carr, Walter D., et al. (See Grouleff, A., and Holmes, assignors.)

Carril, Alfred L. (See Guittard, F. L., and Carril.)

Carroll, Thomas, Langley Field, Va. Means for indicating the liquid content of distant tanks and the like. 1,485,164; Feb. 26.

Carson, William G., Baltimore, Md., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Washing machine. 1,484,873; Feb. 26.

Carter, August J., Chattanooga, Tenn. Tufting-attachment mechanism for sewing machines. 1,485,213; Feb. 26.

Cashiko Machine Company. (See Kovar, J. H., Schimek, and Cavedon, assignors.)

Cavedon, Alexander. (See Kovar, J. H., Schimek, and Cavedon.)

Celona, Ignatius J., Brooklyn, N. Y. Receptacle closure. 1,485,165; Feb. 26.

Celona, Ignatius J., Brooklyn, N. Y. Jar cap. 1,485,166; Feb. 26.

Cement Gun Construction Company. (See Beeby, Frank F., assignor.)

Centner, Harry W. (See Doppes, B. C., and Centner.)

Central Union Trust Company of New York, trustee. (See Wheeler, F. B., and McMeekin, assignors.)

Chance, Henry M., Philadelphia, Pa. Safety razor. 1,485,214; Feb. 26.

Chapman, Frank D., Berlin, Wis. Cooker for canned material. 1,484,756; Feb. 26.

Chase, Elroy A., Northfield, Vt. Stone surfacing wheel. 1,484,810; Feb. 26.

Chester Machine Co. (See Augustine, Addison E., assignor.)

Christensen, John W. (See Tollackson, Theodore J., assignor.)

Christensen, Soren, Copenhagen, Denmark. Fingering mechanism for contrabass viols. 1,484,985; Feb. 26.

Church, Herbert A., Crary Mills, N. Y. Gas vaporizer. 1,485,112; Feb. 26.

Cinderella Heel Corporation. (See Kuebler, Christian G., assignor.)

Citizens of the United States of America. (See Leeper, Robert B.)

Citizens of the United States of America. (See Taylor, George F.)

Clark Tractractor Company. (See Burrows, Robert J., assignor.)

Clark, W. G., & Co. (See Baker, D. N., and Pariseau, assignors.)

Class, Angelo R., Toledo, Ohio. Crank-arm lock. 1,484,875; Feb. 26.

Claude, Georges, assignor to L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Simultaneously preparing ammonium chloride and sodium carbonate employing synthetic ammonia. 1,484,932; Feb. 26.

Cleveland Tractor Company, The. (See Morgan, Matthew B., assignor.)

Cleveland Tractor Company, The. (See Savage, Edwin H., assignor.)

Cleveland Tractor Company, The. (See White, R. H., and Savage, assignors.)

Cleveland Tractor Company, The. (See White, Rollin H., assignor.)

Clough, Woodman W., and C. O. Johns, Elizabeth, N. J., assignors to Standard Development Company. Solvent for organic compounds and the resulting compositions. 1,485,071; Feb. 26.

Coar, Enos E., and C. Thilman, South Bend, Ind. Extension-cord connection. 1,485,215; Feb. 26.

Cochrane, Arthur L., Toronto, Ontario, Canada. Clamp. 1,485,167; Feb. 26.

Cohen, Jacob M., Washington, D. C. Torpedo testing apparatus. 1,485,017; Feb. 26.

Coleman, William C., Wichita, Kans. Oil burner. 1,484,623; Feb. 26.

Collins, Charles S. (See Roessel, L., Bellis, and Collins.)

Coney, William T., assignor to The American Hardware Corporation, New Britain, Conn. Pin-cylinder lock. 1,484,757; Feb. 26.

Conway, Roy D., Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,484,933; Feb. 26.

Cook, James R., and W. P. Miesen, Narberth, Pa. Badge or similar article. Des. 64,049; Feb. 26.

Coolidge, William D., Schenectady, N. Y., assignor to General Electric Company. Electric discharge apparatus. 1,485,352; Feb. 26.

Cooper, Albert E., Stafford, assignor of one-half to C. Jones, Lower Broughton, Salford, Manchester, England. Notching or like press. 1,485,168; Feb. 26.

Cooper, Henry A., West Union, Ohio. Picture hanger. 1,485,216; Feb. 26.

Cooper, Joseph, Ashton-under-Lyne, England. Lock-stitch mechanism for sewing machines. 1,484,624; Feb. 26.

Cooper, Thomas J., Paterson, N. J. Tire tube. 1,484,625; Feb. 26.

Coopersmith, Rudolph, Montreal, Quebec, Canada, assignor of one-half to A. Ruche, Philadelphia, Pa. Divan, couch, and the like. 1,484,626; Feb. 26.

Corn, James O., Columbia, S. C. Belt tightener for variable-speed mechanism. 1,484,811; Feb. 26.

Corning Glass Works. (See Carder, Frederick, assignor.)

Coune, Felix. (See Philippe, Henri R., assignor.)

Craig, Grover H., assignor of one-half to J. H. Thatcher, Houma, La. Underreamer. 1,485,249; Feb. 26.

Crary, George F., assignor of one-half to J. H. McCormick, Ithaca, N. Y. Pawl-and-ratchet mechanism. 1,485,217; Feb. 26.

Cree and Company. (See Carpenter, William J., assignor.)

Crim, John W., assignor of one-half to J. Norwood, Columbia, S. C. Backband hook. 1,484,986; Feb. 26.

Crompton, George, jr. (See Crompton, Randolph and G., jr.)

Crompton, Randolph and G., jr., Worcester, Mass. Weft-replenishing loom. 1,484,812; Feb. 26.

Cronkrite, Herman C. (See Bartlett, George W., assignor.)

Crose, Lewis P., Carnegie, Okla. Attachment for gasoline tanks. 1,485,250; Feb. 26.

Crouse-Tremaine Company, The. (See Burt, George W., assignor.)

Crowe, John M. (See Ash, J. E., and Crowe.)

Crupi, Frank J., assignor to Herman Behr & Co., Inc., Brooklyn, N. Y. Making a waterproof, flexible, abrasive-holding composition and product. 1,484,759; Feb. 26.

Crystal, Siegfried, New York, N. Y. Space indicator for filing devices. 1,485,169; Feb. 26.

Culp, Arthur J., Clanton, Ala. Engine. 1,485,218; Feb. 26.

Cumfer, Harry A., Chicago, Ill., assignor, by mesne assignments, of one-half to The Flintkote Company, Boston, Mass. Roofing machine. 1,484,760; Feb. 26.

Cumfer, Harry A., Chicago, Ill., assignor, by mesne assignments, of one-half to The Flintkote Company, Boston, Mass. Roofing product. 1,484,761; Feb. 26.

Cummings, George C., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telegraph system. 1,484,762; Feb. 26.

Cummings, William W., jr. (See Eaton, E. S., and Cummings.)

Curtis, Lewis E., assignor to The Youngstown Pressed Steel Company, Warren, Ohio. Producing expanded metal. 1,485,219; Feb. 26.

Dake, Charles W., assignor to The Pyle-National Company, Chicago, Ill. Turbogenerator. 1,484,818; Feb. 26.

Dalrymple, Philip W., Baltimore, Md. Regulator. 1,484,964; Feb. 26.

Dalton, Harry, sr., Philadelphia, Pa. Tank carburetor. 1,485,018; Feb. 26.

Daniels, Lee G., Rockford, Ill. Oil and gas burner. 1,484,814; Feb. 26.

Darnall, L. V., et al. (See Flowers, David S., assignor.)

Davis, Charles H., Glouster, Ohio. Knockdown trestle. 1,485,251; Feb. 26.

Davis, Harry A., assignor to Draper Corporation, Hopedale, Mass. Loom temple. 1,485,843; Feb. 26.

De Blieux, Francois W., Chicago, Ill. Golf-bag support. 1,485,113; Feb. 26.

De Bothezat, George, and I. I. Eremeeff, Dayton, Ohio. Barograph. 1,484,815; Feb. 26.

Debrie, Andre L. V. C., Paris, France. Film-actuating device for positive-film-printing machines. 1,484,701; Feb. 26.

De Bus, Louis K. (See Ash, J. E., and Crowe, assignors.)

De Laval Separator Company, The. (See Forsberg, Erik A., assignor.)

Del Castillo, Miguel R., San Sebastian, Spain. Pneumatic milk extractor. 1,484,874; Feb. 26.

Denis, Luc L. B., Paris, France. Fluid-tight joint for pipes for fluids under pressure. 1,485,252; Feb. 26.

Derby, John H., New York, N. Y. Thermostatic-circuit-controlling device. 1,484,816; Feb. 26.

Destribats, Louis P., Trenton, N. J. Making pneumatic tires. 1,485,170; Feb. 26.

Detroit Ice Machine Co. (See Bright, George B., assignor.)

Deutsche Werke Aktiengesellschaft. (See Sándor, Franz, assignor.)

Devlin, Eugene S., New York, N. Y. Utensil for the treatment of food stuffs. 1,485,253; Feb. 26.

Dewey, John J., Quechee, Vt. Repeater for talking machines. 1,485,019; Feb. 26.

Diamond Match Company, The. (See Paridon, Michael, assignor.)

Diamond Match Company, The. (See Wright, Jacob P. and C. F., assignors.)

Di Carlo, Donato, Philadelphia, Pa. Record-ejecting device. 1,484,627; Feb. 26.

Dickie, William A., Spondon, near Derby, England, assignor to American Cellulose and Chemical Manufacturing Company, Limited. Apparatus for coating wire with varnish and the like. 1,485,254; Feb. 26.

Diehl Manufacturing Company. (See Brady, William H., assignor.)

Diehl Manufacturing Company. (See Elshoff, Bernard, assignor.)

Dinhofer, Harry, New York, N. Y. Process and blank for making finger rings. 1,484,628; Feb. 26.

Dinklage, August, East Orange, N. J. Anchoring device. 1,484,817; Feb. 26.

Ditson, Jesse, and A. E. Peters, Littleton, Colo., assignors to Ingersoll-Rand Company, Jersey City, N. J. Hoist. 1,484,763; Feb. 26.

Dobrowolski, Alfons, Racine, Wis. Combination tricycle and gocart. 1,484,876; Feb. 26.

Dobson, John E. (See Klocke, W., and Dobson.)

Dodd, Jonathan B., Cumberland, Md. Actuating mechanism for coal dump cars. 1,484,764; Feb. 26.

Dodd, William C., Bald Knob, Ark. Pump. 1,484,987; Feb. 26.

Dole Arthur C., jr. (See Dole, Arthur C., sr., and A. C., jr.)

Dole, Arthur C., sr., and A. C., jr., Kansas City, Mo. Draft regulator for steam boilers. 1,485,330; Feb. 26.

Doppes, Bernard C., and H. W. Centner, Cincinnati, Ohio. Spark-plug tester. 1,485,171; Feb. 26.

Dowdall, James T., Glen Morris, N. Y. Spool support. 1,485,020; Feb. 26.

Dowell, Benjamin B., Washington, D. C. Vanity case. Des. 64,107; Feb. 26.

Dowell, Benjamin B., Washington, D. C. Vanity case. 1,485,172; Feb. 26.

Dowling, Donaldson B., Ottawa, Canada. Apparatus for drawing isometric or other mechanical projections. 1,484,702; Feb. 26.

Draper Corporation. (See Davis, Harry A., assignor.)

Drewsen, Viggo, Larchmont, N. Y., assignor to West Virginia Pulp and Paper Company, New York, N. Y. Making sodium sulphite. 1,484,818; Feb. 26.

Duban, Charles. (See Sovitsky, W., and Duban.)

Dublin, Winfield L., Tyler, Tex. Safety lamp for fenders of motor vehicles. 1,484,819; Feb. 26.

Duncan, Frank L., Lompoc, Calif. Centrifugal-force sight feed. 1,484,935; Feb. 26.

Duncan, Harry L., Mahwah, N. J. Acoustic diaphragm. 1,484,820; Feb. 26.
Duncan, Harry L., Mahwah, N. J. Diaphragm. 1,484,821; Feb. 26.
Dungan, Harry M., Oregon, Mo. Inkstand. 1,485,255; Feb. 26.
Du Pont, E. I., de Nemours & Company. (See Engelmann, Max, assignor.)
Du Pont, E. I., de Nemours & Company. (See Woodbury, Clifford A., assignor.)
Durand Steel Locker Company. (See Vance, Walter N., assignor.)
Durkin, James E., and D. Wilkie, Battle Creek, Mich. Process and apparatus for manufacturing paper. 1,485,256; Feb. 26.
Dye, John B., Springfield, Mo. Ice pick. 1,485,257; Feb. 26.
Dzus, William, assignor of thirty per cent to G. M. Richardson. Saranac Lake, N. Y. Lathe attachment. 1,485,258; Feb. 26.
Eaton, Ezra S., Newton, Mass., and W. W. Cummings, jr., Hanover, N. H., assignors to The Industrial Appliance Co. of New England, Boston, Mass. Baking oven. 1,485,173; Feb. 26.
Eberhart, Felix, Newark, P. W. Fleischer, Weehawken Heights, N. J., and C. H. Buhmann, New York, N. Y., assignors to American Can Company, New York, N. Y. Can-drying apparatus. 1,484,629; Feb. 26.
Eccles, William. (See Guy, H. L., and Eccles.)
Eccles, William, Chorlton-cum-Hardy, and H. L. Guy, Manchester, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company. Frame support. 1,484,936; Feb. 26.
Economy Engineering Company. (See French, George M., assignor.)
Eckenwalder, Charles, New York, N. Y. Convertible furniture. 1,484,630; Feb. 26.
Eckler, Charles F., Indianapolis, Ind. Step plate. 1,484,877; Feb. 26.
Eden Washer Corporation. (See Francis, Charles W., assignor.)
Edmonds, Walter D. (See Hawes, Herbert E., assignor.)
Edwards, George D., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,484,765; Feb. 26.
Edwards, Isaac L., Aurora, Ill. Railway safety device. 1,485,331; Feb. 26.
Edwards, Isaac L., Aurora, Ill. Bumper for motor vehicles. 1,485,332; Feb. 26.
Egerton, Henry C., Ridgewood, N. J. Cushioned vehicle tire, etc. 1,484,937; Feb. 26.
Eglinski, Alexander. (See Morrison, E. Futrall, and Eglinski.)
Ehrich, Simon, Bronx, N. Y. Bracket attachment. 1,485,259; Feb. 26.
Eiselt, Emil, Baltimore, Md. Railway car. 1,484,938; Feb. 26.
Elbe File & Binder Co. (See Heend, Orah, assignor.)
Electric Vacuum Cleaner Company. (See Hoff, Karl B., assignor.)
Electromotive Engineering Company, The. (See Hamilton, Harold L., assignor.)
Elgin National Watch Company. (See Wilkinson, George E., assignor.)
Ellery, Arthur B., Akron, Ohio. Striker plate for doors. 1,485,179; Feb. 26.
Ellis, Alvarado L. R., Lynn, Mass., assignor to General Electric Company. Plug receptacle. 1,485,175; Feb. 26.
Elshoff, Bernard, assignor to Diehl Manufacturing Company, Elizabeth, N. J. Lighting device for sewing machines. 1,484,822; Feb. 26.
Emmets, Louis N., Brooklyn, N. Y., assignor to Kiddies Metal Toys, Inc. Sand pail. Des. 64,060; Feb. 26.
Emmons, Harold H. (See McCain, George L., assignor.)
Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Disinfecting seeds and composition therefor. 1,485,021; Feb. 26.
Enterprise Railway Equipment Company. See Campbell, Argyle, assignor.)
Eremeeff, Ivan I. (See de Bothezat, G., and Eremeeff.)
Erickson, Hjalmar, Cambridge, Mass. Machine for cleaning book covers and the like. 1,484,766; Feb. 26.
Ernst, Fritz, Zurich, Switzerland. Device for the treatment of affections of the airways of the human body. 1,485,260; Feb. 26.
Eshman, Joseph R., and W. G. Johnson, Eureka Springs, Ark. Bug destroyer. 1,484,703; Feb. 26.
Eureka Rough Dry Pin System Co. (See Hanney, A. F., and Gammell, assignors.)
Faethe, William, Raven Rock, N. J. Mower. 1,484,631; Feb. 26.
Fales, Elisha N., Dayton, Ohio. Helicopter flying machine. 1,484,637; Feb. 26.
Farner, August, Rusnacht, near Zurich, assignor to the Firm G. Hunsiker, Ruti, Canton, Zurich, Switzerland. Disintegrator and feeder. 1,485,072; Feb. 26.
Farrell, James W., assignor to The Homan Manufacturing Company, Cincinnati, Ohio. Sandwich plate or similar article. Des. 64,061; Feb. 26.
Fearing, Elmer R., Charleston, S. C. Compass saw. 1,485,261; Feb. 26.
Fedders Manufacturing Company. (See Yeager, Henry M., assignor.)
Feil, William, assignor to Visible Gasoline Filter Company, Chicago, Ill. Gasoline filter. 1,484,767; Feb. 26.
Fenn, Robert H., Whitestone, N. Y. Automatic label feeder. 1,485,344; Feb. 26.
Ferris, Walter. (See Monahan, F. J., Ferris, and Lehman.)
Fesenmeier, Leo. (See Salmon, Edward W., jr., assignor.)
Fesler, Douglas F., Evanston, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company. Compressor. 1,485,022; Feb. 26.
Fiek, Walter H., New York, N. Y., assignor to The Rosenthal China Corporation. Plate or similar article. Des. 64,052; Feb. 26.
Fisher, William G., Sunbury, Pa. Shuttle trap or guard for looms. 1,484,939; Feb. 26.
Flagg, Ernest, New York, N. Y. Partition construction. 1,485,262; Feb. 26.
Flaherty, John F., assignor to The Bock Bearing Company, Toledo, Ohio. Grinding machine. 1,484,878; Feb. 26.
Flannery, James J., jr., Pittsburgh, Pa. Traffic signal. 1,484,633; Feb. 26.
Flash-Way Corporation, The. (See Johnson, Albert S., assignor.)
Fleischer, Paul W. (See Eberhart, F., Fleischer, and Buhmann.)
Fleming, Robert G., Newark, assignor to The Smokador Manufacturing Company, Inc., Bloomfield, N. J. Combination cigarette holder and smoking tube. 1,485,345; Feb. 26.
Fleming, Robert G., Newark, assignor to The Smokador Manufacturing Company, Inc., Bloomfield, N. J. Smoker's appliance. 1,485,346; Feb. 26.
Flick, Henry, assignor to Hayes Wheel Company, Jackson, Mich. Manufacturing spokes. 1,485,176; Feb. 26.
Flintkote Company, The. (See Cumfer, Harry A., assignor.)
Flowers, David S., assignor of two-fifths to L. V. Darnall, two-fifths to W. Pyne, and one-fifth to (Mrs.) W. H. Pyne. Des Moines, Iowa. Wrench. 1,485,220; Feb. 26.
Fogwell, Harrison H., and C. J. Heiser, assignors of two-thirds to J. N. Van Patten and one-third to said Heiser. Los Angeles, Calif. Ironing machine. 1,484,879; Feb. 26.
Forbes, Alexander. London, England. Tennis-racquet press. Des. 64,103; Feb. 26.
Ford, Hannibal C., Jamaica, N. Y. Calculating instrument. 1,484,823; Feb. 25.
Ford Motor Company. (See Galamb, Joseph, assignor.)
Ford, Oscar L. (See Whalen, James, assignor.)
Forges & Ateliers de Constructions Electriques De Jeumont. (See Perret, J., and Otz, assignors.)
Forges et Ateliers de Constructions Electriques De Jeumont. (See Perret, Joseph, assignor.)

Grassman, John A., administrator. (See Grassman, John A.)
Grassman, John A., deceased, Palmyra, Pa.; J. A. Grassman, administrator. Lawn-mower sharpener. 1,484,708; Feb. 26.
Gray, Benjamin F., and A. J. Morrison, Valera, Tex. Safety device for bank vaults. 1,484,772; Feb. 26.
Gray Brothers. (See Gray, Edward E., assignor.)
Gray, Edward E., assignor to Gray Brothers, Plano, Ill. Lunch box. 1,484,882; Feb. 26.
Gray, G. A., Company, The. (See Cardullo, F. E., and Hummel, assignors.)
Gray, Orrin D., assignor to Advance Automobile Accessories Corporation, Chicago, Ill. Friction material. 1,485,180; Feb. 26.
Green, Matthew, assignor to Parker Rust-Proof Company, Detroit, Mich. Compound for and treating metals. 1,485,025; Feb. 26.
Greene, Charles A., New York, N. Y. Ash-tray mounting. 1,485,223; Feb. 26.
Greist Manufacturing Company, The. (See Lent, Wilmar F., assignor.)
Gross, Angus R., Baltimore, Md. Cowl light. 1,485,074; Feb. 26.
Grouleff, Aage, and H. A. Holmes, Chicago, Ill., assignors to W. D. Carr, Hammond, Ind., and S. Moore, Riverside, Ill. Electric flatiron. 1,484,773; Feb. 26.
Groves, Alfred P., Charleston, S. C. Device for cleaning player pianos. 1,484,774; Feb. 26.
Gruber, Edward, Lyndhurst, Ohio. Unit for track belts. 1,485,026; Feb. 26.
Grün, Adolf. (See Zollinger, E., and Grün.)
Grund, Richard, Cleveland, Ohio. Marking device. 1,485,181; Feb. 26.
Grunebaum, Charles, Philadelphia, Pa. Bead-clasp base. 1,485,027; Feb. 26.
Gscheidlen, Wilhelm. (See Lenhardt, G., and Gscheidlen.)
Guhin, Michael M., Pierre, S. Dak. Educational device. 1,484,883; Feb. 26.
Guittard, Frank L., and A. L. Carril, assignors, by mesne assignments, of one-third to F. X. Schwarzenbek, San Francisco, Calif. 1,485,115; Feb. 26.
Gumaer, Albert P., South Orange, N. J. Key label. 1,485,075; Feb. 26.
Gunter, May C., New York, N. Y. Combination salt and pepper device. 1,485,028; Feb. 26.
Gusmer, Aage, West End, N. J. Clarifying fruit juices. Re15,776; Feb. 26.
Guy, Henry L. (See Eccles, W., and Guy.)
Guy, Henry L., Manchester, and W. Eccles, Chorlton-cum-Hardy, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company. Gear casing. 1,484,942; Feb. 26.
Haberman, Zeno C., Watertown, S. Dak. Washing-machine casing. Des. 64,062; Feb. 26.
Hadaway, John B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and machine for making heels. 1,484,642; Feb. 26.
Haehl, William G., Manilla, Ind. Clutch-pedal holder or retainer. 1,485,182; Feb. 26.
Haen, William T., Minneapolis, Minn. Belt buckle. 1,484,884; Feb. 26.
Haight, Galen A., Detroit, Mich. Toy. 1,484,775; Feb. 26.
Haighton, Coenraad A. A., The Hague, Netherlands. Means for flattening the current waves of pulsating direct current. 1,485,076; Feb. 26.
Hall, Charles W., Princeton, W. Va. Railway grade-crossing gate. 1,484,943; Feb. 26.
Hambuechen, Carl, New York, N. Y., assignor to Union Carbide and Carbon Research Laboratories, Inc. Depolarising composition. 1,484,885; Feb. 26.
Hamilton, Harold L., assignor to The Electromotive Engineering Company, Cleveland, Ohio. Truck. 1,485,224; Feb. 26.
Hamilton, Harold S., New York, N. Y., assignor to American Telephone and Telegraph Company. Public-address circuits. 1,484,988; Feb. 26.
Hamlin, John, Muncie, and T. Makela, Indianapolis, Ind. Metallic motor-vehicle top. 1,485,029; Feb. 26.
Hammond, John H., jr., Gloucester, Mass. Sensitive relay. 1,484,709; Feb. 26.
Hammond, John H., jr., Gloucester, Mass. System for controlling moving bodies. 1,485,183; Feb. 26.
Hancock, Dora B., assignor to The Tri-State Telephone and Telegraph Company, St. Paul, Minn. Plate or similar article. Des. 64,063; Feb. 26.
Hancock Manufacturing Company. (See Yates, Joseph M., assignor.)
Hancock, Raymond C., St. Louis, Mo. Automobile headlight. 1,485,030; Feb. 26.
Hann, Chester K. (See Hann, Paul V., assignor.)
Hann, Paul V., assignor of one-half to C. K. Hann, Columbus, Ohio. Advertising sign. 1,485,077; Feb. 26.
Hanney, Angus F., and A. Gammell, assignors to Eureka Rough Dry Pin System Co., Chicago, Ill. Tag holder. 1,484,776; Feb. 26.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Hand-regulating valve for rotation motors. 1,484,643; Feb. 26.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Road-surfacing machine. 1,484,944; Feb. 26.
Hansen, Henry A. and R. W., Chicago, Ill. Lamp. Des. 64,064; Feb. 26.
Hansen, Henry A. and R. W., Chicago, Ill. Lamp. bination lamp and phonograph stand. Des. 64,065; Feb. 26.
Hansen, Henry A. and R. W., Chicago, Ill. Lamp. phonograph. Des. 64,066; Feb. 26.
Hansen, Roy W. (See Hansen, Henry A. and R. W.)
Harley-Davidson Motor Co. (See Harley, William S., assignor.)
Harley, William S., assignor to Harley-Davidson Motor Co., Milwaukee, Wis. Ignition apparatus. 1,485,353; Feb. 26.
Harris, Percival V., and J. D. Reynolds, Philadelphia, Pa. Radiator guard. 1,485,184; Feb. 26.
Hart, Harry S., assignor to Rodger Ballast Car Company, Chicago, Ill. Door-operating mechanism. 1,485,185; Feb. 26.
Harza, Leroy F., Chicago, Ill. Hydraulic turbine. 1,485,186; Feb. 26.
Hassenpflug, William J., Chicago, Ill. Drumstick. 1,484,777; Feb. 26.
Hater, Harry J., Cincinnati, Ohio. Piston. 1,485,078; Feb. 26.
Hawes, Herbert E., Brooklyn, assignor of thirty-one-hundredths to W. D. Edmonds, Boonville, N. Y. Aeronautics. 1,484,778; Feb. 26.
Hawk, Harvey, Grampian, Pa. Brake. 1,484,989; Feb. 26.
Hayes, Edward J., Beaumont, Tex. Wooden vacuum tub for ice-cream tubs. 1,485,263; Feb. 26.

Hayes, Joe. (See Hogans, John V., assignor.)
Hayes Wheel Company. (See Flick, Henry, assignor.)
Heald, Merl J., Tulsa, Okla. Choke nipple for oil lines. 1,485,264; Feb. 26.
Heend, Orah, Brooklyn, N. Y., assignor to Elbe File & Binder Co., Inc. Stock sheet for postage stamps or the like. 1,484,827; Feb. 26.
Heggelund, Peter S., Deadwood, S. Dak. Doll. Des. 64,067; Feb. 26.
Heise, George W. (See Benner, R. C., and Heise.)
Heise, George W., Elmhurst, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Dry cell and reducing gaseous pressure therein. 1,484,779; Feb. 26.
Heise, George W., Elmhurst, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Depolarizing mixture and preparing the same. 1,484,782; Feb. 26.
Heise, George W., Bayside, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Making gelatinous alkaline electrolyte and compositions therefor. 1,484,784; Feb. 26.
Heise, George W., Elmhurst, N. Y., and C. W. Brokate, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc. Permeable depolarizing masses and making the same. 1,484,780; Feb. 26.
Heise, George W., Elmhurst, N. Y., and C. W. Brokate, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc. Primary electric cell and preparing depolarizer therefor. 1,484,781; Feb. 26.
Heise, George W., Elmhurst, N. Y., and C. W. Brokate, Danbury, Ohio, assignors to Union Carbide & Carbon Research Laboratories, Inc. Coated primary-cell electrode. 1,484,783; Feb. 26.
Heiser, Charles J., et al. (See Fogwell, H. H., and Heiser.)
Heisey, A. H., & Co. (See Balda, Joseph O., assignor.)
Helena Unit Hoop-Head Co. (See Willson, John O., assignor.)
Henderson, Albert E., Toronto, Ontario, Canada. Tube for pneumatic tires. 1,485,265; Feb. 26.
Hennah, Harold S., London, England. Means for securing sanitary towels to belts or supports. 1,485,266; Feb. 26.
Herks, Jefferson, Detroit, Mich. Cigar holder. 1,485,267; Feb. 26.
Herman Behr & Co. (See Crupi, Frank J., assignor.)
Herrmann, Otto, Erfurt, assignor to J. A. John Aktien-Gesellschaft, Erfurt-Ilversgehofen, Germany. Washing machine. 1,485,354; Feb. 26.
Hettick, Jesse H. (See Woods, Fred M., assignor.)
Hewitt, John L., Philadelphia, Pa. Sign. 1,484,644; Feb. 25.
Hill, Frank M., Camden, N. J. Brine-circulating system. 1,484,896; Feb. 26.
Hill, Herbert M., New York, N. Y., assignor to Phenix Cheese Company. Feed hopper for plastic materials. 1,484,945; Feb. 26.
Hinkey, Fred J., et al. (See Michel, Thomas R., assignor.)
Hiss, John M., Columbus, Ohio. Apparatus for supporting arches. 1,484,785; Feb. 26.
Hodgdon, Andrew Y., Dedham, assignor to Gordan Machine Company, Boston, Mass. Selecting and delivering mechanism for packaging machines, etc. 1,485,187; Feb. 26.
Hoff, Earl B., Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc. Suction cleaner. 1,485,188; Feb. 26.
Hoffman, Howard H., Fairfield Beach, assignor to The Lake Torpedo Boat Company, Bridgeport, Conn. Safety quick-closing valve. 1,485,031; Feb. 26.
Hoffmann, Charles F., South Norwood, Ohio. Propeller blade. 1,485,079; Feb. 26.
Hogans, John V., Argyle, Fla., assignor of one-half to J. Hayes, Newark, N. J. Cant hook. 1,484,990; Feb. 26.
Holmes, Charles F., Chicago, Ill. Circuit breaker. 1,484,645; Feb. 26.
Holmes, Harold A. (See Grouleff, A., and Holmes.)
Holub, Gus, Ravenna, Nebr. Framer. 1,484,710; Feb. 26.
Homan Manufacturing Company, The. (See Farrell, James W., assignor.)
Hook & Hastings Company. (See Zimmer, George J., assignor.)
Hopkinson, Richard H. and V., Bradford, England. Variable-speed gearing for motor vehicles and machinery. 1,484,711; Feb. 26.
Hopkinson, Vincent. (See Hopkinson, Richard H. and V.)
Hopson, Harry B., Springfield, Mass. Fire screen. 1,484,648; Feb. 26.
Horton, George A., Caseville, Mich. Dirigible headlight. 1,485,225; Feb. 26.
House, Henry A., Bridgeport, Conn. Closure for receptacles. 1,485,136; Feb. 26.
Howard, Dudley B., Washington, D. C. Flinch indicator for firearms. 1,484,647; Feb. 26.
Hugershoff, Karl R., Tharandt, Germany. Theodolite for making angular determinations direct from photograms. 1,485,226; Feb. 26.
Hughes, Arthur, Los Angeles, Calif. Putty-trimming machine. 1,485,268; Feb. 26.
Hughes, David, Butte, Mont. Belt fastener. 1,484,828; Feb. 26.
Huguenin, Gustav, assignor to Nestle and Anglo-Swiss Condensed Milk Company, Cham, Switzerland. Box or container for use in the conveyance or transport of goods or merchandise. 1,484,829; Feb. 26.
Humiston, Burr. (See Mathers, F. C., and Humiston.)
Hummel, Charles T. (See Cardullo, F. E., and Hummel.)
Hunter, Charles A., Far Hills, N. J. Talking doll. 1,485,137; Feb. 26.
Hunziker, Firm G. (See Farner, August, assignor.)
Hurd, Norman B., assignor to The American Hardware Corporation, New Britain, Conn. Drillproof cylinder lock. 1,484,830; Feb. 26.
Hurd, Norman B., assignor to The American Hardware Corporation, New Britain, Conn. Drillproof cylinder lock. 1,484,831; Feb. 26.
Hurt, Henry H., Yonkers, assignor to Robeson Process Company, New York, N. Y. Deodorizing and preserving. 1,485,333; Feb. 26.
Hyatt, Glenn, Midvale, Utah. Identification device. 1,484,887; Feb. 26.
Industrial Appliance Co. of New England, The. (See Eaton, E. S., and Cummings, assignors.)
Ingersoll-Rand Company. (See Ditson, J., and Peters, assignors.)
Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)
Ingersoll-Rand Company. (See Peck, Caid H., assignor.)
Ingersoll-Rand Company. (See Redfield, Snowden B., assignor.)
Ingersoll-Rand Company. (See Slater, Fred M., assignor.)
International Motor Company. (See Masury, Alfred F., assignor.)
International Silver Company. (See Beck, Ernest T., assignor.)
Interstate Iron and Steel Company. (See Klump, Joseph R., assignor.)
Interstate Iron and Steel Company. (See Nelson, William B., assignor.)
Interstate Refineries Inc. (See Muehl, William F., assignor.)
Ivers-Lee Company. (See Macdonald, Charles H., assignor.)
Jacobs, Conrad, New York, N. Y. Spark-plug cleaner. 1,485,347; Feb. 26.
Jalbert, Domina C., Woonsocket, R. I. Key ring. 1,484,991; Feb. 26.
Janes, Henry E., Pelham Manor, N. Y. Flour box. 1,485,032; Feb. 26.
Jankowsky, Simon. (See Claus, John C., assignor.)
Jenkins, Alexander F., Baltimore, Md. Metal-working torch. 1,485,033; Feb. 26.
Jenkins, Charles F., Washington, D. C. Mounting for picture-projecting lights. 1,484,648; Feb. 26.
Johansson, C. E., Inc. (See Aldeborgh, Erik H., assignor.)
John, J. A., Aktien-Gesellschaft. (See Herrmann, Otto, assignor.)
Johns, Carl O. (See Clough, W. W., and Johns.)
Johnson, Albert S., Oakland, Calif., assignor to The Flash-Way Corporation. Safety signal. 1,484,712; Feb. 26.
Johnson, Correl W., New York, N. Y. Sound clarifier. 1,485,348; Feb. 26.
Johnson, Ernest V., Chicago, Ill. Flat-arch floor construction. 1,484,649; Feb. 26.
Johnson, Frederick H., South Pasadena, Calif. Disappearing lawn sprinkler. 1,484,888; Feb. 26.
Johnson, Jesse C., Delray, Fla. Aeroplane. 1,485,269; Feb. 26.
Johnson, John M., Kansas City, Mo., assignor to The United States Automatic Fire Alarm Company. Signal system. 1,484,713; Feb. 26.
Johnson, Lawrence T., Buffalo, N. Y. Lifting jack. 1,485,138; Feb. 26.
Johnson, Tomlinson F., jr., Atlanta, Ga. Automatic circuit-breaker attachment for high-tension transmission lines. 1,485,227; Feb. 26.
Johnson, Tomlinson F., jr., Atlanta, Ga. Cross-arm hook for electric transmission lines. 1,485,228; Feb. 26.
Johnson, William G. (See Eshman, J. B., and Johnson.)
Johnston, Genevieve, et al. (See Johnston, Horace G., assignor.)
Johnston, Horace G., assignor of four-fifths to G. Johnston and one-fifth to Mrs. H. E. Caldwell, Corsicana, Tex. Hydraulic swivel. 1,484,786; Feb. 26.
Johnstone, Francis W. (See Bond, E. I., and Johnstone.)
Jones, Charles. (See Cooper, Albert E., assignor.)
Jones, Edward T., New Orleans, La. Switch. 1,485,080; Feb. 26.
Joriot, Camille, Lac-on-Villers, France. Pistol and mechanism which can be concealed in any portable object. 1,484,650; Feb. 26.
Julien, Rudolph H., Copas, Minn. Nest. 1,485,229; Feb. 26.
Julius, George A., Sidney, New South Wales, Australia. Ticket issuing and totallising device. 1,484,946; Feb. 26.
Jumbo Specialty Co., The. (See Morgan, Guy E., assignor.)
Kadel, B. W., et al. (See Simmons, Alba K., assignor.)
Kahn, Joseph, Chicago, Ill. Loose-leaf binder. 1,485,034; Feb. 26.
Kaley, John H., Schenectady, N. Y. Vehicle signal. 1,484,714; Feb. 26.

Kamerer, Emanuel A., Cedar, Iowa. Folding crate. 1,484,651; Feb. 26.
Kane, James E., and A. J. Maskrey, jr., Canton, Ohio. Tin-plate polishing and cleaning machine. 1,485,110; Feb. 26.
Karr, Joseph J., Linton, Oreg. Brake shoe. 1,484,787; Feb. 26.
Kauffman, Percival H., New Orelans, La. Boiler cleaner. 1,484,832; Feb. 26.
Kaye, John A., Sault Ste. Marie, Ontario, Canada. Combination tea and coffee pot. 1,484,889; Feb. 26.
Keck, Robert R., Alhambra, Calif. Hand-control load-lifting truck. 1,484,947; Feb. 26.
Keech, Bert F., et al. (See Michel, Thomas R., assignor.)
Keller, Anton, Birmingham, Ala. Curtain ring. 1,484,652; Feb. 26.
Keller, Frank, Chicago, Ill. Cuff link. 1,484,788; Feb. 26.
Keller, John A., Bay Shore, assignor to Keller Printing Company, New York, N. Y. Machine for printing tickets. 1,485,270; Feb. 26.
Keller Printing Company. (See Keller, John A., assignor.)
Kellogg, Daniel P., Los Angeles, Calif., assignor to J. J. McCarthy, Chicago, Ill. Car roof. 1,484,890; Feb. 26.
Keltie, George R., Woonsocket, R. I., assignor, by mesne assignments, to American Wringer Company, Inc. Wringer roll. 1,485,189; Feb. 26.
Kemerling, Alexander G., assignor of one-half to I. F. Raudabaugh, Celina, Ohio. Shock absorber. 1,485,271; Feb. 26.
Kemp, George M., Williamsport, Md. Middlings mill. 1,484,715; Feb. 26.
Keppler, Fred J., Buffalo, N. Y. Convertible building. 1,485,085; Feb. 26.
Kesy, Eugene, Chicago, Ill. Shoe. Des. 64,068; Feb. 26.
Kesy, Eugene, Chicago, Ill. Shoe. Des. 64,104; Feb. 26.
Kiddies Metal Toys, Inc. (See Emmets, Louis N., assignor.)
Kiefer, Eugene T., and W. B. Stevenson, Philadelphia, Pa., assignors to Victor Talking Machine Company. Talking-machine cabinet. 1,484,833; Feb. 26.
Kijima, Kenji, Los Angeles, Calif. Electric swivel socket. 1,484,992; Feb. 26.
Kimberlin, Robert H., Midland, S. Dak. Weeding tool. 1,484,948; Feb. 26.
Kinder, Linwood U., assignor to National Wood Renovating Company, Kansas City, Mo. Eraser for blackboards. 1,485,061; Feb. 26.
Kingsley, Francis, New Rochelle, N. Y. Universal joint. 1,485,036; Feb. 26.
Kinsman, Harold J., Falmouth, England. Golf club. 1,485,272; Feb. 26.
Kirchhoff, Frederick C., San Francisco, Calif. Ice-cream scoop. 1,484,716; Feb. 26.
Kirkbride, George A., Philadelphia, Pa. Work clamp and gauge. 1,485,082; Feb. 26.
Kirschner, Felix, Vienna, Austria. Apparatus for electrogalvanizing. 1,484,653; Feb. 26.
Kissel Motor Car Company. (See Tarkington, J. A., and Palmer.)
Kite, Thomas C., Shenandoah, Va. Educational device. 1,485,190; Feb. 26.
Kitselman Brothers. (See Kitselman, C. M., and Barber, assignors.)
Kitselman, Carl M., and O. L. Barber, assignors to Kitselman Brothers, Muncie, Ind. Fencepost. 1,484,940; Feb. 26.
Klein, Peter, Roseland, Nebr. Grain saver. 1,484,891; Feb. 26.
Kleintop, Charles, Allentown, Pa. Dipper. 1,485,273; Feb. 26.
Kline, Michael I., assignor to American Metals Corporation, Indianapolis, Ind. Shock absorber for vehicles. 1,485,274; Feb. 26.
Klocke, William, and J. E. Dobson, New York, assignors to E. W. Bliss Company, Brooklyn, N. Y. Mechanical movement. 1,484,654; Feb. 26.
Klump, Joseph R., assignor to Interstate Iron and Steel Company, Chicago, Ill. Cooling bed. 1,484,717; Feb. 26.
Knox, William J., New York, assignor of one-half to A. B. Speer, Bronxville, N. Y. Apparatus for the recovery and refining of light hydrocarbon oils and gases from oil wells. 1,484,718; Feb. 26.
Kobylanski, Peter, Hamilton, Ontario, Canada. Combined chair and stepladder. 1,484,720; Feb. 26.
Koch, William L. C., Scranton, Pa. Rowlock. 1,484,719; Feb. 26.
Koerber, Hermann, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Dismountable spark plug. 1,485,275; Feb. 26.
Koerner, Ewald, Dresden, Germany. Device for aligning cigarettes discharged from cigarette-making machines. 1,485,220; Feb. 26.
Kohler, John B., Chicago, Ill. Chimes. 1,484,655; Feb. 26.
Kohoutek, Emil E., Omaha, Nebr. Bolt-hole cleaner. 1,484,721; Feb. 26.
Koropp, Leopold, and V. F. Bergman, Chicago, Ill. Plant product. 1,484,656; Feb. 26.
Kotzebue, Meinhard H., and L. M. Bowman, Tulsa, Okla. Apparatus for cracking hydrocarbons and recovering gasoline. 1,485,083; Feb. 26.
Kovar, John H., J. F. Schimek, Holden, Mass., and A. Cavedon, Woonsocket, R. I., assignors to Casblke Machine Company, Worcester, Mass. Condensing apparatus for carding machines. Re15,778; Feb. 26.
Krause, Adolf, Cannstatt, Germany, assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y. Electric contact device. 1,485,191; Feb. 26.
Krautwald, Rudolph A. (See Stoddard, K. F., and Krautwald.)
Kriegsheim, Heinrich, assignor to The Permutit Company, New York, N. Y. Regenerating spent zeolites. 1,485,324; Feb. 26.
Kubach, William L., Cleveland, Ohio, assignor to General Electric Company. Electric switch. 1,485,192; Feb. 26.
Kuebler, Christian G., assignor to Cinderella Heel Corporation, St. Louis, Mo. Cutting machine. 1,485,276; Feb. 26.
Kusniewski, Peter, Milwaukee, Wis. Curtain holder. 1,485,117; Feb. 26.
Labens, Edward, Humphrey, Nebr. Fencepost. 1,484,834; Feb. 26.
Lackey, Abraham, Rialto, Calif. Shipping or packing box. 1,484,789; Feb. 26.
Lafortune, Henry F., Biddeford, Me. Spring-winding device. 1,484,790; Feb. 26.
L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude. (See Claude, Georges, assignor.)
Lake Torpedo Boat Company, The. (See Hoffman, Howard H., assignor.)
Lambertville Rubber Company. (See McDonald, Francis A., assignor.)
Lamuth, Joseph P., Casper, Wyo. Dirigible headlight. 1,485,277; Feb. 26.
Lancia, Vincenzo, Turin, Italy. Change-speed gear. 1,485,278; Feb. 26.
Landis, Earl S., Monroe, Ind. Sideboard bracket. 1,485,279; Feb. 26.
Lane, Franklin L., assignor to P. B. Yates Machine Company, Beloit, Wis. Adjustment for woodworking machines. 1,484,835; Feb. 26.
Larsson, Thure, assignor to Norton Company, Worcester, Mass. Muffle tunnel kiln. 1,485,118; Feb. 26.
Larsslere, Charles F., assignor of one-half to B. D. Gardner, Flint, Mich. Razor-blade-stropping handle. 1,484,657; Feb. 26.
Lauren, John W., Chicago, Ill., assignor to Simplex Ignition Corporation. Ignition system. 1,484,658; Feb. 26.
La Vigne, Jerome R., assignor to Waterbury Buckle Co., Waterbury, Conn. Buckle. 1,485,119; Feb. 26.
Lawson, Lindley S., Pittsburgh, Pa. Gas stove. Des. 64,069; Feb. 26.
Lawson, Philip H., Portland, Oreg. Machine for conveying and sealing containers. 1,484,722; Feb. 26.
Lear, George B., Shreveport, La. Oil burner. 1,484,993; Feb. 26.
Lee, Hugh W., and J. W. Swindale, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Hobt especially suitable for raising projectiles on board ship. 1,484,659; Feb. 26.
Leeper, Robert B., Denver, Colo., dedicated, by mesne assignments, to the Citizens of the United States of America. Means for removing hair and scurf from hog carcasses. 1,484,836; Feb. 26.
Leftwich, William P., and D. S. Stout, Nallen, W. Va. Gear-shifting mechanism. 1,485,231; Feb. 26.
Leggo, Arthur V., Melbourne, Victoria, Australia. Roasting furnace. 1,484,791; Feb. 26.
Lehman, Christian S., Lawn, Pa. Collapsible crate. 1,485,084; Feb. 26.
Lehman, Werner. (See Monahan, F. J., Ferris, and Lehman.)
Leonhardt, Gustav, Berlin-Charlottenburg, and W. Gechelellen, Berlin-Schmargendorf, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany. Cooling means for electric machinery. 1,484,723; Feb. 26.
Lent, Wilmar F., assignor to The Geist Manufacturing Company, New Haven, Conn. Process of and apparatus for spinning. 1,484,724; Feb. 26.
Levine, Max, New York, N. Y. Tray. Des. 64,070; Feb. 26.
Levitt, Samuel, Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Hose coupling. 1,485,139; Feb. 26.
Lewis, Samuel, New York, N. Y. Dustpan. 1,484,725; Feb. 26.
Lincoln Electric Company, The. (See Lincoln, James F., assignor.)
Lincoln, James F., East Cleveland, assignor to The Lincoln Electric Company, Cleveland, Ohio. Arc welding. 1,485,120; Feb. 26.
Lion Electric Manufacturing Company. (See Ohm, Albert J. D., assignor.)
Liquid Malted Milk Company. (See Melchior, Claude B., assignor.)
Ljungdahl, Janne F., Stockholm, Sweden. Machine for setting potatoes. 1,484,726; Feb. 26.
Lobdell, Edward J., Onaway, Mich. Shifting steering wheel. 1,484,892; Feb. 26.
Lobdell, Edward J., assignor to The American Wood Rim Company, Onaway, Mich. Steering-wheel-attachment device. 1,484,893; Feb. 26.

Lock Joint Pipe Company. (See Mitchell, John C., assignor.)
Loose Seat Valve Company. (See Wilson, Wylie G., assignor.)
Love, Dana W., Johnson City, Tenn. Combined stopcock and drain valve. 1,484,727; Feb. 26.
Lovelace, Eugene G., assignor of one-fourth to Tom Giancoulis and one-fourth to R. J. Wagger, High Point, N. C. Hedge trimmer. 1,484,792; Feb. 26.
Luminite Corporation, The. (See Sherwin, Jerome M., assignor.)
Lund, Thomas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Cutting sheet material. 1,484,728; Feb. 26.
Lundell, Albert E., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,484,950; Feb. 26.
Lustig, Joseph, North Milwaukee, Wis. Automobile signal control. 1,484,837; Feb. 26.
Lyda, Arthur W., North Canton, Ohio. Life raft for vessels. 1,485,220; Feb. 26.
Lyon, George A., Philadelphia, Pa. Buffer for motor vehicles. 1,485,037; Feb. 26.
Lyon, George A., Philadelphia, Pa. Vehicle buffer. 1,485,038; Feb. 26.
Lyon, George A., Philadelphia, Pa. Resilient vehicle buffer. 1,485,039; Feb. 26.
Lyon, George A., Philadelphia, Pa. Vehicle buffer. 1,485,040; Feb. 26.
Lyon, George A., Philadelphia, Pa. Resilient buffer. 1,485,041; Feb. 26.
Lyon, George A., Philadelphia, Pa. Automobile buffer-attaching device. 1,485,042; Feb. 26.
Lyon, George A., Philadelphia, Pa. Brace-bar automobile buffer. 1,485,043; Feb. 26.
Lyon, George A., Philadelphia, Pa. Vehicle buffer device. 1,485,044; Feb. 26.
Lyon, William E., San Diego, Calif. Chicken brooder. 1,484,894; Feb. 26.
Mabee, Charles R. (See Burt, G. W., and Mabee.)
Mabee Patents Corporation. (See Burt, G. W., and Mabee, assignors.)
Macdonald, Charles H., Montclair, assignor, by mesne assignments, to Ivers-Lee Company, Newark, N. J. Packaging machine. 1,485,141; Feb. 26.
MacQuillan, James, Chicago, Ill. Device for cutting vegetables. 1,484,839; Feb. 26.
Maguire, John L., and L. C. Weese, Elkins, W. Va. Tire-retreading core and forming the same. 1,484,994; Feb. 26.
Maillefert, Alice E., administratrix. (See Meyer, O., and Maillefert.)
Maillefert, Paul S. (See Meyer, O., and Maillefert.)
Makela, Toivo. (See Hamlin, J., and Makela.)
Mallory, Harry C., Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill. Expansible-collapsible element and producing the same. 1,485,223; Feb. 26.
Malm, Frank S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Manufacture of sponge-rubber articles. 1,484,731; Feb. 26.
Maltby, Julius, and T. H. Miller, assignors to Waterbury Buckle Co., Waterbury, Conn. Garment-fastener button. 1,485,121; Feb. 26.
Mannix, Joseph, Saranac Lake, N. Y. Concrete casket vault. 1,484,896; Feb. 26.
Manshel, Charles, Newark, N. J. Safety paper for tickets or cards. Des. 64,071; Feb. 26.
Marko, Paul M., Brooklyn, N. Y. Radio battery construction. 1,485,282; Feb. 26.
Marsh, Samuel L., Los Angeles, Calif. Interceptor. 1,484,953; Feb. 26.
Martin, Truman J., Allentown, Pa. Engine-starting-gear limiting means. 1,485,085; Feb. 26.
Martinez, Elias, Port Arthur, Tex. Manual bicycle aeroplane. 1,485,335; Feb. 26.
Marx, Frederick P., St. Louis, Mo. Shank stiffener. 1,485,234; Feb. 26.
Maskrey, Arthur J., jr. (See Kane, J. E., and Maskrey.)
Masury, Alfred F., assignor to International Motor Company, New York, N. Y. Vehicle construction. 1,484,954; Feb. 26.
Mather, George E., Morsemere, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Switching device. 1,484,732; Feb. 26.
Mathers, Frank C., Bloomington, Ind. Making fluorine. 1,484,733; Feb. 26.
Mathers, Frank C., Bloomington, Ind., and B. Humiston, Wilmington, Del. Method and apparatus for making fluorine. 1,484,734; Feb. 26.
Mauss, Wilhelm, Johannesburg, South Africa. Centrifugal separator and the like. 1,485,235; Feb. 26.
Maximotor Company, The. (See Turney, Lee L., assignor.)
Maxwell, Andrew, Chicago, Ill. Dustguard. 1,485,283; Feb. 26.
McCain, George L., assignor, by mesne assignments, to H. H. Emmons, Detroit, Mich. Steering mechanism for automobiles. 1,484,729; Feb. 26.
McCain, William B., assignor of one-half to M. N. Peaslee, Blanchard, Wash. Cable jack. 1,485,232; Feb. 26.
McCarthy, James J. (See Kellogg, Daniel P., assignor.)
McClanahan, Cora M., et al. (See Scheibert, Rudolph H., assignor.)
McCormick, Earl A., assignor to Remy Electric Company, Anderson, Ind. Shipping crate. 1,485,140; Feb. 26.
McCormick, John H. (See Crass, George F., assignor.)
McDonald, Francis A., assignor to Lambertville Rubber Company, Lambertville, N. J. Rubber heel for a boot or shoe. Des. 64,072; Feb. 26.
McDonald, William J., Sioux City, Iowa. Fountain pen. 1,484,730; Feb. 26.
McEwen, Alfred, Tarrytown, N. Y. Universal lever coupling. 1,484,660; Feb. 26.
McGowan, William F., Brooklyn, N. Y. Device for hanging pictures. 1,485,281; Feb. 26.
McKay, John A., New York, N. Y., assignor to General Electric Company. Terminal member. 1,485,193; Feb. 26.
McKee, Philip L., Chicago, Ill. Greenhouse gutter. 1,484,838; Feb. 26.
McLaughlin, William T., Boston, Mass. Cushioned heel. 1,485,194; Feb. 26.
McLeroth, Thomas B., Hadley Wood, England. Air tube for pneumatic tires. 1,484,951; Feb. 26.
McMeekin, Bowman M. (See Wheeler, F. R., and McMeekin.)
McMullen, Earle W., assignor to Simmons Company, Kenosha, Wis. Protective packing means for articles having finished surfaces. 1,484,895; Feb. 26.
McSwain, Harry W. (See McSwain, William H. and H. W.)
McSwain, William H., Moundsville, W. Va., and H. W. McSwain, Detroit, Mich. Automatic flow for glass tanks. 1,484,952; Feb. 26.
Mead, William H., Autaugaville, Ala. Hat-form holder. 1,485,086; Feb. 26.
Medart, Fred, Manufacturing Company. (See Albach, Frank, assignor.)
Medén, Elof H., Short Hills, assignor to American Gas-accumulator Company, Elizabeth, N. J. One-way street-traffic signal. 1,484,840; Feb. 26.
Meinhardt, Jacob A., Chicago, Ill. Mop. 1,485,087; Feb. 26.
Melchior, Claude B., Wilmington, Del., assignor to Liquid Malted Milk Company, Cedar Rapids, Iowa. Bottle-capping machine. Re15,777; Feb. 26.
Mendenhall, Austin A., Duluth, Minn. Shock-absorbing wheel for vehicles. 1,484,661; Feb. 26.
Merkel, Arthur W., Atlanta, Ga. Cotton-gin feeder. 1,485,236; Feb. 26.
Messter, Oskar, Berlin, Germany. Optical rectifier for cinematographic apparatus. 1,485,195; Feb. 26.
Meyer, Frank E., Salt Lake City, Utah. Child's vehicle. 1,484,897; Feb. 26.
Meyer, Oscar, Brooklyn, N. Y., and P. S. Maillefert, deceased, New Haven, Conn.; A. E. Maillefert, administratrix. Clothesline clamp. 1,485,045; Feb. 26.
Michel, Thomas R., Sandusky, Ohio, assignor of one-third to B. F. Keech and one-third to F. J. Hinkey. Combined fermenting bung and wire jar holder. 1,485,088; Feb. 26.
Miesen, Walter P. (See Cook, J. R., and Miesen.)
Miller, Guthrie M., assignor to E. R. Squibb and Sons, New York, N. Y. Folder. 1,484,955; Feb. 26.
Miller, Joseph F., Storm Lake, Iowa. Grocery advertising device. 1,484,898; Feb. 26.
Miller, Theodore H. (See Maltby, J., and Miller.)
Miller, Theodore H., assignor to Waterbury Buckle Co., Waterbury, Conn. Buckle. 1,485,122; Feb. 26.
Millington, William, Grand Rapids, Mich., assignor to The Aeolian Company. Cabinet for phonographs. Des. 64,073; Feb. 26.
Millington, William, Grand Rapids, Mich., assignor to The Aeolian Company. Cabinet for phonographs. Des. 64,074; Feb. 26.
Mitchell, John C., East Orange, assignor to Lock Joint Pipe Company, Ampere, N. J. Process and apparatus for making centrifugal concrete pipes. 1,485,142; Feb. 26.
Mobley, Lewis K., New York, N. Y. Outlet nozzle for atomizing and spraying liquid antiseptics under pressure. 1,485,143; Feb. 26.
Monahan, Frank J., Joliet, Ill.; W. Ferris, Milwaukee, and W. Lehman, assignors to Bucyrus Company, South Milwaukee, Wis. Trench excavator. 1,484,841; Feb. 26.
Mooney, Dermot J. (See Brown, E. E., and Mooney.)
Moore, James W., Moultrieville, S. C. Locked housing for valves. 1,484,793; Feb. 26.
Moore, Nelson S., et al. (See Grouleff, A., and Holmes, assignors.)
Moore, Roswell A., assignor to Waterbury Buckle Co., Waterbury, Conn. Buckle. 1,485,123; Feb. 26.
Morgan, Guy E., assignor to The Jumbo Specialty Co., Chicago, Ill. Receptacle. 1,485,144; Feb. 26.
Morgan, Mathew B., Cleveland Heights, assignor to The Cleveland Tractor Company, Euclid, Ohio. Track belt and unit therefor. 1,485,046; Feb. 26.
Morgan & Wright. (See Zimmerman, Spencer Q., assignor.)
Morkrum Company. (See Brady, John B., assignor.)
Morley, Joseph, assignor to H. Sittenfeld (feme sole), San Francisco, Calif. Jack wheel for automobiles. 1,484,899; Feb. 26.
Morrish, Thomas L., San Francisco, Calif. Controller handle. 1,484,956; Feb. 26.
Morrison, Andrew J. (See Gray, B. F., and Morrison.)

Morrison, Edward, W. F. Futrall, and A. Eglinski, Lorain, Ohio. Bracket for supporting window shades, curtains, and overdrapes. 1,485,145; Feb. 26.
Morrison, Hackley, Richmond, Va. Chucking attachment for threading machines. 1,484,662; Feb. 26.
Moser, Edward F., Warsaw, Ind. Yielding strap for suspenders and the like. 1,484,957; Feb. 26.
Moser Manufacturing Company. (See Uber, Dan W., assignor.)
Mosee, Max H., San Francisco, Calif. Extensible clamp. 1,484,794; Feb. 26.
Motor Protection Company. (See Randle, George T., assignor.)
Muehl, William F., assignor to Interstate Refineries Inc., Kansas City, Mo. Apparatus for converting heavy hydrocarbons into lighter hydrocarbons. 1,484,958; Feb. 26.
Mueller, Adolph, trustee. (See Mueller, Philip and R. H., assignors.)
Mueller, Philip and R. H., assignors to A. Mueller, trustee, Decatur, Ill. Service box. 1,485,047; Feb. 26.
Mueller, Robert H. (See Mueller, Philip and R. H.)
Mundell, Roscoe, Robesart, Saskatchewan, Canada. Educational and game cards. 1,485,146; Feb. 26.
Munsell, Alexander E. O., New York, N. Y. Color piano. 1,484,795; Feb. 26.
Murray, Robert L., Bushey Heath, assignor to Telephone Manufacturing Company Limited, London, England. Telephone transmitter. 1,485,196; Feb. 26.
Musselman, Alvin J., Chicago, Ill. Golf target. 1,485,089; Feb. 26.
Mutscheller, Arthur, New York, N. Y., assignor to Wappler Electric Co., Inc. X-ray filter. 1,484,665; Feb. 26.
Mussy, William H., Chicago, Ill. Reserve-fuel device for automobiles. 1,484,900; Feb. 26.
Myers, George F., New York, N. Y. Aircraft. 1,485,340; Feb. 26.
Myers, William A., Riverside, Calif. Pruner's coat. 1,484,959; Feb. 26.
Myres, Magnus J., Daytona, Fla. Stethoscope. 1,485,124; Feb. 26.
Nashua Gummed & Coated Paper Company. (See Nichols, H. E., O'Clair, and Perry, assignors.)
Nashua Gummed & Coated Paper Company. (See O'Clair, Edward J., assignor.)
National Carbon Co. (See Benner, Raymond C., assignor.)
National Carbon Company. (See Wilker, Arthur V., assignor.)
National Gauge & Equipment Company. (See Padesky, John R., assignor.)
National Wood Renovating Company. (See Kinder, Linwood U., assignor.)
Nelson, William B., assignor to Interstate Iron and Steel Company, Chicago, Ill. Cooling bed. 1,484,664; Feb. 26.
Nelson, William B., assignor to Interstate Iron and Steel Company, Chicago, Ill. Cooling bed. 1,484,665; Feb. 26.
Nestle and Anglo-Swiss Condensed Milk Company. (See Huguenin, Gustav, assignor.)
Nichols, Harold E., E. J. O'Clair, and W. L. Perry, assignors to Nashua Gummed & Coated Paper Company, Nashua, N. H. Slitting and rewinding machine. 1,484,842; Feb. 26.
Noll, Charles F., Sistersville, W. Va. Advertising device. 1,484,666; Feb. 26.
Norton, Charles L., Boston, Mass., assignor to Refractories Machinery Manufacturing Company, Pittsburgh, Pa. Making refractory shapes. 1,484,735; Feb. 26.
Norton Company. (See Beth, H. W. H., and Beecher, assignors.)
Norton Company. (See Beth, Hugo W. H., assignor.)
Norton Company. (See Larsson, Thure, assignor.)
Norton Company. (See Styffe, Peter J., assignor.)
Norwood, Joseph. (See Crim, John W., assignor.)
Oakman, Charles P., Cambridge, Mass. Grate bar. 1,484,901; Feb. 26.
O'Brien, Joseph J., Springfield, Mass. Hairpin. 1,485,284; Feb. 26.
O'Clair, Edward J. (See Nichols, H. E., O'Clair, and Perry.)
O'Clair, Edward J., assignor to Nashua Gummed & Coated Paper Company, Nashua, N. H. Slitting and rewinding machine. 1,484,843; Feb. 26.
Odlum, William H., Chicago, Ill. Locking device for steering gears. 1,484,667; Feb. 26.
O'Gorman, John T., New York, N. Y. Sash grip. 1,485,285; Feb. 26.
Ohm, Albert J. D., Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc. Ring body for lamp fixtures. Des. 64,075; Feb. 26.
Ohm, Albert J. D., Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc. Ring body for lamp fixtures. Des. 64,076; Feb. 26.
Ohm, Albert J. D., Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc. Back plate for lamp fixtures. Des. 64,077; Feb. 26.
Ohm, Albert J. D., Astoria, N. Y., assignor to Lion Electric Manufacturing Company, Inc. Back plate for lamp fixtures. Des. 64,078; Feb. 26.
O'Keefe, James L., assignor of one-half to K. Threefoot, Meridian, Miss. Electrical signal-controlling device. 1,485,197; Feb. 26.
Okonite Company, The. (See Levitt, Samuel, assignor.)
Olle, William B., Racine, Wis. Metal bicycle wheel rim. 1,484,844; Feb. 26.
O'Mara, Martin A. (See Benham, G., and O'Mara.)
Ots, Léon. (See Perret, J., and Ots.)
Overholser, William H., Churubusco, Ind. Automobile jack. 1,485,286; Feb. 26.
Pace, Jefferson D., Shreveport, La. Roller core drill. 1,484,995; Feb. 26.
Padesky, John R., assignor to National Gauge & Equipment Company, La Crosse, Wis. Pressure gauge. 1,485,336; Feb. 26.
Page, Fred H., and D. P. Snooks, Kalamazoo, Mich. Auxiliary dirigible headlight or spotlight. 1,485,048; Feb. 26.
Paige, George R., Canton, Mass. Carding-machine condenser. 1,484,902; Feb. 26.
Palmer, Herman D. (See Tarkington, J. A., and Palmer.)
Pardo y Cosio, Manuel, Madrid, Spain. Airship. 1,484,758; Feb. 26.
Paridon, Michael, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill. Mechanism for assembling matches and the like. 1,485,049; Feb. 26.
Pariseau, Joseph. (See Baker, D. N., and Pariseau.)
Parker, Harry L. (See Tuttle, S. A., and Parker.)
Parker Pen Company, The. (See Tebbel, Lewis M., assignor.)
Parker Rust-Proof Company. (See Green, Matthew, assignor.)
Parodi, Henry, New York, N. Y. Egg poacher. 1,485,237; Feb. 26.
Partlow, Howard W., Utica, N. Y. High-pressure gas governor. 1,484,668; Feb. 26.
Passic, Toney A., Ashland, Wis. Nut lock. 1,485,090; Feb. 26.
Pastore, Vincent, Norwich, Conn. Haircloth fabric. 1,484,669; Feb. 26.
Patrick, Harry E., Evanston, A. J. Peterson, and J. W. Bermes, assignors to Service Station Equipment Company, Chicago, Ill. Portable engine stand. 1,484,736; Feb. 26.
Patterson, William L., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Projection apparatus with movable condensing lens. 1,485,147; Feb. 26.
Pattison, William L., Rosedale, Kans. Grating. 1,484,903; Feb. 26.
Paulus, Oscar E., Harvard, Nebr. Grain-scattering-preventing device for grain binders. 1,484,996; Feb. 26.
Peaslee, Myol N. (See McCain, William B., assignor.)
Peck, Caid H., Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Rotary cylinder motor. 1,484,960; Feb. 26.
Peelle, Willis J., Chicago, Ill. Machine for making gaskets and the like. 1,484,961; Feb. 26.
Peer, Charles H., Denville, N. J. Tire-rim tool. 1,484,737; Feb. 26.
Peer, Charles H., Denville, N. J. Tire-rim tool. 1,484,738; Feb. 26.
Peerless Ice Scoring Machine Co. See Tickel, Walter D., assignor.)
Pehrson, Alfred K., Bellevue, assignor to Pressed Steel Car Company, Pittsburgh, Pa. Brake mechanism. 1,485,238; Feb. 26.
Pepper, Earl, Lamkin, Miss. Ribbon case. 1,485,091; Feb. 26.
Permutit Company, The. (See Kriegsheim, Heinrich, assignor.)
Perret, Joseph, assignor to Forges et Ateliers de Constructions Electriques de Jeumont, Paris, France. Commutation of direct-current machines. 1,485,287; Feb. 26.
Perret, Joseph, and L. Ots, assignors to Forges et Ateliers de Constructions Electriques de Jeumont, Paris, France. Alternating-current motor group. 1,485,288; Feb. 26.
Perry, Winthrop L. (See Nichols, H. E., O'Clair, and Perry.)
Peters, Arthur E. (See Ditson, J., and Peters.)
Peterson, Andrew J. (See Patrick, H. E., Peterson, and Bermes.)
Peterson, Charles F., Schenectady, N. Y., assignor to General Electric Company. Electric coil and making same. 1,485,289; Feb. 26.
Petinot, Napoleon, assignor to United States Ferro-Alloys Corporation, New York, N. Y. Manufacturing low-carbon alloy steels. 1,484,670; Feb. 26.
Phenix Cheese Company. (See Hill, Herbert M., assignor.)
Philhower, Austin, Hanover Neck, N. J. Mandrel for paper-making machines. 1,485,290; Feb. 26.
Philippe, Henri R., Paris, France, assignor to F. Coune, Chicago, Ill. Apparatus for the easy clamping of the protecting tubes used in permanent waving of the hair. 1,485,148; Feb. 26.
Phillips, Harry I., assignor to Scovill Manufacturing Company, Waterbury, Conn. Spring catch for vanity boxes. 1,485,050; Feb. 26.
Phillips, John H., Chicago, Ill. Spring hammer. 1,484,845; Feb. 26.
Pilcher, John A., et al. (See Simmons, Alba K., assignor.)
Piles, Glenn P., Ruble, Mo. Level. 1,485,291; Feb. 26.
Pitney, Arthur H., assignor to Postage Meters & Machine Company, Stamford, Conn. Envelope-sealing device for postage meters. 1,485,051; Feb. 26.

Pittsburgh Lamp, Brass & Glass Company. (See Yokel, Frank, assignor.)
Pomeroy, Edward S., assignor, by mesne assignments, to Smith and Wesson, Inc., Springfield, Mass. Safety firearm. 1,484,671; Feb. 26.
Pomeroy, James W. (See Todd, W. C., and Pomeroy.)
Popper, Isaac C., assignor to The Theros Company, New York, N. Y. Sterilizer. 1,485,292; Feb. 26.
Porits, Frederick M., assignor to Star Chandelier Company, Inc., New York, N. Y. Chandelier body. Des. 64,079; Feb. 26.
Posner, Jacob D., New York, N. Y. Shoe. Des. 64,080; Feb. 26.
Postage Meters & Machine Company. (See Pitney, Arthur H., assignor.)
Powell, William F. (See Taylor, J. H., and Powell.)
Powell, Winfred T., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Impulse transmitter. 1,484,739; Feb. 26.
Power, Charles M., assignor to United States Chain & Forging Co., Pittsburgh, Pa. Cross-chain connecter for antiskid devices. 1,484,672; Feb. 26.
Powers, Samuel P., Wooster, Ohio. Drive-pipe holder. 1,484,904; Feb. 26.
Pressed Steel Car Company. (See Pehrson, Alfred K., assignor.)
Pugh, Morton E., Chicago, Ill. Excavating machine. 1,485,198; Feb. 26.
Pugh, Morton E., Chicago, Ill. Skimmer-scoop excavating machine. 1,485,199; Feb. 26.
Pyle-National Company, The. (See Dake, Charles W., assignor.)
Pyne, (Mrs.) W. H., et al. (See Flowers, David S., assignor.)
Pyne, William, et al. (See Flowers, David S., assignor.)
Rail Joint Company, The. (See Thomson, McLeod, assignor.)
Randle, George T., Sayleaville, assignor to Motor Protection Company, Pawtucket, R. I. Protection for electric motors. 1,484,962; Feb. 26.
Rauchut, Frank J., Philadelphia, Pa. Broom and mop holder. 1,485,092; Feb. 26.
Raudabaugh, Israel F. (See Kemerling, Alexander G., assignor.)
Raynsford, Arthur, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,484,963; Feb. 26.
Redfield, Snowden B., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Compressor unloader. 1,484,673; Feb. 26.
Redfield, Snowden B., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Pilot valve for compressors. 1,484,674; Feb. 26.
Refractories Machinery Manufacturing Company. (See Norton, Charles L., assignor.)
Reineking, Frederick C., assignor of one-half to E. G. Zeleden, Los Angeles, Calif. Piston ring. 1,485,293; Feb. 26.
Remy Electric Company. (See McCormick, Earl A., assignor.)
Renken, Henry, New York, assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y. Attachment for trimming machines. 1,485,140; Feb. 26.
Reutter, Philip A., assignor to Scovill Manufacturing Company, Waterbury, Conn. Spring catch for vanity boxes. 1,484,682; Feb. 26.
Reynolds, John D. (See Harris, P. V., and Reynolds.)
Reynolds Spring Company. (See Van Hove, Desire H., assignor.)
Rhoads, J. Bergerville, La Jolla, Calif. Illuminating device. 1,484,964; Feb. 26.
Rice, Joseph J., jr., Frackville, Pa. Automobile signal-control switch. 1,485,294; Feb. 26.
Richardson, G. M. (See Daus, William, assignor.)
Richardson, John M., Milwaukee, Wis. Davenport. 1,484,846; Feb. 26.
Riddle, Zala, San Francisco, Calif. Direction signal. 1,485,295; Feb. 26.
Ritter, George, Perth Amboy, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa. Apparatus for applying granular surfacing materials upon prepared roofing. 1,485,340; Feb. 26.
Ritter, Warren, Brooklyn, N. Y. Tractor phonograph. 1,484,965; Feb. 26.
Rivers, Ara M., administratrix. (See Rivers, C. A., and Stuart.)
Rivers, Charles A., deceased, and F. B. Stuart, El Paso, Tex., A. M. Rivers, administratrix. Extension pedal. 1,484,847; Feb. 26.
Roberts, P. A., Construction Co., The. (See Roberts, P. A., and Bach, assignors.)
Roberts, Preston A., and P. C. Bach, assignors to The P. A. Roberts Construction Co., Inc., Washington, D. C. Garage. 1,485,200; Feb. 26.
Robeson Process Company. (See Hurt, Henry H., assignor.)
Robinson, Frank W., Reading, Pa. Splicing mechanism for circular-knitting machines. 1,485,150; Feb. 26.
Rodger Ballast Car Company. (See Hart, Harry S., assignor.)
Roessel, Louis, Brooklyn, N. Y., A. E. Bellis, Springfield, Mass., and C. S. Collins, Bronx, N. Y., assignors to Bellis Heat Treating Company, New Haven, Conn. Furnace. 1,485,151; Feb. 26.
Ronning, Adolph. (See Ronning, Andrean G. and A.)
Ronning, Andrean G. and A., Minneapolis, Minn. Ensilage-harvester attachment. 1,485,201; Feb. 26.
Rosenberg, Heyman, New York, N. Y. Masonry anchorage device. 1,485,202; Feb. 26.
Rosenthal China Corporation, The. (See Fiek, Walter H., assignor.)
Rosenthal, Morris G., Cincinnati, Ohio. Label-affixing sewing machine. 1,484,905; Feb. 26.
Rossiter, Lewis J., Erskineville, New South Wales, Australia. Valve. 1,484,997; Feb. 26.
Rubino, Thomas, Hazleton, Pa. Faucet. 1,484,740; Feb. 26.
Rubinoff, Jacob, New York, N. Y. Combination signal and license-plate holder. 64,081; Feb. 26.
Ruche, Abraham. (See Coopersmith, Rudolph, assignor.)

Sherer, Adolph, Brooklyn, N. Y. Making soup powder from peas, beans, lentils, or the like. 1,484,970; Feb. 26.
Sheridan, James W., New York, N. Y. Wood substitute. 1,485,303; Feb. 26.
Sherman, Grant W. (See Wilson, J. M., and Sherman.)
Sherwin, Jerome M., assignor to The Luminite Corporation, Newark, N. J. Luminous locator or marker. 1,484,742; Feb. 26.
Sherwood, Truman C., assignor of forty-nine one-hundredths to H. R. Van Nordstrand, Danville, Ill. Furnace. 1,484,908; Feb. 26.
Shields, Samuel, Denoya, Okla. Shelf tool. 1,484,848; Feb. 26.
Shoemaker, Samuel B., South Strafford, Vt. Hydraulic brake. 1,485,304; Feb. 26.
Short, Hugh O., Rochester, England. Aeroplane flying machine. 1,485,305; Feb. 26.
Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung. (See Lenhardt, G., and Gscheidlen, assignors.)
Silverstein, Joseph, Brooklyn, N. Y. Casing for disinfector. Des. 64,082; Feb. 26.
Simmons, Alba K., Roanoke, Va., assignor to B. W. Kadel, Baltimore, Md., and J. A. Pilcher, Roanoke, Va. Railway car. 1,484,971; Feb. 26.
Simmons Company. (See McMullen, Earle W., assignor.)
Simplex Ignition Corporation. (See Lauren, John W., assignor.)
Simpson, Cleveland, assignor of one-half to J. L. Berrier, Winston-Salem, N. C. Photographic-printing machine. 1,484,797; Feb. 26.
Sipple, William F., Hazleton, Pa. Conveyer-chain link. 1,484,972; Feb. 26.
Sittenfeld, Henrietta (feme sole). (See Morley, Joseph, assignor.)
Skrmetti, Paul M., San Pedro, Calif. Floating trawling fish seine. 1,485,338; Feb. 26.
Slater, Fred M., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Fluid-actuated inlet valve for rock drills. 1,484,678; Feb. 26.
Slater, Fred M., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Fluid-actuated inlet valve for rock drills. 1,484,679; Feb. 26.
Small, Frank E., Jamaica, N. Y. Piston packing ring. 1,485,128; Feb. 26.
Smith and Wesson, Inc. (See Pomeroy, Edward S., assignor.)
Smith, George E., Oil City, La. Folding coach step. 1,484,910; Feb. 26.
Smith, Hubert E., London, England. Burner for petrol gases and the like. 1,485,129; Feb. 26.
Smith, James R., Mechanicsville, N. Y. Seatless valve. 1,484,798; Feb. 26.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,485,204; Feb. 26.
Smith, John R., Los Angeles, Calif. Elevator stop. 1,484,909; Feb. 26.
Smokador Manufacturing Company, The. (See Fleming, Robert G., assignor.)
Sniegocki, Anthony, Oakland, Calif. Combination shaving brush and soap holder. 1,484,911; Feb. 26.
Snooks, Don P. (See Page, F. H., and Snooks.)
Sotier, Otto F. (See Altman, B., Wooley, and Sotier.)
Sovitzky, Walter, Milwaukee, and C. Duban, Kenosha, Wis. Hair-cutting tool. 1485,130; Feb. 26.
Speer, Arthur B. (See Knox, William J., assignor.)
Speese, Daniel S., Detroit, Mich. Knitting machine. 1,485,056; Feb. 26.
Speirs, Stuart, New York, N. Y. Safety razor. 1,485,093; Feb. 26.
Spillane, Patrick H., Washington, D. C. Smoker's ash tray. Des. 64,083; Feb. 26.
Sprinkle, Lake H., Brooklyn, N. Y. Artificial tooth. 1,485,057; Feb. 26.
Sprinkle, Lake H., Brooklyn, N. Y. Artificial tooth. 1,485,058; Feb. 26.
Squibb, E. R., and Sons. (See Miller, Guthrie M., assignor.)
Squire, Fred, Wellington, Kans. Wire-line spooler. 1,484,799; Feb. 26.
Stack, Emmet G. and J. E., Marshfield, Oreg. Log-bark-peeling machine. 1,484,912; Feb. 26.
Stack, John E. (See Stack, Emmet G. and J. E.)
Stallings, Hiram C., Carrollton, Ga. Security case. 1,485,131; Feb. 26.
Standard Development Company. (See Clough, W. W., and Johns, assignors.)
Star Chandelier Company. (See Poritz, Frederick M., assignor.)
Stark, Jacob J., Brooklyn, N. Y. Dental appliance. 1,484,800; Feb. 26.
Stark, Jacob J., Brooklyn, N. Y. Dental bridgework. 1,485,306; Feb. 26.
Stearns, Frederick B., Worcester, Mass. Making cloth and mechanism therefor. 1,485,059; Feb. 26.
Steckenreiter, John F., Brooklyn, N. Y. Silo construction. 1,485,307; Feb. 26.
Stegeman, Ralph H., Anaheim, Calif. Holding device for sucker rods. 1,485,308; Feb. 26.
Steiner, Charles, Bristow, Okla. Rod coupling. 1,484,999; Feb. 26.
Stevenson, George H., Rye, assignor to Western Electric Company, Incorporated, New York, N. Y. Airplane interphone set. 1,484,973; Feb. 26.
Stevenson, William B. (See Kieffer, E. T., and Stevenson.)
Steward, Charles A., Plano, Ill. Building block. 1,485,309; Feb. 26.
Stewart, George, Brownsville, Pa. Accelerator. 1,484,801; Feb. 26.
Stoddard, Katherine F., and R. A. Krautwald, Chicago, Ill. Sanitary-belt buckle. 1,484,680; Feb. 26.
Stone, Marguerite L., San Francisco, Calif. Doll. Des. 64,084; Feb. 26.
Stoppel, Ernest A., Brooklyn, assignor to Valentine & Company, New York, N. Y. Puzzle. 1,484,849; Feb. 26.
Storey, Norman C., Rockaway, N. J. Vehicle. 1,484,974; Feb. 26.
Stout, Dira S. (See Leftwich, W. P., and Stout.)
Stralucke, Carl H., New York, N. Y. Shuttle-throwing mechanism. 1,485,310; Feb. 26.
Stromberg-Carlson Telephone Manufacturing Company, The. (See Powell, Winfred T., assignor.)
Stuart, Francis B. (See Rivers, C. A., and Stuart.)
Stubbs, John O., Hickman, Ky. Decoy duck. 1,484,975; Feb. 26.
Sturtevant Mill Company. (See Sturtevant, Thomas J., assignor.)
Sturtevant, Thomas J., Wellesley, assignor to Sturtevant Mill Company, Boston, Mass. Apparatus for agitating materials. 1,485,205; Feb. 26.
Styffe, Peter J., assignor to Norton Company, Worcester, Mass. Making abrasive wheels. 1,485,132; Feb. 26.
Summers, Edgar W., deceased, Pittsburgh, Pa.; P. C. Summers, executrix. Railway truck. 1,485,311; Feb. 26.
Summers, Patience C., executrix. (See Summers, Edgar W.)
Surry, Cyril M., Haileyville, Okla. Artificial body member. 1,484,913; Feb. 26.
Sutherland, David E. (See Taylor, Silas P., assignor.)
Svetkoff, Ivan, Clinton, Ind. Shot-hole-clearing tool. 1,484,850; Feb. 26.
Swadba, Henry, Boston, Mass. Merchandise-display stand. Des. 64,085; Feb. 26.
Sweeley, Edward A., Alexandria, Va., assignor to The Wine Railway Appliance Company, Toledo, Ohio. Hatch cover. 1,485,312; Feb. 26.
Swindale, John W. (See Lee, H. W., and Swindale.)
Tamarin, Bernard J., Philadelphia, Pa. Vacuum-cleaner electric-cord take-up. 1,484,681; Feb. 26.
Tangerman, William J., Hammond, Ind. Tank-car construction. 1,484,682; Feb. 26.
Tarkington, Joseph A., and H. D. Palmer, assignors to Kissel Motor Car Company, Hartford, Wis. Oiling system. 1,484,851; Feb. 26.
Taylor, George F., Washington, D. C., dedicated, by mesne assignments, to the Citizens of the United States of America. Thermostat. 1,484,802; Feb. 26.
Taylor, John W., Cleveland, Ohio. Bending machine. 1,485,313; Feb. 26.
Taylor, Joseph H., and W. F. Powell, Rocky Mount, N. C. Ice-loosening device. 1,485,314; Feb. 26.
Taylor, Silas P., Loretto, Tenn., assignor to D. E. Sutherland, Haleyville, Ala. Cultivator. 1,484,803; Feb. 26.
Tebbel, Lewis M., Spokane, Wash., assignor to The Parker Pen Company, Janesville, Wis. Self-filling fountain pen. 1,484,683; Feb. 26.
Tebbutt, John T., Three Rivers, Quebec, Canada. Congress shoe. 1,484,743; Feb. 26.
Telephone Manufacturing Company Limited. (See Murray, Robert L., assignor.)
Terry, Curt L., El Paso, Tex. Signpost. 1,484,804; Feb. 26.
Thatcher, Joseph H. (See Craig, Grover H., assignor.)
Theros Company, The. (See Popper, Isaac C., assignor.)
Thilman, Casmier. (See Coar, E. E., and Thilman.)
Thomas, Horace T., Lansing, Mich. Lock for electric circuits. 1,485,060; Feb. 26.
Thomas, Walter J., assignor of one-fourth to J. A. Wenger, Modesto, Calif. Automatic tire pump. 1,484,914; Feb. 26.
Thompson, Willis M., Chicago, Ill. Can opener. 1,485,094; Feb. 26.
Thomson, McLeod, Chelsea, N. J., assignor to The Rail Joint Company, New York, N. Y. Rail-joint structure. 1,485,315; Feb. 26.
Thorington, Sidney P., Bishop, Calif. Separable rim. 1,484,915; Feb. 26.
Threefoot, Kutchen. (See O'Keefe, James L., assignor.)
Tickel, Walter D., assignor to Peerless Ice Scoring Machine Co., Oklahoma City, Okla. Machine for marking ice. 1,485,316; Feb. 26.
Tiller, David M., Kansas City, Mo. Portable measuring device. 1,485,096; Feb. 26.
Tiller, David M., Broken Arrow, Okla., assignor to The Tiller Manufacturing Company, Kansas City, Mo. Portable measuring device. 1,485,095; Feb. 26.

Tiller Manufacturing Company, The. (See Tiller, David M., assignor.)
Todd, William C., and J. W. Pomeroy, Victoria, British Columbia, Canada. Water sprinkler. 1,484,684; Feb. 26.
Tollackson, Theodore J., assignor of one-half to J. W. Christensen, Westby, Wis. Antiskid device. 1,485,239; Feb. 26.
Triebel, Paul, Jersey City, N. J. Register for coal cars or the like. 1,484,852; Feb. 26.
Tri-State Telephone and Telegraph Company, The. (See Hancock, Dora B., assignor.)

Williamson, Nelson R., Portland, Ind. Tire carrier. 1,485,355; Feb. 26.
Williamson, R., & Company. (See Williamson, James, assignor.)
Wills, Charles M., Atlantic City, N. J. Wearing apparel. 1,485,001; Feb. 26.
Willson, John O., St. Joe, assignor to Helena Unit Hoop-Head Co., Helena, Ark. Combined barrel end and hoop. 1,484,854; Feb. 26.
Wilson, Edwin B., Forest Hills, N. Y. Chair or similar article. Des. 64,092; Feb. 26.
Wilson, John M., and G. W. Sherman, San Diego, Calif. Advertising display stand. Des. 64,093; Feb. 26.
Wilson-Jones Loose Leaf Company. (See Severance, Horace W., assignor.)
Wilson, Wylie G., Jersey City, N. J., assignor to Loose Seat Valve Company. Operating mechanism by gravity. 1,485,002; Feb. 26.
Wine Railway Appliance Company, The. (See Sweeley, Edward A., assignor.)
Winetzky, Schai A., New York, N. Y. Tellurian. 1,485,322; Feb. 26.
Winn, Byron A., Barber, Idaho. Mold. 1,484,855; Feb. 26.
Witten, Arthur P., Akron, Ohio. Manufacturing colored rubber articles. 1,484,919; Feb. 26.
Wolcott, Frank E., Hartford, Conn. Electric heater. 1,485,153; Feb. 26.
Wolf, Edwin E., New York, N. Y. Dress. Des. 64,105; Feb. 26.
Wolf, Edwin E., New York, N. Y. Dress. Des. 64,106; Feb. 26.
Wolfe, Eowin C., Corral, Idaho. Reversible pump oil can. 1,484,920; Feb. 26.
Wolfe, Mathew. (See Apperson, A. G., and Wolfe.)
Wood, Charles E., Baxter Springs, Kans. Sand separator. 1,484,695; Feb. 26.
Wood, James J., Fort Wayne, Ind., assignor to General Electric Company. Safety device for clothes wringers. 1,485,323; Feb. 26.
Woodbury, Clifford A., Media, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. High explosive. 1,485,003; Feb. 26.
Woods, Fred M., assignor of one-half to J. B. Hettick, Muskogee, Okla. Neckband. 1,484,921; Feb. 26.
Wooley, Walter L. (See Altman, B. Wooley, and Sotier.)
Wright, Charles F. (See Wright, Jacob P. and C. F.)
Wright, George T. (See Schuricht, A. G., and Wright.)
Wright, Herbert A., Detroit, Mich. Process and apparatus for reducing the temperature of cooling oil. 1,485,134; Feb. 26.
Wright, Jacob P., Barberton, and C. F. Wright, Akron, Ohio, assignors to The Diamond Match Company, Chicago, Ill. Machine for making boxes. 1,485,004; Feb. 26.
Wright, Joseph L., Cleveland, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. 1,485,005; Feb. 26.
Wulftange, John A., Hamilton, Ohio. Metal binding. 1,484,696; Feb. 26.
Yamamoto, Tadsoki, Tokyo, Japan. Induction synchronous motor. 1,485,006; Feb. 26.
Yates, Joseph M., assignor to Hancock Manufacturing Company, Charlotte, Mich. Handle for motor-vehicle doors. Des. 64,095; Feb. 26.
Yates, P. B., Machine Company. (See Lane, Franklin L., assignor.)
Yeager, Henry M., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Radiator mounting. 1,484,748; Feb. 26.
Yeager, Henry M., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Radiator. 1,484,749; Feb. 26.
Yerly, Arthur, Gary, Ind. Rolling window screen. 1,485,324; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Wall plate for lighting fixtures. Des. 64,096; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Wall plate for lighting fixtures. Des. 64,097; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Wall plate for lighting fixtures. Des. 64,098; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Bracket for lighting fixtures. Des. 64,099; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Bracket for lighting fixtures. Des. 64,100; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh, Lamp, Brass & Glass Company, Pittsburgh, Pa. Hanger for lighting fixtures. Des. 64,101; Feb. 26.
Yokel, Frank, Avalon, assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Plate for chandelier fixtures. Des. 64,102; Feb. 26.
Young, Addren H., Nashville, Tenn. Coin separator and assorter. 1,484,806; Feb. 26.
Young, Harry M., assignor to Western Wire Products Company, St. Louis, Mo. Wire fabric. 1,484,697; Feb. 26.
Youngstown Pressed Steel Company, The. (See Curtis, Lewis E., assignor.)
Zahn, William A., Pittsburgh, Pa. Building block. 1,485,007; Feb. 26.
Zander, Karl A., Stow, Mass. Portable tool device. 1,484,923; Feb. 26.
Zeigler, Elmer J., Camden, N. J. Water heater. 1,485,107; Feb. 26.
Zeledon, Ralph G. (See Reineking, Frederick C., assignor.)
Zieg, Conrad H., York, Nebr. Furnace. 1,485,325; Feb. 26.
Zillisch, Bernhard F., Watertown, Wis. Clothesline support. 1,484,856; Feb. 26.
Zimmer, George J., Waltham, assignor to Hook & Hastings Company, Kendal Green, Mass. Flute organ pipe. 1,485,008; Feb. 26.
Zimmerman, Spencer Q., Detroit, Mich., assignor to Morgan & Wright. Sectional core-collapsing device. 1,484,924; Feb. 26.
Zollinger, Ernst, Zurich, Switzerland, and A. Grün, Aussig, Czechoslovakia. Producing polyfatty-acid esters. 1,484,826; Feb. 26.
Zottoli, Frank M., Boston, Mass. Turbine wheel. 1,484,980; Feb. 26.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 26TH DAY OF FEBRUARY, 1924.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abrasive wheels, Making. P. J. Styffe. 1,485,132; Feb. 26.
Accelerator. G. Stewart. 1,484,801; Feb. 26.
Advertising device. C. F. Noll. 1,484,666; Feb. 26.
Advertising device, Grocery. J. F. Miller. 1,484,898; Feb. 26.
Aeronautics. H. E. Hawes. 1,484,778; Feb. 26.
Aeroplane. J. C. Johnson. 1,485,269; Feb. 26.
Aeroplane firing machine. H. O. Short. 1,485,305; Feb. 26.
Aeroplane, Manual bicycle. E. Martinez. 1,485,335; Feb. 26.
Agitating materials, Apparatus for. T. J. Sturtevant. 1,485,205; Feb. 26.
Aircraft. G. F. Myers. 1,485,349; Feb. 26.
Aircraft, Metal construction for. E. E. Brown and D. J. Mooney. 1,485,246; Feb. 26.
Airplane interphone set. G. H. Stevenson. 1,484,973; Feb. 26.
Airship. M. Pardo y Cosio. 1,484,758; Feb. 26.
Airways of the human body, Device for the treatment of the affections of the. F. Ernst. 1,485,260; Feb. 26.
Alloy steels, Manufacturing low-carbon. N. Petinot. 1,484,670; Feb. 26.
Ammonium chloride and sodium carbonate employing synthetic ammonia, Simultaneously preparing. G. Claude. 1,484,932; Feb. 26.
Amplifying system. J. C. Schelleng. 1,484,967; Feb. 26.
Amusement device. A. G. Apperson and M. Wolfe. 1,484,752; Feb. 26.
Anchoring device. A. Dinklage. 1,484,817; Feb. 26.
Annunciator. H. Schurr. 1,484,675; Feb. 26.
Antiskid device. T. J. Tollackson. 1,485,239; Feb. 26.
Antiskid devices, Cross-chain connecter for. C. M. Power. 1,484,672; Feb. 26.
Apparel, Wearing. C. M. Wills. 1,485,001; Feb. 26.
Applicator. H. Schumacher. 1,485,126; Feb. 26.
Arches, Apparatus for supporting. J. M. Hiss. 1,484,785; Feb. 26.
Arc shaper, Oscillatory. A. Bonom. 1,485,162; Feb. 26.
Arc welding. J. F. Lincoln. 1,485,120; Feb. 26.
Armoring means. H. F. George. 1,484,639; Feb. 26.
Automobile alarm system. R. Varley. 1,485,098; Feb. 26.
Automobile bumper-attaching device. G. A. Lyon. 1,485,042; Feb. 26.
Automobile bumper, Brace-bar. G. A. Lyon. 1,485,043; Feb 26.
Automobile bumper. W. F. Adams. 1,485,326; Feb. 26.
Automobile inclosure. G. E. Bishop. 1,485,012; Feb. 26.
Automobile jack. W. H. Overholser. 1,485,286; Feb. 26.
Automobile jack wheel. J. Morley. 1,484,899; Feb. 26.
Automobile levers, Slot guard for. C. H. Gaulke. 1,484,824; Feb. 26.
Automobile signal control. J. Lustig. 1,484,837; Feb. 26.
Automobile signal-control switch. J. J. Rice, jr. 1,485,294; Feb. 26.
Automobile steering mechanism. G. L. McCain. 1,484,729; Feb. 26.
Automobile visor. C. H. Veeder. 1,484,687; Feb. 26.
Automobiles, Direction indicator for. H. C. Sallac. 1,484,998; Feb. 26.
Automobiles, Reserve-fuel device for. W. H. Muzzy. 1,484,900; Feb. 26.
Automobiles, Windshield wiper for. S. A. Tuttle and H. L. Parker. 1,485,097; Feb. 26.
Axle, Motor-vehicle. E. Frankland. 1,485,023; Feb. 26.
Backband hook. J. W. Crim. 1,484,986; Feb. 26.
Badge. E. H. Bartelsmeyer. Des. 64,043; Feb. 26.
Badge or similar article. J. R. Cook and W. P. Miesen. Des. 64,049; Feb. 26.
Bag: *See*—
  Bicycle bag.
Ball holder for domestic use, Hollow wool-. J. Blennerhassett. 1,485,327; Feb. 26.
Banjo resonator. A. M. Anderson. 1,485,155; Feb. 26.
Bank-vault safety device. B. F. Gray and A. J. Morrison. 1,484,772; Feb. 26.
Bar: *See*—
  Grate bar.
Barograph. G. de Bothezat and I. I. Eremeeff. 1,484,815; Feb. 26.
Barometer. M. T. Sandys. 1,485,152; Feb. 26.
Barrel end and hoop, Combined. J. O. Willson. 1,484,854; Feb. 26.
Battery: *See*—
  Electric battery.

Bead-clasp base. C. Grunebaum. 1,485,027; Feb. 26.
Belt fastener. D. Hughes. 1,484,828; Feb. 26.
Bending machine. J. W. Taylor. 1,485,313; Feb. 26.
Bicycle bag, Balanced. L. R. Bristol. 1,485,067; Feb. 26.
Binder, Loose-leaf. J. Kahn. 1,485,034; Feb. 26.
Binding, Metal. J. A. Wulftange. 1,484,696; Feb. 26.
Bit: *See*—
  Plane bit.
Block: *See*—
  Building block.
Boiler: *See*—
  Steam boiler.
Boiler cleaner. P. H. Kauffman. 1,484,832; Feb. 26.
Boilers, Draft regulator for steam. A. C. Dole, sr., and A. C. Dole, jr. 1,485,330; Feb. 26.
Bolt-hole cleaner. E. E. Kohoutek. 1,484,721; Feb. 26.
Book covers and the like, Cleaning machine for. H. Erickson. 1,484,766; Feb. 26.
Bottle-capping machine. C. B. Melchior. Re15,777; Feb. 26.
Box: *See*—
  Flour box. Tote box.
  Lunch box. Vanity box.
  Service box.
Box. C. E. Gee. 1,485,221; Feb. 26.
Box support, Curb-. V. E. Beagle. 1,484,699; Feb. 26.
Boxes, Machine for making. J. P. and C. F. Wright. 1,485,004; Feb. 26.
Bracket: *See*—
  Sideboard bracket.
Bracket attachment. S. Ehrich. 1,485,259; Feb. 26.
Brake: *See*—
  Hydraulic brake. Knee brake.
Brake. H. Hawk. 1,484,989; Feb. 26.
Brake mechanism. A. K. Pehrson. 1,485,238; Feb. 26.
Brake shoe. J. J. Karr. 1,484,787; Feb. 26.
Brine-circulating system. F. M. Hill. 1,484,886; Feb. 26.
Brooder, Chicken. W. E. Lyon. 1,484,894; Feb. 26.
Broom and mop holder. F. J. Rauchut. 1,485,092; Feb. 26.
Brush and soap holder, Combination shaving. A. Sniegocki. 1,484,911; Feb. 26.
Brush holders, Arcing means for. E. Sears. 1,485,127; Feb. 26.
Buckle. T. H. Miller. 1,485,122; Feb. 26.
Buckle. R. A. Moore. 1,485,123; Feb. 26.
Buckle. J. R. La Vigne. 1,485,119; Feb. 26.
Buckle, Belt. W. T. Haen. 1,484,884; Feb. 26.
Buckle, Sanitary belt. K. F. Stoddard and R. A. Krautwald. 1,484,880; Feb. 26.
Buffer, Resilient. G. A. Lyon. 1,485,041; Feb. 26.
Bug destroyer. J. B. Eshman and W. G. Johnson. 1,484,703; Feb. 26.
Building block. C. A. Steward. 1,485,309; Feb. 26.
Building block. W. A. Zahn. 1,485,007; Feb. 26.
Building, Convertible. F. J. Keppler. 1,485,035; Feb. 26.
Burner: *See*—
  Oil burner. Stove burner.
  Oil and gas burner.
Button, Cuff. D. N. Baker and J. Pariseau. 1,484,807; Feb. 26.
Cabinets, Wall bracket for. E. W. Salmon, jr. 1,485,296; Feb. 26.
Cable jack. W. B. McCain. 1,485,232; Feb. 26.
Calculating instrument. H. C. Ford. 1,484,823; Feb. 26.
Can: *See*—
  Oil can.
Can-drying apparatus. F. Eberhart and P. W. Fleischer. 1,484,629; Feb. 26.
Can opener. W. M. Thompson. 1,485,094; Feb. 26.
Cant hook. J. V. Hogans. 1,484,990; Feb. 26.
Car construction, Railway-. A. Campbell. 1,485,329; Feb. 26.
Car construction, Tank-. W. J. Tangerman. 1,484,682; Feb. 26.
Car, Railway. E. Eiselt. 1,484,938; Feb. 26.
Car, Railway. A. K. Simmons. 1,484,971; Feb. 26.
Car roof. D. P. Kellogg. 1,484,890; Feb. 26.
Cars, Actuating mechanism for coal dump. J. B. Dodd. 1,484,764; Feb. 26.
Cars or the like, Register for coal. P. Triebel. 1,484,852; Feb. 26.
Carding-machine condenser. G. R. Paige. 1,484,902; Feb. 26.

Carding machines, Condensing apparatus for. J. H. Kovar, J. F. Schimek, and A. Cavedon. Re15,778; Feb. 26.
Carrier: *See*—
  Tire carrier.
Cartridge plug or wad. A. G. Schuricht and G. T. Wright. 1,485,337; Feb. 26.
Case: *See*—
  Ribbon case. Vanity case.
  Securing case.
Cement dump. B. H. Scott. 1,484,969; Feb. 26.
Chair and stepladder, Combined. P. Kobylanski. 1,484,720; Feb. 26.
Chair or similar article. E. B. Wilson. Des. 64,092; Feb. 26.
Chandelier body. F. M. Poritz. Des. 64,079; Feb. 26.
Chandelier-fixture plate. F. Yokel. Des. 64,102; Feb. 26.
Chimes. J. B. Kohler. 1,484,655; Feb. 26.
Chimney. F. F. Beeby. 1,484,862; Feb. 26.
Cigar holder. J. Herks. 1,485,267; Feb. 26.
Cigar lighter. G. Benham and M. A. O'Mara. 1,485,342; Feb. 26.
Cigarette holder and smoking tube, Combination. R. G. Fleming. 1,485,345; Feb. 26.
Cigarettes discharged from cigarette-making machines, Device for aligning. E. Koerner. 1,485,230; Feb. 26.
Cinematographic apparatus, Optical rectifier for. O. Messter. 1,485,195; Feb. 26.
Circuit breaker. C. F. Holmes. 1,484,645; Feb. 26.
Circuit-controlling device, Thermostatic. J. H. Derby. 1,484,816; Feb. 26.
Circuits, Public-address. H. S. Hamilton. 1,484,988; Feb. 26.
Clamp: *See*—
  Clothesline clamp. Extensible clamp.
Clamp. A. L. Cochrane. 1,485,167; Feb. 26.
Cleaner: *See*—
  Boiler cleaner. Spark-plug cleaner.
  Bolt-hole cleaner. Suction cleaner.
Cleaner electric-cord take-up, Vacuum-. B. J. Tamarin. 1,484,681; Feb. 26.
Cleaning metal surfaces, Material for and method of. P. H. Walker and J. H. Bower. 1,484,690; Feb. 26.
Clevis. W. G. and O. Sampson. 1,484,966; Feb. 26.
Clip: *See*—
  Lath-attaching clip.
Cloth and mechanism therefor, Making. F. B. Stearns. 1,485,059; Feb. 26.
Clothesline clamp. O. Meyer and P. S. Maillefert. 1,485,045; Feb. 26.
Clothesline support. B. F. Zilisch. 1,484,856; Feb. 26.
Clutch. E. E. Wemp. 1,485,319; Feb. 26.
Clutch-pedal holder or retainer. W. G. Haehl. 1,485,182; Feb. 26.
Coach step, Folding. G. E. Smith. 1,484,910; Feb. 26.
Coat, Pruner's. W. A. Myers. 1,484,959; Feb. 26.
Coating fabrics, Machine for and method of. D. D. Frothingham and R. U. Sawyer. 1,484,705; Feb. 26.
Coating objects, Apparatus for. F. F. Bradley. 1,484,867; Feb. 26.
Coin counting and packeting machine. C. L. Burdick. 1,484,870; Feb. 26.
Coin-delivery machine. R. and J. W. Cairns. 1,484,872; Feb. 26.
Coin separator and assorter. A. H. Young. 1,484,806; Feb. 26.
Compressor. D. F. Fesler. 1,485,022; Feb. 26.
Compressor unloader. S. B. Redfield. 1,484,873; Feb. 26.
Computing machine. J. Waldheim. 1,485,341; Feb. 26.
Concrete construction, Form for. G. A. Bonelli. 1,484,865; Feb. 26.
Confections, Making. F. L. Guittard and A. L. Carril. 1,485,715; Feb. 26.
Containers, Machine for conveying and sealing. P. H. Lawson. 1,484,722; Feb. 26.
Containers, Manufacturing. J. M. Ahlgren. 1,485,061; Feb. 26.
Controller handle. T. I. Morrish. 1,484,956; Feb. 26.
Conveyer-chain link. W. F. Sipple. 1,484,972; Feb. 26.
Cooker for canned material. F. D. Chapman. 1,484,756; Feb. 26.
Cooling bed. J. R. Klump. 1,484,717; Feb. 26.
Cooling bed. W. B. Nelson. 1,484,664–5; Feb. 26.
Cord connection, Extension-. E. E. Coar and C. Thilman. 1,485,215; Feb. 26.
Core-collapsing device, Sectional. S. Q. Zimmerman. 1,484,924; Feb. 26.
Core drill, Boller. J. D. Pace. 1,484,995; Feb. 26.
Cotton and other fibrous materials, Machines for opening and cleaning. H. Wilkinson. 1,485,240; Feb. 26.
Cotton-gin feeder. A. W. Merkel. 1,485,236; Feb. 26.
Coupling: *See*—
  Hose coupling. Rod coupling.
  Lever coupling.
Cowl light. A. R. Gross. 1,485,074; Feb. 26.
Crank-arm lock. A. R. Clas. 1,484,875; Feb. 26.
Crate, Collapsible. C. S. Lehman. 1,485,084; Feb. 26.
Crate, Folding. E. A. Kamerer. 1,484,651; Feb. 26.
Crate, Shipping. E. A. McCormick. 1,485,140; Feb. 26.
Cuff link. F. Keller. 1,484,788; Feb. 26.
Cultivator. S. P. Taylor. 1,484,803; Feb. 26.
Cultivators, Manually-controlled guide for. H. G. White. 1,484,746; Feb. 26.
Cultivators, Transporting device for disk. J. C. Claus. 1,484,622; Feb. 26.
Culvert. J. H. Schlafly. 1,484,968; Feb. 26.
Cup: *See*—
  Grease cup.
Current machines, Commutation of direct-. J. Perret. 1,485,287; Feb. 26.
Current, Means for flattening the current waves of pulsating direct. C. A. A. Haighton. 1,485,076; Feb. 26.
Current motor group, Alternating-. J. Perret and L. Ots. 1,485,288; Feb. 26.
Curtain holder. P. Kuzniewski. 1,485,117; Feb. 26.
Curtain ring. A. Keller. 1,484,652; Feb. 26.
Curtain stretchers, Clamp for. A. J. Brosey. 1,485,015; Feb. 26.
Cutting machine. C. G. Kuebler. 1,485,276; Feb. 26.
Cylinder lock, Drillproof. N. B. Hurd. 1,484,830–1; Feb. 26.
Cylinder motor, Rotary. C. H. Peck. 1,484,960; Feb. 26.
Davenport. J. M. Richardson. 1,484,846; Feb. 26.
Dental appliance. J. J. Stark. 1,484,800; Feb. 26.
Dental bridgework. J. J. Stark. 1,485,306; Feb. 26.
Deodorizing and preserving. H. H. Hurt. 1,485,333; Feb. 26.
Depolarizing composition. C. Hambuechen. 1,484,885; Feb. 26.
Depolarizing mass and making same, Permeable. G. W. Heise and C. W. Brokate. 1,484,780; Feb. 26.
Depolarizing mixture and preparing same. G. W. Heise. 1,484,782; Feb. 26.
Diaphragm. H. L. Duncan. 1,484,821; Feb. 26.
Diaphragm, Acoustic. H. L. Duncan. 1,484,820; Feb. 26.
Dipper. C. Kleintop. 1,485,273; Feb. 26.
Direction signal. Z. Riddle. 1,485,295; Feb. 26.
Dish or similar article. J. H. Venon. Des. 64,086; Feb. 26.
Disinfector casing. J. Silverstein. Des. 64,082; Feb. 26.
Disintegrator and feeder. A. Farner. 1,485,072; Feb. 26.
Display stand, Advertising. J. M. Wilson and G. W. Sherman. Des. 64,093; Feb. 26.
Display stand, Merchandise-. H. Swadba. Des. 64,085; Feb. 26.
Distribution system. H. D. Arnold. 1,485,156; Feb. 26.
Divan, couch, and the like. R. Coopersmith. 1,484,626; Feb. 26.
Doll. M. Browne. Des. 64,047; Feb. 26.
Doll. F. S. Heggelund. Des. 64,067; Feb. 26.
Doll. M. L. Stone. Des. 64,084; Feb. 26.
Doll, Talking. C. A. Hunter. 1,485,137; Feb. 26.
Door latch, Barn-. J. G. Sebastian. 1,485,301; Feb. 26.
Door-operating mechanism. H. S. Hart. 1,485,185; Feb. 26.
Door-securing mechanism. E. E. Gage. 1,485,024; Feb. 26.
Door structure, Grain-. C. H. Foss. 1,484,634; Feb. 26.
Door threshold, Stormproof. R. Altman, W. L. Wooley, and O. F. Sotier. 1,485,208; Feb. 26.
Doors, Striker plate for. A. B. Ellery. 1,485,174; Feb. 26.
Dress. E. E. Wolf. Des. 64,105–6; Feb. 26.
Drill: *See*—
  Core drill.
Drilling machine. C. B. Cargile. 1,484,809; Feb. 26.
Drink-mixing receptacle. M. Weintraub. Des. 64,091; Feb. 26.
Drumstick. W. J. Hassenpflug. 1,484,777; Feb. 26.
Dry cell. R. C. Benner. 1,484,926; Feb. 26.
Dry cell and reducing gaseous pressure therein. G. W. Heise. 1,484,779; Feb. 26.
Duck, Decoy. J. O. Stubbs. 1,484,975; Feb. 26.
Dustguard. A. Maxwell. 1,485,283; Feb. 26.
Dustpan. S. Lewis. 1,484,725; Feb. 26.
Educational and game cards. R. Mundell. 1,485,146; Feb. 26.
Educational device. M. M. Guhin. 1,484,883; Feb. 26.
Educational device. T. C. Kite. 1,485,190; Feb. 26.
Egg poacher. H. Parodi. 1,485,237; Feb. 26.
Egg turner. T. H. West. 1,484,694; Feb. 26.
Electric battery. A. V. Wilker. 1,484,918; Feb. 26.
Electric cell and preparing depolarizer therefor, Primary. G. W. Heise and C. W. Brokate. 1,484,781; Feb. 26.
Electric circuits, Lock for. H. T. Thomas. 1,485,060; Feb. 26.
Electric coil and making the same. C. F. Peterson. 1,485,289; Feb. 26.
Electric contact device. A. Krauss. 1,485,191; Feb. 26.
Electric discharge apparatus. W. D. Coolidge. 1,485,352; Feb. 26.
Electric heater. F. E. Wolcott. 1,485,153; Feb. 26.
Electric-machinery cooling means. G. Lenhardt and W. Gscheidlen. 1,484,723; Feb. 26.
Electric regulation. E. J. Blake. 1,484,620; Feb. 26.
Electric switch. I. Berenson. 1,485,210; Feb. 26.
Electric switch. W. L. Kubach. 1,485,192; Feb. 26.
Electrode and support for active materials, Storage-cell. R. C. Benner. 1,484,928; Feb. 26.
Electrode, Coated primary-cell. G. W. Heise and C. W. Brokate. 1,484,783; Feb. 26.
Electrogalvanizing apparatus. F. Kirschner. 1,484,653; Feb. 26.
Electrolyte and compositions therefor, Making gelatinous alkaline. G. W. Heise. 1,484,784; Feb. 26.
Elevator stop. J. R. Smith. 1,484,909; Feb. 26.

Embalming implement. W. O. Schroyer. 1,485,298; Feb. 26.
Engine. A. J. Culp. 1,485,218; Feb. 26.
Engine stand, Portable. H. E. Patrick, A. J. Peterson, and J. W. Barmes. 1,484,736; Feb. 26.
Engine-starting gear limiting means. T. J. Martin. 1,485,085; Feb. 26.
Engines, Charge forming and controlling mechanism for internal-combustion. G. W. Bartlett. 1,484,808; Feb. 26.
Engines, Preheating piston for internal-combustion. C. Altenburger. 1,485,009; Feb. 26.
Envelope-making machines, Gum-box drive mechanism for. A. E. Augustine. 1,484,753; Feb. 26.
Envelope-sealing device for postage meters. A. H. Pitney. 1,485,021; Feb. 26.
Eraser for blackboards. L. U. Kinder. 1,485,081; Feb. 26.
Esters, Producing polyfatty-acid. E. Zollinger and A. Grün. 1,484,626; Feb. 26.
Excavating machine. M. E. Pugh. 1,485,198; Feb. 26.
Excavating machine, Skimmer-scoop. M. E. Pugh. 1,485,199; Feb. 26.
Expansible-collapsible element and producing the same. H. C. Mallory. 1,485,233; Feb. 26.
Explosive, High. C. A. Woodbury. 1,485,003; Feb. 26.
Extensible clamp. M. H. Moses. 1,484,794; Feb. 26.
Extractor: *See*—
  Milk extractor.
Fabric: *See*—
  Haircloth fabric. Wire fabric.
Fan. J. Aronoff. 1,485,241; Feb. 26.
Faucet. T. Rubino. 1,484,740; Feb. 26.
Feeder, Automatic. J. R. Vincent. 1,484,916; Feb. 26.
Fencepost. C. M. Kitselman and O. L. Barber. 1,484,949; Feb. 26.
Fencepost. E. Labenz. 1,484,834; Feb. 26.
Fermenting bung and wire jar holder, Combined. T. R. Michel. 1,485,088; Feb. 26.
Filling devices, Space indicator for. S. Crystal. 1,485,169; Feb. 26.
Film-printing machines, Film-actuating device for positive-. A. L. V. C. Debrie. 1,484,701; Feb. 26.
Filter, Gasoline. W. Feil. 1,484,767; Feb. 26.
Finger prints, Taking. F. D. Boyd. 1,485,245; Feb. 26.
Firearm, Safety. E. S. Pomeroy. 1,484,671; Feb. 26.
Firearms, Flinch indicator for. D. B. Howard. 1,484,647; Feb. 26.
Fire screen. H. B. Hopson. 1,484,646; Feb. 26.
Fishing reel. S. G. Russell. 1,484,906; Feb. 26.
Flatiron, Electric. A. Grouleff and H. A. Holmes. 1,484,773; Feb. 26.
Floor construction, Flat-arch. E. V. Johnson. 1,484,649; Feb. 26.
Floor crane. W. R. Beatty. 1,485,011; Feb. 26.
Flour box. H. E. Janes. 1,485,032; Feb. 26.
Fluids under pressure, Fluid-tight joint for pipes for. L. L. B. Denis. 1,485,252; Feb. 26.
Fluorine, Making. F. C. Mathers. 1,484,733; Feb. 26.
Fluorine, Method and apparatus for making. F. C. Mathers. 1,484,734; Feb. 26.
Flying machine. F. Braun. 1,485,163; Feb. 26.
Flying machine, Helicopter. E. N. Fales. 1,484,632; Feb. 26.
Fodder tie. R. B. Vincent. 1,484,688; Feb. 26.
Folder. G. M. Miller. 1,484,955; Feb. 26.
Folder, Flexible. H. W. Severance. 1,484,677; Feb. 26.
Folding stand, Adjustable. E. W. Borger. 1,485,244; Feb. 26.
Food-preservation apparatus. G. Frerichs. 1,484,704; Feb. 26.
Foodstuffs, Utensil for the treatment of. E. S. Devlin. 1,485,253; Feb. 26.
Frame support. W. Eccles and H. L. Guy. 1,484,936; Feb. 26.
Framer. G. Holub. 1,484,710; Feb. 26.
Friction material. O. D. Gray. 1,485,180; Feb. 26.
Fruit juices, Clarifying. A. Gusmer. Re15,776; Feb. 26.
Furnace: *See*—
  Roasting furnace.
Furnace. T. C. Sherwood. 1,484,908; Feb. 26.
Furnace. C. H. Zieg. 1,485,325; Feb. 26.
Furnace. L. Roessel, A. E. Bellis, and C. S. Collins. 1,485,151; Feb. 26.
Furniture, Convertible. C. Eckenwalder. 1,484,630; Feb. 26.
Fuse, Renewable electric. T. Berger. 1,485,211; Feb. 26.
Gambrel. W. A. Blake. 1,485,161; Feb. 26.
Garage. P. A. Roberts and P. C. Bach. 1,485,200; Feb. 26.
Garment-fastening button. J. Maltby and T. H. Miller. 1,485,121; Feb. 26.
Gas governor, High-pressure. H. W. Partlow. 1,484,668; Feb. 26.
Gas vaporizer. H. A. Church. 1,485,112; Feb. 26.
Gases and the like, Burner for petrol. H. E. Smith. 1,485,129; Feb. 26.
Gases, Apparatus for purifying. H. L. Wadsworth. 1,484,745; Feb. 26.
Gaskets and the like, Machine for making. W. J. Peelle. 1,484,961; Feb. 26.
Gasoline, Recovering. L. Warren. 1,484,922; Feb. 26.
Gasoline tanks, Attachment for. L. P. Crose. 1,485,250; Feb. 26.
Gauge: *See*—
  Pressure gauge.
Gauge. E. H. Aldeborgh. 1,485,154; Feb. 26.
Gauges, Device for lapping. G. E. Wilkinson. 1,485,321; Feb. 26.
Gear. R. D. Babson. 1,485,158; Feb. 26.
Gear casing. H. L. Guy and W. Eccles. 1,484,942; Feb. 26.
Gear, Change-speed. V. Lancia. 1,485,278; Feb. 26.
Gear-shifting mechanism. W. P. Leftwich and D. S. Stout. 1,485,231; Feb. 26.
Gearing, Lubricating system for. C. W. Francis. 1,484,635; Feb. 26.
Gearing mounting, Transmission-. R. H. White. 1,485,106; Feb. 26.
Glass into molds, Method of and apparatus for feeding molten. A. L. Schram. 1,484,907; Feb. 26.
Glass tanks, Automatic flow for. W. H. and H. W. McSwain. 1,484,952; Feb. 26.
Goblet or similar article. J. O. Balda. Des. 64,040; Feb. 26.
Golf-bag support. F. W. De Blieux. 1,485,113; Feb. 26.
Golf club. H. J. Kinsman. 1,485,272; Feb. 26.
Golf target. A. J. Musselman. 1,485,089; Feb. 26.
Goods or merchandise, Box or container for use in the conveyance or transport of. G. Huguenin. 1,484,829; Feb. 26.
Grain binders, Grain-scattering-preventing device for. O. E. Paulus. 1,484,996; Feb. 26.
Grain saver. P. Klein. 1,484,891; Feb. 26.
Grate bar. C. P. Oakman. 1,484,901; Feb. 26.
Grate, Mechanical stoker furnace. S. Wadas. 1,485,317; Feb. 26.
Grating. W. L. Pattison. 1,484,903; Feb. 26.
Gravity, Operating mechanism by. W. G. Wilson. 1,485,002; Feb. 26.
Grease cup. O. E. Barthel. 1,484,925; Feb. 26.
Greenhouse gutter. P. L. McKee. 1,484,838; Feb. 26.
Grinding machine. J. F. Flaherty. 1,484,878; Feb. 26.
Hair, Apparatus for the easy clamping of the protecting tubes used in permanent waving of the. H. R. Philippe. 1,485,148; Feb. 26.
Haircloth fabric. V. Pastore. 1,484,660; Feb. 26.
Hair-cutting tool. W. Sovitzky and C. Duban. 1,485,130; Feb. 26.
Hairpin. J. J. O'Brien. 1,485,284; Feb. 26.
Hammer, Spring. J. H. Phillips. 1,484,845; Feb. 26.
Hammers, Tool holder for pneumatic. J. E. Ash and J. M. Crowe. 1,485,010; Feb. 26.
Handle: *See*—
  Controller handle. Razor-blade-stropping handle.
Hanger: *See*—
  Picture hanger.
Harvester attachment, Ensilage-. A. G. and A. Ronning. 1,485,201; Feb. 26.
Hatch cover. E. A. Sweeley. 1,485,312; Feb. 26.
Hat-form holder. W. H. Mead. 1,485,086; Feb. 26.
Headlight, Automobile. R. C. Hancock. 1,485,030; Feb. 26.
Headlight, Dirigible. G. L. Horton. 1,485,225; Feb. 26.
Headlight, Dirigible. J. P. Lamuth. 1,485,277; Feb. 26.
Headlight or spotlight, Auxiliary dirigible. F. H. Page and D. P. Snooks. 1,485,048; Feb. 26.
Heater: *See*—
  Electric heater. Water heater.
Heater or like utensil. R. Bartholomew. 1,485,159; Feb. 26.
Hedge trimmer. E. G. Lovelace. 1,484,792; Feb. 26.
Heel, Cushioned. W. T. McLaughlin. 1,485,194; Feb. 26.
Heels, Method of and machine for making. J. B. Hadaway. 1,484,642; Feb. 26.
Hinge. W. N. Vance. 1,484,686; Feb. 26.
Hog carcasses, Means for removing hair and scurf from. R. B. Leeper. 1,484,836; Feb. 26.
Hoist. J. Ditson and A. E. Peters. 1,484,763; Feb. 26.
Hoist especially suitable for raising projectiles on board ship. H. W. Lee and J. W. Swindale. 1,484,659; Feb. 26.
Hook: *See*—
  Backband hook. Cant hook.
Hose coupling. S. Levitt. 1,485,139; Feb. 26.
Hydraulic brake. S. B. Shoemaker. 1,485,304; Feb. 26.
Hydrocarbons and recovering gasoline, Apparatus for cracking. M. H. Kotzebue and L. M. Bowman. 1,485,083; Feb. 26.
Hydrocarbons into lighter hydrocarbons, Apparatus for converting heavy. W. F. Muehl. 1,484,958; Feb. 26.
Ice-cream, milk-chocolate, and confection mixes and the like, Manufacturing. G. W. Burt. 1,485,069; Feb. 26.
Ice-cream scoop. F. C. Kirchhoff. 1,484,716; Feb. 26.
Ice-cream tubs, Wooden vacuum tub for. E. J. Hayes. 1,485,263; Feb. 26.
Ice-loosening device. J. H. Taylor and W. E. Powell. 1,485,314; Feb. 26.
Ice, Machine for marking. W. D. Tickel. 1,485,316; Feb. 26.
Ice manufacture, Combined dumping and refilling means for. G. B. Bright. 1,484,982; Feb. 26.
Ice pick. J. B. Dye. 1,485,257; Feb. 26.
Identification device. G. Hyatt. 1,484,887; Feb. 26.
Ignition apparatus. W. S. Harley. 1,485,353; Feb. 26.
Ignition system. J. W. Lauren. 1,484,658; Feb. 26.
Illuminating device. J. B. Rhoads. 1,484,964; Feb. 26.
Impulse transmitter. W. T. Powell. 1,484,739; Feb. 26.
Indicator: *See*—
  Test indicator.

Induction synchronous motor. T. Yamamoto. 1,485,006; Feb. 26.
Ingot mold and ingot. E. Gathmann. 1,484,940; Feb. 26.
Inkstand. H. M. Dungan. 1,485,255; Feb. 26.
Interceptor. S. L. Marsh. 1,484,953; Feb. 26.
Ironing machine. H. H. Fogwell and C. J. Heiser. 1,484,879; Feb. 26.
Isometric or other mechanical projections, Apparatus for drawing. D. B. Dowling. 1,484,702; Feb. 26.
Jack: *See*—
  Automobile jack. Lifting jack.
  Cable jack. Pumping jack.
Jar cap. I. J. Celona. 1,485,166; Feb. 26.
Joint: *See*—
  Universal joint.

Oil burner. G. B. Lenr. 1,484,993; Feb. 26.
Oil burner, Fuel-. F. A. E. Wegscheider. 1,484,693; Feb. 26.
Oil can, Reversible pump. E. C. Wolfe. 1,484,920; Feb. 26.
Oil lines, Choke nipple for. M. J. Heald. 1,485,264; Feb. 26.
Oil, Process and apparatus for reducing the temperature of cooling. H. A. Wright. 1,485,134; Feb. 26.
Oils and gases from oil wells, Apparatus for the recovery and refining of light hydrocarbon. W. J. Knox. 1,484,718; Feb. 26.
Oiling system. J. A. Tarkington and H. D. Palmer. 1,485,857; Feb. 26.
Ophthalmic mounting. E. J. R. Beattey. Des. 64,044; Feb. 26.
Organ pipe, Flute. G. J. Zimmer. 1,485,008; Feb. 26.
Organic compounds and the resulting compositions, Solvent for. W. W. Clough and C. O. Johns. 1,485,071; Feb. 26.
Oven, Baking. E. S. Eaton and W. W. Cummings, jr. 1,485,173; Feb. 26.
Overload protective device. C. J. Axtell. 1,485,157; Feb. 26.
Packaging machine. C. H. Macdonald. 1,485,141; Feb. 26.
Packaging machines, etc., Selecting and delivering mechanism for. A. Y. Hodgdon. 1,485,187; Feb. 26.
Packing means for articles having finished surfaces, Protective. E. W. McMullen. 1,484,895; Feb. 26.
Packing ring, Piston. F. E. Small. 1,485,128; Feb. 26.
Packing rings, Apparatus and process for registering and assembling. R. B. Wasson. 1,484,691; Feb. 26.
Pail, Sand. L. N. Emmets. Des. 64,050; Feb. 26.
Paper for tickets or cards, Safety. C. Manshel. Des. 64,071; Feb. 26.
Paper-making machines, Mandrel for. A. Philhower. 1,485,290; Feb. 26.
Paper, Process and apparatus for manufacturing. J. H. Durkin and D. Wilkie. 1,485,256; Feb. 26.
Partition construction. E. Flagg. 1,485,262; Feb. 26.
Pawl-and-ratchet mechanism. G. F. Crass. 1,485,217; Feb. 26.
Pedal, Extension. C. A. Rivers and F. B. Stuart. 1,484,847; Feb. 26.
Peeling machine, Log-bark-. E. G. and J. E. Stack. 1,484,912; Feb. 26.
Pen, Fountain. W. J. McDonald. 1,484,730; Feb. 26.
Pen, Self-filling fountain. L. M. Tebbel. 1,484,683; Feb. 26.
Pencil. C. J. Funk. 1,485,073; Feb. 26.
Pendant. A. L. Whitcomb. Des. 64,094; Feb. 26.
Phonograph cabinet. W. Millington. Des. 64,073–4; Feb. 26.
Phonograph lamp. H. A. and R. W. Hansen. Des. 64,066; Feb. 26.
Phonograph stop and start device, Automatic. E. H. Bickley. 1,485,065; Feb. 26.
Phonograph, Tractor. W. Ritter. 1,484,965; Feb. 26.
Photograms, Theodolite for making angular determinations direct from. K. R. Hugershoff. 1,485,220; Feb. 26.
Photographic-printing machine. C. Simpson. 1,484,797; Feb. 26.
Piano, Color. A. E. O. Munsell. 1,484,795; Feb. 26.
Piano, Pneumatically-played. W. M. Bauer. 1,485,063; Feb. 26.

Pianos, Cleaning device for player. A. P. Groves. 1,484,774; Feb. 26.
Picture hanger. H. A. Cooper. 1,485,216; Feb. 26.
Picture machines, Film-feeding mechanism for moving-. S. Bardy. 1,484,754; Feb. 26.
Picture-projecting lights, Mounting for. C. F. Jenkins. 1,484,648; Feb. 26.
Pictures, Device for hanging. W. F. McGowan. 1,485,281; Feb. 26.
Piling machine. B. H. Saunders. 1,485,053; Feb. 26.
Pin-cylinder lock. W. T. Coney. 1,484,757; Feb. 26.
Pipe: *See*—
Organ pipe.
Pipe holder, Drive-. S. P. Powers. 1,484,904; Feb. 26.
Pipes, Process and apparatus for making centrifugal concrete. J. C. Mitchell. 1,485,142; Feb. 26.
Pistol and mechanism which can be concealed in any portable object. C. Joriot. 1,484,650; Feb. 26.
Piston. H. J. Hater. 1,485,078; Feb. 26.
Piston ring. F. C. Reineking. 1,485,293; Feb. 26.
Pitcher. F. Carder. Des. 64,048; Feb. 26.
Plane bit. P. Basmaison. 1,484,861; Feb. 26.
Plant product. L. Koropp and V. F. Bergman. 1,484,656; Feb. 26.
Plastic materials, Feed hopper for. H. M. Hill. 1,484,945; Feb. 26.
Plate or similar article. W. H. Fiek. Des. 64,052; Feb. 26.
Plate or similar article. D. B. Hancock. Des. 64,063; Feb. 26.
Plate or similar article, Sandwich. J. W. Farrell. Des. 64,051; Feb. 26.
Pliers. W. M. Way. 1,485,318; Feb. 26.
Plug receptacle. A. L. R. Ellis. 1,485,175; Feb. 26.
Portable table. P. Alexander. 1,484,858; Feb. 26.
Potatoes, Machine for setting. J. F. Ljungdahl. 1,484,726; Feb. 26.
Pressure gauge. J. R. Padesky. 1,485,336; Feb. 26.
Processing, Method and apparatus for automatically controlling. W. H. White. 1,485,133; Feb. 26.
Projection apparatus with movable condensing lens. W. L. Patterson. 1,485,147; Feb. 26.
Propeller blade. C. F. Hoffmann. 1,485,079; Feb. 26.
Pump. W. C. Dodd. 1,484,987; Feb. 26.
Pump jack. L. L. Turney. 1,484,744; Feb. 26.
Puzzle. E. A. Stoppel. 1,484,849; Feb. 26.
Racquet press, Tennis-. A. Forbes. Des. 64,103; Feb. 26.
Radiator. H. M. Yeager. 1,484,749; Feb. 26.
Radiator guard. P. V. Harris and J. D. Reynolds. 1,485,184; Feb. 26.
Radiator mounting. H. M. Yeager. 1,484,748; Feb. 26.
Radiator support. J. C. Frank. 1,485,178; Feb. 26.
Radio battery construction. P. M. Marko. 1,485,282; Feb. 26.
Radio telegraph system. J. B. Brady. 1,485,212; Feb. 26.
Radio transmission system. J. Bethenod. 1,485,111; Feb. 26.
Rail-joint structure. M. Thomson. 1,485,315; Feb. 26.
Railway-grade-crossing gate. C. W. Hall. 1,484,943; Feb. 26.
Railway safe-running device. A. R. Angus. 1,485,108; Feb. 26.
Railway safety device. I. L. Edwards. 1,485,331; Feb. 26.
Raising and lowering machine. G. M. French. 1,484,636; Feb. 26.
Razor-blade-stropping handle. C. F. Larzelere. 1,484,857; Feb. 26.
Razor, Safety. H. M. Chance. 1,485,214; Feb. 26.
Razor, Safety. S. Speirs. 1,485,093; Feb. 26.
Razor strop. J. W. Shepard. 1,485,350; Feb. 26.
Receptacle. G. E. Morgan. 1,485,144; Feb. 26.
Receptacle closure. I. J. Celona. 1,485,165; Feb. 26.
Receptacle closure. H. A. House. 1,485,136; Feb. 26.
Record-ejecting device. D. Di Carlo. 1,484,627; Feb. 26.
Reel: *See*—
Fishing reel.
Refractory shapes, Making. C. L. Norton. 1,484,735; Feb. 26.
Regulator. P. W. Dairymple. 1,484,934; Feb. 26.
Relay and circuits therefor. D. K. Gannett. 1,484,707; Feb. 26.
Relay, Sensitive. J. H. Hammond, jr. 1,484,709; Feb. 26.
Ribbon case. E. Pepper. 1,485,091; Feb. 26.
Rim flange, Auxiliary demountable-. W. J. Wall. 1,485,100; Feb. 26.
Rim, Separable. S. P. Thorington. 1,484,915; Feb. 26.
Ring: *See*—
Curtain ring. Packing ring.
Key ring. Piston ring.
Rings, Process and blank for making finger. H. Dinhofer. 1,484,628; Feb. 26.
Road-surfacing machine. C. C. Hansen. 1,484,944; Feb. 26.
Roasting furnace. A. V. Leggo. 1,484,791; Feb. 26.
Rod coupling. C. Steiner. 1,484,999; Feb. 26.
Roofing, Apparatus for applying granular surfacing materials upon prepared. G. Ritter. 1,485,340; Feb. 26.
Roofing machine. H. A. Cumfer. 1,484,760; Feb. 26.
Roofing product. H. A. Cumfer. 1,484,761; Feb. 26.
Rowlock. W. L. C. Koch. 1,484,719; Feb. 26.
Rubber articles, Manufacture of sponge-. F. S. Malm. 1,484,731; Feb. 26.
Rubber articles, Manufacturing colored. A. P. Witten. 1,484,919; Feb. 26.
Rubber heel for a boot or shoe. F. A. McDonald. Des. 64,072; Feb. 26.
Safety signal. A. S. Johnson. 1,484,712; Feb. 26.
Salt and pepper device, Combination. M. C. Gunter. 1,485,028; Feb. 26.
Sand separator. C. E. Wood. 1,484,695; Feb. 26.
Sash grip. J. T. O'Gorman. 1,485,285; Feb. 26.
Sausage casings, Flushing and stuffing. W. F. Schönland, jr. 1,484,741; Feb. 26.
Saw, Compass. E. E. Fearing. 1,485,261; Feb. 26.
Saw set. O. Frisk. 1,485,114; Feb. 26.
Saw, Swing. J. Wegner. 1,485,101; Feb. 26.
Screen: *See*—
Fire screen. Window screen.
Sealing, Method and means for. W. M. Brooks. 1,485,328; Feb. 26.
Security case. H. C. Stallings. 1,485,131; Feb. 26.
Seeds and composition therefor, Disinfecting. M. Engelmann. 1,485,021; Feb. 26.
Seine, Floating trawling fish. P. M. Skrmetti. 1,485,338; Feb. 26.
Separator: *See*—
Sand separator.
Separator and the like, Centrifugal. W. Mauss. 1,485,235; Feb. 26.
Service box. P. and R. H. Mueller. 1,485,047; Feb. 26.
Sewing machine, Label-fixing. M. G. Rosenthal. 1,484,905; Feb. 26.
Sewing machines, Lighting device for. B. Elshoff. 1,484,822; Feb. 26.
Sewing machines, Lighting device for. W. H. Brady. 1,484,868; Feb. 26.
Sewing machines, Lock-stitch mechanism for. J. Cooper. 1,484,624; Feb. 26.
Sewing machines, Tufting-attachment mechanism for. A. J. Carter. 1,485,213; Feb. 26.
Shades, curtains, and overdrapes, Bracket for supporting window. E. Morrison, W. F. Futrall, and A. Eglinski. 1,485,145; Feb. 26.
Shank stiffener. F. P. Marx. 1,485,234; Feb. 26.
Sharpener, Lawn-mower. J. A. Grassman. 1,484,708; Feb. 26.
Sheet material, Cutting. T. Lund. 1,484,728; Feb. 26.
Shelf tool. S. Shields. 1,484,848; Feb. 26.
Shipping cases, Constructing fiber. H. R. Bliss. Re15,775; Feb. 26.
Shipping frame for long-pile goods. F. R. Wheeler and B. M. McMeekin. 1,485,320; Feb. 26.
Shipping or packing box. A. Lackey. 1,484,789; Feb. 26.
Shock absorber. E. S. Aker. 1,484,859; Feb. 26.
Shock absorber. A. G. Kemerling. 1,485,271; Feb. 26.
Shock absorber for vehicles. M. I. Kline. 1,485,274; Feb. 26.
Shock-absorbing wheel for vehicles. A. A. Mendenhall. 1,484,661; Feb. 26.
Shocking machine. J. Birnie, jr. 1,484,700; Feb. 26.
Shoe. E. Kezy. Des. 64,068; Feb. 26.
Shoe. E. Kezy. Des. 64,104; Feb. 26.
Shoe. J. D. Posner. Des. 64,080; Feb. 26.
Shoe, Congress. J. T. Tebbutt. 1,484,743; Feb. 26.
Shotgun rib. J. F. Berger. 1,485,064; Feb. 26.
Shot-hole-clearing tool. I. Svetkoff. 1,484,850; Feb. 26.
Shuttle-throwing mechanism. C. H. Straiucke. 1,485,310; Feb. 26.
Sideboard bracket. E. S. Landis. 1,485,279; Feb. 26.
Sight feed, Centrifugal-force. F. L. Dunann. 1,484,935; Feb. 26.
Sign. J. L. Hewitt. 1,484,644; Feb. 26.
Sign, Advertising. P. V. Hann. 1,485,077; Feb. 26.
Signal: *See*—
Direction signal. Traffic signal.
Safety-signal. Vehicle signal.
Signal and license-plate holder, Combination. J. Rubinoff. Des. 64,081; Feb. 26.
Signal-controlling device, Electrical. J. L. O'Keefe. 1,485,197; Feb. 26.
Signal system. J. M. Johnson. 1,484,713; Feb. 26.
Signpost. C. L. Terry. 1,484,804; Feb. 26.
Sill construction. J. F. Steckenreiter. 1,485,307; Feb. 26.
Silo or tank. O. Brumbaugh. 1,484,984; Feb. 26.
Slitting and rewinding machine. H. E. Nichols, E. J. O'Clair, and W. L. Perry. 1,484,842; Feb. 26.
Slitting and rewinding machine. E. J. O'Clair. 1,484,843; Feb. 26.
Smoker's appliance. R. G. Fleming. 1,485,346; Feb. 26.
Sodium sulphites, Making. V. Drewsen. 1,484,818; Feb. 26.
Sound clarifier. C. W. Johnson. 1,485,348; Feb. 26.
Soup powder from peas, beans, lentils, or the like, Making. A. Sherer. 1,484,970; Feb. 26.
Spark-plug cleaner. C. Jacobs. 1,485,347; Feb. 26.
Spark plug, Diamountable. H. Koerber. 1,485,275; Feb. 26.
Spark-plug tester. B. C. Doppes and H. W. Centner. 1,485,171; Feb. 26.
Spear. N. S. Scott. 1,485,300; Feb. 26.
Spinning, Process of and apparatus for. W. F. Lent. 1,484,724; Feb. 26.
Spokes, Manufacturing. H. Flick. 1,485,176; Feb. 26.
Spool support. J. T. Dowdall. 1,485,020; Feb. 26.

Spoolers, Attachment for. W. E. Ball. 1,485,242; Feb. 26.
Spoon or similar article. E. T. Beck. Des. 64,045–6; Feb. 26.
Spraying apparatus. C. L. Ginty. 1,485,222; Feb. 26.

Track for gymnasium climbing poles. F. Albach. 1,485,135; Feb. 26.
Tractor. J. C. French. 1,484,637; Feb. 26.
Tractor. R. H. White and E. H. Savage. 1,485,104; Feb. 26.
Tractors, Clutch release for. S. G. Besaury. 1,484,929; Feb. 26.
Tractors, Side frame for track-laying. R. H. White. 1,485,105; Feb. 26.
Traffic signal. J. J. Flannery, jr. 1,484,633; Feb. 26.
Traffic signal, One-way street-. E. H. Medén. 1,484,840; Feb. 26.
Transformers, Means for indicating load conditions of. H. J. Blakeslee. 1,485,013; Feb. 26.
Transmission lines, Automatic circuit-breaker attachment for high-tension. T. F. Johnson, jr. 1,485,227; Feb. 26.
Transmission lines, Cross-arm hook for electric. T. F. Johnson, jr. 1,485,228; Feb. 26.
Tray. M. Levine. Des. 64,070; Feb. 26.
Tray mounting, Ash-. C. A. Greene. 1,485,223; Feb. 26.
Tray or similar article, Metal border strip for a. A. Barchoff. Des. 64,041; Feb. 26.
Tray, Smoker's ash. P. H. Spillane. Des. 64,083; Feb. 26.
Treatment of materials, Apparatus for. G. W. Burt and C. R. Mabee. 1,485,070; Feb. 26.
Trench excavator. P. J. Monahan, W. Ferris, and W. Lehman. 1,484,841; Feb. 26.
Trestle, Knockdown. C. H. Davis. 1,485,251; Feb. 26.
Tricycle and gocart, Combination. A. Dobrowolski. 1,484,876; Feb. 26.
Trimmer: *See*—
Hedge trimmer. Lawn trimmer.
Trimming-machine attachment. H. Renken. 1,485,149; Feb. 26.
Trimming machine, Putty-. A. Hughes. 1,485,268; Feb. 26.
Truck. H. L. Hamilton. 1,485,224; Feb. 26.
Truck, Hand. C. F. Bompart. 1,484,864; Feb. 26.
Truck, Hand-control load-lifting. R. R. Keck. 1,484,947; Feb. 26.
Truck, Hoisting. V. E. Beagle. 1,484,698; Feb. 26.
Truck, Railway. E. W. Summers. 1,485,311; Feb. 26.
Truck, Rotatable conveying. V. E. Adland. 1,484,615; Feb. 26.
Tube: *See*—
Tire tube.
Turbine. J. C. Britcher. 1,484,983; Feb. 26.
Turbine, Hydraulic. L. F. Harza. 1,485,186; Feb. 26.
Turbine wheel. F. M. Zottoli. 1,484,980; Feb. 26.
Turbogenerator. C. W. Dake. 1,484,813; Feb. 26.
Typewriting machine. F. Sándor. 1,485,297; Feb. 26.
Typewriting machine. J. A. B. Smith. 1,485,204; Feb. 26.
Typewriting machine. J. Waldheim. 1,485,206; Feb. 26.
Underreamer. G. H. Craig. 1,485,249; Feb. 26.
Universal joint. F. Kingsley. 1,485,036; Feb. 26.
Valve. L. J. Rossiter. 1,484,997; Feb. 26.
Valve-adjusting means. R. M. Getchell. 1,484,640; Feb. 26.
Valve for compressors, Pilot. S. B. Redfield. 1,484,674; Feb. 26.

Valve for rock drills, Fluid-actuated inlet. F. M. Slater. 1,484,678-9; Feb. 26.
Valve for rotative motors, Hand-regulating. C. C. Hansen. 1,484,643; Feb. 26.
Valve, Pressure-reducing regulating. E. R. Williams. 1,485,000; Feb. 26.
Valve, Safety quick-closing. H. H. Hoffman. 1,485,081; Feb. 26.
Valve, Seatless. J. R. Smith. 1,484,796; Feb. 26.
Valves, Locked housing for. J. W. Moore. 1,484,798; Feb. 26.
Vanity box. F. Goerts. 1,484,770; Feb. 26.
Vanity boxes, Spring catch for. H. I. Phillips. 1,485,050; Feb. 26.
Vanity boxes, Spring catch for. P. A. Reutter. 1,485,052; Feb. 26.
Vanity case. B. B. Dowell. 1,485,172; Feb. 26.
Vanity case. B. B. Dowell. Des. 64,107; Feb. 26.
Variable-speed mechanism, Belt tightener for. J. O. Corn. 1,484,811; Feb. 26.
Vault, Concrete casket. J. Mannix. 1,484,896; Feb. 26.
Vegetables, Device for cutting. J. MacQuillan. 1,484,859; Feb. 26.
Vehicle. N. C. Storey. 1,484,974; Feb. 26.
Vehicle buffer. G. A. Lyon. 1,485,035; Feb. 26.
Vehicle buffer. G. A. Lyon. 1,485,040; Feb. 26.
Vehicle buffer device. G. A. Lyon. 1,485,044; Feb. 26.
Vehicle buffer, Resilient. G. A. Lyon. 1,485,039; Feb. 26.
Vehicle, Child's. F. E. Meyer. 1,484,897; Feb. 26.
Vehicle construction. A. F. Masury. 1,484,954; Feb. 26.
Vehicle doors, Handle for motor-. J. M. Yates. Des. 64,095; Feb. 26.
Vehicle, Motor. J. Galamb. 1,484,880; Feb. 26.
Vehicle signal. O. W. Barricklow. Des. 64,042; Feb. 26.
Vehicle signal. F. H. Kaley. 1,484,714; Feb. 26.
Vehicle top, Metallic motor-. J. Hamlin and T. Makela. 1,485,029; Feb. 26.
Vehicles and machinery, Variable-speed gearing for motor. R. H. and V. Hopkinson. 1,484,711; Feb. 26.
Vehicles, Buffer for motor. G. A. Lyon. 1,485,037; Feb. 26.
Vehicles, Bumper for motor. I. L. Edwards. 1,485,382; Feb. 26.
Vehicles, Lubricating arrangement for the crank cases or oil chambers of motor. W. E. Goodwin. 1,484,641; Feb. 26.
Ventilator: *See*—
Window ventilator.
Vessels, Propulsion and maneuvering of. J. H. W. Gill. 1,484,881; Feb. 26.
Viola, Fingering mechanism for contrabass. S. Christensen. 1,484,955; Feb. 26.
Vulcanising and other apparatus, Means for controlling the supply of heat in. W. H. Welch. 1,485,351; Feb. 26.
Washer for nuts and the like, Locking. A. G. France. 1,484,769; Feb. 26.
Washing machine. W. G. Carson. 1,484,873; Feb. 26.
Washing machine. O. Herrmann. 1,485,354; Feb. 26.
Washing-machine casing. Z. C. Haberman. Des. 64,062; Feb. 26.
Waterer and feeder, Chicken. T. O. Bakken. 1,484,860; Feb. 26.
Water heater. E. J. Zeigler. 1,485,107; Feb. 26.
Waterproof, flexible, abrasive-holding composition and product, Making. F. J. Crupi. 1,484,759; Feb. 26.
Water sprinkler. W. C. Todd and J. W. Pomeroy. 1,484,684; Feb. 26.
Weeding tool. R. H. Kimberlin. 1,484,948; Feb. 26.
Wheel: *See*—
Automobile jack wheel. Turbine wheel.
Steering wheel.
Wheelbarrow. J. L. Funk. 1,485,179; Feb. 26.
Wheel rim, Metal bicycle. W. B. Olle. 1,484,844; Feb. 26.
Window screen, Rolling. A. Yerly. 1,485,324; Feb. 26.
Window sashes, Automatic interlocking attachment for. H. C. Trost. Re15,779; Feb. 26.
Window sashes, Automatic interlocking attachment for. H. C. Trost. 1,484,685; Feb. 26.
Window ventilator. A. C. Schoepfer. 1,485,125; Feb. 26.
Wire fabric. H. M. Young. 1,484,697; Feb. 26.
Wire-line spooler. F. Squire. 1,484,790; Feb. 26.
Wire with varnish and the like, Apparatus for coating. W. A. Dickie. 1,485,254; Feb. 26.
Wood substitute. J. W. Sheridan. 1,485,303; Feb. 26.
Woodworking machine, Adjustment for. F. L. Lane. 1,484,585; Feb. 26.
Work clamp and gauge. G. A. Kirkbride. 1,485,082; Feb. 26.
Wrench. P. C. Baldus. 1,485,062; Feb. 26.
Wrench. D. S. Flowers. 1,485,220; Feb. 26.
Wringer roll. G. R. Keltie. 1,485,189; Feb. 26.
Wringers, Control mechanism wash for. J. G. Seelig. 1,484,676; Feb. 26.
Wringers, Safety device for clothes. J. J. Wood. 1,485,323; Feb. 26.
X-ray filter. A. Mutschellor. 1,484,663; Feb. 26.
Zeolites, Regenerating spent. H. Kriegsheim. 1,485,334; Feb. 26.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 26, 1924.

NOTE.—First number—class, second number—subclass, third number—patent number.

2— 15: 1,484,859
31: 1,484,921
103: 1,485,086
119: 1,485,160
3— 12: 1,484,913
5— 12: 1,484,626
31: 1,484,946
186: 1,484,607
8— 19: 1,485,053

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 320—No. 1. TUESDAY, MARCH 4, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disbarment of Attorneys—Rules of the Supreme Court of the District of Columbia—Petitions to Review Orders of Commissioner of Patents.

IN THE SUPREME COURT OF THE DISTRICT OF COLUMBIA HOLDING A GENERAL TERM. PRESENT: THE CHIEF JUSTICE AND ASSOCIATE JUSTICES STAFFORD, SIDDONS, HITZ, BAILEY, AND HOEHLING.

Order.

It is ordered that the following be and they hereby are established as the rules of practice in this court on petitions to review orders of the Commissioner of Patents:

1. In all cases of review by the Supreme Court of the District of Columbia of the action of the Commissioner of Patents in refusing recognition of parties practicing or seeking to practice before the United States Patent Office, or suspending or excluding parties from so practicing, which review is provided for by section 487 R. S. as amended by the act of Congress of February 18, 1922, the party aggrieved shall within forty days from and after the date of the order or action sought to be reviewed present to the Commissioner of Patents his petition to this court requesting a review of the order made by the Commissioner and setting forth the errors alleged or the grounds on which the review is sought; and within forty days after the presentation of such petition to the Commissioner the same shall be forwarded by him to this court and shall be filed by the clerk. The party seeking such review shall within said forty days file with the clerk of this court a certified transcript of the record and proceedings in the Patent Office which it is sought to review which shall constitute the sole basis of such review.

2. At the time of the filing of such transcript the petitioner shall deposit with the clerk at least fifteen dollars ($15) to be applied toward the fees in this court and from time to time the clerk may on notice to the petitioner require additional deposits. On failure to make such deposit or deposits the appeal may be dismissed by the court.

3. The Commissioner of Patents may be represented in the proceedings upon such petition in this court by a law officer of the Patent Office to answer such questions or give such information as the court shall desire.

4. Upon the hearing the petitioner shall submit a brief on the law and facts and shall deliver three copies thereof for the use of the court and a copy for the Commissioner of Patents. If the transcript of the record and proceedings contains a report of more than twenty-five pages of evidence, such brief shall contain a short statement of the facts in addition to the brief of authorities relied upon.

5. If the certified transcript of the record and proceedings shall not be filed within the time fixed by these rules, the right to a review shall be deemed waived and the order of the Commissioner shall remain in full force and effect.

6. Whenever any paper is filed in the office of the clerk of the court there shall be delivered therewith to the clerk three copies thereof for the use of the court.

7. A motion to set a day for a hearing on the petition may be made by the petitioner at any time after the transcript of the record and proceedings has been filed in the office of the clerk, provided that notice of such motion be in writing and a copy thereof served on the Commissioner of Patents at least two clear days, excluding Sundays and holidays, before the return day thereof. Such motion shall be heard by the Chief Justice or in his absence by the senior Associate Justice.

Unless the petitioner moves for a hearing within thirty days after the filing of such transcript in the office of the clerk of this court, the proceedings will stand dismissed for want of prosecution, and the clerk shall make the proper entry of such dismissal.

By the Court:

WALTER I. McCOY, *Chief Justice.*

February 20, 1924.

Prints and Labels—Amendment to Rules.

(ORDER No. 2,855.)

Acting with the approval of the Secretary of the Interior, rules 18 (b), 32, 34, and 42 of the rules governing the registration of prints and labels are amended to read as follows:

18 (b). Ten copies of the print or label; if the print or label is unwieldy at least two originals and ten photographic copies.

32. When the requirements of the law and of the rules have been complied with and the Office has adjudged a print or label registrable, a certificate will be issued, signed by the Commissioner of Patents, under the seal of the Patent Office.

34. The certificate may be continued for a further term of twenty-eight years upon filing a second application within one year prior to the expiration of the term of the original certificate, on payment of the renewal fee of six dollars, and complying with all other regulations of the statute.

42. It is necessary, in order to maintain an action for infringement of a copyright, that the claim of copyright be printed on each copy of the article protected. The wording of the notice is determined by the copyright statute, section 18. Prior to filing the application for copyright the article must be originally published with the statutory notice of copyright.

February 25, 1924.

THOMAS E. ROBERTSON,
Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

CANTERBURY CANDY MAKERS *v.* BRECHT CANDY CO.

No. 1,561. Decided January 7, 1924.

1. TRADE-MARKS—CANCELLATION—SWINGING SIGNS OF DIFFERENT PROPORTIONS—DECEPTIVE SIMILARITY.

Where the registrant's trade-mark comprises the word "Canterbury," associated with a swinging sign carried by a support, and the petitioner's mark consists of a bracket from which a sign depends, both signs bearing words all of which are disclaimed except registrant's word "Canterbury," petitioner's sign being of greater width than height and registrant's of greater height than width, and the lower parts of both having similar outlines, *Held* that in each the characteristic thing is the sign, and the marks held deceptively similar.

2. SAME—SAME—SIMILARITY—IMPROPER TEST OF.

Placing the marks side by side is not the way to determine whether they are deceptively similar.

3. SAME—SAME—USE OF CHARACTERISTIC FEATURE OF MARK BY OTHERS IN SAME LINE OF BUSINESS.

The fact that others in the same line of business are using signs as trade-marks furnishes no reason why registrant should be given the sole right to employ one. The only concern in this proceeding is that as against the petitioner the registrant has not an exclusive right to the mark.

Mr. D. W. Gould for Canterbury Candy Makers.

Mr. A. J. O'Brien for Brecht Candy Co.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

In this proceeding the Brecht Candy Company seeks the cancellation of a trade-mark of Canterbury Candy Makers, which comprises the word "Canterbury" associated with a swinging sign carried by a support. On the sign are the words "Canterbury Candies, Seattle." Apart from the drawing shown in the certificate of registraion, 'Candies" and "Seattle" are disclaimed. The Brecht Candy Company's mark consists of a bracket from which a sign depends. On the sign are the words "Von Brecht," which are disclaimed. The mark was adopted by it before the registrant adopted its mark. Both parties are in the candy business. The only inquiry in the case, therefore, relates to the alleged similarity of the marks.

[1, 2] Petitioner's sign is wider than it is high, while registrant's is taller than it is wide. The lower parts of both have similar outlines. In each the characteristic thing is the sign. It impresses the mind. One might easily mistake the one mark for the other unless his attention was especially directed to the words on them. Of course, one mark differs somewhat from the other, and if they were placed side by side a person would have no difficulty in distinguishing them, but that is not the way, as we have said more than once, to determine whether marks are deceptively similar. *Coca Cola Co.* v. *Chero Cola Co.*, 51 App. D. C. 27; 288 O. G., 432, and cases therein referred to. The intending purchaser rarely has an opportunity to compare the marks. He must rely on his memory of the one he is seeking, and usually he decides at a glance. He is not required by the law to do more. *Coca Cola Co.* v. *Chero Cola Co.*, ante. Proceeding in this way we think he probably would be deceived if both marks were used in trade.

[3] It is urged by the registrant that others engaged in the same line of business are using signs as trade-marks. This may be conceded, but it furnishes no reason why registrant should be given the sole right to employ one. As against the petitioner the registrant has not an exclusive right to the mark. That is all we are concerned about in this proceeding.

The Commissioner of Patents sustained the petition for cancellation, and we affirm his decision.

Affirmed.

The decision of Assistant Commissioner Fenning, rendered in this case May 3, 1922, is as follows:

This is an appeal from the action of the Examiner of Interferences dismissing a petition for the cancellation of trade-mark registration No. 135,208, issued to Canterbury Candy Makers.

The application for the registration of the mark was refused on Trade-Mark No. 114,594, registered to the Von Brecht Candy Company. Apparently after an oral interview with the Examiner the prior mark was withdrawn as a reference and the case passed to issue. The rules require that proceedings be in writing, and the oral interview is allowed merely as an elaboration of the argument. The attorney should have incorporated the substance of the argument in the papers filed, and the Examiner should have insisted on this; but that duty was neglected in this instance. In the record is no indication of what occurred at that interview, and it is impossible to determine what controlled the Examiner in this respect.

In this state of the case, the Examiner of Interferences rendered a pro forma decision against petitioner "in the interests of uniformity of practice in this Office," I am, therefore, forced to enter upon an uncharted sea on this appeal.

The registered mark shows a bracket from which depends a sign associated with an inconspicuous lantern and the word "Canterbury." Upon the sign are the words "Canterbury Candies, Seattle." "Candies" and "Seattle" are disclaimed apart from the mark shown. An amendment disclaiming the "representation of the swinging sign" was presented, but afterwards canceled.

Petitioner for cancellation has established the prior use of its registered mark which consists of a bracket from which a sign depends, on which are placed the words "Von Brecht" or "Brecht." The words "Von Brecht" are disclaimed.

The petitioner's sign is wider than it is high. Registrant's sign is taller than it is wide. Nevertheless both marks are signs, and the predominant thing, aside from the words, in both marks is the sign. We are not informed with respect to the origin of registrant's mark. With the whole world to choose from it seems unnecessary for registrant to place a representation of a sign upon its goods. It may be that the words associated with the marks of the parties will prevent either party's goods from being known as "sign" candies. Nevertheless, it is clear that the only picture carried in the mind of the purchaser from an inspection of the marks will be a sign. A careful examination of the two marks placed side by side may distinguish them; but that is not sufficient. *Coca-Cola Co.* v. *Chero-Cola Co.*, 288 O. G. 432; 51 App. D. C. 27.

I am of the opinion that with both marks in commerce there is likelihood of the result being—

to cause confusion or mistake in the mind of the public or to deceive purchasers.

Registrant refers to earlier registered marks by third parties which include signs. Such a showing seems merely to indicate that registrant by entering the field makes "confusion worse confounded." But I do not understand the trade-mark statutes are directed toward such a result.

The Examiner of Interferences is reversed and trade-mark registration No. 135,208 will be canceled.

Court of Appeals of the District of Columbia.

DOBLE *v.* SCOTT.

No. 1,814. Decided January 7, 1924.

INTERFERENCE—CONCEPTION—DILIGENCE—INOPERATIVENESS—RIGHT TO MAKE CLAIMS.

Where S. alleged no date of conception prior to D.'s filing date as to certain counts and as to other counts claimed conception long prior to D.'s filing date, but failed to show that he was diligent when D. entered the field; and subsequently, D. would be entitled to priority if his apparatus were operative and if he were able to make the claims. Priority awarded to S.

Mr. C. C. Bulkley for Doble.

Mr. A. S. Stewart for Scott.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

Doble appeals from a decision of the Commissioner of Patents awarding Scott priority in an interference proceeding between a patent to Scott on an application filed June 24, 1918, and an application of Doble's filed November, 1916. The invention involved relates to an apparatus for burning heavy oils, primarily intended for the generation of steam in a steam-driven automobile. The oil is forced through a mechanical spraying device and is ignited by an electric sparking device in the path of the oil. Air to complete combustion is supplied by a blowing device and the spark is shielded from the air blown into the apparatus to insure complete combustion. Doble copied certain claims from the Scott patent, and after the declaration of the interference Scott moved to dissolve it as to counts 3, 4, 5 and 6, on the ground that Doble had no right to make the counts. The motion was denied by the Law Examiner.

As Scott's patent was issued during the pendency of Doble's application he gained no advantage by reason of having it. Doble relies on his filing date. Scott, as to counts 3 and 4, alleged no date of conception prior to that date. As to claims 1, 2, 5 and 6 Scott claims conception as of June, 1908, but he failed to show that he was diligent when Doble entered the field and subsequently. In this situation Doble would be entitled to priority unless his apparatus is inoperative, or unless he is unable to make the claims, as Scott asserts. Testimony was taken on behalf of both. Obviously, the question involved is purely one of fact. Each of the three tribunals found in favor of Scott.

We have attentively considered the record in the light of the oral and printed arguments of the parties, and we find no ground for reversing the decision of the Commissioner. It is therefore affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

JOY *v.* MORGAN.

No. 1,838. Decided January 7, 1924.

1. INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE—DELAY—DILIGENCE.

Where the junior party, J., who conceived the invention in 1903 and filed his application in 1916, was not only diligent at the time M. conceived and after that until J. filed his application, but did many things looking toward the development of the invention between the time of J.'s conception and 1910, when M. appeared, and where under circumstances of great difficulty J. sought in every direction for the money or its equivalent necessary to reduce the invention to practice and lost no opportunity to avail himself of assistance, priority was awarded to J. as against M., who filed his application in 1910, but never built a machine or did anything toward reducing it to practice, and whose invention was declared impractical by disinterested experts.

2. SAME—SAME—SAME—SAME—SAME—TIME AND MONEY SPENT ON OTHER INVENTIONS.

Where J. found time and money to file applications for other inventions while he was working on the invention in issue, but the inventions were simple and little money was required, and he gave attention to those inventions on the advice of his attorneys that he might through them secure money enough to enable him to proceed with the development of the present invention, *Held* that this course on his part may be treated as a step toward the reduction of the device to practice.

3. SAME—SAME—SAME—SAME—SAME—THINGS TO BE TAKEN INTO CONSIDERATION.

Only reasonable diligence is required in any case. The situation of the inventor, his financial condition, the amount of work and money necessary to produce an actual reduction to practice, and his efforts to secure what is needed to accomplish his purposes are all proper to be taken into consideration.

4. SAME—SAME—SAME—SAME—SAME—THINGS NOT REQUIRED OF INVENTOR.

It is not necessary that the inventor should give all his time to the development of the invention or abandon his ordinary means of livelihood.

5. SAME—SAME—SAME—DELAY IN FILING APPLICATION.

M. filed as soon as he conceived the invention, while J. waited until he was certain he had a device that would satisfy the demand of the industry and advance the public interest. *Held* that J.'s course should be approved.

Mr. M. A. Christy for Joy.

Mr. C. M. Nisson, Mr. A. J. Crane, Mr. F. W. Thomas, and *Mr. C. M. Thomas* for Morgan.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

In an interference between the application of Edmund C. Morgan and a patent to Joseph F. Joy, relative to a subcombination of a coal-loading machine or device, the Commissioner of Patents awarded priority to Morgan. His application was filed in 1910, and a division of that application in 1916. Joy filed in 1916 and secured a patent in 1919, while Morgan's application was pending. The issue is expressed in two counts, reading thus:

1. In a loading machine of the class described, a gathering mechanism including a substantially horizontally arranged finger and means to move the same in a fixed noncircular orbital path.

2. A gathering mechanism including a support, a driven shaft carried by said support, a disk rotatably geared to said shaft, a finger pivoted eccentrically on said disk, a bar carried by said finger, and a swiveled guide for said bar carried by said support.

Joy was successful before the Examiner of Interferences but lost on Morgan's appeal to the Examiners in Chief. Both tribunals went into the matter with great thoroughness. The Commissioner contented himself with a short opinion in which he affirmed the decision of the Examiners in Chief.

The Examiner of Interferences and the Examiners in Chief united in awarding conception to Joy in 1903, some seven years before Morgan entered the field. On this point the Commissioner expressed no opinion but placed his judgment upon the ground that Joy had not shown himself diligent at the critical time. In the holding that Joy is entitled to 1903 for conception we concur. The case turns chiefly on the point whether or not, all the circumstances considered, Joy was reasonably diligent at the time Morgan conceived and continued so until his filing date. Relative to this the testimony is extensive. We can give no more than a brief résumé of it.

The Morgan machine has never been built, nor has anything been done toward actually reducing it to practice. Disinterested experts testified that it was impractical under actual mining conditions. On the other hand, the Joy machine as soon as completed was placed in operation and proved satisfactory. For more than 20 years there was a demand in the coal industry for such a machine. It was the first to meet and satisfy the demand. A number have been built at great expense and are doing good work.

Joy, a very poor boy, went to work in the mines when he was 12 years of age, having at that time little education. But he was industrious and ambitious. When about 15 he took a correspondence school course in mechanical engineering. In 1903, when about 19, he conceived the invention in question, and, while at that time he had it in its essential subject matter, it was in a crude form. The machine would dig some coal and to that extent was workable, but, according to his notion as a miner of experience, it was not sufficiently developed to be classed as a practical machine.

While we are concerned only with the period which commenced immediately preceding Morgan's entry into the field and continued until Joy filed, still it is not improper to point out that Joy did many things looking toward the development of the invention between the time of conception and 1910, when Morgan appeared. In 1903 and 1905 he made two drawings and discussed them with persons familiar with mining needs, and made a model between 1905 and 1906. Between 1907 and 1908 he worked in the evenings on drawings and sketches, being engaged during the day in the mines. Another model was made by him in 1909.

To actually reduce the invention to practice required much time and money. He was compelled to labor that he might support his wife and indigent father. Consequently he could give but little time to the machine. But if he could spare the time he was without the necessary money to procure material and facilities for the construction of the device. Not until the spring of 1910 was he able to get in touch with anyone who could help him. This was some three months before Morgan's date of conception, which was July 27, 1910. He then secured a position as master mechanic with a coal-mining company, and succeeded in interesting the superintendent in his invention. This promised well for him, but very soon thereafter a strike occurred in an affiliated mine which made it necessary for him and the superintendent to give all their attention to the mine with which they were connected. In the fall of that year seeing what he believed would be a better opportunity to develop his invention, he sought and obtained employment in another mine, whose superintendent was favorably impressed with the invention and authorized him to build a machine embodying it if he could find sufficient material at the mine with which to do it; but he was unable to find the material. He withdrew from his employment in that mine in 1912, leaving behind a drawing and a model which he had made while there.

We next find him superintendent of a coal mine where he was able to earn a salary of $140 a month. The company which owned it, however, was not financially strong, and it was imperative that he should give every moment of his time to its affairs. Seeing no immediate prospect of developing his ideas at that place, he accepted a position with a large coal-mining-machinery manufacturing company at a smaller salary, namely, $100 a month, in the hope that he might obtain there the chance which he so earnestly sought. Taking the place at $40 a month less than he was receiving

in the position which he gave up was a great sacrifice for him in view of the demands upon him and his ability to meet them, but he was willing to make it.

From a study of the company's machinery he got an idea which aided him to solve some of his difficulties. He communicated his views to the designing engineer of the company, who, perceiving the merit of his conception, referred him to some of the executives of the company. He saw them, but they refused him any assistance, and endeavored to discourage him from further prosecution of his thought. Their attitude, it turned out, was due to the fact that they believed his machine would conflict with one their company was working on. But he did not yield. He was convinced, he said, that in time he would satisfy them of the merits of his idea. He continued to give his best efforts to the duties of his employment with the manufacturing company but still kept his own machine in mind, and whenever opportunity permitted he sought aid either by discussing the matter with others or by soliciting an opportunity to embody his ideas in a structure.

In 1915 he was authorized by the company to superintend the installation of one of its machines at mine No. 2 of the Pittsburgh Coal Company. While engaged in that work he met a friend who had helped him to prepare one of the models heretofore referred to, and explained to him what he had decided upon with respect to a certain part of the invention. After the machine which he had been sent to install had been put in place he and his friend constructed a model embodying some of his latest ideas. As a result he reached the conclusion that he had a practical form of machine capable of accomplishing the purpose which he had in mind. But still he was without money with which to construct it. He sought a former acquaintance who had been successful in the coal-mining business and exhibited the last-mentioned model with a view of obtaining financial aid. Joy being convinced from his various experiments that he had the conception of a complete machine that would work tendered his resignation to the manufacturing company. But one of the officers of that company, knowing something about the progress which he had made in the development of his conception, offered him a larger salary if he would remain. At this time a falling out occurred between him and the acquaintance who was to assist him, and he accepted the company's offer, feeling, however, that now he would be able to interest that company in his invention. He showed his last model to the chief engineer of the company, who suggested that he exhibit it to some of the other officials. He did so, but their general disposition toward it was still discouraging. The engineer, however, gave him a letter of introduction to the chief engineer of the Pittsburgh Coal Company, who upon seeing the model said it seemed to be just what his company was looking for, and introduced him to the vice president of the company, who sent word to the manufacturing company, Joy's employer, that he would like them to proceed with the construction of a machine in accordance with Joy's model. This was in the latter part of 1915. The construction of the machine was entered upon and proceeded with in the usual way but was not completed until the latter part of September, 1916. Commenting upon this the Examiner of Interferences said:

> It took almost a year for the Jeffrey Company (the manufacturing company) to build a small part of the completely practical machine and to barely reduce to practice the subcombination in issue, using parts furnished by the Pittsburgh Coal Company, and the continual services of the inventor. Under such circumstances it is conceivable that a relatively poor man might easily require more than six years, devoting due time to earning a livelihood, and by the exercise of a high degree of diligence fail to complete the details of a practical loader to the extent of justifying an application for patent, even though he had a conception of its most vital subcombination.

The machine after it was built was tried out and the results were so satisfactory that the coal company proceeded to have additional machines built in accordance with the Joy model, and then Joy caused his application to be filed.

[1] The first machine constructed cost $22,000, and there was spent in its further development and modification $175,000. This shows the large amount of money which was necessary to achieve an actual reduction to practice. Joy, as we have said, did not have it, and while he sought in every direction in which it seemed likely that he would be able to procure it or its equivalent in material and facilities he failed until he met the Pittsburgh Coal Company. He lost no opportunity to avail himself of any assistance which presented itself. What more could he have done in the circumstances? We can not conceive of anything.

[2] It is said that while he was working on the invention he found time and money sufficient to enable him to file applications for other inventions. That is true. But the inventions were simple and little money was required. Besides, he gave attention to those inventions on the advice of his attorneys that he might through them secure money enough to enable him to proceed with the development of the coal-loading device. This course on his part may be treated as a step toward the reduction of the device to practice. It works for him, not against him.

[3, 4] We have declared more than once that there is no fixed rule by which diligence may be determined in all cases. Each case must be turned on its own facts. *Burnett* v. *Utsman*, 46 App. D. C. 407, 410; 245 O. G. 1027; *Jobski* v. *Johnson*, 47 App. D. C. 230; 247 O. G. 479; and *Sargent* v. *Vetter*, 48 App. D. C. 582, 585; 262 O. G. 646. Only reasonable diligence is required in any case. The situation of the inventor, his financial condition, the amount of work and money necessary to produce an actual reduction to practice, and his efforts to secure what is needed to accomplish his purposes, are all proper to be taken into consideration. *Dickinson* v. *Swinehart*, 49 App. D. C. 222; 263 Fed. 474; 273 O. G. 407; and *Walser* v. *Scott*, 52 App. D. C. 232; 308 O. G. 4. It is not necessary that the inventor should give all his time to the development of his invention, or abandon his ordinary means of livelihood. *Courson* v. *O'Connor et al.*, 227 Fed. 890; 224 O. G. 1067; and *Dickinson* v. *Swinehart*, supra. Nor will persistent efforts to develop an invention, as here, be discouraged by "a too strict application" of the rule requiring diligence. *Sargent* v. *Vetter*, ante. Delay for the purpose of the elaboration and perfection of a crude conception may well be commended, and we have had occasion to express such commendation. *Platt* v. *Shipley*, 11 App. D. C. 576; 82 O. G. 461.

A careful survey of the record in the light of these decisions satisfies us that Joy exercised due diligence in his efforts to reduce the invention to practice before he filed.

[5] It is asserted that he might have secured a constructive reduction to practice by filing an application before Morgan appeared on the scene. That is true. He says he did not file because he thought an application should not be filed until his invention had been sufficiently developed to be a commercial success. While he was mistaken in this, it explains his failure to file. As we have just said, this court has commended the course of those who refuse to rush to the Patent Office before the merits of their invention have been tested. *Platt* v. *Shipley*, ante; and *Yates* v. *Huson*, 8 App. D. C. 93; 74 O. G. 1732. Morgan filed as soon as he conceived the invention, while Joy waited until he was certain he had a device that would satisfy the demand of the coal-mining industry and advance the public interest. We think his course should be approved. However, as he exercised due diligence in actually reducing the invention to practice, his failure to secure a constructive reduction to practice is immaterial. *Walser* v. *Scott*, supra.

Joy urges that Morgan, because of laches, lost his right to make the claims prior to Joy's filing date, but, in view of the conclusion we have reached, we do not find it necessary to consider this question.

Taking the case as we see it, we feel constrained to reverse the decision of the Commissioner, and it is so ordered.

Reversed.

Court of Appeals of the District of Columbia.

HORTON *v.* SACHS.

No. 1,559. Decided January 7, 1924.

INTERFERENCE—PATENT AND APPLICATION—CONSTRUCTION OF ISSUE.

Where a patent embracing the invention issued to S., the junior party, while the application of H. was pending and was placed in interference therewith, the issue was given a broad construction and priority was awarded to S.

Mr. W. B. Jones and *Mr. J. B. Theiss* for Horton.

Mr. H. G. Kimball and *Mr. C. W. Fairbank* for Sachs.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

Bryson D. Horton appeals from a decision of the Commissioner of Patents awarding priority to Joseph Sachs in an interference proceeding relative to an invention concerning a cut-out switch, with which is associated a device arranged for meter testing. The whole device is ordinarily used at a point adjacent to where the wires enter a building to supply electric current thereto. There are 17 counts. Counts 1, 9 and 14 are typical.

> 1. A meter-testing appliance comprising a plurality of pairs of contacts, and their cooperating connectors, one of which constitutes a load-controlling switching element, at least one contact of each pair having means electrically connected therewith for the connection thereto of testing means to thus adapt the appliance for meter-testing.
>
> 9. A plurality of pairs of contacts, a service side connector cooperative with one pair of contacts to open and close connection therebetween, and a load side connector cooperative with another pair of contacts to open and close connection therebetween, the meter coil end contact of the first mentioned pair and the load end contact of the second mentioned pair having means for the connection therewith of a testing device.
>
> 14. A load-controlling switching element and its complemental contacts, one of them constituting a load connectible contact and the other a meter coil connectible contact, the switching element when in the open position electrically freeing the meter coil connectible contact, and a circuit-controlling element connectible on the service side, said second element and the load side connectible contact of the switching element having means whereby current may be by-passed between the two elements.

Horton filed his application in 1913, while Sachs's earliest filing date was 1915. A patent embracing the invention was issued to Sachs while Horton's application was pending. The Primary Examiner held that Horton could not make the claims because he did not disclose the structure expressed by them. On appeal the Examiners in Chief reversed his decision as to certain of the claims, and affirmed it as to others. In reversing him they said that generally the language of the claims should be given the broadest meaning consistent with ordinary usage, and that no reason appeared in the case before them for making an exception to this rule. When the matter came to the Examiner of Interferences he found that Sachs had conceived and reduced to practice before Horton conceived, and awarded him priority. Horton appealed again to the Examiners in Chief, who adhered to their previous statement that in an interference proceeding it was the rule that the issue claims should be construed broadly, but that an exception must be made where, as here, the counts are claims of a patent. In such a case, they said, if a broad interpretation would make the counts readable upon the prior art it should not be adopted, but that a construction should be chosen which would be applicable to the disclosures of the parties, and also free of the prior art. In consonance with this view they held the claims should be given a restricted meaning, and that when this was done Horton could make them; that the exhibits upon which Sachs relied to show priority did not reflect the issue, and hence that Horton should be awarded priority.

In reviewing the decision of the Examiners in Chief, the Assistant Commissioner went into the

subject quite thoroughly. He held with the Primary Examiner, saying in effect that there was no difficulty in reading the counts upon the structure of Horton in the way he suggested without impinging upon the prior art, but that there was no word or term or clause in any of them which supported or furnished any basis whatever for adopting his suggestion, and accordingly he reversed the Examiners in Chief and awarded priority to Sachs.

A careful study of the case has led us to the conclusion that the Commissioner did not err. We are satisfied with his reasoning, and on the strength of it affirm his decisoin.

Affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

845,224, W. Eibel, Fourdrinier machines, suit filed Jan. 8, 1924, D. C., S. D. N. Y., Doc. E 28/248, *Eibel Process Co.* v. *Sears, Roebuck & Co.*

Des. 63,192, W. Muelberger, Textile fabric, suit filed Jan. 18, 1924, D. C., S. D. N. Y., Doc. E 28/275, *Nathan & Cohen Co., Inc.*, v. *Mills & Gibb Corp.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,179,717, C. C. Harbridge, Carrier for automobiles, decided January 7, 1924, claims 17 and 19.

Pat. 1,378,118, Jacobsen and Breer, Power-transmitting joint, decided January 26, 1924, claims 1 and 2.

Pat. 1,392,473, F. O. Ball, Reatomizer, decided January 22, 1924, claims 13 and 14.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Feb. 21, 1924.*

Calista O. Van Slyck, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William A. Whitmore, 810 West Pratt Street, Baltimore, Md., for registration of a trade-mark and trade-mark registered March 19, 1895, No. 26,243, to Calista O. Van Slyck, Lamanda Park, Calif., and a notice of such declaration sent by registered mail to said Van Slyck at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Van Slyck, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Feb. 9, 1924.*

Hoffheimer Soap Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Theo. B. Robertson Products Company, 700–4 West Division Street, Chicago, Ill., for registration of a trade-mark and trade-marks registered February 13, 1906, and February 6, 1906, No. 49,655 and No. 49,376, respectively, to Hoffheimer Soap Co., 169 Jackson Boulevard, Chicago, Ill., and a notice of such declaration sent by registered mail to said Hoffheimer Soap Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Hoffheimer Soap Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 4, 1924.

[VOL. 320. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 148,444. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. P. KRUSE, Minneapolis, Minn. Filed May 31, 1921.

Particular description of goods.—Face Creams, Toilet Waters, Perfumes; Depilatories, Bandolines and Brilliantines, and Face Powders.

Claims use since Mar. 30, 1920.

Ser. No. 151,250. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BORDEN'S FARM PRODUCTS COMPANY, INC., Wassaic and New York, N. Y. Filed Aug. 2, 1921.

No claim is made to the right to the exclusive use of the words "Quality" or "Service" or the collocation "Quality Service" except in the setting and relation in which they appear in the drawings.

Particular description of goods.—Raw or Pasteurized Milk (as Distinguished from Condensed or Otherwise-Treated Milk), Raw or Pasteurized Cream (as Distinguished from Evaporated or Otherwise-Treated Cream), and Buttermilk.

Claims use since October, 1917.

Ser. No. 151,955. (CLASS 12. CONSTRUCTION MATERIALS.) J. EDWARD OGDEN COMPANY INCORPORATED, New York, N. Y. Filed Aug. 19, 1921.

TURNOVER

Particular description of goods.—Doors.

Claims use since June, 1921.

Ser. No. 156,366. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) E. H. FREEMAN ELECTRIC CO., Trenton, N. J. Filed Dec. 7, 1921.

Particular description of goods.—Attachment Plugs, Porcelain Switch Bases, Inclosed Fuse Contacts, Current Taps, Inclosed Fuse Cut-Outs, Edison Plug Cut-Outs, Parts of Sockets, Flush Receptacle Plates, Receptacles, Rosettes, Shade Holders, Sockets, Switch Bases, Entrance Switches, Panel Switches.

Claims use since Jan. 1, 1908.

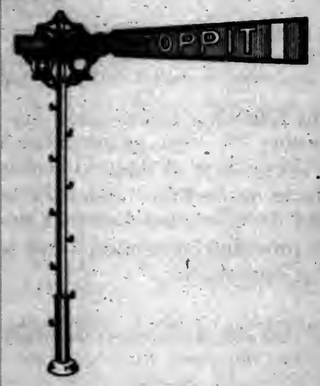
Ser. No. 160,455. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ZIRKLE AND HENLEY, doing business as 222 Laboratories, Lynchburg, Va. Filed Mar. 9, 1922.

WILBUR'S
222

Particular description of goods.—Medicine for Indigestion, Dyspepsia, Gas, Sour Stomach, Heartburn, Nausea, Nervous Indigestion, Sleeplessness, Palpitation, Gastric or Wind Colic, Acute Indigestion, and Stomach Disorders.
Claims use since Jan. 1, 1922.

Ser. No. 163,383. (CLASS 39. CLOTHING.) DREYFUS & COMPANY, Wilmington, Del. Filed May 5, 1922.

SASSYJANE



Particular description of goods.—Hosiery.
Claims use since Apr. 1, 1922.

Ser. No. 164,497. (CLASS 33. GLASSWARE.) CALIFORNIA GLASS & PAINT CO., Los Angeles, Calif. Filed May 25, 1922.

Particular description of goods.—Beveled Plate Glass, Tile, and Sheet Prism Glass, Plain Plate Glass, Flat Drawn Window Glass, Three-Sixteenths-Inch Flat Drawn Crystal Glass, Rough Glass, Ribbed Glass, Figured Wire Glass, Polished Wire Glass, Ornamental and Figured Glass, Leaded Art and Colored Glass, Black and White Glass.
Claims use since June, 1920.

Ser. No. 165,971. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE TEMPLE PHARMACY, Pocatello, Idaho. Filed June 28, 1922.

The color lining appearing on the drawing indicates the color red.
Particular description of goods.—Preparation for Hay Fever, Asthma, and Catarrh.
Claims use since Jan. 18, 1921.

Ser. No. 166,035. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANK BIGGIO & SONS, Chicago, Ill. Filed June 26, 1922.

KEWPIE

Particular description of goods.—Fresh Tomatoes.
Claims use since May 29, 1922.

Ser. No. 166,880. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FRENCH BROAD MANUFACTURING CO., Craggy, Asheville, N. C. Filed July 14, 1922.

Without waiving any common-law right or rights the applicant does not claim the exclusive use of the words "French Broad" and "Bedspread" save and except in connection with the other matter constituting said trademark.
Particular description of goods.—Finished and Unfinished Cotton Goods, Quilts, and Bedspreads.
Claims use since Jan. 1, 1920.

Ser. No. 166,891. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PYOSEPTOL LABORATORY, Washington, D. C. Filed July 14, 1922.

PYOSEPTOL

Particular description of goods.—Antiseptic Ipecac Wash for the Treatment and Prevention of Pyorrhea.
Claims use since June 15, 1922.

Ser. No. 167,045. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE HYGEIA NURSING BOTTLE CO. INC., Buffalo, N. Y. Filed July 18, 1922.

WHEAT-EAT

Particular description of goods.—Candy.
Claims use since July 11, 1922.

Ser. No. 167,100. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) I. ROKEACH & SONS, INC., Brooklyn, N. Y. Filed July 19, 1922.

The applicant disclaims as a part of the mark the printed word appearing on the drawing which is descriptive of the goods.
Particular description of goods.—Soaps.
Claims use since February, 1911.

Ser. No. 168,295. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BURDAN BROS., Pottstown and Lebanon, Pa. Filed Aug. 16, 1922.

The mark shows the representation of a keystone having on it the representation of an ice-cream tub with two red stripes, four white stripes, and two green stripes extending around the tub.
Particular description of goods.—Raw and Condensed Milk, Raw and Condensed Cream, Ice Cream, and Cheese.
Claims use since 1899.

Ser. No. 168,671. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROB'T L. EBY CO., Lebanon, Pa. Filed Aug. 25, 1922.

"Sugar Cured Dried Beef Roll" is disclaimed apart from the other features of the mark.
Particular description of goods.—Sugar-Cured Dried-Beef Roll.
Claims use since June 3, 1922.

Ser. No. 168,947. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) SPARTAN RUBBER CO., Trenton and Yardville, N. J. Filed Aug. 31, 1922.

Spartan ARMOR THREAD Cord

No claim is made to the words "Armor Thread Cord" apart from the mark shown on the drawing.

Particular description of goods.—Rubber Tires for Automobiles.

Claims use since about May 12, 1922.

Ser. No. 169,392. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BEMENT-REA CO., INC., Terre Haute, Ind. Filed Sept. 13, 1922.

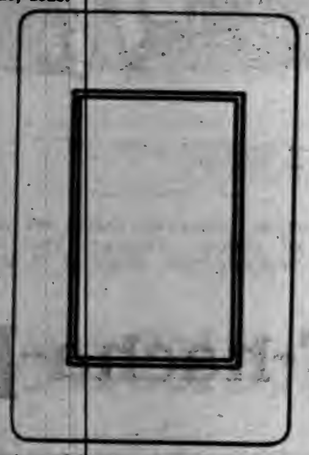
Kitauto



Particular description of goods.—Emergency Axles for Automobiles.
Claims use since Aug. 18, 1923.

Ser. No. 185,864. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) F. A. FERRIS & CO. INC., New York, N. Y. Filed Sept. 17, 1923.

Grill Room

Particular description of goods.—Bacon.
Claims use since Aug. 20, 1923.

Ser. No. 185,996. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE UNITED STATES PLAYING CARD COMPANY, East Norwood, Cincinnati, Ohio. Filed Sept. 20, 1923.

The mark consists of a substantially rectangular arbitrarily-colored frame as distinguished from an ordinary black border line as frequently used on playing cards. This colored frame, which is shaped to conform to the shape of the card, is arbitrarily placed on the face side of each card at a considerable distance from its edges, as shown in the drawing. The space within said frame, containing the designating faces and index spots, occupies a considerably smaller proportion of the card than the proportion conventionally occupied by the designating faces and index spots. The space outside the said frame contains the relatively large index numbers and index spots. The drawing is lined to indicate contrasting color, not to indicate any particular color. No claim is made to the representation of the playing card apart from the mark shown.

Particular description of goods.—Playing Cards.
Claims use since about Apr. 27, 1895.

Ser. No. 186,075. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE REPUBLIC METALWARE CO., Buffalo, N. Y. Filed Sept. 22, 1923.

RM

Particular description of goods.—Black Steel Sheets, Auto Sheets, Blue Steel Sheets, Galvanized Steel Sheets, Terne Plates, Continuous Roofing Terne Plates, Long Terne Sheets, Bright Coke Tin Plates, Bright Charcoal Tin Plates, Strip Steel, Solder, Copper Sheets.

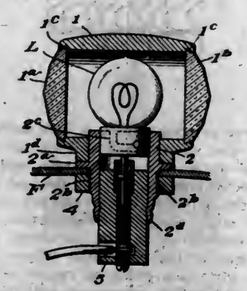
REISSUES

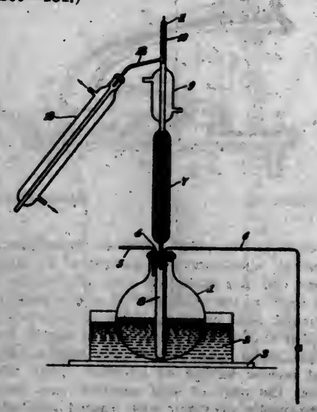
MARCH 4, 1924.

15,780. HOIST. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 22, 1923. Serial No. 676,465. Original No. 1,421,183, dated June 27, 1922, Serial No. 486,097, filed July 20, 1921. 24 Claims. (Cl. 254—185.)



1. In a hoist, the combination of a frame, a driving shaft, two drums rotatable relatively to the driving shaft, a motor connected to operate the driving shaft, and means including a movable pawl mounted remote from the driving shaft between portions of the drums, for automatically disconnecting one drum and connecting the other drum to the driving shaft in accordance with the direction of rotation of the driving shaft.

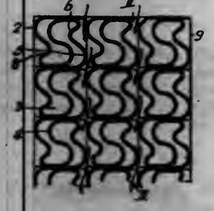
15,781. STUD AND EYELET FASTENING DEVICE. GEORGE HENRY ELWELL, Cleveland, Ohio, assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed July 17, 1923. Serial No. 652,176. Original No. 1,444,867, dated Feb. 13, 1923, Serial No. 542,669, filed Mar. 10, 1922. 17 Claims. (Cl. 24—211.)



1. In a stud member the combination of a stud and eyelet fastening device, said stud member having an attaching means and provided with a two piece shank adapted for longitudinal alignment, one of said pieces being integral with said stud member and the other piece being pivotally mounted on said stud member and adapted to be presented at opposite exterior longitudinal surfaces of said shank; blocking means with which said pivotal piece is provided at its free extremity adapted to project laterally beyond the exterior surface of said shank only when said shank pieces are in alignment; and spring means normally adapted to maintain said pieces out of alignment; whereby said shank may be positively interlocked with an eyelet member when the eyelet is pressed onto said shank forcing said pieces into alignment and said blocking means into blocking position, and whereby said eyelet may be removed from said shank only by tipping said eyelet upon said stud member and pulling outwardly that portion of said eyelet located across the stud passage and directly opposite to that portion of said eyelet engaged by said blocking means.

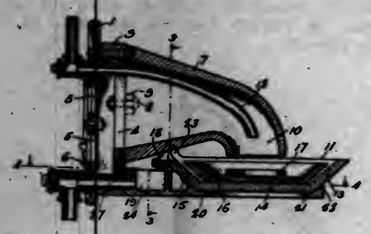
15,782. PARKING LIGHT FOR AUTOMOBILES, ETC. ANGUS R. GROSS, Baltimore, Md. Filed Dec. 24, 1923. Serial No. 682,537. Original No. 1,380,058, dated May 31, 1921, Serial No. 401,134, filed Aug. 4, 1920. 6 Claims. (Cl. 240—7.)

4. For a parking light, a small T-shaped casing having openings in its opposite ends, and projecting multifaceted lenses secured in said openings and projecting beyond each end of the casing and means for attaching same to an automobile fender; substantially as described.



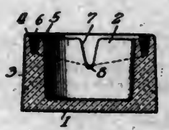
15,783. PROCESS OF DEHYDRATING ORGANIC LIQUIDS. JOHN A. S. HAMMOND, Woodlawn, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 15, 1923. Serial No. 680,916. Original No. 1,466,435, dated Aug. 28, 1923, Serial No. 525,797, filed Dec. 20, 1921. 13 Claims. (Cl. 260—151.)

3. The process of dehydrating ethers whose boiling points, and the boiling points of their constant boiling mixtures with water, are less than that of water, com-



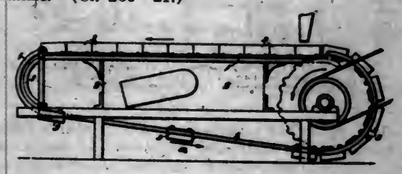
prising distilling them and passing their vapors in contact with sodium hydroxide in such a manner that the vapors are finally exposed to substantially anhydrous portions of the sodium hydroxide to accomplish dehydration.

15,784. RADIATOR CORE. GEORGE A. HOUSEMAN, Shreveport, La. Filed Mar. 23, 1923. Serial No. 627,223. Original No. 1,433,374, dated Oct. 24, 1922, Serial No. 472,112, filed May 24, 1921. 3 Claims. (Cl. 257—130.)



1. A radiator unit embodying a tube fashioned from a single strip bent upon itself to form, in a one piece structure, the outer wall of the tube and a partition connecting spaced portions of the tube and located within the tube, the partition being reversely curved to give the partition an S shape in cross section and to form longitudinal concavities in the partition, opposed portions of the wall of the tube being bulged inwardly, out of alinement with each other, in spaced relation to the ends of the tube and in alinement with the concavities of the partition, to form, in the completed radiator, a sinuous water passage.

15,785. OIL BURNER. CURTIS C. LILLIBRIDGE, Hutchinson, Kans. Filed Sept. 19, 1923. Serial No. 663,716. Original No. 1,391,641, dated Sept. 20, 1921, Serial No. 382,964, filed May 20, 1920. 6 Claims. (Cl. 158—91.)



1. A device of the class described comprising a horizontal bracket, a substantially horizontal air supply neck fixed at one end and extending over said bracket in close proximity thereto, the other end of said neck being downwardly turned, said bracket having an overflow pan under the fixed end of said neck, and a burner resting on said bracket under said downwardly turned end of said neck, said burner having an overflow spout adapted to extend over the edge of said overflow pan, said burner being additionally provided with spaced lugs adapted to straddle said neck to properly position said spout.

15,786. SPONGE CUP. HUGH L. MCGINTY, Pittsburgh, Pa., assignor, by mesne assignments, to Sengbusch Self-Closing Inkstand Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 14, 1924. Serial No. 686,221. Original No. 1,405,142, dated Jan. 31, 1922, Serial No. 404,842, filed Aug. 20, 1920. 9 Claims. (Cl. 91—54.4.)

1. As an article of manufacture, a flat bottomed sponge cup having two concentric rims at the top of its side and a drainage groove of variable depth therebetween.

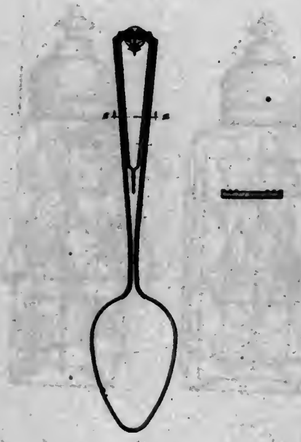
15,787. SINTERING-MACHINE GRATE. AUGUST L. LARSON, Kellogg, Idaho, assignor to Coeur d'Alene Hardware and Foundry Company, Wallace, Idaho, a Corporation of Idaho. Filed Mar. 31, 1923. Serial No. 629,180. Original No. 1,373,620, dated Apr. 5, 1921, Serial No. 404,778, filed Aug. 20, 1920. 31 Claims. (Cl. 266—21.)

1. In a grate for ore carriers or pallets, a series of relatively fixedly held grate irons and other grate irons cooperative with the fixedly held irons and movably mounted with respect to the said fixedly held irons and having a limited outward drop relatively to the fixedly held arms, as the pallet or carrier is inverted.

15,788. APPARATUS FOR GRINDING OR POLISHING PLATE GLASS. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, St. Helens, England, a Limited Liability Company of Great Britain. Filed Mar. 27, 1923. Serial No. 628,114. Original No. 1,370,246, dated Mar. 1, 1921, Serial No. 401,488, filed Aug. 5, 1920. 2 Claims. (Cl. 51—240.)

1. Apparatus for grinding or polishing plate glass consisting of a series of rectangular tables in contact each with its neighbors forming a continuous support for the plates of glass and slidingly supported on fixed guides, a framework above the series of tables, a series of sets of runners on vertical shafts, bearings for the shafts attached to the framework, means for moving the series of tables continuously from one end to the other of the series of sets of runners, means for removing a table from the moving series of tables after it has left the last set of runners, and means for adding a table to the moving series of tables before the first set of runners, the sets of runners being so spaced apart as to permit of the effective washing away of the abrasive between any two sets using different grades.

DESIGNS

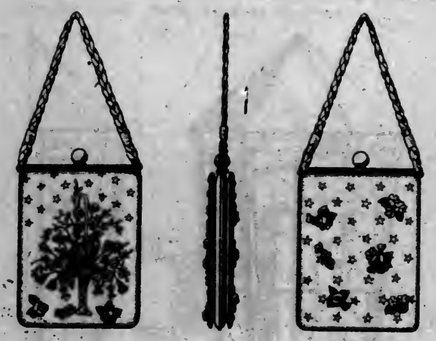


MARCH 4, 1924:

64,108. COMBINED HUSK AND SOCKET COVER. GEORGE AINSWORTH, Great Neck, N. Y., assignor to Alfred Vester & Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 23, 1923. Serial No. 5,916. Term of patent 14 years.

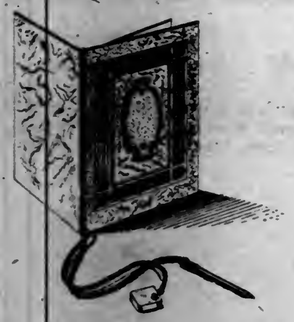
The ornamental design for a combined husk and socket cover, as shown.

64,109. SPOON OR SIMILAR ARTICLE. WILLIAM COMAN, Providence, R. I. Filed Jan. 15, 1924. Serial No. 8,322. Term of patent 7 years.



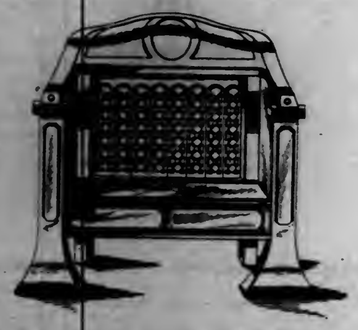
The ornamental design for a spoon or similar article as shown.

64,110. DINING-ROOM LIGHTING FIXTURE. ABRAHAM COOPER, Brooklyn, N. Y. Filed Aug. 21, 1923. Serial No. 7,050. Term of patent 3½ years.



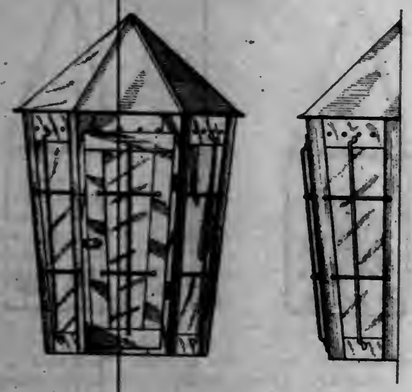
The ornamental design for a dining room lighting fixture, as shown.

64,111. POCKETBOOK. JEANNE D'ETREILLIS, New York, N. Y. Filed Nov. 2, 1923. Serial No. 7,658. Term of patent 14 years.



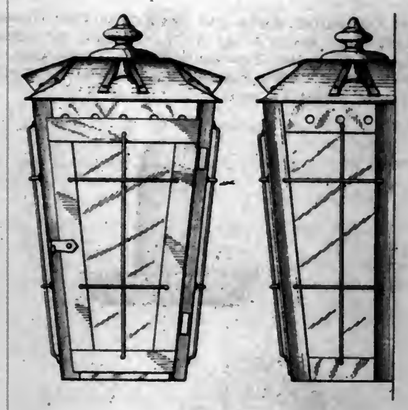
The ornamental design for a pocketbook as shown.

64,112. AUCTION-BRIDGE SCORE BOOK. J EMIL DEFROOS, New York, N. Y. Filed Mar. 12, 1923. Serial No. 5,452. Term of patent 3½ years.



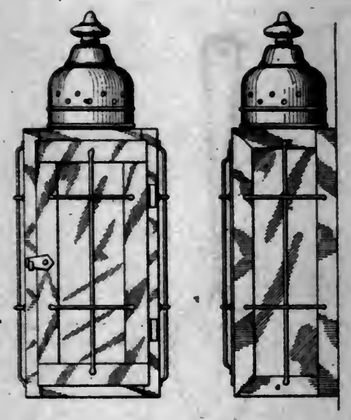
The ornamental design for an auction bridge score book as shown.

64,113. HEATER. CHARLES J. GRAYSON, Ashland, Ky. Filed Dec. 21, 1923. Serial No. 8,117. Term of patent 3½ years.



The ornamental design for a heater as shown.

64,114. LIGHTING FIXTURE. HARRY J. GRUBER, New York, N. Y. Filed Nov. 3, 1923. Serial No. 7,672. Term of patent 7 years.



The ornamental design for a lighting fixture, as shown.

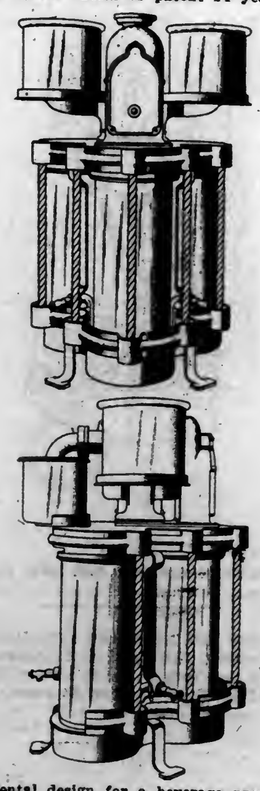
64,115. LIGHTING FIXTURE. HARRY J. GRUBER, New York, N. Y. Filed Nov. 3, 1923. Serial No. 7,673. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

64,116. LIGHTING FIXTURE. HARRY J. GRUBER, New York, N. Y. Filed Nov. 3, 1923. Serial No. 7,674. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

64,117. DOLL. CLARA V. HAVENS, New York, N. Y., assignor to The Karmen Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1923. Serial No. 7,645. Term of patent 14 years.



The ornamental design for a doll as shown.

64,118. DOLL. CLARA V. HAVENS, New York, N. Y., assignor to The Karmen Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1923. Serial No. 7,646. Term of patent 14 years.

The ornamental design for a doll as shown.

64,119. BEVERAGE PREPARING AND DISPENSING STAND. JACOB LEVIN, New York, N. Y., assignor to The Lebros Manufacturing Co., Inc., New York, N. Y., a Corporation of Massachusetts. Filed Oct. 18, 1923. Serial No. 7,542. Term of patent 14 years.

The ornamental design for a beverage preparing and dispensing stand as shown.

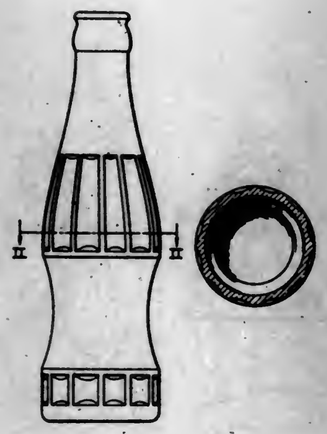
64,120. BRACKET FOR LIGHTING FIXTURES. GERHARD H. LIEFTUCHTER, Cincinnati, Ohio, assignor to The Electric Railway Equipment Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1923. Serial No. 7,035. Term of patent 14 years.

The ornamental design for a bracket for lighting fixtures as shown.

64,121. DESK LAMP. FRANK B. LINDOW, Milwaukee, Wis. Filed Jan. 10, 1923. Serial No. 4,858. Term of patent 3½ years.

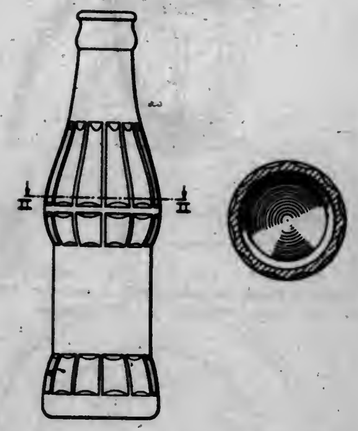
The ornamental design for a desk lamp, as shown and described

64,122. GLOBE FOR LIGHTING FIXTURES. FREDERICK W. MATHIEU, New York, N. Y., assignor to Grace E. Mathieu, New York, N. Y. Filed May 12, 1922. Serial No. 2,201. Term of patent 14 years.



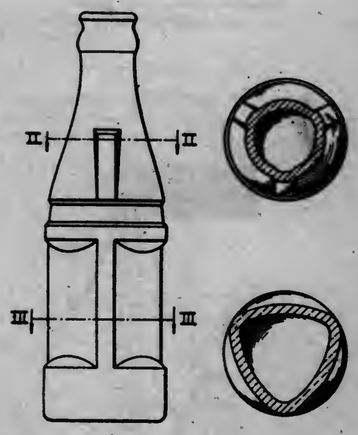
The ornamental design for a globe for lighting fixtures, as shown.

64,123. CABINET FOR WIRELESS RECEIVING APPARATUS. RALPH A. MCKINNEY, Pittsburgh, Pa. Filed July 29, 1922. Serial No. 3,246. Term of patent 7 years.



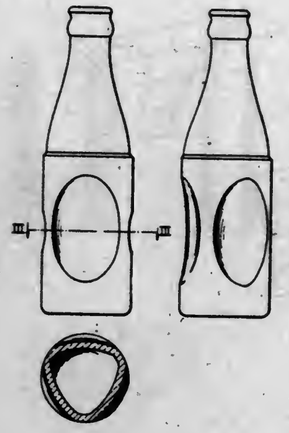
The ornamental design for a cabinet for wireless receiving apparatus, as shown.

64,124. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 19, 1923. Serial No. 8,094. Term of patent 14 years.



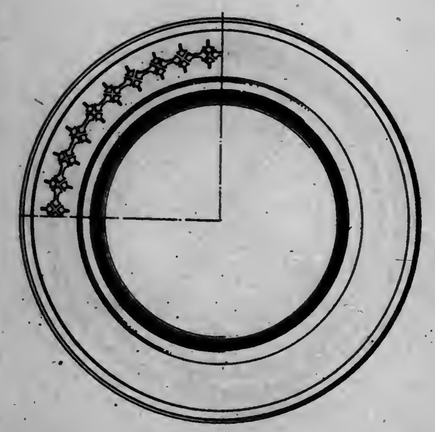
The ornamental design for a bottle, substantially as shown.

64,125. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 19, 1923. Serial No. 8,095. Term of patent 14 years.



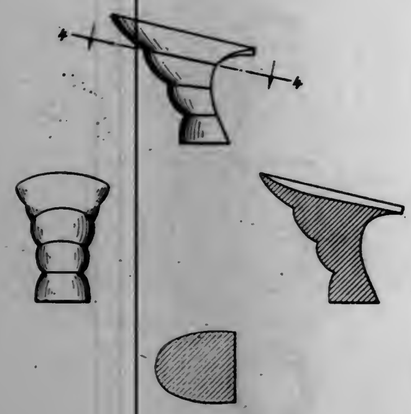
The ornamental design for a bottle, substantially as shown.

64,126. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 19, 1923. Serial No. 8,096. Term of patent 14 years.



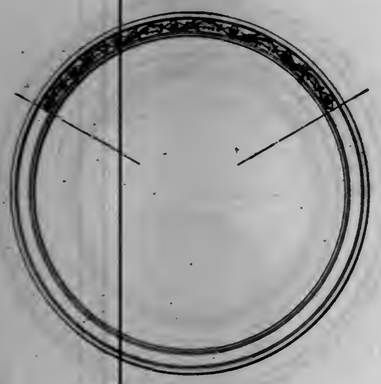
The ornamental design for a bottle, substantially as shown.

64,127. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 19, 1923. Serial No. 8,097. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

64,128. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1922. Serial No. 2,016. Term of patent 7 years.



The ornamental design for a plate or analogous article, substantially as shown.

64,129. SHOE HEEL. WILLIAM H. NUTT, Newburyport, Mass. Filed Apr. 28, 1922. Serial No. 2,015. Term of patent 7 years.

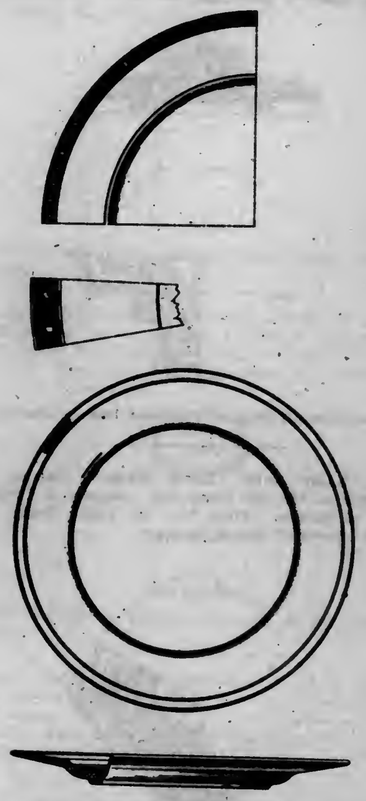
The ornamental design for a shoe heel, as shown.

64,130. PLATE OR ANALOGOUS ARTICLE. GEORGE F. PARKER, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed May 13, 1921. Serial No. 469,385. Term of patent 7 years.

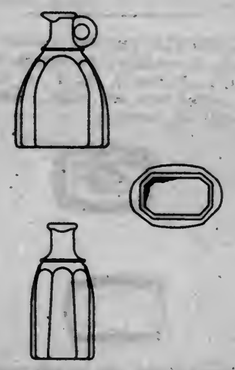
The ornamental design for a plate or analogous article, substantially as shown.

64,131. ASH RECEIVER. FRANK PARISEK, Chicago, Ill. Filed Nov. 24, 1923. Serial No. 7,873. Term of patent 7 years.

The ornamental design for an ash receiver as shown.

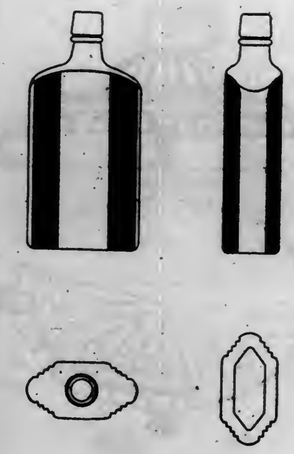


64,132. COMBINED TOILET AND WRITING STAND. EDWARD P. POOR, Scranton, Pa. Filed Oct. 17, 1923. Serial No. 7,522. Term of patent 3½ years.



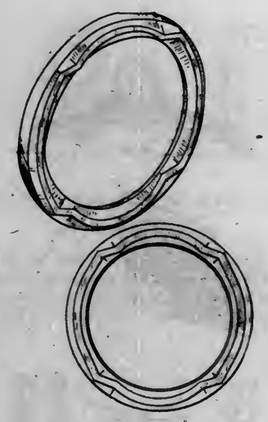
The ornamental design for combined toilet and writing stand as shown.

64,133. PLATE OR SIMILAR ARTICLE. EDWARD JOHN RIDGWAY, Staten Island, N. Y. Filed May 4, 1923. Serial No. 6,061. Term of patent 7 years.



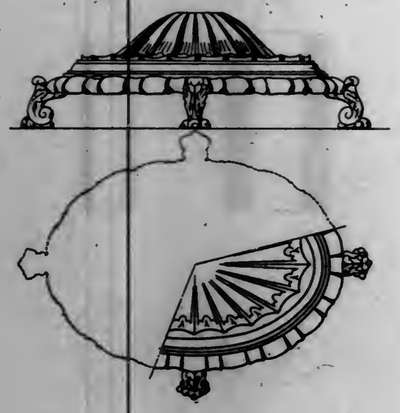
The ornamental design for a plate or similar article as shown and described.

64,134. DECANTER. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Dec. 13, 1923. Serial No. 8,005. Term of patent 14 years.



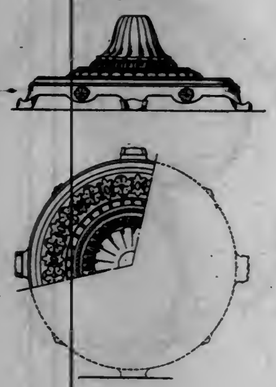
The ornamental design for a decanter as shown.

64,135. FLASK. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Dec. 17, 1923. Serial No. 8,065. Term of patent 7 years.



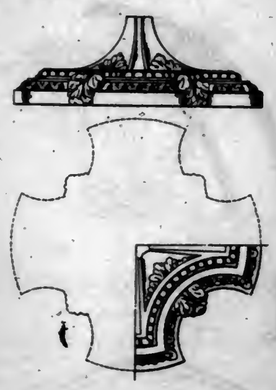
The ornamental design for a flask, as shown.

64,136. LAMP DOOR. ERNEST O. SEITZ, Detroit, Mich., assignor to C. M. Hall Lamp Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1923. Serial No. 5,590. Term of patent 14 years.



The ornamental design for a lamp door, substantially as shown.

64,137. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to The Art Lamp Mfg. Company, a Corporation of Illinois. Filed Oct. 15, 1923. Serial No. 7,495. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

64,138. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to The Art Lamp Mfg. Company, a Corporation of Illinois. Filed Oct. 15, 1923. Serial No. 7,496. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

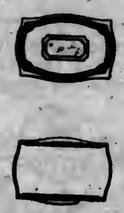
64,139. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to The Art Lamp Mfg. Company, a Corporation of Illinois. Filed Oct. 15, 1923. Serial No. 7,498. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

64,140. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to The Art Lamp Mfg. Company, a Corporation of Illinois. Filed Oct. 15, 1923. Serial No. 7,499. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

64,141. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,874. Term of patent 3½ years.



The ornamental design for a belt buckle frame, as shown.

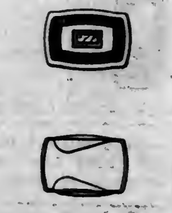
64,142. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,875. Term of patent 3½ years.

The ornamental design for a belt buckle frame, as shown.

64,143. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,876. Term of patent 3½ years.

The ornamental design for a belt buckle frame, as shown.

64,144. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,877. Term of patent 3½ years.



The ornamental design for a belt buckle frame, as shown.

64,145. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,879. Term of patent 3½ years.

The ornamental design for a belt buckle frame, as shown.

64,146. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,880. Term of patent 3½ years.

The ornamental design for a belt buckle frame, as shown.

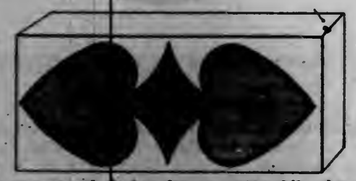
64,147. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,881. Term of patent 3½ years.

The ornamental design for a belt slide, as shown.

64,148. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,882. Term of patent 3½ years.

The ornamental design for a belt slide, as shown.

64,149. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., A Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,883. Term of patent 7 years.

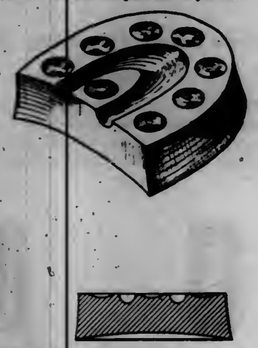


The ornamental design for a belt slide, as shown.

64,150. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1923. Serial No. 7,884. Term of patent 3½ years.

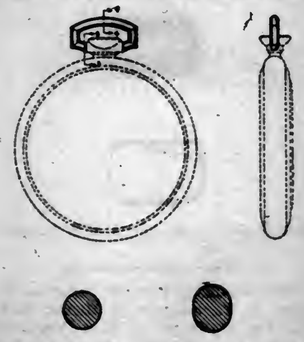
The ornamental design for a belt slide, as shown.

64,151. AUTOMOBILE SIGNAL BOX. GEORGE STAGI, Los Altos, Calif. Filed July 20, 1923. Serial No. 6,814. Term of patent 3½ years.



The ornamental design for an automobile signal box, substantially as shown.

64,152. BOTTLE. DANIEL B. SWEENEY, Middletown, N. Y. Filed Sept. 11, 1922. Serial No. 3,691. Term of patent 14 years.



The ornamental design for a bottle, as shown.

64,153. RUBBER HEEL. ISAAC WAGENMAKER, Athens, Tenn., and ELMER G. BRETZIN, Knisley, and VERNE C. FOSTER, Birmingham, Ala. Filed Sept. 12, 1922. Serial No. 3,707. Term of patent 7 years.

The ornamental design for a rubber heel, as shown.

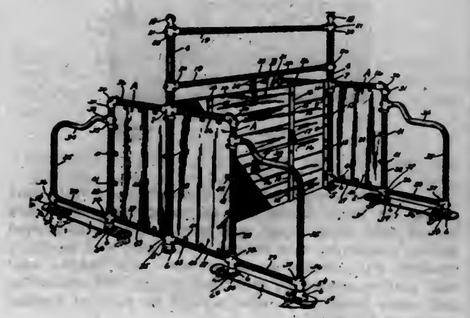
64,154. WATCHCASE BOW. ARTHUR W. WADSWORTH and ARTHUR P. CONANT, Fort Thomas, Ky., assignors to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed June 26, 1923. Serial No. 6,578. Term of patent 14 years.

The ornamental design for a watchcase bow, substantially as shown.

64,155. ORNAMENTAL LAMP. VICTOR R. WILL, Sacramento, Calif. Filed Oct. 17, 1923. Serial No. 7,529. Term of patent 3½ years.

The ornamental design for an ornamental lamp as shown.

64,156. ORNAMENTAL LAMP. VICTOR R. WILL, Sacramento, Calif. Filed Oct. 19, 1923. Serial No. 7,552. Term of patent 3½ years.

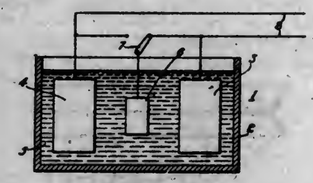


The ornamental design for an ornamental lamp as shown.

PATENTS

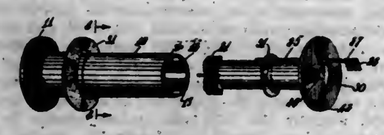
GRANTED MARCH 4, 1924.

1,485,356. SHOW STALL FOR CATTLE. ROBERT J. ACKERMAN, Minneapolis, Minn., assignor to Hudson Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 25, 1920. Serial No. 419,366. 8 Claims. (Cl. 119—27.)



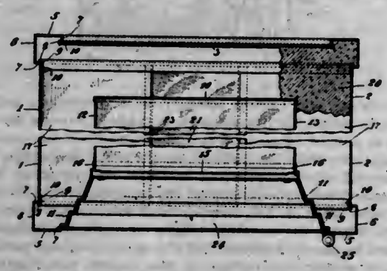
1. A demountable show stall for animals having in combination central upstanding main posts, spaced auxiliary posts arranged at each side of said main posts in a line normal to that connecting the said main posts, a solid partition extending between said main posts and secured thereto, horizontal members connecting said main and auxiliary posts substantially at the height of said partition, horizontal members connecting said main and auxiliary posts adjacent the bottom thereof, and solid panels extending between said auxiliary posts, main posts and horizontal members on each side of said central partition.

1,485,357. VANITY CASE. SAMUEL S. ABBS, New York, N. Y. Filed Dec. 9, 1922. Serial No. 605,847. 4 Claims. (Cl. 132—83.)



1. A vanity case comprising two hingedly connected sections, one of said sections having a plurality of cosmetic receiving compartments therein, and the second section having a sliding mirror and a concealed cigarette or change compartment when opened, the second section constituting a closure for the first mentioned section.

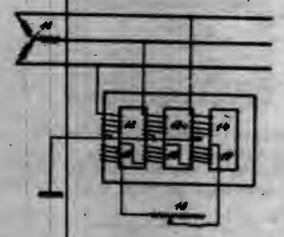
1,485,358. ELECTROLYTIC CONDENSER. CHESTER T. ALLCUTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1919. Serial No. 348,371. 4 Claims. (Cl. 175—315.)



1. An electrolytic condenser comprising a plurality of film-forming electrodes immersed in a suitable electrolyte and connected to an electrical supply circuit, and means for adding additional electrode surface to the electrodes alternately.

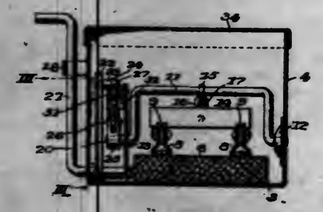
1,485,359. FASTENER. PETER BALLAZ, West New York, N. J. Filed Apr. 9, 1923. Serial No. 631,048. 6 Claims. (Cl. 85—5.)

1. A device of the class described comprising a cylindrical female element having a series of longitudinal ribs formed on its inner face, and a male element having hook-like projections adapted to engage behind said ribs, flange extensions on the inner ends of said ribs adapted to prevent displacement of said hooks from behind said ribs in one rotative direction, and a key carried by the male element and adapted to prevent disengagement of said hooks from said ribs in an opposite direction.



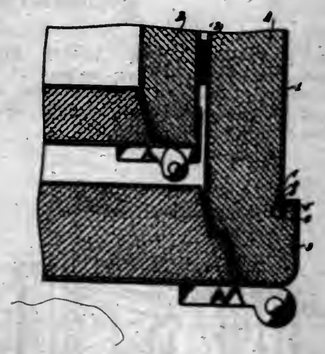
1,485,360. METALLIC STRUCTURE. CARL BARTELS, Hamilton, Ohio, and DAVID H. BELLAMORE, New York, N. Y., assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed July 7, 1921. Serial No. 482,893. 8 Claims. (Cl. 109—20.)

1. In safe construction, a metallic framing member having a central web portion providing two flanges angularly disposed one to the other, an inwardly extend-



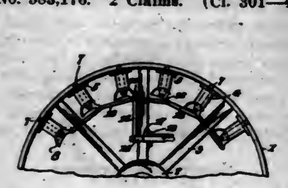
ing flange along the outer extremity of each of said flanges, and a groove open outwardly along the inner edge of each of said inwardly extending flanges, said grooves being adapted to receive unturned edges of flat wall plates, and the inner side of each of said grooves being extended and abutting against the inner surface of a plate when its edge is in the groove.

1,485,361. MEANS FOR SUPPRESSING THE GROUND CURRENTS. RICHARD BAUCH, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed July 6, 1921. Serial No. 482,840. 5 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. System for suppressing accidental grounding currents occurring in high tension alternating current systems, comprising a transformer having its primary winding connected to the system and the neutral point of said winding connected directly to ground, and having its secondary winding electrically loaded to a sufficient extent so that, in case of accidental grounding of the system, the current passing from said neutral point to ground approximates the value of the accidental ground current, whereby the inductance acting counter to the accidental ground current is considerably smaller than the working inductance of the system.

1,485,362. SWITCH MECHANISM. HAROLD G. BAXTER, Baldwin, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,453. 5 Claims. (Cl. 200—67.)

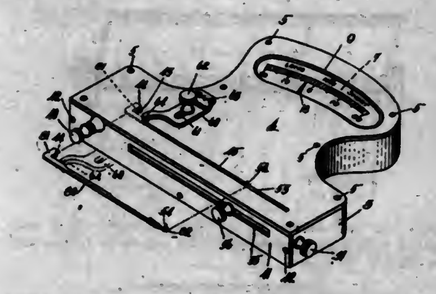


1. Switch mechanism comprising a housing, a switch pivoted within the housing, an operating member for the switch pivoted at one end to the side wall of the housing, a bracket within the housing for pivotally supporting the other end of the operating member, an operating lever operable from the exterior of the housing and pivoted to the side wall of the housing and having an operating crank within the housing, toggle members pivotally connected to the said crank and the said operating member, and a spring for collapsing the toggle for imparting opening or closing movement to the switch when one leg of the toggle is moved over the dead center of the toggle by the said crank.

1,485,363. SAFE CONSTRUCTION. DAVID H. BELLAMORE, New York, N. Y., and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed May 16, 1922. Serial No. 561,454. 4 Claims. (Cl. 109—2.)

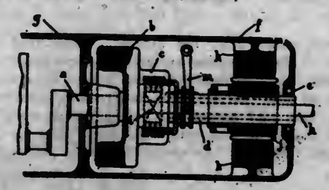
1. In safe construction, in combination, a safe part having an inner flange and an outer flange extending beyond said inner flange and having a resilient curved bottom connecting said flanges, and a safe wall having a straight, flat portion seated between said flanges, said wall portion contacting said inner flange, and contacting said outer flange at a point beyond its point of contact with said inner flange.

1,485,364. ADJUSTABLE TRACTION CLEAT. CLARENCE C. BLACK, Brookville, Ohio. Filed Aug. 21, 1922. Serial No. 583,176. 2 Claims. (Cl. 301—46.)



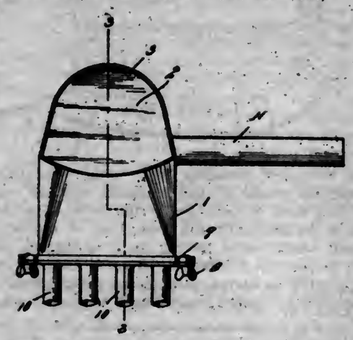
1. A traction wheel, a rim, brackets supported on the inner surface of the rim and each having a central bore therethrough registering with an opening in said rim, traction spurs positioned in said bores of said brackets, a cam pivotally supported in each of said brackets and held in engagement with the projecting spur therein, means for connecting the cams together and means pivotally supported on one of the spokes of the wheel for operating the cams and moving the projecting spurs beyond the surface of the rim simultaneously.

1,485,365. CALIPER FOR MEASURING VARIATIONS IN LATCH NEEDLES. ROYALL D. BRADBURY, Andover, Mass. Filed Dec. 13, 1921. Serial No. 521,973 5 Claims. (Cl. 33—147.)



1. A caliper for latch needles comprising a relatively fixed member constructed and arranged to be engaged by the surface of the inner face of a latch needle hook, a complemental movable member constructed and arranged to engage the inner face of the butt of said needle, means to control the position of said needle in engagement with said members whereby the distance between said members represents the distance between the inner face of said hook and the inner face of said butt measured on a line from the inner face of said hook substantially

normal to the inner face of said butt, an indicator arranged to be operated by the movable member, and means when said members are engaged by a templet or



needle to adjust said templet or needle and members to bring the indicator to a zero reading without disturbing the relative positions of said members as fixed by said templet or needle.

1,485,366. STARTING DYNAMO FOR MOTOR VEHICLES. ETTORE BUGATTI, Molsheim, France. Filed Aug. 25, 1921. Serial No. 495,299. 2 Claims. (Cl. 290—22.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

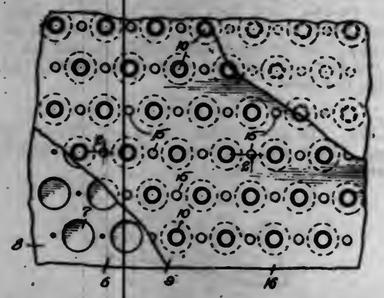
1. In a starting mechanism, the combination with an engine crank shaft, a hollow shaft alined with and connected thereto, a crank case extension in which the end of the hollow shaft is journalled, a fly-wheel and a clutch on said crank shaft and a dynamo rotor on said hollow shaft and rotating therewith.

1,485,367. CANDY-RUNNING IMPLEMENT. ALBERT T. BURNETT, Los Angeles, Calif. Filed Oct. 4, 1922. Serial No. 592,336. 1 Claim. (Cl. 107—52.)

A candy pouring implement including a body having a bottom, side walls, a curved top wall on the front portion thereof, and a curved rear end wall, said top and rear end walls defining an opening in the rear of the body with the upper edges of the side walls for receiving material to be poured, the forward end of the bottom being upwardly inclined, the forward end of the body having a substantially narrow opening extending across said body, an annular flange extending therefrom, a handle extending laterally from one side of the body, a spout member having an annular flange for fitting the flange on the body, and means for removably securing said spout member on the body, the spout of said member being inclined upwardly with relation to the body so that the upper end thereof terminates in the plane of the upper edge of the side walls whereby the rear end of the body may be dipped into a receptacle containing candy for receiving a charge therein, said body being adapted to hold the charge until it is desired to be poured by moving the forward end of the container downwardly so that the charge will run down the inclined wall of the bottom and out through the spout.

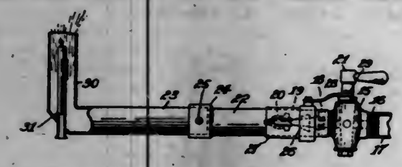
1,485,368. HAIR CURLER. MAMIE L. CAVIN, Baker, Oreg. Filed May 18, 1923. Serial No. 639,856. 5 Claims. (Cl. 132—41.)

1. A curler having an iron about which the hair is adapted to be wrapped, a bail separable from and attachable to said iron, and a hair-retainer carried by said bail independently of the iron to coact with said iron.



1,485,369. TWO-STROKE EXPLOSION VALVELESS ENGINE. JULES COSTILLE and GUILLAUME ROBBE, Brussels, Belgium. Filed Nov. 11, 1920. Serial No. 423,318. 1 Claim. (Cl. 123—74.)

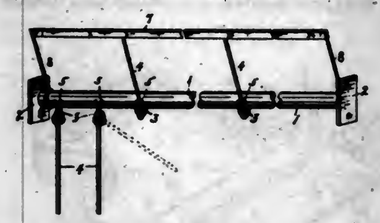
In an internal combustion engine the combination with the frame thereof comprising a crank case containing a crankshaft, a cylinder section and a tubular section mounted in fixed position with its lower end constituting a guideway projecting into the crank case, the upper end terminating in a transverse division wall constituting the bottom of the cylindrical chamber, said wall having a central opening therein, a piston within said chamber, a connecting rod having its upper end connected to said piston and extending through said opening with a sliding fit, a guide slidable within said guideway and operatively connecting the lower end of the rod to the crankshaft, said cylinder section containing a suction and compression chamber in juxtaposition with the cylindrical chamber and ports adapted to at times effect communication between the said suction and compression chamber and the space between the piston and said division wall and between the last-mentioned chamber and the space between the piston and the top of the cylindrical chamber, said cylindrical section also having an exhaust port



adapted to communicate with said last mentioned space, and an intake port adapted to communicate with the space between the piston and said division wall for the purpose set forth.

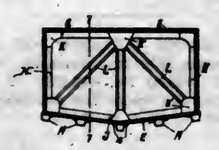
1,485,370. PLASTER-RECEIVING BOARD. HARRY A. CUMPER, Chicago, Ill., assignor of one-half to Albert D. Stewart, Hutchinson, Kans. Filed Jan. 23, 1922. Serial No. 531,036. 4 Claims. (Cl. 72—116.)

1. A plaster receiving board comprising two spaced parallel flat sheets and an intermediate flat sheet, the latter sheet perforated at uniform intervals and having all of its remaining surfaces glued to the respective outside sheets, one of the outside sheets having registering perforations of smaller diameter.



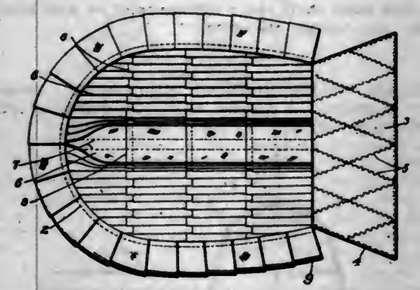
1,485,371. BURNER. EDWARD T. CURRAN, Detroit, Mich. Filed Dec. 6, 1920. Serial No. 428,780. 1 Claim. (Cl. 158—119.)

In a burner for gaseous fuel, an angularly formed mixing chamber of substantially the same cross sectional dimension throughout having an outlet at one end to constitute the burner port and having circumferentially disposed air inlet ports adjacent the opposite end; a tube extending from the exterior to the interior of the mixing chamber at the bend of the angular portion with the outlet of said tube adjacent to and at a point within the burner port of the mixing chamber; a valve chamber connected to the end of the mixing chamber at which circumferential ports are located having an inlet arranged to be connected to a gas supply and an outlet into the mixing chamber; a valve in said valve chamber to control the gas supply to the mixing chamber; a sleeve slidably mounted upon the mixing chamber adjustable to regulate the size of the circumferential air inlet ports and air supply to the mixing chamber; a connection between said sleeve and gas control valve whereby to simultaneously actuate both the valve and sleeve to open and shut off the air supply to the mixing chamber and regulate the supply of one proportionally to the other; a nipple connected to the outlet of the valve chamber extending into the mixing chamber; and a valve to regulate the gas supply from the nipple to the mixing chamber independent of the air supply.



1,485,372. LAUNDRY-SORTING DEVICE. FRANK E. DOLE, Salt Lake City, Utah. Filed Feb. 15, 1923. Serial No. 619,281. 3 Claims. (Cl. 211—36.)

1. A sorting device for laundries comprising a longitudinally disposed pipe; a plurality of hooks extending from one side thereof; an equal number of hook eyes secured in and extending at right angles to said hooks;

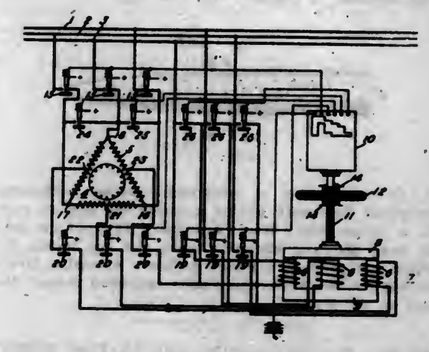


supporting bars having an eye bolt on one end of each engaged within said hook eyes; and means to fasten said pipe rigidly in place.

1,485,373. STRUCTURAL FRAMING. CLAUDIUS DORNIER, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,548. 2 Claims. (Cl. 114—88.)

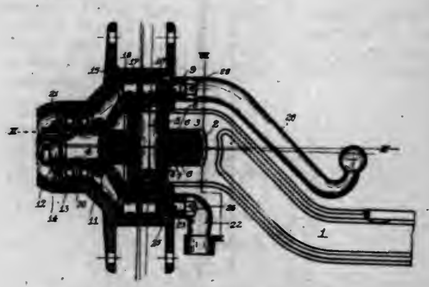
1. Sheet metal float for aircraft comprising in combination, a flanged substantially quadrangular channel iron frame, flanged metal channel braces extending from one side of said frame to the centre and corners of the opposite side and metal plates extending substantially at right angles to and connected with the four sides of said frame to form a braced substantially prismatic body.

1,485,374. POLISHING GLOVE. CHARLES C. DRUEDING, Philadelphia, Pa., assignor to Drueding Brothers Company, Philadelphia, Pa. Filed Jan. 18, 1923. Serial No. 613,518. 3 Claims. (Cl. 15—227.)



1. A reversible polishing glove comprising palm and back sections united at their marginal side and outer end edges, and rows of polishing strips secured to the palm and back section, each row composed of a plurality of relatively short pieces having their contiguous ends arranged in positive overlapping relation to form substantially continuous strips, said pieces being united to the said sections by spaced longitudinal rows of stitching.

1,485,375. CONTROL MECHANISM FOR INDUCTION MOTORS. ADOLPHUS M. DUDLEY, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 260,988. 8 Claims. (Cl. 172—274.)



7. The combination with an alternating-current motor having a primary winding arranged to be connected in

delta or in star for operation at different speeds, of a reactance device for controlling the voltage applied to

said motor during the transition from one connection to the other, and means for controlling the electrical connections of said motor and the reactance of said device.

1,485,376. FRONT-AXLE CONSTRUCTION. FRANK V. ELBERTZ, Detroit, Mich., assignor of one-half to B. F. Everitt Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1919. Serial No. 272,444. 4 Claims. (Cl. 280—96.3.)

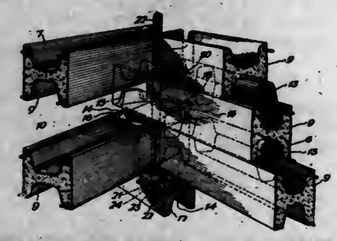
1. The combination of an axle having a longitudinal bearing slot in the end portion, a stub axle pivoted in the slot, the vertical dimension of the stub axle being less than the similar dimension of the main axle, a bearing hub of unbroken annular type secured on the stub axle around the main axle, the pivot of the stub axle being located interiorly of the hub, a wheel hub journalled on the bearing hub, the pivot of the stub axle being in substantially the load plane of the wheel hub, and means for holding the wheel hub detachably in position, the pivot connections between the axles including a pivot pin with the connections presenting a bearing face concentric with the pin and within the planes of the stub axle, said face having a diameter materially greater than that of the pin, the face-carrying member being operative to space the latter from stub axle contact.

1,485,377. ANTISPASMODIC COMPOUND AND PROCESS OF PRODUCING THE SAME. WILLIAM H. ENGELS, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Filed Apr. 25, 1922. Serial No. 556,424. 4 Claims. (Cl. 260—98.)

3. The process of making an alkali dibensylphosphate, which consists in treating phosphoric acid dibensylester with an alkali base under approximately anhydrous conditions, and isolating the salt.

1,485,378. ANTISPASMODIC COMPOUND AND PROCESS OF PRODUCING THE SAME. WILLIAM H. ENGELS, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Original application filed Apr. 25, 1922, Serial No. 556,424. Divided and this application filed May 13, 1922. Serial No. 560,719. 4 Claims. (Cl. 260—103.)

4. The process of simultaneously purifying and rendering water-soluble phthalic acid partially saturated by a bensyl group, which consists in completing the saturation by combination with an alkali under approximately anhydrous conditions.



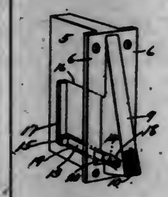
1,485,379. ANTISPASMODIC COMPOUND AND PROCESS OF PRODUCING THE SAME. WILLIAM H. ENGELS, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Original application filed Apr. 25, 1922, Serial No. 556,424. Divided and this application filed May 13, 1922. Serial No. 560,720. 4 Claims. (Cl. 260—106.)

3. The process of making an alkali bensyl succinate which consists in treating succinic acid monobensylester with an alkali base under substantially anhydrous conditions, and isolating the salt.

1,485,380. THERAPEUTIC COMPOUND AND PROCESS OF PRODUCING THE SAME. WILLIAM H. ENGELS, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,931. 7 Claims. (Cl. 260—11.)

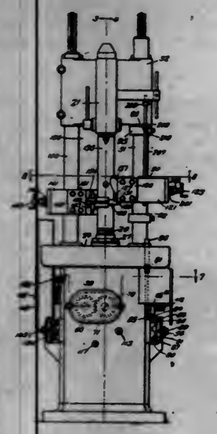
7. The process of making bismuth 8-oxyquinolate which consists in causing an acid solution of a bismuth salt and a solution of an 8-oxyquinoline compound to react with each other in the presence of an alkali.

1,485,381. CRIBBING FOR SHORE-PROTECTING SYSTEMS. WILLIAM H. EVERS, Cleveland, Ohio, assignor of one-third to William E. Pease and one-third to Noah H. Suloff, Cleveland, Ohio. Original application filed Jan. 3, 1922, Serial No. 526,548. Divided and this application filed Aug. 7, 1922. Serial No. 580,046. 18 Claims. (Cl. 61—47.)



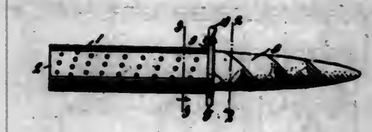
1. A wave resisting structure, comprising crossed concrete H beams, said beams being arranged with the webs thereof horizontal; an interlocker between the superposed beams at the intersection thereof, comprising a block having integral upper and lower crossed portions adapted to fit within the channels of said superposed crossed beams, and means extending substantially from top to bottom of the structure and passing in common through the beams and blocks.

1,485,382. AUTOMATIC SASH LOCK. JAMES A. FOLEY, Omaha, Nebr. Filed Feb. 15, 1923. Serial No. 619,109. 2 Claims. (Cl. 292—219.)



1. The combination with an upper window sash, a lower sash, of a sash lock, said sash lock comprising a casing imbedded in the upper sash adjacent the upper

end of the lower sash, a member pivoted in the upper end of the casing and extending downwardly, a leaf spring disposed within the casing and normally forcing the pivoted member outwardly at its lower end to a position where it will be in the path of the lower sash,



an arm pivoted to the lower end of the pivoted member and extending into the casing, said arm terminating in an outwardly extending arm disposed in an opening in the side of the casing and cooperating with the rear side of the opening for holding the pivoted member against inward movement.

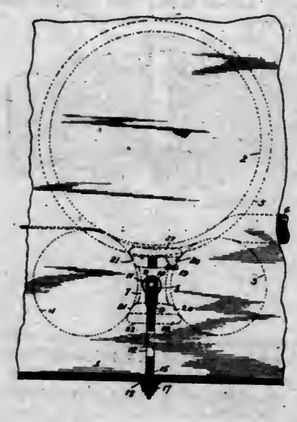
1,485,383. MACHINE LATHE. PERCY M. FOWL and HERMAN W. ZIMMERMAN, Detroit, Mich.; Union Trust Company, executor of said Percy M. Fowl, deceased, assignors, by direct and mesne assignments, to Cadillac Machinery Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1919. Serial No. 285,218. 36 Claims. (Cl. 82—2.)

1. A machine of the character described comprising, in combination, a lathe spindle disposed substantially vertically; a fixed substantially horisontal bearing supporting the weight of said spindle and the work and sustaining them against end thrust, and fixed substantially vertical bearings for said spindle—all said bearings being mounted and stiffly braced in frame members; a slidable tool carrying bar substantially vertically disposed; extensive bearings for said tool carrying bar permitting substantially vertical movement of said bar while holding it securely against transverse wear, there being extensive lengths of said bar in said bearings at all times; the respective mountings of said spindle and bar holding their respective axes in fixed relationship and substantially parallel to the direction of gravity; means for vertically moving said bar; and a tool carrier mounted on said bar, and means for relieving said bar from thrust of the work of the tool.

1,485,384. ASH TRAY AND SHIELD. GEORGE E. GALLOWAY, Belmond, Iowa. Filed Aug. 24, 1921. Serial No. 494,799. 2 Claims. (Cl. 131—51.)

1. In combination, a cylindrical member perforated throughout its length having a closed end and an open end, a lug projecting from the member adjacent its open end, jaws pivotally connected with the lug, means for holding the jaws in a closed position, operating levers disposed on the jaws, and finger operating means disposed on the jaws.

1,485,385. HOSIERY DRYING AND SHAPING STRUCTURE. JACOB GERRITSON, Kankakee, Ill., assignor, by mesne assignments, to Paramount Textile Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1919. Serial No. 323,599. 2 Claims. (Cl. 223—17.)



1. A holding-device for hosiery-drying and shaping forms including a relatively thin backing-member of heat non-conducting material provided with slits, a fabric hosiery-engaging element having its central portion overlying the section between the slits of the backing-member and its edge-portions underlying the sections thereof beyond the slits, and a fabric member-covering of heat-conducting material overlying said edge-portions; the backing-member constituting an encompassing frame for the hosiery-engaging element to protect its edges; and the hosiery-engaging element and member-covering, together, presenting a fabric facing for the backing-member approximately coextensive with the surface dimensions thereof.

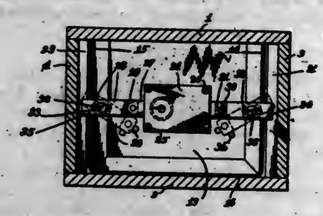
1,485,386. CANE MILL. JOHN PORTER GOLDEN, Columbus, Ga., assignor to Golden's Foundry & Machine Company, Columbus, Ga. Filed Nov. 16, 1922. Serial No. 601,368. 4 Claims. (Cl. 100—47.)

1. A reversible guide-knife structure for cane mills having two pairs of roll engaging faces adapted for interchangeable use.

4. In a cane mill, the combination with framework and three rolls, of a reversible guide-knife structure having opposite heads providing, interchangeably, roll engaging

portions disposed between two of said rolls, means for adjustably suspending said guide-knife structure from the

framework and means for adjusting said guide-knife structure relatively to the roll or rolls with which it cooperates.

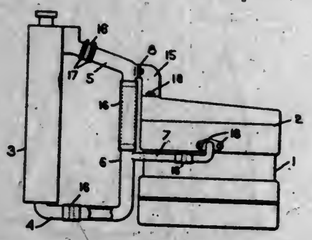


1,485,387. LOCK BOX. GUSTAVE M. GOLDSMITH and CARL P. BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed May 25, 1921. Serial No. 472,501. 6 Claims. (Cl. 109—12.)

1. In a lock box, the combination with a door having a lock on the rear side thereof, and a drawer in said box, said drawer having longitudinal walls, of a plate rigidly mounted on said drawer across the front thereof and positioned to lie directly back of the lock when the door is closed, and said longitudinal drawer walls abutting said plate from the rear, whereby movement of said plate rearwardly of said drawer is limited, and cooperating with said plate whereby inward movement of said lock from said door is prevented when the door is closed.

1,485,388. LOCKING DEVICE. GUSTAVE M. GOLDSMITH and CARL P. BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed June 30, 1921. Serial No. 481,474. 3 Claims. (Cl. 109—3.)

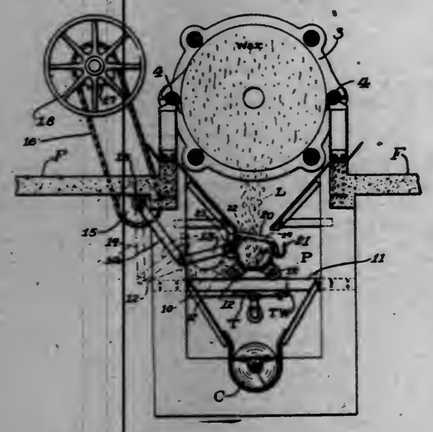
1. In a device of the character described, in combination, a drawer, a locking element slidably and pivotally mounted on said drawer, means comprising a lock having a slidable bolt-part severably connected to said element for sliding said element into and out of locking position, said element being arranged to pivot when said con-



nection is severed, and means comprising stops on said drawer positioned to engage said element when it pivots, for maintaining said element in locking position.

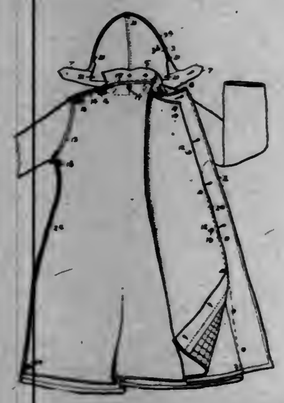
1,485,389. LOCKING DEVICE. GUSTAVE M. GOLDSMITH and CARL P. BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Original application filed June 30, 1921, Serial No. 481,474. Divided and this application filed Apr. 3, 1923. Serial No. 629,589. 4 Claims. (Cl. 109—3.)

1. In a device of the character described, the combination with a drawer having for its front face a rigid plate, of a lock on the rear side of said plate and a locking element severably connected to said lock for slidable operation thereby into and out of locking position, a support for said element upon which said element is slidably and pivotally mounted, said element having a projecting locking lug which becomes disposed in locking position automatically when said lock connection with said element is severed.



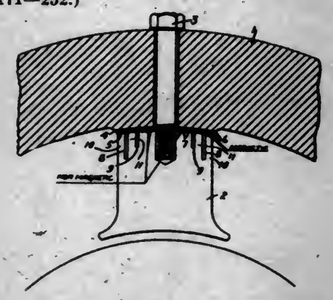
1,485,390. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ALBERT C. GOWING, Franklin, Mass. Filed Sept. 11, 1923. Serial No. 662,120. 7 Claims. (Cl. 123—174.)

1. The combination with an internal combustion engine having a water jacket, of a circulating system through which water or other cooling medium circulates, said system being separate from the engine jacket and including a radiator, and a feed water connection to supply water from the circulating system to the jacket, a steam delivery connection between the water jacket and the



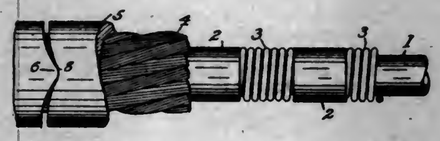
circulating system, said connections being so formed that they restrict the circulation of water through the jacket to such an extent that during the normal operation of the engine the water in the jacket is at boiling temperature.

1,485,391. WAX PRESS. ALANSON McD. GRAY, Elizabeth, N. J., assignor to The M. W. Kellogg Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1922. Serial No. 542,109. 4 Claims. (Cl. 210—192.)



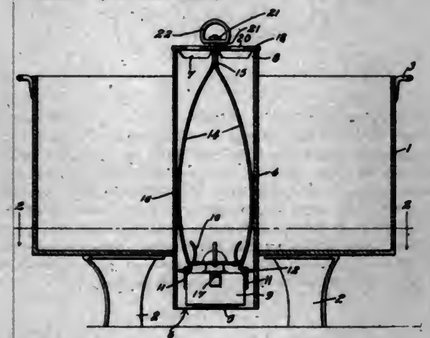
1. The combination of a filter press, a trough for receiving filtered liquid flowing from said press, a track for said trough on which said trough may be moved laterally from its normal position, and an operator controlled shaft having connections with said trough whereby said trough may be moved at right angles to said shaft.

1,485,392. COMBINED COAT AND HELMET. CHARLES HALEK, Cleveland, Ohio. Filed May 27, 1922. Serial No. 564,194. 4 Claims. (Cl. 2—85.)



3. A garment of the class described comprising an outer body having a detachable inner lining therefor, said lining being provided with divided shoulder portions, and means carried by said outer body for uniting said portions and securing the same to said outer body.

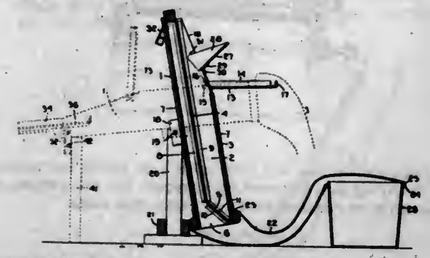
1,485,393. FIELD-MAGNET POLE PIECE FOR DYNAMO-ELECTRIC MACHINES. DAVID HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,373. 14 Claims. (Cl. 171—252.)



9. In a dynamo-electric machine, a field frame, a field-magnet pole piece mounted on said frame, and a spacing member disposed intermediate said pole piece and said frame and comprising an annular rim portion composed of magnetic material.

1,485,394. SOUNDING LINE. ELBERT J. HAYNES, Cleveland, Ohio. Filed Aug. 11, 1922. Serial No. 581,110. 3 Claims. (Cl. 137—90.)

1. A sounding line comprising an air hose, an inner armor embracing said hose, comprised of alternate collars and flexible metal coils, and a surrounding armor extending substantially continuously co-extensive with the air hose.



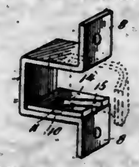
1,485,395. POULTRY-TANK HEATER. HOLLIE HIBBS, Leeton, Mo. Filed June 11, 1921. Serial No. 476,838. 1 Claim. (Cl. 126—358.)

In a device of the class described, a tank, a flue mounted in the tank and having an opening, the flue being extended below the bottom of the tank to permit air to enter the opening, a heater in the flue and supported on the bottom of the flue, a bail comprising side arms assembled with the heater, the side arms merging into a stem having a handle, and a closure resting on the upper end of the flue, the stem passing through the closure, the

closure being slidable on the stem to insure a seating of the closure when the heater rests on the bottom of the flue, the closure being located between the side arms and the handle, whereby the side arms and the handle will constitute stops which limit the movement of the closure on the stem when the heater has been lifted out of the flue.

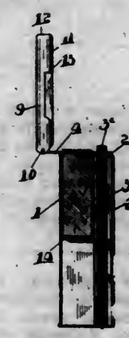
1,485,396. SIFTER. CHARLES W. HINCHCLIFFE, Lawrence, Mass., assignor of one-half to Frances J. Craig, Lawrence, Mass. Filed July 23, 1921. Serial No. 487,096. 3 Claims. (Cl. 83—60.)

1. An ash sifter comprising a rectangular casing having an inlet opening at one end of its top, a closure for said inlet, an outlet opening at the opposite end of said casing, a screen extending longitudinally of said casing in parallelism with and spaced apart from the bottom of its casing and turned upwardly at the outlet end to engage the top of the casing, means pivotally supporting said casing substantially midway of its ends to permit a vertical swinging movement and a flexible discharge chute enclosing said outlet operable to clear the chute of the sifted material discharged from said casing.



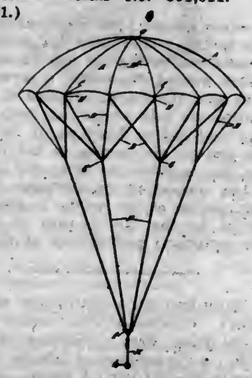
1,485,397. TRAVELER'S IRON. HENRY KREISHELD, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Jan. 3, 1920. Serial No. 349,286. 13 Claims. (Cl. 219—25.)

1. In a sad iron, the combination with a working member, a clamping plate, a heating element located between said working member and said clamping plate, and means for clamping together said working member and said clamping plate, of a cover member for said working member, a handle member, supporting means for said handle member, and a single means for holding said cover member against said working member and for holding said handle-supporting member in operative relation to said cover member.



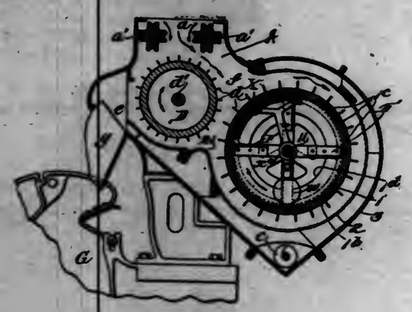
1,485,398. HINGE STRUCTURE FOR AUTOMOBILE DOORS. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1919. Serial No. 290,785. 4 Claims. (Cl. 16—135.)

1. A hinge construction comprising a stamping having a substantially U-shaped portion, one leg of said U-shaped portion having a pintle hole therethrough, a hinge member having a pintle to be received in said pintle hole,



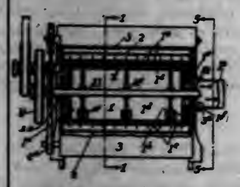
and means to guide said pintle along the leg of the U-shaped portion of said stamping and into position to be received in said pintle hole.

1,485,399. TOBACCO HOLDER AND CUTTER. FREDERICK A. H. LONGWORTH, Toronto, Ontario, Canada. Filed Aug. 25, 1922. Serial No. 584,319. 4 Claims. (Cl. 131—59.)



1. In a tobacco holder and cutter; a container having an oblong open end; a feed screw journalled longitudinally of the container substantially midway of one of the longer sides of said open end; a follower threaded on the feed screw; and a convex cutting blade carried by the feed screw adapted to co-operate with the edges of the open end of the container to form a shear.

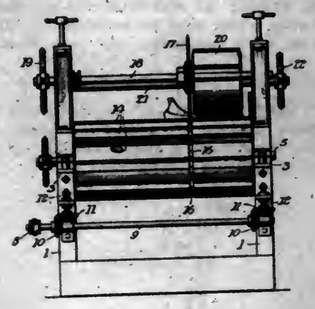
1,485,400. PARACHUTE. OWEN DAVID LUCAS, Bayswater, London, England, assignor to V. M. L. Experimental Limited, Westminster, London, England. Filed Sept. 28, 1922. Serial No. 591,011. 11 Claims. (Cl. 244—21.)



1. A parachute provided with reinforcing cords, which pass across the fabric and with means whereby the said cords are gripped to the parachute at its edges in a manner allowing of slip under excessive stresses on the fabric.

1,485,401. CLEANER FOR COTTON. JOHN H. McDONOUGH, Dallas, Tex., and OLIVER MITCHELL, Brookline, Mass., assignors to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Mar. 21, 1923. Serial No. 626,530. 4 Claims. (Cl. 19—67.)

1. In a cotton cleaner, a hollow rotary spiked drum, having inwardly extending skirts at its ends to define an axial end opening and having a multiplicity of perforations in its peripheral walls, said drum supported for rotation within a screened casing; that casing, provided with an opening coacting with the opening in the drum, for the passage of air; means to actuate the drum.

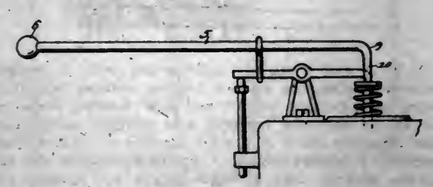


1,485,402. COTTON CLEANER. JOHN H. McDONOUGH, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed May 26, 1923. Serial No. 641,750. 4 Claims. (Cl. 19—67.)

3. In a cotton cleaner, the combination of a hollow rotary drum having a multiplicity of perforations in its peripheral walls and having its ends enclosed except for an air opening around the shaft; a screen adjacent to said drum to hold the cotton adjacent to said drum; a casing enclosing the said screen and drum and having a feed opening and having bearings in its sides for the drum shaft, and an air opening in the casing adjacent to a bearing and opposite the drum end opening; an air fan; a conduit connecting the discharge side of the fan with the air opening of the casing, to cause the air current generated by the fan to pass to the drum and through the peripheral perforations of the drum.

1,485,403. ROLLING AND SEVERING MACHINE FOR HOG SIDES. CLINTON F. MACDONALD and HARRY H. MCKEE, St. Paul, Minn., assignors to Swift & Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1923. Serial No. 671,169. 1 Claim. (Cl. 17—23.)

A machine of the class described comprising a frame, a conveyer support, a conveyer arranged to travel over said conveyer support, a pressing roller mounted above said conveyer and arranged to cooperate therewith in pressing the sides of hogs traveling with said conveyer, and a disk-shaped knife at one side of said pressing roller for severing the fat back from the belly, means for

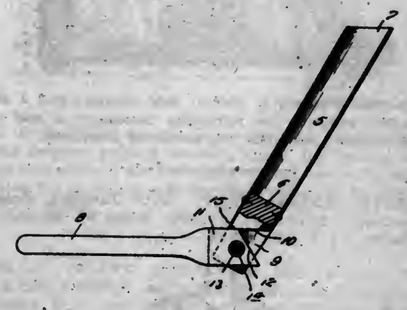


driving said roller and said knife, and means for raising or lowering said conveyer and support for the purpose of changing its relation with said roller and knife.

1,485,404. AMMUNITION. HELMUTH PAUL MARTIN and OWEN DAVID LUCAS, Westminster, England, assignors to M. L. Experimental Limited, Westminster, England. Filed Sept. 3, 1920. Serial No. 408,056. 1 Claim. (Cl. 102—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

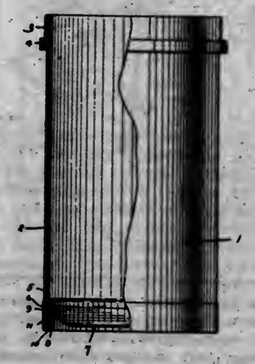
In an electrically fired cartridge, the combination of an anvil, an insulating plug in the rear part of the cartridge, an electric contact carried by said plug in alignment with said anvil, a detonating substance between said contact and said anvil and a wire clamped by said insulating plug between it and the body of the cartridge, said wire being electrically connected to said contact and disposed in contact with said detonating substance.

1,485,405. VALVE LIFT. CHARLES W. MERRIMAN, Beaver Falls, Pa. Filed May 15, 1922. Serial No. 561,211. 1 Claim. (Cl. 29—86.3.)



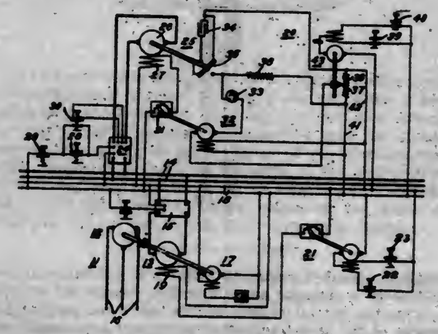
A tool for manipulating rock arms of valve mechanisms comprising a handle, a hook having an eye slidable on the handle by which the hook is adjustable longitudinally of the handle, the said handle having an extension at approximately right angles to the handle, the said extension being bifurcated and terminating in straight ends adapted to lie on a washer of a valve spring, the furcations of the extension being spaced apart to form a clearance and permitting the furcations to straddle a rock arm and of a length to project from the upper edge of a rock arm to the end of the rock arm where it engages said washer, whereby the extensions bear against the washer.

1,485,406. ACID-PHOSPHATE PROCESS. HERBERT H. MEYERS, Pittsburgh, Pa., assignor to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 21, 1922. Serial No. 608,352. 9 Claims. (Cl. 71—7.)



1. The process of producing acid phosphate, consisting in wet grinding the phosphate-rock, acidulating such wet ground rock, and heating and drying said acidulated rock at a temperature to produce available acid phosphate as a product.

1,485,407. CHARGER. JOHN MICHELICH, Auburn, Ill. Filed Dec. 26, 1923. Serial No. 682,746. 5 Claims. (Cl. 86—21.)



1. A charger of the character described comprising a tubular receptacle, a handle, a friction hinged connection between the bottom of the receptacle and the handle, whereby the receptacle may be tilted to lie at an angle to or co-extensive with the handle and retained so tilted for facilitating filling of the receptacle for pouring of powder therefrom into drill holes, the bottom of said receptacle comprising a plug, and said hinged connection between the handle and the receptacle comprising an ear upon the outer end of the plug, and a pair of legs upon the inner end of the handle between which the plug ear is fitted, said hinged connection further embodying a pivot bolt passing through the handle legs and the plug ear.

1,485,408. METAL RECEPTACLE. ARTHUR MILLER, Columbus, Ohio, assignor to The Solar Metal Products Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 3, 1921. Serial No. 449,331. 1 Claim. (Cl. 220—73.)

In a sheet metal receptacle, a tubular body member having its lower end formed with an inwardly directed annular shoulder and a depending vertical flange, said flange having its lower edge curved inwardly, a bottom member having its outer edge arranged to constitute a seat for the lower curved edge of said flange and forming, in effect a continuation thereof, and to enable said flange to be welded to said edge, an annular wall depending from the outer edge of said bottom member, and a reinforcing band arranged to encircle said wall and lower end of the body and to be welded thereto, said ring having its upper portion positioned to engage said shoulder and to surround and protect the joint between the body and bottom members.

1,485,409. SPEED-REGULATOR SYSTEM. LEONARD MILLER, Manchester, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,920. 11 Claims. (Cl. 171—312.)

1. In a regulator system adapted to maintain a predetermined operating condition, the combination with a translating device to be regulated, of a Wheatstone-bridge-control element therefor, the respective arms of which comprise a fixed-resistance unit, variable-resistance units, a variable condenser and a motor-control element.

1,485,410. COTTON CLEANER. FELIX RACKEMANN, Milton, Mass., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Mar. 1, 1923. Serial No. 621,994. 6 Claims. (Cl. 19—72.)

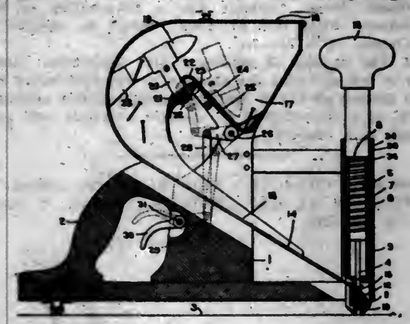
3. In a cotton cleaner, a hollow rotary drum having closed ends and a multiplicity of perforations in its peripheral walls; a hollow shaft, disposed along the longitudinal axis of the drum and having vents from the inside of the shaft, within the drum; a screened casing enclosing the drum; bearings for the shaft in the sides of said casing; means to introduce compressed air, through the hollow shaft into the hollow drum, to be discharged through the peripheral perforations.

1,485,411. STANDING-VALVE-RELEASING MECHANISM. WALTER D. BROWN and JOHN L. FITZPATRICK, Parkerton, Wyo. Filed Dec. 14, 1922. Serial No. 606,920. 1 Claim. (Cl. 103—221.)

In combination, a working barrel, a standing valve in the working barrel, a shell attached to the working barrel at its bottom end and provided with longitudinally extending slots having angular extensions at their upper ends,

an anchor connection movable in the shell and including a member engageable with the standing valve for unseating the same when the working barrel is lowered, pins projecting from the anchor connection and movable in the slots of the shell, the bottom end of said shell being

partially closed, a removable bushing in the upper end of said shell, a shoulder on said anchor connection adapted to abut the partial closure at the lower end so that the weight of the barrel and other parts will be on said partial closure and shoulder rather than on said pins.

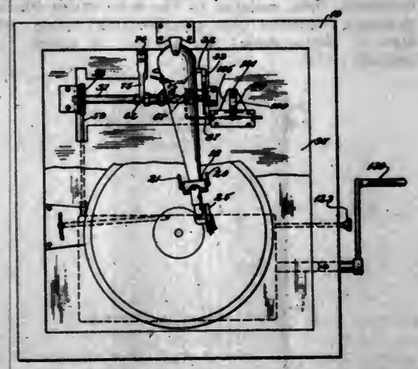


1,485,412. PROTECTING DEVICE FOR GAUGES. OTTO W. HESSE, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Feb. 25, 1922. Serial No. 539,256. 5 Claims. (Cl. 73—109.)

1. A gauge comprising a casing, a Bourdon tube therein, an element secured to the free end portion of said tube, and an element fixed relatively to the casing, one of said elements having an elongate slot extending substantially parallel to the path of movement of the free end of the tube end under pressure variation, and the other of said elements projecting into said slot.

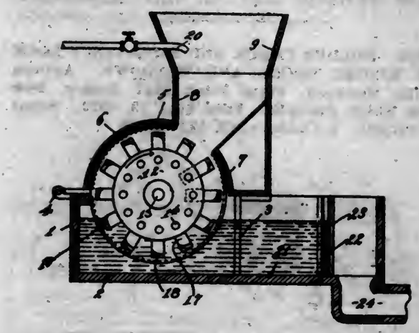
1,485,413. NAIL DRIVER. OLOV J. JOHANSON, Boston, Mass. Filed Nov. 6, 1922. Serial No. 599,270. 4 Claims. (Cl. 1—46.)

3. In a nail driver, the combination with a driving element, of a reservoir, a nail chute leading to the driving element and means for transferring nails from the reservoir to the chute, said means comprising a pivotally-mounted magnetic element, means for moving said element into position to take nails from the reservoir by magnetic



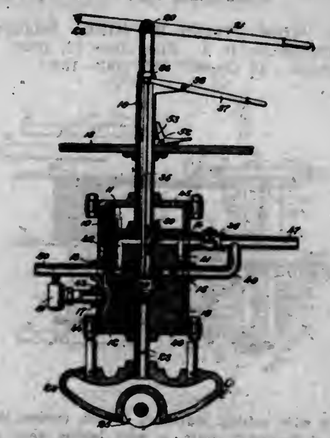
attraction, a spring to retract said element, and a stop to arrest suddenly the retracting movement of said element whereby the nails will be jarred therefrom.

1,485,414. ROTARY PUMP. HUGO JUNKERS, Dessau, Germany. Filed June 29, 1920. Serial No. 392,833. 4 Claims. (Cl. 230—30.)



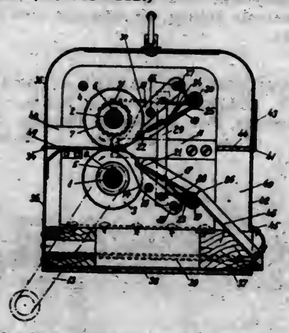
1. In a rotary pump in combination a stationary casing, a plurality of rotary pistons adapted to rotate about a common axis within said casing, lateral discs rigidly connected to the ends of said pistons, a bearing associated with each disc for supporting it rotatably in said casing and driving means fitted to one of said discs.

1,485,415. PHONOGRAPH REPEATER. ALBERT KALINOSKY, New York, N. Y. Filed Jan. 23, 1923. Serial No. 614,429. 10 Claims. (Cl. 274—15.)



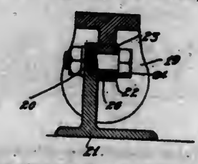
1. A repeating mechanism for phonographs including a reproducer, a tone-arm, and an operating support for a record, an operating finger carried by said tone-arm, a motor driven shaft, a worm shaft, means for coupling both shafts adapted to be operated by said finger at the end of a record, means for engaging said finger with said worm shaft to return the finger and tone-arm to their original positions, means for lifting and lowering said reproducer out of and into engagement with a record.

1,485,416. BEATING DEVICE. CHARLES L. KELLER, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed May 11, 1923. Serial No. 638,183. 6 Claims. (Cl. 92—20.)



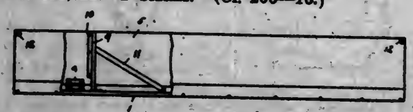
1. A device of the character described, comprising a swing hammer pulping machine, means for feeding fiber stock and water to the said machine, and means for maintaining the screen of said machine submerged at least in part, in water.

1,485,417. VALVE MECHANISM FOR AUTOMATIC TRAIN-CONTROL APPARATUS. OTIS B. KENT, Washington, D. C., and ROBERT L. MILLER, Spokane, Wash.; said Miller assignor to Otis Automatic Train Control, Inc., Spokane, Wash., a Corporation of Washington. Filed July 27, 1921. Serial No. 487,946. 2 Claims. (Cl. 246—190.)



1. In automatic train control apparatus, mechanism including a valve normally establishing communication between the train pipe and a source of fluid pressure supply, a hollow ramp engageable shoe in communication with the train pipe and operable at predetermined times to cause said valve to deny communication between the train pipe and said source of supply, a member normally establishing communication between the train pipe and said hollow shoe and movable by the pressure of fluid in the train pipe also to deny communication between the train pipe and said source of supply in the event of breakage or fracture of said shoe, said member including a perforated disk against which the pressure of fluid in the train pipe acts to move the member into position to effect denial of the communication aforementioned, and the communication between the train pipe and said hollow shoe being through the perforations of said disk.

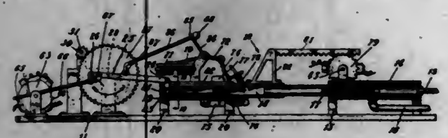
1,485,418. SHREDDING MACHINE. SÁNDOR KORBULY, Budapest, Hungary, assignor to Boris Aivas, Budapest, Hungary. Filed Nov. 29, 1920. Serial No. 427,193. 4 Claims. (Cl. 146—122.)



1. In a shredding machine, a rotary shaft, axially movable cutter discs thereon forming a cutting roller, a second rotary shaft parallel with the first one and axially movable cutter discs thereon projecting into the spaces between the adjacent cutter discs of the first cutting roller, means to prevent the rotation of the cutter discs on their respective shafts, pressure rollers acting against the lateral faces of the cutting rollers in the plane of their nip and springs acting on said pressure rollers.

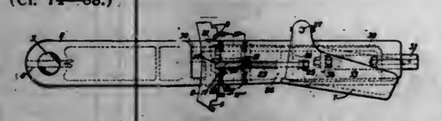
1,485,419. CLUTCH-SHIFTING MECHANISM. PATRICK P. LA MONTAGNE, Kankakee, Ill., assignor, by mesne assignments, to Pope Machine Company, Kankakee, Ill., a Corporation of Illinois. Filed July 13, 1921. Serial No. 484,469. 3 Claim. (Cl. 74—61.)

A shifter-operating mechanism comprising a support provided with an opening therein; a treadle-member having an extended portion provided with an opening adapted to cooperate with the opening in the support; the corresponding faces of the extended portion of the treadle and support constituting a friction area; a securing means passing through the openings in the support and extension and forcing the members together; and a washer having a sharpened edge-portion engaging a surface of one of the members, said washer having a ridged portion intermediate its edges bowed to constitute a resilient clutch-element and provided with an opening for the reception of the securing means, whereby tightening of the securing means will force the sharp edge-portion of the washer against a portion of one of the elements, the rigid portion acting to reinforce the washer and resist deformation thereof.



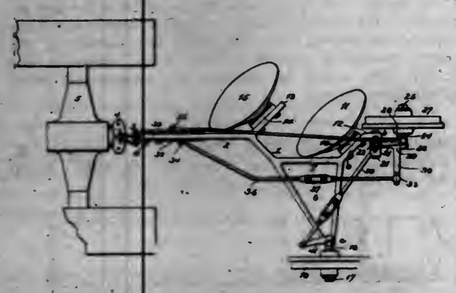
1,485,420. COLLAPSIBLE TOOL BOX. CHARLES M. LANGNESS, Duluth, Minn. Filed Mar. 30, 1923. Serial No. 628,722. 2 Claims. (Cl. 206—16.)

2. A box of the character described comprising a bottom, ends hingedly united to the bottom and foldable inwardly thereupon, sides hingedly united above the bottom and foldable inwardly upon the ends, a rack hingedly



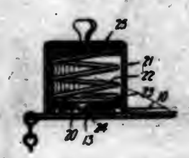
united to the bottom for erection adjacent one side when upright, a brace pivotally united to the interior of the box below the hinged portion of the side adjacent the rack for engagement with the rack when upright, and means for securely uniting the sides and ends of the box when upright.

1,485,421. AUTOMATIC AIR-BRAKE APPARATUS FOR RAILWAY TRAINS AND THE LIKE. ZENON P. LEGER, Moncton, New Brunswick, Canada. Filed May 1, 1922. Serial No. 557,775. 3 Claims. (Cl. 246—170.)



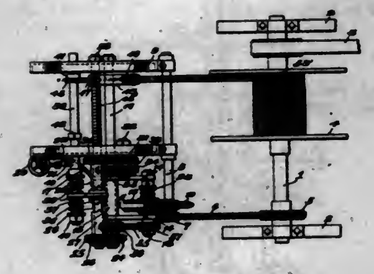
1. The combination in an apparatus of the character described of a valve, magnetic means for retaining the valve in closed position including a circuit closed when the train to which the apparatus is applied is run on the track, said circuit being opened upon derailment of said train to release the valve, means for forcing the valve to open position upon its release, and means including a motor for returning the valve to closed position after derailment.

1,485,422. CONTROL APPARATUS. ALEXANDER MCIVER, Deer Lodge, Mont., and PAUL L. MARDIS, Swissvale, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1920. Serial No. 391,647. 12 Claims. (Cl. 74—88.)



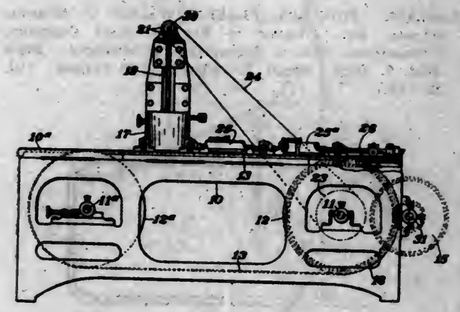
1. Control apparatus comprising a handle member and a latching member and means for imparting translatory and rotative movement to said latching member relative to said handle member, said rotative movement being about an axis substantially at right angles to said handle.

1,485,423. PLOW. AUGUSTA P. MCKAY, Rome, Ga., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Dec. 7, 1922. Serial No. 605,413. 11 Claims. (Cl. 97—47.)



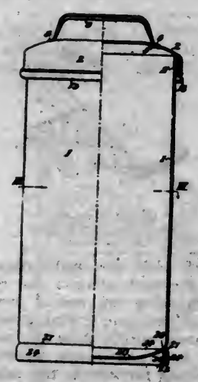
1. The combination with a tractor and a plow frame having loose connection therewith, of a single furrow wheel at the rear of the frame, a single land wheel forwardly of the furrow wheel, and means associated with the axle of the furrow wheel for raising the furrow side of the frame and tilting said frame laterally on its loose connection with the tractor while the land wheel fulcrums on the ground.

1,485,424. HOLDER CHECK AND EMERGENCY LOCK FOR HINGED DOORS AND WINDOWS. ARTHUR DAVIES MUNSLOW, Potts Point, near Sydney, New South Wales, Australia. Filed Sept. 13, 1922. Serial No. 587,891. 2 Claims. (Cl. 292—341.)



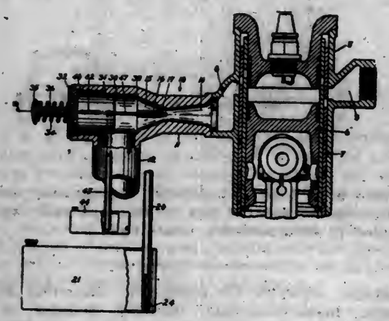
1. A door or sash holder, comprising a flat bracket detachably mounted on the door frame, a cylindrical casing mounted on the free end of the bracket, said casing being provided with a horizontally disposed slot, a perforated false bottom in the casing and mounted above the slot, a ball projecting through said perforated bottom, a helical spring engaging said ball, means for adjusting the tension of the spring, and a flat quadrant plate mounted on the door and adapted to pass through the slot in the bracket, a longitudinal guiding groove for the spring pressed ball on the upper surface of said quadrant plate, said groove being provided with depressions at regular intervals along said groove.

1,485,425. WIRE-COILING MACHINE. EMANUEL MYETTE, Providence, R. I. Filed June 21, 1923. Serial No. 646,873. 17 Claims. (Cl. 242—158.)



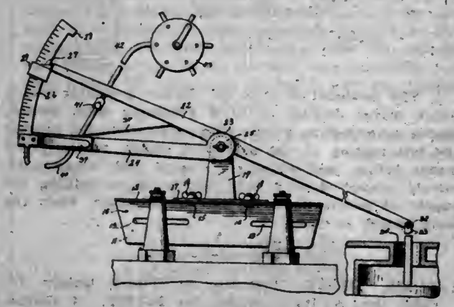
1. In a wire coiling machine, a reel, means to rotate the reel, a threaded shaft, a wire laying arm, a guide on the arm to engage the laid convolutions of the wire, a guide on the arm for the wire being laid, a member having threaded engagement with the threaded shaft, means to connect the arm to said member to allow the arm to move vertically and horizontally, a slidable rod having spaced stops arranged to engage opposite sides of the member, spaced clutch members on said shaft, a clutch carried by the rod and operating in the space between the clutch members and engageable with each of the latter, a second shaft, a yoke pivoted on the second shaft and carrying a pair of spaced disks, a disk between and engaged with the pair of disks, means to operate one of the clutch members from the second shaft, means to actuate the second shaft from the pair of disks, means to actuate the other clutch member from the second shaft, and means to adjustably move the yoke about its pivot.

1,485,426. MACHINE FOR PASTING STORAGE-BATTERY GRIDS. PAUL E. NORRIS, Wilkinsburg, Pa., assignor, by mesne assignments, to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 1920. Serial No. 429,269. 2 Claims. (Cl. 226—39.)



1. A storage battery grid pasting machine comprising a hopper for delivering paste to the grids, a carrier belt of flexible metal for carrying the grids under said hopper, and a take off shoe provided with a knife edge for removing the pasted grids from the carrier belt.

1,485,427. PROCESS FOR FORMING CONTAINERS. ARTHUR E. PAIGE, Philadelphia, Pa. Original application filed July 22, 1922, Serial No. 486,789. Divided and this application filed Feb. 14, 1922. Serial No. 536,510. 6 Claims. (Cl. 113—116.)

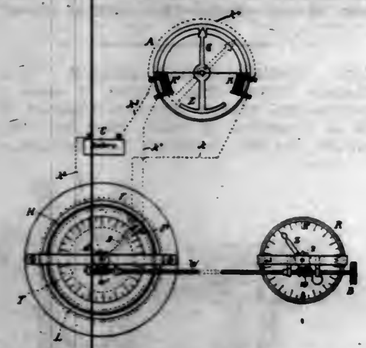


1. The process of forming a container with a tubular body and a bottom plate; which consists in forming said bottom plate with a cylindrical portion surrounded by a transversely extending margin, said cylindrical portion being of such diameter as to fit within said body, and having a rounded edge at the inner end of said cylindrical portion; thrusting said cylindrical portion of said bottom plate into said body to the extent limited by said transversely extending margin on said plate; then spinning said margin to cylindrical form exterior to said body and in contact therewith; then spinning the free edge of said plate against said body and deforming said body and the cylindrical portion of said plate inwardly and thereby forming an annular ridge in said body having its inner edge complementary to the inner edge of said cylindrical portion of said plate and in spaced relation with the inner wall of said body; whereby a smoothly continuous curved surface is formed upon the interior of said container, at the junction of said bottom plate and body, by said complementary portions thereof.

1,485,428. ENGINE-PRIMING DEVICE. HARRY R. PATTERSON, Toledo, Ohio, assignor, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 28, 1919. Serial No. 341,195. 5 Claims. (Cl. 123—127.)

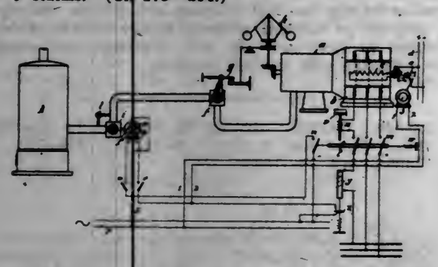
1. In a device of the class described, the combination of an internal combustion engine having a fuel inlet, a tubular element connected to the fuel inlet, said tubular element having two fuel openings and one air opening; a plurality of valvular members fixedly interconnected, adapted to open and close said openings; and means for operating said valvular members.

1,485,429. GAUGE. GEORGE W. POWELL, La Grande, Oreg. Filed May 3, 1922. Serial No. 558,173. 4 Claims. (Cl. 33—180.)



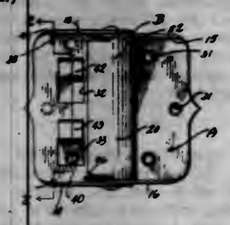
1. In an adjustment gauge for engines having reciprocatory pistons, an adjustable support, a lever pivoted upon the support, an arcuate scale adjustable upon the support and with which one end of the lever coacts, and an indicator slidable upon the scale and disposed in the path of said lever.

1,485,430. DIRECTION-INDICATING APPARATUS. MAX ROUX, Berlin-Friedenau, Germany. Filed Jan. 28, 1921. Serial No. 440,733. 1 Claim. (Cl. 33—222.)



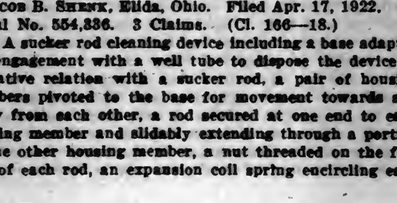
In a direction indicating apparatus, the combination of a compass card, a rotatable pointer associated therewith, a magnetic compass spaced from said card and comprising a frame, a compass box pivotally mounted therein, spaced insulated contacts carried by said box a needle element pivotally mounted in said box and

adapted to make and break electric circuits through said contacts respectively, means forming circuits connected to said contacts indicating means in said circuits and



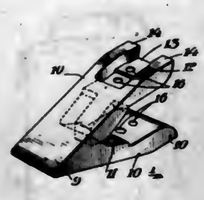
adapted to be controlled thereby, and manually operable means associated with said pointer and said box and adapted to simultaneously rotate each.

1,485,431. SYSTEM OF CONTROL. REINHOLD RÜDENBERG, Berlin-Grunewald, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschrankter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Dec. 15, 1920. Serial No. 431,051. 6 Claims. (Cl. 175—294.)



1. The combination with an electric generator and a prime mover driving it, of a generator main switch, means connected in circuit with said switch for causing the interruption of the supply of energy to the prime mover before said switch is opened and means operatively connected with said switch for controlling the supply of motive power to the prime mover, when the main switch is closed.

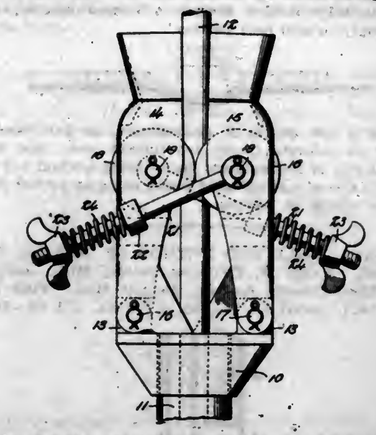
1,485,432. HINGE. FREDERIC H. SCHOFF, Quincy, Ill. Filed Dec. 8, 1921. Serial No. 521,022. 4 Claims. (Cl. 16—181.)



1. A closure supporting device comprising a hinge member formed of a plurality of pivotally connected leaf sections, and a supporting plate, said hinge member and supporting plate having interengaging hook and socket means for suspending said hinge member from said supporting plate, and interengaging lug and socket means for said hinge member and supporting plate adjacent the upper and lower marginal edges thereof to prevent lateral sway of said hinge member and supporting plate.

1,485,433. FOUNDRY FLASK. WALTER F. SCHULZ, Sharon, Pa., assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Sept. 9, 1922. Serial No. 587,041. 20 Claims. (Cl. 22—96.)

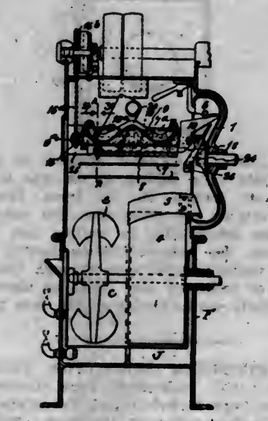
1. A flask member, comprising an outer wall, and an inner wall substantially parallel to and spaced apart from said outer wall and rigidly secured thereto.



1,485,434. DIPPER TOOTH. VOORHEES N. SEAL, Carlisle, Pa., assignor to The Frog Switch & Manufacturing Company, Carlisle, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,799. 4 Claims. (Cl. 37—142.)

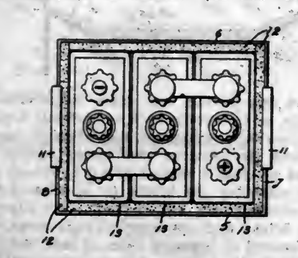
1. In a dipper tooth, the combination of a base comprising a nose provided adjacent the rear thereof with a forwardly projecting lug spaced inwardly from the side edges of the nose and having substantially the entire bottom thereof spaced from the nose, and a point carried by said base and having a recess for receiving said lug, said recess forming at the sides thereof a pair of spaced substantially parallel ribs and having a bottom wall connecting said ribs together from end to end thereof, said wall extending under said lug substantially the entire length of the lug.

1,485,435. CLEANING DEVICE FOR SUCKER RODS. JACOB B. SHENK, Elida, Ohio. Filed Apr. 17, 1922. Serial No. 554,836. 3 Claims. (Cl. 166—18.)



1. A sucker rod cleaning device including a base adapted for engagement with a well tube to dispose the device in operative relation with a sucker rod, a pair of housing members pivoted to the base for movement towards and away from each other, a rod secured at one end to each housing member and slidably extending through a portion of the other housing member, a nut threaded on the free end of each rod, an expansion coil spring encircling each rod between the nut thereon and a portion of the adjacent housing member whereby the housing members are urged together, and a roller carried by each housing member for engagement with the sucker rod to effect removal of deposits therefrom as the same is withdrawn from the well tube.

1,485,436. MEANS FOR PREVENTING OCCLUSION OF HYDROGEN IN METAL CATHODES. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 12, 1920. Serial No. 351,005. 4 Claims. (Cl. 204—1.)

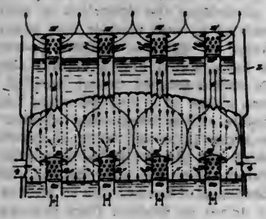


1. The method of preventing occlusion of gases in ferrous electrodes of electrolytic apparatus that comprises maintaining the electrolyte employed in a cool state.

1,485,437. MACHINE FOR COATING CHOCOLATES. ASBJORN SONSTHAGEN, Leytonstone, England. Filed Feb. 17, 1922. Serial No. 537,228. 9 Claims. (Cl. 91—3.)

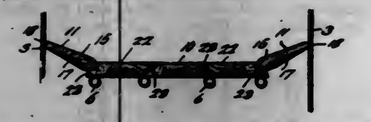
1. In a core coating machine, the combination, of a reservoir for the coating material; means for emulsifying the coating material; means for conveying the coating material from said reservoir to the emulsifying means; a trough for distributing the emulsified material upon the cores; means cooperating between the emulsifying means and said trough for conveying the emulsified material from said means to the trough; and means for conveying the cores for distribution of the emulsified material thereupon from said trough.

1,485,438. STORAGE-BATTERY BOX. HARRY E. SPOENEMAN and CARL G. SCHWARZ, St. Louis, Mo., assignors to Panama Rubber and Equipment Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1921. Serial No. 462,198. 3 Claims. (Cl. 206—2.)



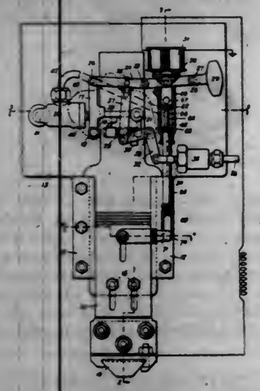
1. A storage battery box comprising an integrally formed acid resisting metallic box, a sheet of acid resisting resilient material located inside said box and on its bottom, a sheet of acid resisting resilient material placed at each end of the box, said sheets resting on the first mentioned sheet and extending from side to side, and a sheet of resilient acid resisting material located on each side of the box, said sheets resting on the bottom sheet and contacting with the end sheets.

1,485,439. PISTON RING. EARL STINER, Detroit, Mich. Filed Nov. 22, 1922. Serial No. 602,493. 1 Claim. (Cl. 74—109.)



A piston ring comprising a pair of split members provided on their inner periphery with notches at points such that when the notches are in registration, the split ends of the rings are out of registration, and a flat spring bent at substantially equal intervals adapted to lie in contact with the inner periphery of said ring members, said spring having one of its ends bent outwardly to engage within the registering notches in said ring members.

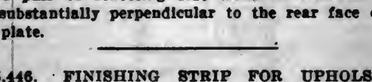
1,485,440. APPLIANCE FOR PURIFYING AND MOISTENING AIR. MIROCLAV STÖHR, Prague, Czechoslovakia. Filed Aug. 13, 1923. Serial No. 657,187. 3 Claims. (Cl. 261—114.)



1. An appliance for purifying and moistening the air of rooms, comprising in combination a heating device, a moistening chamber heated by the said heating device, a water chamber which is open to the atmosphere and is located immediately above the said moistening chamber, a member having an extensive superficial area, which member is both the roof of the moistening chamber and the bottom wall of the water chamber and air conveying tubes extending through the said member into the water chamber, as and for the purpose set forth.

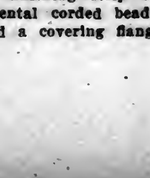
1,485,441. ARCH BRICK. JEREMIAH J. SULLIVAN, Nashville, Tenn. Filed Dec. 1, 1922. Serial No. 604,120. 4 Claims. (Cl. 110—87.)

1. In a fire box having arch tubes longitudinally arranged therein, a refractory arch comprising a plurality of bricks tangentially supported and slidable upon said tubes, said arch composed of body bricks having at two opposite edges oppositely related parallel surfaces of ogee configuration adapting the bricks to be adjacently complementally overlappingly nested within the edge dimensions of the bricks and non-interlockingly engaged, and key bricks disposed at opposite sides of said body bricks, said key bricks having rounded ends fitted against corresponding outer surfaces of said body bricks.



1,485,442. RAILWAY SIGNALING APPARATUS. EDMUND SPENSER TIDDEMAN, Hornchurch, and FREDERICK VERNON RUSSELL, Leytonstone, England, assignors to W. R. Sykes Interlocking Signal Company Limited, Clapham, London, England. Filed July 24, 1920. Serial No. 398,752. 7 Claims. (Cl. 246—181.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. In railway signaling apparatus, the combination of means for controlling the application of the brakes, mechanism, including a vertically slidable plunger and a controlled lever, controlling the operation of said means, a contact shoe carried by said plunger and adapted to pass over track ramps of different heights operatively connected with a home signal and a distant signal respectively, a single spring-pressed detent adapted, when the plunger has been raised to a predetermined height by the passage of its shoe over a track ramp relating to a home signal and the latter is in the "danger" position, to prevent the return of said plunger to its normal position, and manually operated means for restoring said detent to its inoperative position, said means being so located as to compel the engine driver to descend from the engine cab to the permanent way to operate the same.



1,485,443. AXLE HOUSING AND METHOD OF MAKING THE SAME. VIGGO V. TORRENSEN, Cleveland, Ohio, assignor to The Vig-Tor Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 8, 1922. Serial No. 605,587. 9 Claims. (Cl. 29—153.)

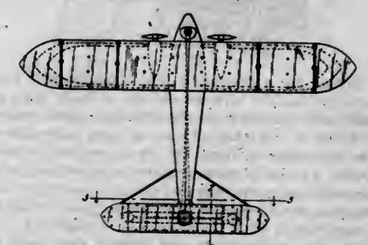
1. The herein described method of making an axle housing which consists in taking a tube of the required length and cutting away substantially one-half of a middle section thereof, bending the remaining portion of said section away from the axis of the tube to form a part of the enlarged center of the housing and then securing to the thus partially formed housing a formed section complementary to said bent portion.

5. As a new article of manufacture, an axle housing having an enlarged center and tubular ends, said ends and one side of said enlarged center being integral and the opposite side of said enlarged center being an arched piece that is welded in position.

1,485,444. DRILL AND METHOD OF MAKING THE SAME. HARRY W. TWOGOOD, Detroit, Mich., assignor to Wheel Trueing Tool Co., Detroit, Mich. Filed Feb. 11, 1921. Serial No. 444,135. 3 Claims. (Cl. 76—108.)

1. A method of making drills, consisting in first providing a reamer body; second, cutting away the reamer body at its ends; third, setting diamonds in the cut away places of said reamer body; fourth, securing the diamonds in place by brazing, and fifth, trimming the reamer body and its brazing material to expose portions of said diamonds.

1,485,445. SIGN. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to The Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1922. Serial No. 603,013. 6 Claims. (Cl. 40—136.)

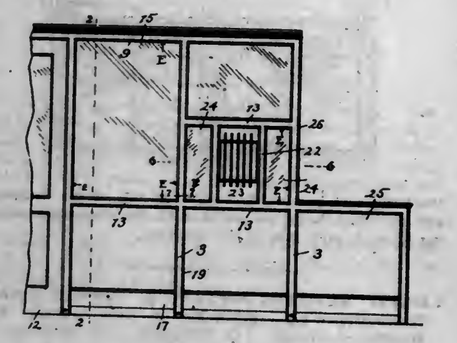


1. A sign plate of material adapted to permit the passage of light rays, formed in its rear face with a depression and formed on its front face with a convexity overlying the depression, the convexity and the depression being alike in outline and forming a sign character, the said depression having a bottom designed to transmit light rays through the convexity and a pair of reflecting side walls of material depth and substantially perpendicular to the rear face of the sign plate.

1,485,446. FINISHING STRIP FOR UPHOLSTERY AND THE LIKE. ALBERT E. VOGT, Rochester, N. Y., assignor to Vogt Manufacturing Corporation, Rochester, N. Y., a Corporation of New York. Filed Oct. 11, 1920. Serial No. 416,282. 2 Claims. (Cl. 155—184.)

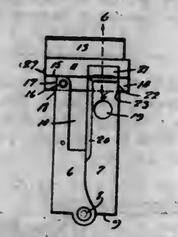
1. A fabricated finishing strip for upholstery comprising an ornamental corded bead and an attaching flange portion and a covering flange portion therefor, one of which flange portions is connected to the bead through the medium of the other, which latter terminates in an integral tubular portion surrounding the cord of the bead, all of said parts being integrally woven in one piece.

1,485,447. AIRPLANE. FRANK B. VORACEK, Portland, Oreg. Original application filed Oct. 18, 1920, Serial No. 417,535. Divided and this application filed Apr. 18, 1922. Serial No. 555,393. 2 Claims. (Cl. 244—29.)



1. In an airplane, the combination of a fuselage tapering toward both ends and terminating in a blunt nose, and having a double deck tail plane extending horizontally from both sides of the fuselage, with a plurality of vertical shafts disposed in spaced relation along the longitudinal center line of the tail plane between the upper and lower decks, pulleys at the bottom of the vertical shafts, a main pulley at the center line of the fuselage and in alinement with the pulleys on the vertical shafts, endless cables connecting the pulleys on the vertical shafts with the main pulley, a driving pulley below the main pulley, a revoluble steering post in the blunt nose of the fuselage, a steering wheel attached to the upper end of the steering post, a steering pulley attached to the lower end of the steering post, an endless cable between the driving pulley and the steering pulley, and vertical rudders mounted on the vertical shafts.

1,485,448. DOUBLE-SASH CATCH. THOMAS E. WALKER, Detroit, Mich., assignor to Crittall Casement Window Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 17, 1923. Serial No. 657,888. 10 Claims. (Cl. 20—42.)

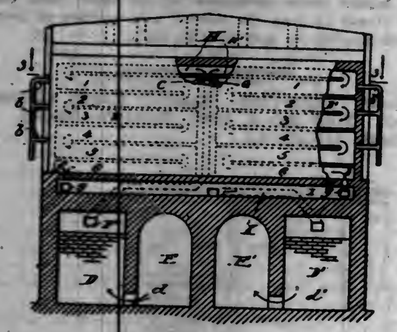


1. In a window frame, the combination of upper and lower sashes swingable relative to said frame and having sash meeting rails adapted to interlock when the sashes are closed, and a barrier in the path of the meeting rail of the lower sash adapted to prevent complete closing of the lower sash until said barrier is shifted, said barrier being operatable by the upper sash being fully closed to push the barrier to a position to permit interlocking of the sash meeting rails.

1,485,449. PARTITION. HARRY F. BALOUN, Cleveland, Ohio. Filed July 5, 1923. Serial No. 649,452. 10 Claims. (Cl. 20—4.)

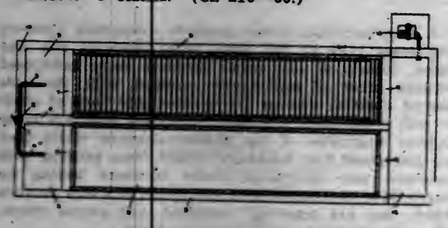
1. In a partition, frame members comprising pilasters and cross rails of the same cross sectional size and shape, certain of said frame members being interposed between other of said frame members with the ends thereof abutting against the opposed side faces of other of said frame members, said interposed members being slidable lengthwise of the members between which they are interposed and removable bodily from between said members, said interposed frame members having an interlocking connection with the frame members between which they are removably mounted, and panels removably secured within said frame members.

1,485,450. COMPOUND TOOL. HENRY BAUM, Cleveland, Ohio. Filed Dec. 14, 1922. Serial No. 606,831. 8 Claims. (Cl. 30—10.)



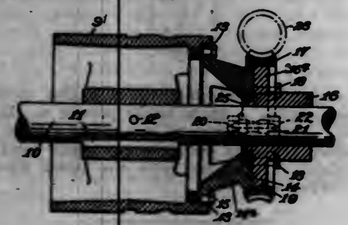
1. A compound tool comprising a handle consisting of pivoted sections, a blade holder pivoted to the free end of one section to swing in or out and a blade fitted in the holder, the other section of the handle being foldable to engage its free end with the holder when the latter is swung out.

1,485,451. HEATING SYSTEM FOR RETORT COKE OVENS. JULIUS BECKER, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Sept. 17, 1921. Serial No. 501,263. 2 Claims. (Cl. 202—9.)



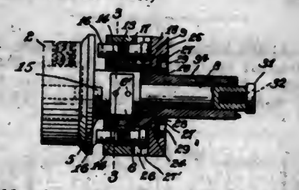
1. In a heating system for retort coke ovens the combination of a coking chamber, two sets of horizontally disposed heating flues on each side of said chamber, and

two regenerators located below the chamber and parallel thereto, one of said regenerators being connected with



the lowermost heating flues on each side of the chamber and the other being connected with the uppermost heating flues on each side of the chamber.

1,485,452. SETTLING APPARATUS. JAMES P. DOVEL, Birmingham, Ala. Filed May 9, 1921. Serial No. 467,856. 5 Claims. (Cl. 210—60.)



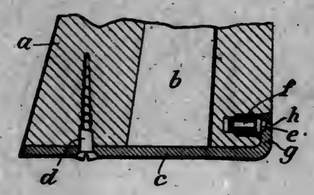
1. In a water purification apparatus, two similar elongated tanks, each having means for the inflow of water to be purified at one end and the overflow of the purified water at the other end, a common marginal rack adapted to be transferred from one to the other tank, means to mount said rack in the top of each tank, and a series of transverse closely associated narrow baffles mounted in said rack.

1,485,453. DIRECT DRIVE FOR LEAD CAM DRUMS. ALFRED E. DRISCOLL, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1921. Serial No. 523,640. 10 Claims. (Cl. 74—29.)

2. The combination of a rotary shaft, a driving member freely mounted thereon, means for continuously rotating said driving member, a driven member secured to the shaft and spaced laterally from said driving member, and a ring shaped connecting member bridging the space between said driving and driven members and fixedly connected to both thereof at a plurality of points about the axis of said shaft.

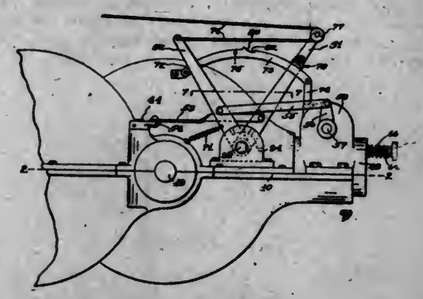
1,485,454. REVERSIBLE TAP AND DIE HOLDER. EDMOND E. DROWNS, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 2, 1921. Serial No. 474,376. 23 Claims. (Cl. 10—136.)

2. A holder for a threading tool comprising a pair of body members having between certain of their juxtaposed faces shiftable gripping means effective upon reversing the direction of rotation of one of said members relatively to the other to lock the two together, a driving ring carried by one of said members, cooperating driving pins carried, one by the ring and one by a member, means effective upon the release of said driving pins to shift one out of engagement with the other and comprising a camming ring cooperating with said driving ring, said rings having between certain of their juxtaposed faces a cam surface and a spring actuated means cooperating therewith.



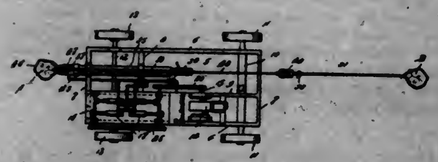
21. In a holder for a threading tool, the combination of a pair of relatively shiftable members, two sets of means for locking said members together at predetermined times, one set comprising companion driving pins including a self-retractable pin, and the other set comprising roller gripping means, and reversely extending cams cooperating with said self-retractable pin for permitting the tool to cut right and left-handed threads.

1,485,455. EARTH-BORING APPARATUS. THEOPHIL J. FREDA, Detroit, Mich. Filed Nov. 14, 1921. Serial No. 514,859. 16 Claims. (Cl. 255—21.)



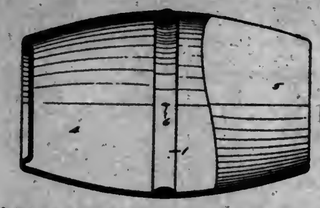
1. A boring apparatus comprising a machine having a casing, a tubular boring unit including spiral cutters adapted to enter the ground below said machine, means on said machine for revolving said boring unit, other tubular units adapted to be interposed between said boring unit and the operating means thereof so that the hole may be progressively bored, the operating means for said boring unit extending through said tubular units adjacent the walls of said units, an auger axially of said tubular boring unit, and axial operating means for said auger independent of the operating means of the remainder of the boring unit.

1,485,456. RIFLE STOCK. RUDOLF V. FROMMER, Budapest, Hungary. Filed Aug. 25, 1921. Serial No. 495,180. 3 Claims. (Cl. 42—71.)



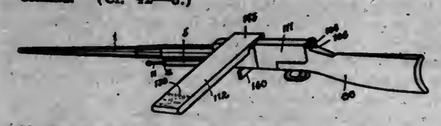
1. In a rifle, a stock having article receiving chamber or chambers, a heelplate secured to the stock by a pin vertically arranged to the plane of the heelplate so that the latter is swingable in its own plane, and cooperative catch means provided on the stock and on the heelplate for releasably maintaining the heelplate in closed position.

1,485,457. POWER TRANSMITTER AND OPERATING MECHANISM THEREFOR. DAVID FRANKLIN GEIGER, Minneapolis, Minn. Filed May 18, 1921. Serial No. 469,148. 12 Claims. (Cl. 74—26.)



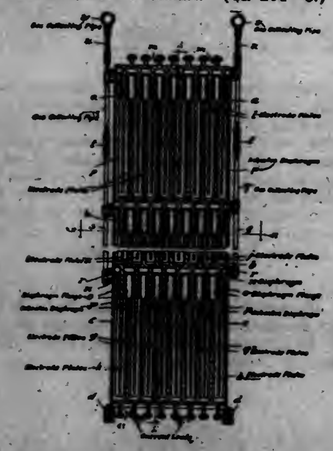
3. In a device of the class described, a driving member, a driven member, a clutch and a reversing member for said driving and driven members, a lever to operate the clutch, a lever to operate the reversing member, and a single line for actuating said levers.

1,485,458. STUMP PULLER. JOEL GILMORE, Hull, Tex. Filed Mar. 28, 1923. Serial No. 628,194. 6 Claims. (Cl. 254—93.)



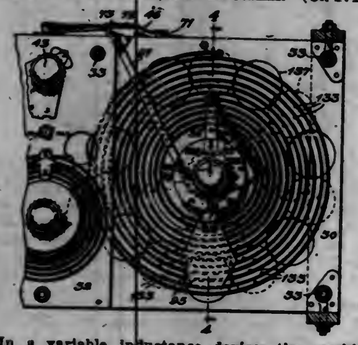
1. In a machine of the class described, a frame, a cylinder disposed upon said frame, a plunger movable within the cylinder, a pointed head upon one end of said cylinder and adapted for engagement with the tree adjacent the stump to be pulled, a source of fluid supply, means for forcing said fluid into said cylinder for occasioning the outward movement of the plunger therein, a cable connected at its ends to the end of said plunger and engaging over pulleys upon said tree, and a connection between the cable and the stump to be pulled.

1,485,459. ARC WELDING. EMIL GRUENFELDT, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,286. 7 Claims. (Cl. 219—10.)



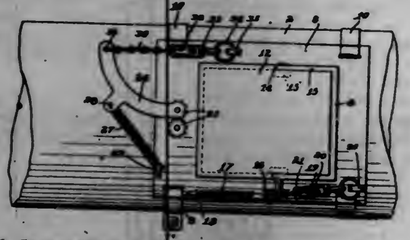
1. A joint produced by arc welding comprising a backing bar having a plurality of projections, a pair of sheet metal members overlying said backing bar and projections, the edges of said sheet metal parts being secured to said bar by fusion of said edges, said projections and said bar.

1,485,460. MACHINE GUN. JAMES S. JOHNSTON, Utica, N. Y. Filed Apr. 3, 1917. Serial No. 159,533. 16 Claims. (Cl. 42—3.)



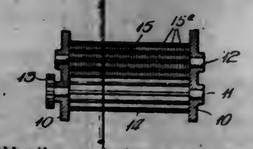
12. In a machine gun, a barrel, a cartridge carrier, a gas chamber, a breech bolt carrying a firing pin, an actuator, a piston rod carrying a piston movable in said gas chamber, whereby to move the actuator for reloading and firing the gun, and said piston rod being divided transversely, one end having a cone and the other a conical recess to center the rod ends and whereby said rod and connected parts may be moved to the rear independently of said piston.

1,485,461. ELECTROLYTIC CELL. ALBERT EDGAR KNOWLES, Heswall, England. Filed July 13, 1922. Serial No. 574,639. 5 Claims. (Cl. 204—5.)



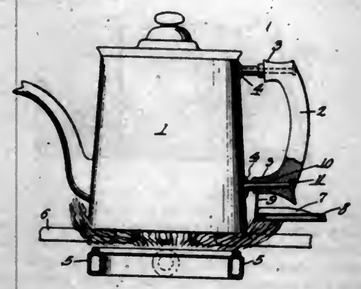
1. An electrolytic plant for the production of oxygen and hydrogen by the electrolysis of water, comprising a group of superimposed cells, partitions between adjacent cells, electrodes extending upwardly from each of the said partitions into the cell above, electrodes depending from each of the said partitions into the cell below, and current leads to the upper closure of the topmost cell and to the bottom of the lowermost cell of the group.

1,485,462. ELECTRICAL APPARATUS. FRITZ LOWENSTEIN, New York, N. Y.; John C. Wait, administrator of said Fritz Lowenstein, deceased, assignor to William Dubilier, New York, N. Y. Original application filed Jan. 19, 1918, Serial No. 212,615. (Patent No. 1,339,772, May 11, 1920.) Divided and this application filed Dec. 2, 1919. Serial No. 341,990. 15 Claims. (Cl. 171—242.)



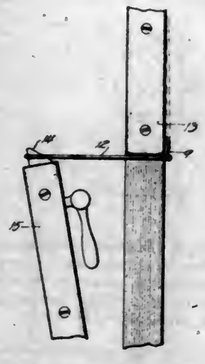
1. In a variable inductance device, the combination, with a plurality of coaxially arranged and electrically connected coils each provided with a movable contact arm, of means extending substantially axially through the set of coils and operable to selectively engage and move any of said movable contact arms.

1,485,463. CONTROLLING MEANS FOR FLUES OF HEATING APPLIANCES. VARNUM D. LUDINGTON, Holley, N. Y. Filed Apr. 17, 1922. Serial No. 553,700. 2 Claims. (Cl. 110—58.)



1. In combination with a heating appliance having a combustion flue leading from the combustion chamber thereof, a check damper in said flue adapted to admit air to the flue, and a flue damper arranged between said check damper and the combustion chamber of the heating appliance and having two members operable from a single plane where the damper closes the flue, toward the flow of the products of combustion in order to displace the latter outwardly to heat the air flowing to the combustion chamber through the check damper.

1,485,464. COMPOSITE GEAR. EDWARD MCDONOUGH, Elgin, Ill., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 12, 1919. Serial No. 289,656. 3 Claims. (Cl. 74—41.)

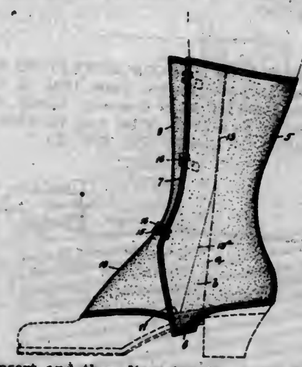


1. In combination, a shaft, a bushing mounted on said shaft, and a plurality of gear laminations arranged in contact side by side and rotatably mounted on said bushing, said bushing being provided with means for lubricating said laminations.

1,485,465. HANDLE PROTECTOR. ARTHUR R. MITCHELL, St. Louis, Mo., assignor to John Obermaier, Chicago, Ill. Filed Sept. 7, 1922. Serial No. 586,595. 1 Claim. (Cl. 53—3.)

A handle protector of the class described having a portion adapted to be detachably connected to a handle and another portion arranged at an angle thereto to serve as a heat deflector, and the last said portion being provided with corrugations which extend into the first said portion and adapted to reinforce the last said portion at its connection with the first said portion.

1,485,466. DOOR HOLDER. CHARLES F. PORTER, Chicago, Ill.; Sarah Harriet Porter executrix of said Charles F. Porter, deceased. Filed Sept. 12, 1921. Serial No. 500,242. 2 Claims. (Cl. 292—262.)

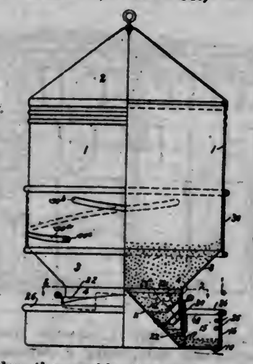


1. The combination with a door frame, a door and a latch bolt thereon, a latch bolt retaining device comprising a flat fastening member, said fastening member being secured to the door frame, and a flat latch receiving member, said two members having hinged relation whereby to lie in substantially the same plane, said latch receiving member being substantially U-shaped in form and having opposing restrictions in each arm to provide means adjacent which the latch bolt is adapted to be received and engaged within the U.

1,485,467. GAITER. HERBERT S. RAUH, New York, N. Y. Filed June 7, 1922, Serial No. 566,451. Renewed Jan. 16, 1924. 1 Claim. (Cl. 36—2.)

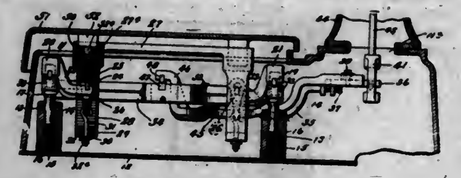
A gaiter comprising a main body consisting of connected quarters having their front edges spaced from each other, a strap forming an integral continuation of said quarters and adapted to extend beneath the shoe, an insert folded upon itself and located between the forward edges of said quarters and extending forwardly thereof to form an instep-enclosing portion, lines of stitching extending transversely to and in registry with said strap at opposite sides of said gaiter whereby said insert is attached, at its lower portions, to the main body

of the gaiter, the quarters having flaps extending partly over the insert and connected with the edges thereof by lines of stitching extending parallel with the edges of



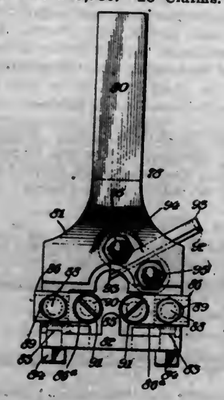
said insert and then diverging forwardly therefrom, and means whereby said gaiter is secured in place upon the shoe.

1,485,468. ATTACHMENT FOR GRAIN BINDERS. JOHN REICHEL, Camden, Ohio. Filed Nov. 21, 1922. Serial No. 602,464. 1 Claim. (Cl. 56—185.)



In combination with the platform and conveyor mechanism of a grain binder, an attachment comprising a guard plate, reinforcing bars secured to said plate, the lower ends of said bars being provided with flanges arranged to cooperate with the lower edge of said plate whereby said plate may be secured to the platform underneath said conveyor mechanism.

1,485,469. POULTRY FEEDER. IRWIN D. RIEGEL, Shartlesville, Pa. Filed June 22, 1922. Serial No. 570,062. 4 Claims. (Cl. 119—53.)

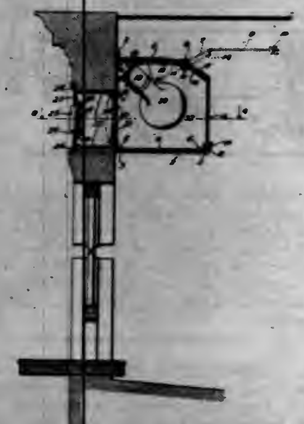


1. In a feeder, the combination with a cylindrical feed reservoir having a connected base portion comprising an annular feed-trough and an inclined annular feed-way communicating with the lower portion of said trough, of a plurality of fixed pressure-relieving rings in said feed-way located at different distances from the trough entrance and differently spaced from the inclined wall of the feed way.

1,485,470. WEIGHING SCALE. HARRY C. SCHAPER, St. Louis, Mo., assignor to The General Automatic Scale Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 12, 1921. Serial No. 436,691. 14 Claims. (Cl. 265—71.)

1. In a weighing scale, a housing, a pair of levers supported in said housing and adapted to operate weight indicating mechanism, a spider frame suspended from said levers and having its points of suspension on a horizontal plane with the fulcrums of said levers, a weighing platform supported on said spider frame, and means mounted in said housing for adjusting said levers in vertical plane.

1,485,471. COMBINATION TOOL. OSCAR A. SMITH, East Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Oct. 26, 1921, Serial No. 510,412. Divided and this application filed Jan. 17, 1922. Serial No. 529,930. 15 Claims. (Cl. 82—35.)



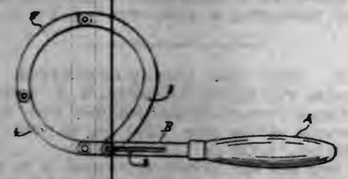
1. A tool holder comprising an enlarged body member having means for attachment to a tool slide of a machine, a work stop carried by said body member and having the work engaging part thereof extending above the bottom of said member, and a tool carried by said body member and terminating above said work stop.

5. A combination tool comprising a tool holder adapted to be connected to a tool slide of a machine and having at one end an enlarged body portion provided with an inwardly extending recess, a work stop bar connected to said body portion and having a stop member terminating in the recess, and a tool mounted on said body portion and also terminating in said recess.

1,485,472. DESK AND SIGN ILLUMINATOR. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to The Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1922. Serial No. 593,587. 8 Claims. (Cl. 40—130.)

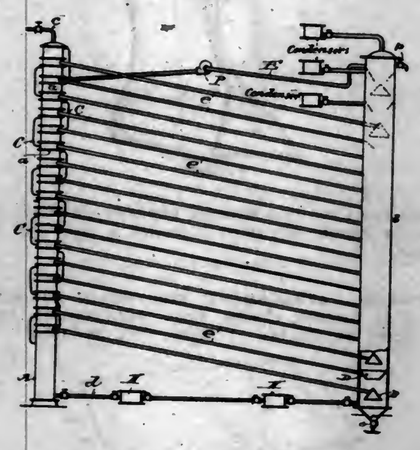
1. A desk and sign illuminator adapted to be secured to a room wall and comprising an elongated box or casing formed with a front having a longitudinal opening therein, a transparent bottom, a rigid opaque top and closed ends, a movable rear pivotally supported at the

inner or rear edge of the rigid top, a longitudinally extending collar secured to the front and projecting forwardly therefrom, and adapted to extend through an opening in the room wall, said collar extending around the margin of the opening in the front of the casing and



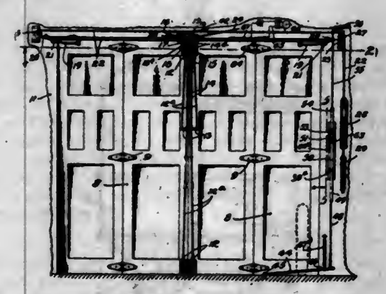
being open at its end adjoining said front, a stencil plate secured over the front end of said collar, transparent letters secured to said stencil plate, electric lamps mounted within the illuminator, and reflector plates carried by the rigid top of the casing and the pivoted back of the casing.

1,485,473. ELECTROLYTIC CELL. HERBERT I. ALLEN, Portland, Me., assignor to Electron Chemical Company, Portland, Me., a Corporation of Maine. Filed Mar. 14, 1922. Serial No. 543,677. 15 Claims. (Cl. 204—58.)



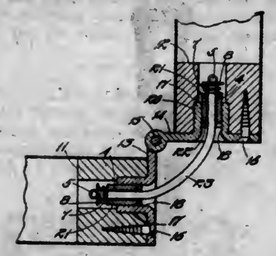
1. An electrolytic cell comprising a tank, a box shaped cathode having an outwardly directed flange at its upper portion overlying said tank, an anode positioned within said cathode, and a freeboard section resting on said flange and made fast to said tank to form a liquid tight joint with said cathode.

1,485,474. CAN-COVER REMOVER. DURWARD M. ALLEN and JEREMIAH E. HAYES, Binghamton, N. Y.; said Allen assignor to said Hayes. Filed July 14, 1922. Serial No. 575,043. 1 Claim. (Cl. 81—3.1.)



A single handled can cover remover comprising a handle, a shank secured in the handle and provided with a slot intermediate its ends, the outer end of the shank being pointed to engage the can cover, a curved link pivotally connected to the pointed end of the shank, another curved link provided with a pin for traversing the slot in the shank and an intermediate link for connecting the other links together.

1,485,475. APPARATUS FOR CONCENTRATING SOLUTIONS. NATHANIEL T. BACON, Peace Dale, R. I., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed July 19, 1918. Serial No. 245,634. 10 Claims. (Cl. 159—2.)

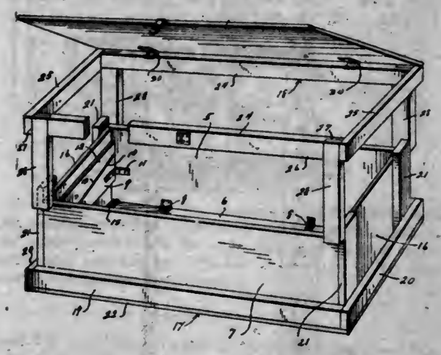


1. In concentrating apparatus, the combination of a preheating column and means for causing a downward flow of liquid therethrough, an evaporating column, connected therewith, means for causing a flow of liquid from the preheating column to the evaporating column, means for causing an upward flow of liquid through the evaporating column and means for heating the liquid in the preheating column from the top downward, with steam of progressively higher temperature evolved in the evaporating column.

1,485,476. DOOR-ACTUATING MECHANISM. FRANK S. BALATTA, St. Paul, Minn. Filed Mar. 1, 1922. Serial No. 540,174. 5 Claims. (Cl. 268—1.)

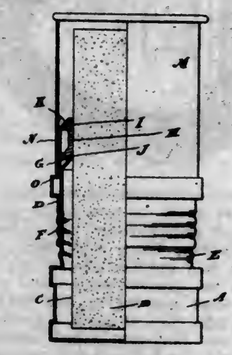
1. The combination with a movable door, of a door actuating mechanism comprising a depressible lever in the path of movement of a vehicle, an intermediate lever, means for locking said intermediate lever in a position to hold the door open, the depression of said first noted lever serving to open the door, and means for tripping said intermediate lever to permit closing of the door, comprising a depressible member located close to the door in position to be engaged by a wheel of the vehicle.

1,485,477. DOORCHECK. WALTER J. BEHN, Detroit, Mich. Filed Oct. 15, 1920. Serial No. 417,199. 6 Claims. (Cl. 16—72.)



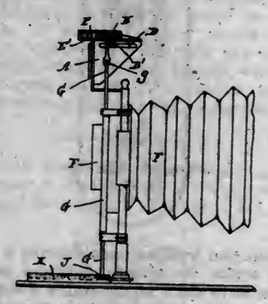
4. The flexible member for a door check which comprises a plurality of superposed strips of metal provided with a head at each end.

1,485,478. LITHOGRAPH ENGRAVING PROCESS ON STRAIGHT LINES. ANTONIO JOSEPH BORDEFELD and MARCUS PAGE EXLINE, Dallas, Tex. Filed Apr. 28, 1923. Serial No. 635,352. 2 Claims. (Cl. 41—33.)



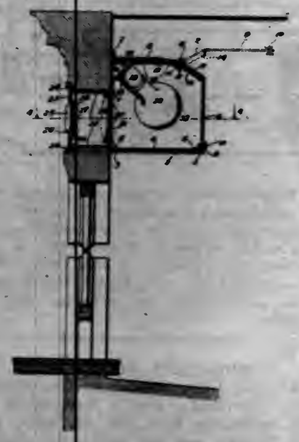
1. The method of transferring letters comprising the forming of an alphabet on a sheet of paper, placing a line on said paper in spaced and parallel relation with said letters, forming a line on a second sheet, cutting said letters apart and placing the same on said second sheet so that the line associated with the respective letters will be superimposed on the line on the second sheet.

1,485,479. CAMPER'S OUTFIT CHEST. ONEY BURY and JAMES ALBERT MASON, Houston, Tex. Filed Feb. 12, 1923. Serial No. 618,522. 6 Claims. (Cl. 190—12.)



1. A device of the character described comprising a pair of benches including a supporting frame and legs, the seat of one of said benches being movable, one of said benches being inverted and adapted to support the remaining bench and to coact with said bench to provide a chest frame, the movable seat of the upper bench serving as a lid for the frame, and a foldable table disposed within the chest frame to provide chest sides and ends.

1,485,480. SOAP-STICK HOLDER. ELMORE ROY BUTLER, Toronto, Ontario, Canada, assignor to Collapsible Tubes & Containers, Limited, Toronto, Canada. Filed Aug. 16, 1922. Serial No. 582,271. 3 Claims. (Cl. 206—56.)

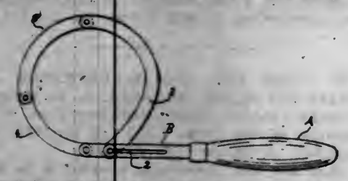


2. A device of the character set forth comprising a holder adapted to house one end of a stick of material, and provided at one end with a flared flange to form a seat; a clamp adapted to be coupled to said holder and beyond which said stick of material will project, and provided at one end with an in-turned flange, and a split ring-clutch surrounding said stick of material and exteriorly provided at each end with an inwardly sloping seat, and located between the flanges of said holder and clamp, the whole adapted to co-act for the purpose set forth.

1,485,481. FOCUSING DEVICE FOR HAND CAMERAS. JOSEPH PATRICK CARMINE, Westport, New Zealand. Filed May 21, 1923. Serial No. 640,442. 7 Claims. (Cl. 95—44.)

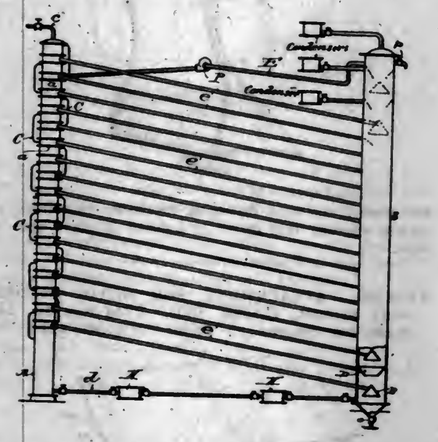
1. In a focusing attachment for cameras, a finder having a vision glass in one wall, and an indicator bar mounted with relation to the finder to extend laterally across said glass at right angles to the vertical line of the image shown therein of the object to be photographed; said bar adapted to be moved forward and backward across said glass in the said vertical line of the image while maintaining such lateral position, and indicating the correct focus for said object when it touches the foot of the image and the camera is held level.

inner or rear edge of the rigid top, a longitudinally extending collar secured to the front and projecting forwardly therefrom, and adapted to extend through an opening in the room wall, said collar extending around the margin of the opening in the front of the casing and



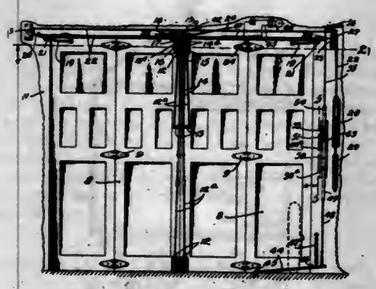
being open at its end adjoining said front, a stencil plate secured over the front end of said collar, transparent letters secured to said stencil plate, electric lamps mounted within the illuminator, and reflector plates carried by the rigid top of the casing and the pivoted back of the casing.

1,485,473. ELECTROLYTIC CELL. HERBERT I. ALLEN, Portland, Me., assignor to Electron Chemical Company, Portland, Me., a Corporation of Maine. Filed Mar. 14, 1922. Serial No. 543,677. 15 Claims. (Cl. 204—58.)



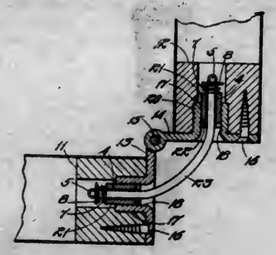
1. An electrolytic cell comprising a tank, a box shaped cathode having an outwardly directed flange at its upper portion overlying said tank, an anode positioned within said cathode, and a freeboard section resting on said flange and made fast to said tank to form a liquid tight joint with said cathode.

1,485,474. CAN-COVER REMOVER. DURWARD M. ALLEN and JEREMIAH E. HAYES, Binghamton, N. Y.; said Allen assignor to said Hayes. Filed July 14, 1922. Serial No. 575,043. 1 Claim. (Cl. 81—3.1.)



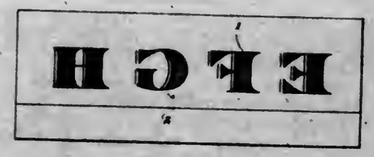
A single handled can cover remover comprising a handle, a shank secured in the handle and provided with a slot intermediate its ends, the outer end of the shank being pointed to engage the can cover, a curved link pivotally connected to the pointed end of the shank, another curved link provided with a pin for traversing the slot in the shank and an intermediate link for connecting the other links together.

1,485,475. APPARATUS FOR CONCENTRATING SOLUTIONS. NATHANIEL T. BACON, Peace Dale, R. I., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed July 19, 1918. Serial No. 245,634. 10 Claims. (Cl. 159—2.)



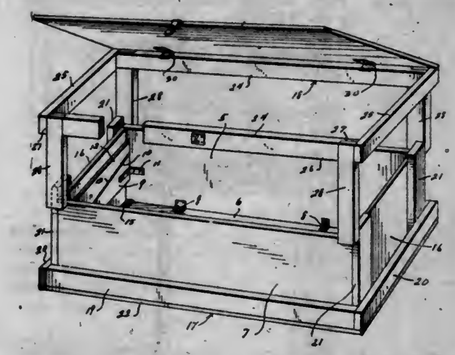
1. In concentrating apparatus, the combination of a preheating column and means for causing a downward flow of liquid therethrough, an evaporating column, connected therewith, means for causing a flow of liquid from the preheating column to the evaporating column, means for causing an upward flow of liquid through the evaporating column and means for heating the liquid in the preheating column from the top downward, with steam of progressively higher temperature evolved in the evaporating column.

1,485,476. DOOR-ACTUATING MECHANISM. FRANK S. BALATTA, St. Paul, Minn. Filed Mar. 1, 1922. Serial No. 540,174. 5 Claims. (Cl. 268—1.)



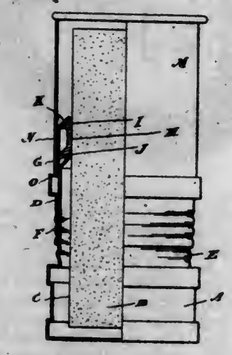
1. The combination with a movable door, of a door actuating mechanism comprising a depressible lever in the path of movement of a vehicle, an intermediate lever, means for locking said intermediate lever in a position to hold the door open, the depression of said first noted lever serving to open the door, and means for tripping said intermediate lever to permit closing of the door, comprising a depressible member located close to the door in position to be engaged by a wheel of the vehicle.

1,485,477. DOORCHECK. WALTER J. BEHN, Detroit, Mich. Filed Oct. 15, 1920. Serial No. 417,199. 6 Claims. (Cl. 16—72.)



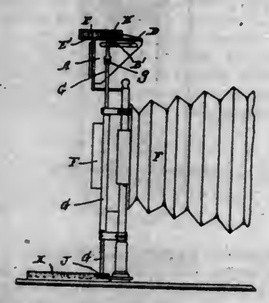
4. The flexible member for a door check which comprises a plurality of superposed strips of metal provided with a head at each end.

1,485,478. LITHOGRAPH ENGRAVING PROCESS ON STRAIGHT LINES. ANTONIO JOSEPH BOEDEFELD and MARCUS PAGE EKLIND, Dallas, Tex. Filed Apr. 28, 1923. Serial No. 635,852. 2 Claims. (Cl. 41—33.)



1. The method of transferring letters comprising the forming of an alphabet on a sheet of paper, placing a line on said paper in spaced and parallel relation with said letters, forming a line on a second sheet, cutting said letters apart and placing the same on said second sheet so that the line associated with the respective letters will be superimposed on the line on the second sheet.

1,485,479. CAMPER'S OUTFIT CHEST. ONEY BURY and JAMES ALBERT MASON, Houston, Tex. Filed Feb. 12, 1923. Serial No. 618,522. 6 Claims. (Cl. 190—12.)

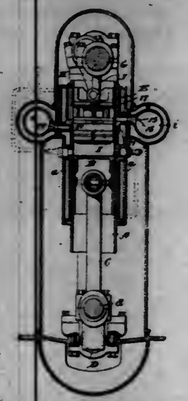


1. A device of the character described comprising a pair of benches including a supporting frame and legs, the seat of one of said benches being movable, one of said benches being inverted and adapted to support the remaining bench and to coact with said bench to provide a chest frame, the movable seat of the upper bench serving as a lid for the frame, and a foldable table disposed within the chest frame to provide chest sides and ends.

1,485,480. SOAP-STICK HOLDER. ELMORE ROY BUTLER, Toronto, Ontario, Canada, assignor to Collapsible Tubes & Containers, Limited, Toronto, Canada. Filed Aug. 16, 1922. Serial No. 582,271. 3 Claims. (Cl. 206—56.)

2. A device of the character set forth comprising a holder adapted to house one end of a stick of material, and provided at one end with a flared flange to form a seat; a clamp adapted to be coupled to said holder and beyond which said stick of material will project, and provided at one end with an in-turned flange, and a split ring-clutch surrounding said stick of material and exteriorly provided at each end with an inwardly sloping seat, and located between the flanges of said holder and clamp, the whole adapted to co-act for the purpose set forth.

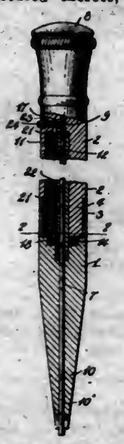
1,485,481. FOCUSING DEVICE FOR HAND CAMERAS. JOSEPH PATRICK CARMINE, Westport, New Zealand. Filed May 21, 1923. Serial No. 640,442. 7 Claims. (Cl. 95—44.)



1. In a focusing attachment for cameras, a finder having a vision glass in one wall, and an indicator bar mounted with relation to the finder to extend laterally across said glass at right angles to the vertical line of the image shown therein of the object to be photographed; said bar adapted to be moved forward and backward across said glass in the said vertical line of the image while maintaining such lateral position, and indicating the correct focus for said object when it touches the foot of the image and the camera is held level.

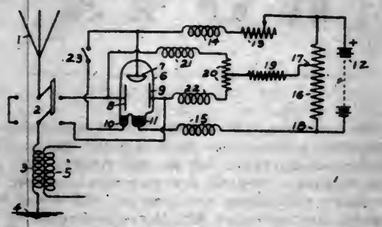
1,485,482. FLOOR MOP. CHARLES A. CHANNELL, Chicago, Ill., assignor to Channell Chemical Company, a Corporation of Illinois. Original application filed Aug. 9, 1917, Serial No. 185,235. Divided and this application filed Nov. 21, 1921. Serial No. 516,553. 2 Claims. (Cl. 15—229.)

2. In a mop head comprising an upper plate having a flange against which the mop fabric can normally be held and a lower plate provided with a downwardly and outwardly projecting flange, said flange being adapted to engage and hold the mop against the flange of the upper plate, a pin secured between said plates, a movable handle socket mounted on said head, said socket comprising a single piece of metal, a portion of which is bent around said pin, said socket extending through said upper plate and an upturned integral portion of said upper plate acting as a stop to limit the movement of said handle socket around said pivot in one direction.



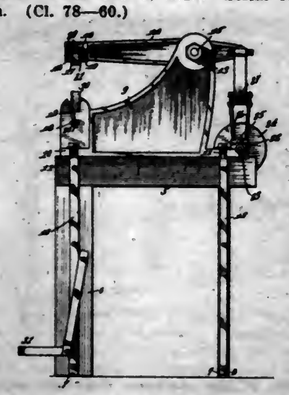
1,485,483. INTERNAL-COMBUSTION ENGINE. BARTLETT HOMER CHAPPELL, New York, N. Y., assignor to William Grant Brown, New York, N. Y. Filed May 3, 1919. Serial No. 294,402. 4 Claims. (Cl. 123—75.)

1. In combination with an engine having a cylinder, a piston valve within the cylinder having a gear connection with the main shaft of the engine whereby to constitute a power unit, a plunger within the cylinder, said piston valve having at the compression end thereof a packing ring, and an auxiliary ring spaced from the first mentioned ring and adapted to travel between the inlet and exhaust port of the cylinder.



1,485,484. REFILLABLE PENCIL. PIERRE CHARTON, Montreal, Quebec, Canada. Filed June 9, 1922. Serial No. 567,102. 3 Claims. (Cl. 120—4.)

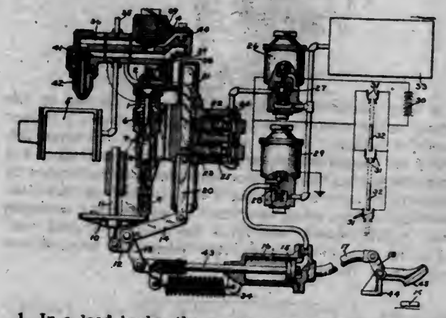
3. A pencil comprising a body having a bore therein, a chamber formed in the body and communicating with the bore, said chamber being adapted to contain a plurality of leads, a shaft journalled in said body and having a follower secured thereto, said follower being



disposed in the chamber, an internal gear formed around the bore, a pinion secured to said shaft and adapted to mesh with the gear, and a spring surrounding said shaft.

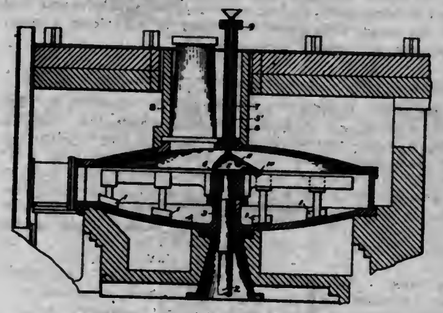
1,485,485. RADIOSIGNALING. HENRY G. CORDES, Bremerton, Wash. Filed Sept. 29, 1919. Serial No. 327,313. 16 Claims. (Cl. 250—20.)

9. The method of reducing the duration of a train of free oscillations in an oscillatory circuit of a radio receiving system which consists in limiting the amount of electrostatic energy in an oscillatory circuit which can be transformed into electromagnetic energy.



1,485,486. POWER HAMMER. JAMES I. DEPEW, Loup City, Nebr. Filed Oct. 3, 1922. Serial No. 592,069. 1 Claim. (Cl. 78—60.)

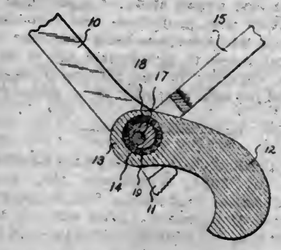
In a power hammer, a die support having a cut out portion formed with a relatively perpendicular wall and an inclined wall, laterally extending ears disposed on



said support, said cut out portion adapted to receive a die, a securing bolt positioned between one surface of the die and said inclined wall of the cut out portion, and said securing bolt extending through the ears for securing the die within the cut out portion.

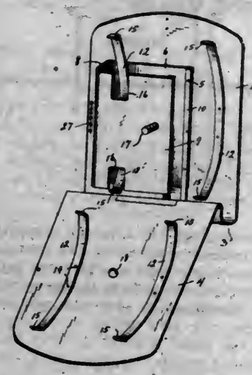
1,485,487. VARIABLE-LOAD BRAKE. EDWARD H. DEWSON, Quincy, Mass., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1923. Serial No. 615,011. 4 Claims. (Cl. 303—22.)

1. In a load brake, the combination with an adjustable mechanism for regulating the braking power, of a member associated with the car truck, a rocker arm mounted on the car body and adapted to engage said member, a piston cylinder operatively connected to said arm, and a piston in said cylinder operatively connected to said mechanism.



1,485,488. FURNACE FOR THE MANUFACTURE OF HYDROCHLORIC ACID AND SODIUM SULPHATE. CARL DIETZ and MATTHIAS LATTEN, Leverkusen, near Cologne, Prussia, and WILHELM BOSSE, Cologne, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,765. 5 Claims. (Cl. 23—1.)

1. A furnace for the manufacture of hydrochloric acid and sodium sulphate comprising, stirring mechanism, an acid supply, and means movable with said stirring mechanism and terminating adjacent the center of the furnace for delivering acid thereto.



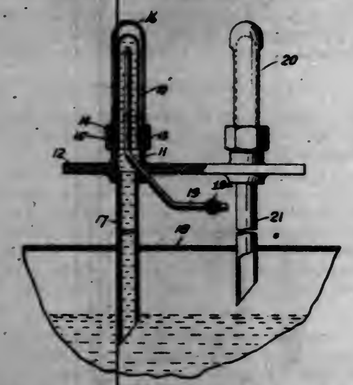
1,485,489. TONGS. LEWIS C. DOCKERY, Corsicana, Tex. Filed Jan. 22, 1923. Serial No. 614,270. 1 Claim. (Cl. 81—98.)

A pipe wrench comprising a pair of pivotally connected handles, a jaw rigidly secured to one of said handles, a relatively movable jaw, said movable jaw having a bifurcated inner end to receive the handle of the rigid jaw, a bifurcated inner end for the other handle to receive the movable jaw and the handle of the rigid jaw, bearing members carried by the bifurcated ends of

the handle to provide a bearing for the movable jaw and a pivot pin extending through the handles and movable jaw and disposed eccentric to the bearing members.

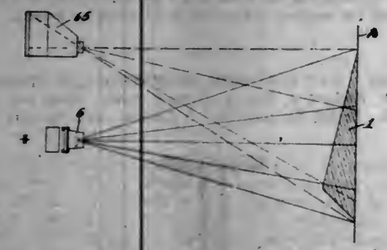
1,485,490. RECEPTACLE. RAYMOND A. DORSEY, Baltimore, Md. Filed Jan. 31, 1923. Serial No. 616,075. 4 Claims. (Cl. 206—39.)

1. A receptacle of the class described comprising two hingedly connected plates one overlapping the other when the receptacle is closed, a pocket carried by one of the plates, an outstanding stud carried by the wall of the pocket, the second plate being provided with an opening through which the stud extends when the plates are in overlapping relation, and a member threaded upon the stud for holding the plates in overlapping relation.



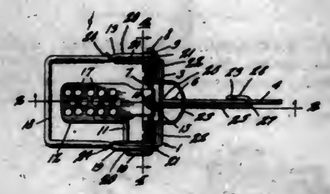
1,485,491. TAP BOLT AND OPERATING CAP THEREFOR. ROBERT Z. DRAKE, Omaha, Nebr. Filed Oct. 2, 1922. Serial No. 591,730. 5 Claims. (Cl. 85—9.)

1. In devices for the purpose described, the combination with a bolt having a head provided with peripheral recesses, said head being provided on its inner side with secondary recesses each opening on a peripheral recess



and with radially disposed blades each extending from the shank to terminate in a recess, the side wall of each secondary recess providing a second blade disposed in the plane of a first named blade, of a revoluble cap having lugs provided with projections, the combined widths of each lug and its projections being less than the width of a peripheral recess to permit said cap to be disposed with its lugs engaging in the peripheral recesses with one of its projections engaging in a secondary recess of said head.

1,485,492. WATER GAUGE FOR STEAM GENERATORS. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Co., Wilmington, Del., a Corporation of Delaware. Filed Apr. 13, 1921. Serial No. 460,993. 11 Claims. (Cl. 116—118.)

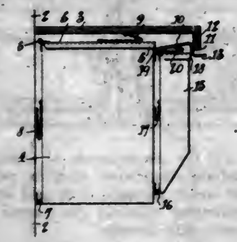


3. A liquid level gauge for a container under pressure, comprising an indicator closed to the container at the upper end and above the level at which the liquid is to be registered, and a pipe connected to the lower end of the indicator and communicating with the container at the level to be registered, said device being adapted to indicate whether the water is above or below the lower end of the pipe without circulating through the indicator.

1,485,493. PROCESS OF PRODUCING GIVEN THREE-DIMENSIONAL FIGURES AND MEANS FOR CARRYING OUT THE SAID PROCESS. HOWARD M. EDMUNDS, Brighton, England. Filed July 3, 1920. Serial No. 393,962. 77 Claims. (Cl. 95—5.)

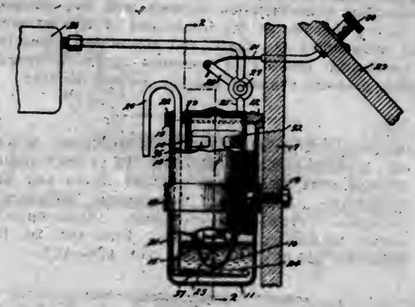
1. The process of making a guide plate for use in producing solid reproductions of objects either in full or altered scale and in full or altered degree of relief which consists in throwing by means of a light projector a line on an object in relief against a screen which is normal to the optical axis of said projector, photographing said line by means of a camera, the incident nodal point of the lens of which is in a plane normal to said optical axis and passing in proximity to the emergent nodal point of the lens of said projector, developing the resulting negative and photoengraving the line defined thereon.

1,485,494. TRAP. THOMAS G. EDWARDS, Arlington, Ky.; Bertha Edwards administratrix of said Thomas G. Edwards, deceased. Filed Jan. 4, 1922. Serial No. 526,905. 1 Claim. (Cl. 43—81.)



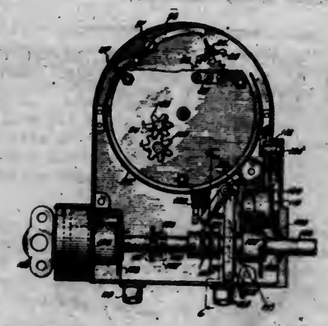
A trap comprising a frame; a support carried by the frame; a jaw mounted pivotally on the support; a trigger mounted pivotally on the support; a latch mounted pivotally on the frame and cooperating with the trigger and with the jaw to hold the jaw set; and springs carried by the support and cooperating with the jaw to close the jaw, the springs being connected by an inverted U-shaped yoke within which the latch operates, the yoke constituting a stop for the latch when the latch moves away from the trigger.

1,485,495. CRUDE-OIL BURNER. ERROL R. ELDRED and WILLIAM R. ELDRED, El Portal, Calif. Filed Mar. 6, 1923. Serial No. 623,119. 4 Claims. (Cl. 158—78.)



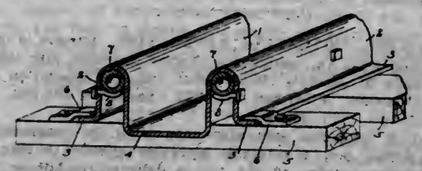
1. A crude oil burner comprising a hollow head adapted at its inner end for connection to a source of fuel supply, and a horizontal line of spaced holes in the outer end of the head, said holes increasing in size from a point opposite the supply connection.

1,485,496. PANTRY RECEPTACLE. THOMAS G. ELLIOTT, North Vancouver, British Columbia, Canada. Filed Nov. 13, 1922. Serial No. 600,682. 9 Claims. (Cl. 211—6.)



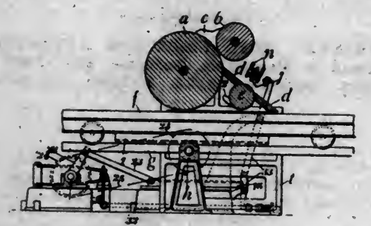
1. A pantry receptacle of the class described, comprising the combination with a horizontally disposed shelf or the like, of an open ended box hinged along its lower edge with its open end in proximity to the underside of the shelf, a cover hinged to the open edge of the box along the same side as the hinge, means for retaining the box in its upright position beneath the shelf, and means limiting outward movement of the box on its hinge.

1,485,497. COMBUSTION PROMOTER. ELMER ISAIAH EMMASON, Middletown, N. Y. Filed Nov. 29, 1919. Serial No. 341,553. 1 Claim. (Cl. 123—198.)



The method of reducing carbon formations in the cylinders of internal combustion motors, which consists in introducing air into the cylinders of the motor cylinders with the introduction of the charge of fuel, said air having been first passed through a volume of hydrogen peroxide sufficient to saturate the air therewith.

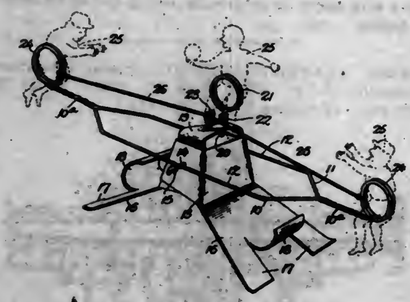
1,485,498. ALARM DEVICE. VLADIMIR P. FEDOROFF, New York, N. Y. Filed Feb. 17, 1920. Serial No. 359,260. 48 Claims. (Cl. 116—75.)



32. In combination, a casing having a door provided with a locking member, alarm mechanism including a movable controlling part, means operated by said part and cooperating with said locking member to lock said door, and means operated by said alarm mechanism to restrain said locking means against operation to unlock said door and to release said locking means for operation to unlock said door at the termination of operation of said alarm mechanism.

1,485,499. TRACK PAN FOR RAILROADS. JAMES H. FLEHARTY, Berea, Ohio, assignor to The Fleharty Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 23, 1921. Serial No. 479,746. 6 Claims. (Cl. 103—82.)

6. A track pan for railroads comprising a longitudinally extending trough having its lateral edges bent downwardly and then outwardly to form integral depending flanges, in combination with clips spiked to such ties and overlying the outwardly bent portions of such flanges, and steam pipes secured in place between such flanges and the sidewalls of said trough.

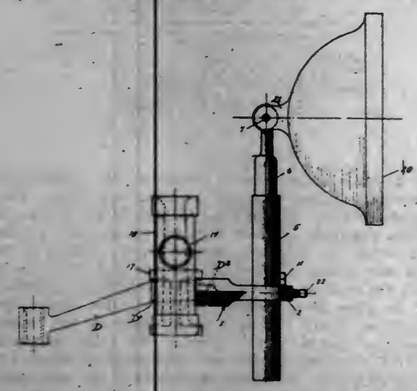


1,485,500. MACHINERY FOR PRODUCING GLASS SHEETS OR PLATES. ALFRED LINDSAY FORSTER, Smethwick, England, assignor of one-half to Chance Brothers and Co., Limited, Smethwick, England. Filed Dec. 11, 1922. Serial No. 606,255. 7 Claims. (Cl. 49—8.)

1. In glass plate forming machines, the combination comprising cutting tools for severing the formed glass into plates, a tool carrying bar movable in an endwise direction, angularly movable supports for the bar, a roller with which the cutters co-operate in the cutting of the glass and means for moving the bar and its supports about the axis of the roller, substantially as described.

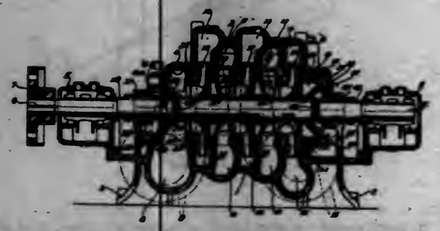
2. In glass plate forming machines, the combination comprising rotary cutting tools for severing the formed glass into plates, a bar carying the tools, angularly movable supports for the bar permitting a rising and falling as well as an endwise movement of the bar, means for imparting endwise movement to the bar, and rotary abutment pieces for imparting angular movements to the bar supports, substantially as described.

1,485,501. SEESAW TOY. ANDREW J. GIPSON, Perkins, Okla. Filed June 1, 1922. Serial No. 565,080. 1 Claim. (Cl. 46—40.)



A seesaw toy consisting of a support in the form of a central upright pedestal, a seesaw frame fulcrumed on the pedestal, figure holding devices carried by the ends of said frame and by the said pedestal, of which the latter is mounted to oscillate in a vertical plane on the pedestal above the seesaw frame and is provided with a lateral extension, and a flexible connection secured at its center to said extension and at its ends to portions of the seesaw frame upon opposite sides of the fulcrum thereof.

1,485,502. SYNTHETIC METHOD OF PRODUCING CYANIDES. TATSUSABURO HARA, Tokyo, Japan, assignor to Mitsubishi Kogyo Kabushiki Kaisha, Tokyo, Japan. Filed June 25, 1920. Serial No. 391,710. 3 Claims. (Cl. 23—13.)



1. The process of manufacturing cyanide by passing nitrogen into contact with a catalytic substance mixed with alkali forming metal compounds at a high temperature, which catalytic substance is a carbon containing material, charged with minute particles of iron oxide prepared by soaking the carbon containing material with a solution of an iron chloride and decomposing the iron chloride with steam at a high temperature.

1,485,503. ROAD LIGHT FOR AUTOMOBILES. THOMAS A. HENDRICKS, Lexington, Ky. Filed Mar. 6, 1923. Serial No. 623,271. 3 Claims. (Cl. 240—62.)

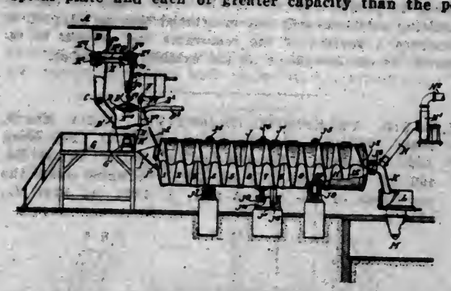
1. A roadway lamp for automobiles and a support therefor including a bracket having means to engage a portion of the steering arm of an automobile, a barrel clamped vertically in the bracket, a member to which the lamp is attached movable vertically within the barrel and having a sleeve thereon intermediate its ends and springs compressed between opposite sides of the sleeve and spaced portions of the said member, and a set screw threaded through the wall of the barrel and engaging said sleeve to detachably secure the latter within the barrel.

1,485,504. CENTRIFUGAL PUMP. ALADAR HOLLANDER, Belleville, N. J. Filed June 30, 1922. Serial No. 571,883. 13 Claims. (Cl. 103—112.)

9. A thrust balancing mechanism comprising a casing, a shaft extending through said casing, an intake chamber at one end of said mechanism, a pressure discharge chamber at the other end of said mechanism, means to force fluid from the intake chamber to the discharge chamber, a balancing pressure chamber at the discharge end of said mechanism and in communication with the pressure discharge chamber, a thrust balancing means connected to and movable axially with said shaft and subject to pressure in the balancing pressure chamber, a counter-balancing pressure chamber on the opposite side of the thrust balancing means, the said thrust balancing means controlling communication between said two chambers, a sealing chamber at the intake end of the mechanism and surrounding the shaft, and means for maintaining a substantial equality of pressures in the counter-balancing pressure chamber and the sealing chamber.

1,485,505. PROCESS FOR INTRODUCING ALKALI OR EARTH-ALKALI METALS IN DISCHARGING TUBES AND THE LIKE. GILLES HOLST and EKKO OOSTERHUIS, Eindhoven, Netherlands, assignors to Naamlooze Vennootschap Philip's Gloeilampen-Fabrieken, Eindhoven, Netherlands. Filed Oct. 26, 1920. Serial No. 419,659. 2 Claims. (Cl. 176—122.)

1. Evacuated container electrical apparatus, in which an alloy of an alkali- or earth-alkali-metal with a nobler metal of low vapor pressure is applied at a place where a sufficiently high temperature is obtained to vaporize the alkali or earth-alkali metal, while the other component of the alloy does not evaporate perceptibly and the vapor of the alkali or earth alkali metal does not coact in the conduction of the current.



1,485,506. HAIR-CURLING DEVICE. BARBARA E. IKAS, Newark, N. J. Filed Sept. 27, 1922. Serial No. 590,876. 4 Claims. (Cl. 132—41.)

1. A hair curler including a clip for attachment to a lock of hair to be rotated for rolling the hair about the clip and provided at one end with an opening, and a separate supplementary clip formed at one end with a hook to engage in said opening and provided at its opposite end with means to engage the opposite end of said first-mentioned clip coacting with the roll of hair locking said first-mentioned clip against counter rotation.

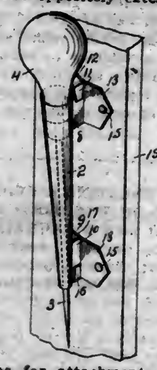
1,485,507. NITRATING APPARATUS. GEORGE JUHL, Hopewell, Va., assignor to Tubize Artificial Silk Company of America, Wilmington, Del., a Corporation of Delaware. Filed Jan. 21, 1922. Serial No. 530,786. 3 Claims. (Cl. 23—3.)

1. A nitrating apparatus comprising in combination a mixing pot, a rotatable nitrating cylinder having a charging opening at one end, a delivery conduit at its other end and a spirally twisted plate secured to its inner surface, said plate having such pitch and height as to form with the walls of the cylinder and along the bottom of the cylinder a multiple series of receptacles separated from each other by the lower portions of the spiral plate and each of greater capacity than the pot

and all connected in series by the upper spaces between convolutions of the spiral plate, and means for rotating the cylinder.

1,485,508. VALVE. EDWARD J. KILEY, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 11, 1922. Serial No. 560,055. 8 Claims. (Cl. 251—25.)

5. A valve comprising a cup shaped member provided with a recessed boss to receive a headed operating stem and a resilient side wall comprising a plurality of segments, a disc positioned in the cup member to engage the seat in a valve, means interposed between the head of the stem and disc to impart thrust from the stem to the disc, and means on the edge of the segments to hold the parts in position, but permit the disc to be removed from the cup member at will.



1,485,509. APPARATUS FOR COUPLING TRACTORS TO TRAILERS. OTTO KÖHLER, Vienna, Austria, assignor to Oesterreichische Daimler Motoren Aktiengesellschaft, Wiener-Neustadt, Austria. Filed July 7, 1921. Serial No. 483,047. 5 Claims. (Cl. 280—33.1.)

1. Apparatus for coupling a tractor having a rearwardly extending steering and coupling arm to a trailer having a forwardly extending coupling arm, comprising an articular connection capable of allowing the tractor and trailer to be swivelled relatively to one another at least laterally and a rearwardly arranged fastening device for connecting the two coupling arms together, whereby the tractor and trailer can be connected together by means of the articular connection in any angular position of the coupling arms relatively to one another and then by driving the tractor forward and pulling the trailer after it, the coupling arms can be brought into alinement thus enabling the said fastening device to be readily applied.

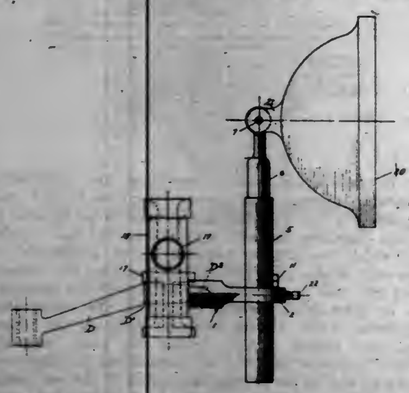
1,485,510. ICE-PICK HOLDER. FRANK ARON, Kansas City, Mo. Filed July 24, 1922. Serial No. 577,048. 4 Claims. (Cl. 248—20.)

1. An ice pick holder comprising a sheet of suitable material formed into an upwardly flaring tubular body, the longitudinal edges of the sheet having respectively two rearwardly extending portions having at their rear ends respectively two oppositely extending lateral extensions having means for attachment to a suitable support, one of said portions having a lip folded over the other extension for holding the extensions together.

1,485,511. LINING FOR HATS. ALFRED KURTZ, Brooklyn, N. Y. Filed Apr. 29, 1920, Serial No. 377,584. Renewed Aug. 5, 1922. Serial No. 579,962. 3 Claims. (Cl. 2—113.)

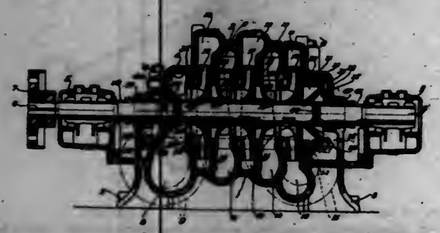
1. In a hat lining the combination of a side crown, a tip and an annular grooved connecting member separate from the tip, said tip being provided with means for detachably engaging said grooved annular member.

1,485,512. LINER. FRANK LE COCQ and IRWIN LE COCQ, Aberdeen, S. Dak.; said Frank Le Cocq assignor to said Irwin Le Cocq. Filed Feb. 28, 1922. Serial No. 539,939. 2 Claims. (Cl. 166—4.)



1. In an oil well, the combination of inner and outer spaced casings, a filling of cement between the inner and

1,485,502. SYNTHETIC METHOD OF PRODUCING CYANIDES. TATSUSABURO HARA, Tokyo, Japan, assignor to Mitsubishi Kogyo Kabushiki Kaisha, Tokyo, Japan. Filed June 25, 1920. Serial No. 391,710. 3 Claims. (Cl. 23—13.)



1. The process of manufacturing cyanide by passing nitrogen into contact with a catalytic substance mixed with alkali forming metal compounds at a high temperature, which catalytic substance is a carbon containing material, charged with minute particles of iron oxide prepared by soaking the carbon containing material with a solution of an iron chloride and decomposing the iron chloride with steam at a high temperature.

1,485,503. ROAD LIGHT FOR AUTOMOBILES. THOMAS A. HENDRICKS, Lexington, Ky. Filed Mar. 6, 1923. Serial No. 623,271. 3 Claims. (Cl. 240—62.)

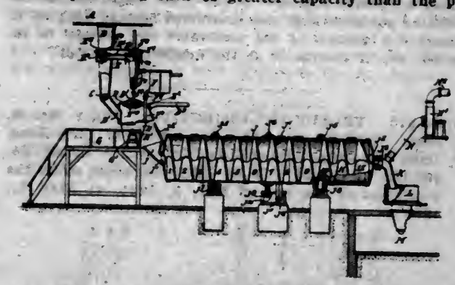
1. A roadway lamp for automobiles and a support therefor including a bracket having means to engage a portion of the steering arm of an automobile, a barrel clamped vertically in the bracket, a member to which the lamp is attached movable vertically within the barrel and having a sleeve thereon intermediate its ends and springs compressed between opposite sides of the sleeve and spaced portions of the said member, and a set screw threaded through the wall of the barrel and engaging said sleeve to detachably secure the latter within the barrel.

1,485,504. CENTRIFUGAL PUMP. ALADAR HOLLANDER, Belleville, N. J. Filed June 30, 1922. Serial No. 571,883. 13 Claims. (Cl. 103—112.)

9. A thrust balancing mechanism comprising a casing, a shaft extending through said casing, an intake chamber at one end of said mechanism, a pressure discharge chamber at the other end of said mechanism, means to force fluid from the intake chamber to the discharge chamber, a balancing pressure chamber at the discharge end of said mechanism and in communication with the pressure discharge chamber, a thrust balancing means connected to and movable axially with said shaft and subject to pressure in the balancing pressure chamber, a counter-balancing pressure chamber on the opposite side of the thrust balancing means, the said thrust balancing means controlling communication between said two chambers, a sealing chamber at the intake end of the mechanism and surrounding the shaft, and means for maintaining a substantial equality of pressures in the counter-balancing pressure chamber and the sealing chamber.

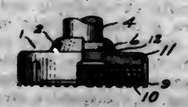
1,485,505. PROCESS FOR INTRODUCING ALKALI OR EARTH-ALKALI METALS IN DISCHARGING TUBES AND THE LIKE. GILLES HOLST and EKKO OOSTERHUIS, Eindhoven, Netherlands, assignors to Naamlooze Vennootschap Philip's Gloeilampen-Fabrieken, Eindhoven, Netherlands. Filed Oct. 26, 1920. Serial No. 419,659. 2 Claims. (Cl. 176—122.)

1. Evacuated container electrical apparatus, in which an alloy of an alkali- or earth-alkali-metal with a nobler metal of low vapor pressure is applied at a place where a sufficiently high temperature is obtained to vaporize the alkali or earth-alkali metal, while the other component of the alloy does not evaporate perceptibly and the vapor of the alkali or earth alkali metal does not coact in the conduction of the current.



1,485,506. HAIR-CURLING DEVICE. BARBARA E. IKAS, Newark, N. J. Filed Sept. 27, 1922. Serial No. 590,876. 4 Claims. (Cl. 132—41.)

1. A hair curler including a clip for attachment to a lock of hair to be rotated for rolling the hair about the clip and provided at one end with an opening, and a separate supplementary clip formed at one end with a hook to engage in said opening and provided at its opposite end with means to engage the opposite end of said first-mentioned clip coacting with the roll of hair locking said first-mentioned clip against counter rotation.



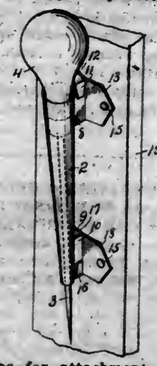
1,485,507. NITRATING APPARATUS. GEORGE JUBB, Hopewell, Va., assignor to Tubize Artificial Silk Company of America, Wilmington, Del., a Corporation of Delaware. Filed Jan. 21, 1922. Serial No. 530,786. 3 Claims. (Cl. 23—3.)

1. A nitrating apparatus comprising in combination a mixing pot, a rotatable nitrating cylinder having a charging opening at one end, a delivery conduit at its other end and a spirally twisted plate secured to its inner surface, said plate having such pitch and height as to form with the walls of the cylinder and along the bottom of the cylinder a multiple series of receptacles separated from each other by the lower portions of the spiral plate and each of greater capacity than the pot

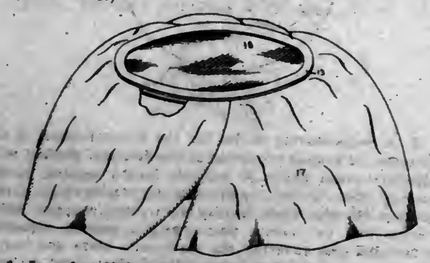
and all connected in series by the upper spaces between convolutions of the spiral plate, and means for rotating the cylinder.

1,485,508. VALVE. EDWARD J. KILEY, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 11, 1922. Serial No. 560,055. 8 Claims. (Cl. 251—25.)

5. A valve comprising a cup shaped member provided with a recessed boss to receive a headed operating stem and a resilient side wall comprising a plurality of segments, a disc positioned in the cup member to engage the seat in a valve, means interposed between the head of the stem and disc to impart thrust from the stem to the disc, and means on the edge of the segments to hold the parts in position, but permit the disc to be removed from the cup member at will.



1,485,509. APPARATUS FOR COUPLING TRACTORS TO TRAILERS. OTTO KÖHLER, Vienna, Austria, assignor to Oesterreichische Daimler Motoren Aktiengesellschaft, Wiener-Neustadt, Austria. Filed July 7, 1921. Serial No. 483,047. 5 Claims. (Cl. 280—33.1.)



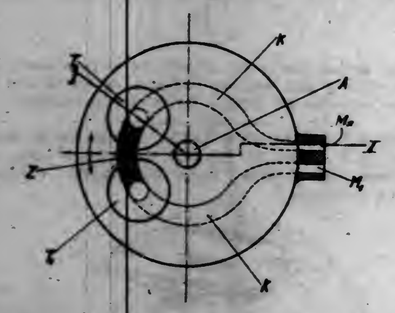
1. Apparatus for coupling a tractor having a rearwardly extending steering and coupling arm to a trailer having a forwardly extending coupling arm, comprising an articular connection capable of allowing the tractor and trailer to be swivelled relatively to one another at least laterally and a rearwardly arranged fastening device for connecting the two coupling arms together, whereby the tractor and trailer can be connected together by means of the articular connection in any angular position of the coupling arms relatively to one another and then by driving the tractor forward and pulling the trailer after it, the coupling arms can be brought into alinement thus enabling the said fastening device to be readily applied.

1,485,510. ICE-PICK HOLDER. FRANK AHON, Kansas City, Mo. Filed July 24, 1922. Serial No. 577,048. 4 Claims. (Cl. 248—20.)

1. An ice pick holder comprising a sheet of suitable material formed into an upwardly flaring tubular body, the longitudinal edges of the sheet having respectively two rearwardly extending portions having at their rear ends respectively two oppositely extending lateral extensions having means for attachment to a suitable support, one of said portions having a lip folded over the other extension for holding the extensions together.

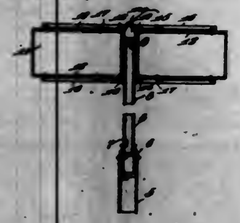
1,485,511. LINING FOR HATS. ALFRED KURTZ, Brooklyn, N. Y. Filed Apr. 29, 1920, Serial No. 377,584. Renewed Aug. 5, 1922. Serial No. 579,962. 8 Claims. (Cl. 2—113.)

1. In a hat lining the combination of a side crown, a tip and an annular grooved connecting member separate from the tip, said tip being provided with means for detachably engaging said grooved annular member.



1,485,512. LINER. FRANK LE COCQ and IRWIN LE COCQ, Aberdeen, S. Dak.; said Frank Le Cocq assignor to said Irwin Le Cocq. Filed Feb. 28, 1922. Serial No. 539,939. 2 Claims. (Cl. 166—4.)

1. In an oil well, the combination of inner and outer spaced casings, a filling of cement between the inner and

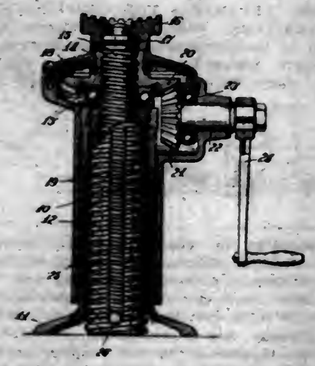


outer casings forming a conduit for use subsequent to the disintegration of the inner casing as the result of contact with the impurities in the oil, collars mounted on the inner casing and having radial spacing arms engaging the outer casing whereby to maintain the inner and outer casings in uniform spaced relation throughout, said inner casing being formed with a plurality of connecting couplings engaged by said collars and holding the collars in spaced relation.

1,485,513. COMPENSATING DEVICE FOR THE DETERMINATION OF THE DIRECTION OF SOUNDS ACCORDING TO THE BINAURAL METHOD. ERNST LÜCKE, Bremen, Germany, assignor to Atlas Werke Aktiengesellschaft, Bremen, Germany. Filed Aug. 29, 1922. Serial No. 585,042. 3 Claims. (Cl. 181—26.)

3. A compensating device for the determination of the direction of sounds according to the binaural method with separate sound paths of variable length leading to the ears of the observer, comprising in combination a stationary circular plate having a circular channel which merges into two mouth pieces with a smooth rounding, a movable disc covering the stationary plate and carrying the telephones, an intermediary piece fixed to said disc between the telephones sliding in the annular channel and dividing the latter into two parts, a scale plate secured to the movable disc, a hand in connection with the stationary plate and showing on the scale plate the position of the movable disc regarding to the stationary plate.

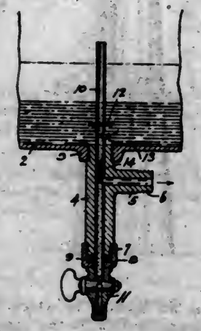
1,485,514. SIGN. EUGENE LEE MCGUIRE, Massillon, Ohio. Filed Feb. 26, 1923. Serial No. 621,246. 1 Claim. (Cl. 40—39.)



A movable sign including a supporting post, a removable reduced end section positioned in the upper end of the supporting post, a tapered bearing member mounted on the upper end of the removable section, an exhibitor including relatively flat exhibiting surfaces having flanges formed integral therewith, the flanges extending at right angles to the body portions of the exhibiting surfaces, means for connecting the upper and lower edges of adjacent exhibiting surfaces, a bearing having connection with the adjacent inner edges of the exhibiting surfaces and adapted to receive the tapered bearing member of the removable end section, a bearing secured between the adjacent inner edges of the exhibiting surfaces at points adjacent to the lower edges of the exhibiting surfaces, said last mentioned bearing adapted to embrace a portion of the removable end section to restrict lateral movement of the exhibiting member.

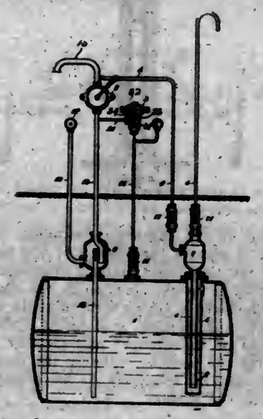
1,485,515. TELEPHOTO OBJECTIVE. WILLY MERTE, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 18, 1921. Serial No. 492,122. 1 Claim. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a spherically, chromatically and astigmatically corrected objective, a collective front member, a dispersive back member, the hinder principal point of the said objective lying in front of the foremost lens surface, the said front member consisting of two lenses separated from each other by a dispersive air-lens, the said back member consisting of two lenses cemented together, the two components of each of the said two members being of opposite sign, and the cemented surface having collective power.



1,485,516. LIFTING JACK. JOSEPH J. MISER, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 7, 1921. Serial No. 513,341. 14 Claims. (Cl. 254—102.)

12. A lifting jack comprising a standard, a hollow screw supported by said standard and adapted upon rotation to move vertically with respect to the standard, a second screw loosely mounted within said first named screw, means for limiting the vertical movement of said second screw with respect to the first named screw and for holding said screws against rotation with respect to each other, a nut supported by said first named screw and engaging the threads of the second screw, a load supporting member carried by said second screw, a housing supported from said nut and slidable vertically with respect to said standard, means for holding said housing against rotation with respect to said standard, a gear carried by said nut, a shaft journaled in said housing at



one side thereof, a gear fixedly mounted on said shaft and meshing with first named gear, and means for rotating said shaft for driving said nut adapted first to cause vertical movement of the second screw to the limit of its motion with respect to the first named screw and adapted then to cause rotation of the screws in unison for raising them both with respect to the standard.

1,485,517. VALVE. WILLIAM H. MORRIS, Bellaire, Ohio. Filed Nov. 26, 1920. Serial No. 426,527. 4 Claims. (Cl. 258—46.5.)

1. A valve for liquid receptacles comprising a tubular member having a lateral outlet, a tube mounted slidably within the said tubular member and having both ends extending beyond the said member, and means for limiting the sliding movement of the said inner tube, the said inner tube being provided with two openings, one of the said openings being in constant communication with the said lateral outlet and the other opening being beyond the said tubular member in one position of the said inner tube and being enclosed within the said member in another position of the said inner tube.

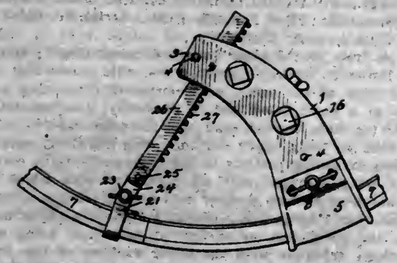
1,485,518. STORAGE OF INFLAMMABLE LIQUIDS. JOSEF MUCHKA, Vienna, Austria. Filed Jan. 6, 1921. Serial No. 435,551. 5 Claims. (Cl. 221—60.)

1. Apparatus for storing and tapping off liquids from storage vessels in which the liquid is stored under a mixture of gas saturated with liquid vapours, comprising in combination a storage vessel, an air inlet pipe leading in an auxiliary vessel communicating with the gas space of the storage vessel and containing a liquid for shutting off the air inlet pipe from the storage vessel, a suction pump for drawing off the liquid from the storage vessel and for creating a partial vacuum in the storage vessel and for drawing in air in the auxiliary vessel and means for preventing the pump from drawing liquid when the partial vacuum falls off and is broken.

1,485,519. ATTACHMENT FOR TOOTHBRUSHES. ROBERT O. NELSON, San Francisco, Calif. Filed July 30, 1923. Serial No. 654,788. 8 Claims. (Cl. 132—91.)

1. The combination with the body member of a tooth brush, of a cleat formed at one end thereof, an arm pivotally secured at one end to an intermediate portion of the body member and having a cleat at its other end adapted to be spaced laterally from the first mentioned cleat, said cleats being adapted to connect the ends of a span of dental floss, which span will assume a transverse position to the body member.

1,485,520. CHAIN-LINK CONSTRUCTION. EDGAR B. NICHOLS, Rochester, N. Y. Filed Mar. 25, 1920. Serial No. 368,676. 3 Claims. (Cl. 198—175.)

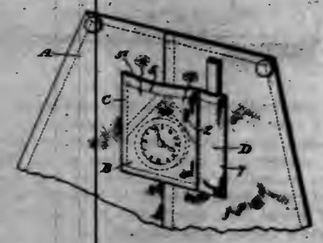


1. A link for drive chains consisting of a strip of metal bent upon itself to form pin loops, one end of the metal strip lying inside of the link thus formed, and the other end extending outwardly away from the link to form an attaching carrier.

1,485,521. METHOD OF FINISHING SICCATIVE COATINGS. GEORGE J. NIKOLAS, Chicago, Ill. Filed May 3, 1923. Serial No. 636,498. 4 Claims. (Cl. 91—68.)

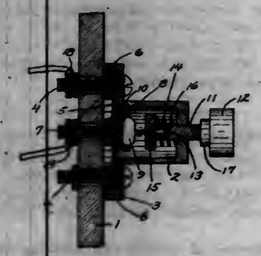
2. The method of removing orange-peel effects from coatings which includes the application and draining off of a thinner.

4. The method of coating and finishing an object which consists in applying a siccative coating thereto, then after the coating has dried, rubbing it down to remove the orange-peel effect, and then applying briefly thereto a thinner to bring up a gloss finish.



1,485,522. DEMOUNTABLE-RIM JACK. KENNEDY PARK, Mansfield, Ohio. Filed May 27, 1922. Serial No. 564,031. 12 Claims. (Cl. 157—1.)

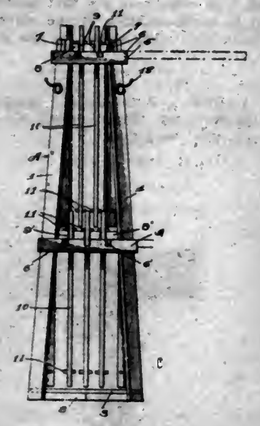
1. A rim jack including a curved main bracket adapted to be removably secured to a rim adjacent the line of division, a bar adapted to be removably secured to the rim



on the opposite side of the line of rim division, and a plurality of means carried by said bracket for operating the bar, said bar being adapted for cooperation with either of said means at will to thereby operate the bar in respectively different lines with regard to the rim.

1,485,523. WATCH POCKET. WALTER L. PENDERGRASS, Mobile, Ala., assignor to Kahn Manufacturing Company, Mobile, Ala. Filed Jan. 7, 1924. Serial No. 684,824. 3 Claims. (Cl. 2—254.)

1. A watch pocket comprising an outer wall having its upper edge folded over and downwardly, and tapering pieces of material fastened at their upper and broader ends to said folded edge and at their lower and narrower ends to the inner wall of the pocket.



1,485,524. CRYSTAL DETECTOR FOR RADIO INSTRUMENTS. HUGO H. PICKRON, Rock Island, Ill., assignor of one-half to W. E. Copp, Rock Island, Ill. Filed Mar. 9, 1923. Serial No. 623,893. 5 Claims. (Cl. 250—31.)

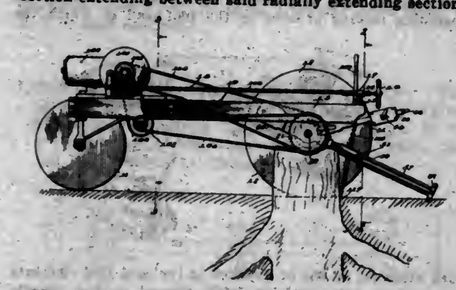
2. A device of the class described, comprising a casing, adapted for attachment to an instrument box, provided in one of its ends with a mineral receptacle, and in its opposite end with a stem having a recess in its inner end; and a helical telescopic spring secured in said recess, and adapted for engagement with a mineral contained in said receptacle.

1,485,525. FOLDING CLOTHES DRIER. JOSEPH PRIER, Oblong, Ill. Filed Jan. 15, 1923. Serial No. 612,710. 2 Claims. (Cl. 68—34.)

1. A drier of the class described comprising upwardly and inwardly inclined corner posts, sills connecting the lower ends of the posts, cross members connecting said posts at a point below but in relatively close proximity to the top ends thereof, each of said cross members being provided on their upper surfaces with angularly related notches extending entirely thereacross, each of the corner posts being provided with an open slot with which an end notch of a cross member registers, a plate supported by the corner posts and positioned above the cross members, the lower face or surface of said plate being substantially coplanar with the upper surfaces of the cross members, the marginal portions of the plate being provided with recesses registering with the notches or recesses of the cross members, said members being arranged outwardly of the corner posts and the plate positioned inwardly thereof, an elongated arm associated with each registering notch and recess, each registering notch and

recess providing an opening in which the arm is freely slidable, and means carried by the opposite end portions of the arms for limiting the movement of said arms in either direction.

1,485,526. AIR-PRESSURE GAUGE. PHILIP E. PULVERMAN, New York, N. Y. Filed Dec. 26, 1922. Serial No. 608,821. 4 Claims. (Cl. 152—11.5.)

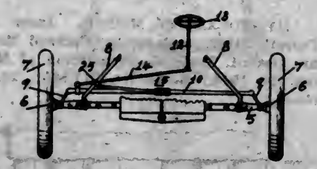


1. A device of the character described, comprising a tubular body, a plunger carried within and movable longitudinally of the body, said plunger extending beyond one end of the body, a member carried in the opposite end of the bore of the body, a spring secured at its opposite ends to the plunger and member, said spring acting to oppose the separation of the plunger and member, and an element engaging the member whereby the member may be moved longitudinally relatively to the plunger to adjust the tension of the spring.

1,485,527. MACHINE FOR CUTTING STUMPS. CLEMENS RAEBEL, San Antonio, Tex. Filed Dec. 27, 1922. Serial No. 609,261. 10 Claims. (Cl. 144—2.)

1. In combination, a horizontally disposed supporting means adapted to be positioned over a stump, a cutter carried by said supporting means including a pair of

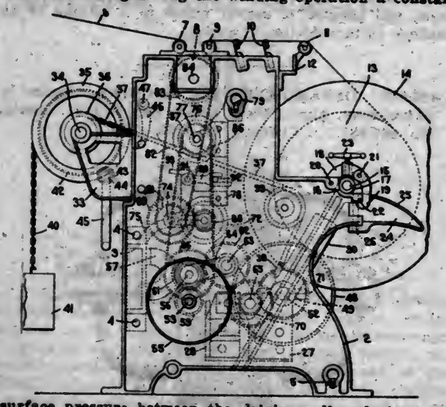
radially extending sections, and a horizontally disposed section extending between said radially extending sections,



said radially extending sections carrying the horizontally disposed cutter being adapted to turn about said supporting means and serve for cutting the stump.

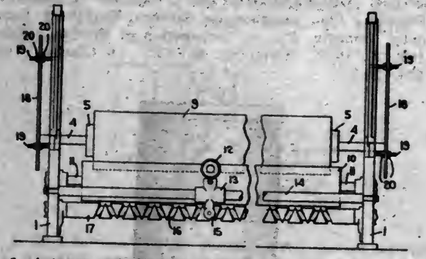
1,485,528. KEY TAG. ROBERT RALSTON, Montreal, Quebec, Canada. Filed Dec. 1, 1922. Serial No. 604,253. 2 Claims. (Cl. 40—2.)

1. In a key tag, a tag plate having a key slot and lock at one end thereof and a card retaining cover extending over the main portion and rigid therewith, and forming a permanent frame having a slit at one end for the insertion of the card between the back and the front.



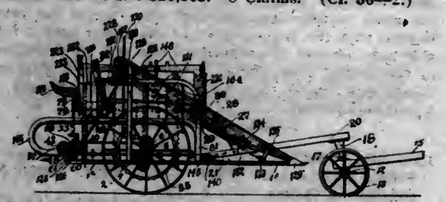
1,485,529. TENSION DEVICE FOR THE STEERING GEAR OF AUTOMOBILES. JACOB E. REMPE, Springfield, Ill. Filed Nov. 25, 1922. Serial No. 603,371. 1 Claim. (Cl. 280—89.)

In a tension device for the steering rods of automobiles, the combination of a longitudinally movable steering rod; spindles operatively conected at the respective ends of the steering rods; vehicle wheels rotative on said spindles; block members extending lengthwise of the connecting rod; grooved wheels carried by said block members and contacting with the periphery of the steering rod; springs controlling the pressure of said grooved wheels on the steering rods; means for controlling the stress of said springs and a stationary block and a connecting device connecting said stationary block with one of said block members, to prevent longitudinal movement of the block members on the connecting rod.



1,485,530. WARPER. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 12, 1921. Serial No. 468,897. 21 Claims. (Cl. 28—39.)

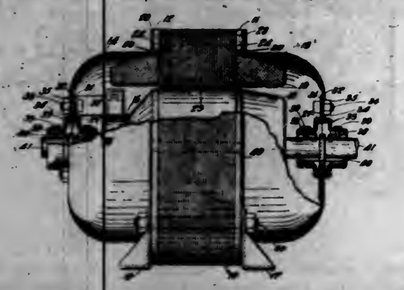
19. A warper comprising a frame, a warp beam, a beam driving roll contacting with the warp on the beam and acting therethrough to rotate the beam, and means for maintaining during the winding operation a constant



surface pressure between the driving roll and the warp mass on the beam thereby to secure a uniform density in the warp mass.

1,485,531. GUIDE MEANS FOR WARPERS AND SIMILAR MACHINES. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 21, 1923. Serial No. 640,431. 4 Claims. (Cl. 28—32.)

1. A yarn winding machine comprising a frame, a yarn receiver having a core, roll and journals, a winding drum in parallelism with the roll and acting by peripheral engagement with the yarn mass on the roll to effect the winding operation, means to permit transverse movement of the roll with respect to the drum as the winding operation proceeds, and guide plates abutting the ends of the roll journals and supported rigidly from the frame at right angles to the roll axis whereby longitudinal movement of the yarn receiver is prevented during transverse movement of the roll in the winding operation.



1,485,532. COMBINATION HARVESTER. ANDREAN G. RONNING and ADOLPH RONNING, Boyd, Minn. Filed Mar. 2, 1914, Serial No. 822,008. Renewed Aug. 27, 1919. Serial No. 320,305. 8 Claims. (Cl. 56—2.)

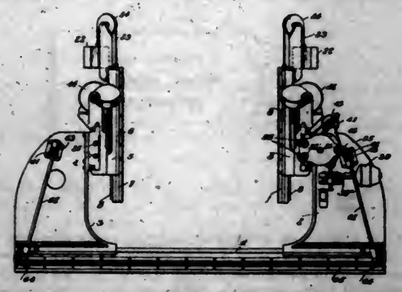
1. A harvesting machine having in combination a frame adapted to support grain binding and ensilage cutting devices, a grain platform mounted thereon, cut-

ting means on said platform, an elevating means adjacent said platform to receive the cut material therefrom, and adapted to deliver either to a binding or an ensilage cutting device.

1,485,533. DYNAMO-ELECTRIC MACHINE. AMATO N. SAMMARONE, Akron, Ohio. Filed May 9, 1921. Serial No. 467,887. 4 Claims. (Cl. 172—36.)

1. A dynamo-electric machine including, a field piece, a clamp-ring on each end of said field piece, and a sheet metal pedestal on each of said clamp-rings and centralised therein by a double-up annular flange integral with said pedestal.

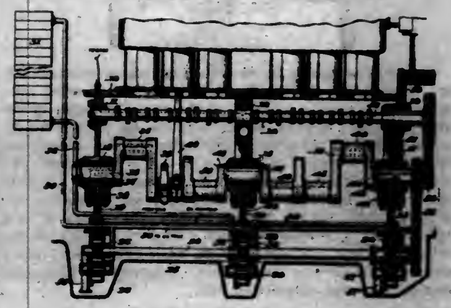
1,485,534. ORCHARD HEATER. BRONSON C. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed July 13, 1923. Serial No. 651,232. 10 Claims. (Cl. 126—59.5.)



1. A knock down orchard heater, the same comprising a grate member provided with seats for the reception of supporting leg members, supporting legs carrying a head extension adapted to interlock with and support the grate member and provided with means for interlocking with the body member of the heater, and a foldable body adapted to embrace the legs and grate members of the heater when placed in closed condition and provided with means for holding the edges thereof in locked engagement.

1,485,535. COMBINATION KITCHEN TOOL. JOHN I. STEIN, Muncie, Ind. Filed June 2, 1923. Serial No. 642,965. 3 Claims. (Cl. 7—15.)

1. A kitchen tool of the combination type comprising a tool-head presenting radially disposed tool elements, a handle member having a forked end in which the said head is mounted for rotation, and means for clamping the head in fixed relation to the arms of the fork and including locking grooves in the tool-head in which the fork arms set as one or another of the said tool elements is revolved into position with respect to the handle member.



1,485,536. SLOTTING MACHINE. ALFRED TROSCH, Rochester, N. Y., assignor to Arthur H. Ingle, Rochester, N. Y. Filed Dec. 8, 1921. Serial No. 520,955. 22 Claims. (Cl. 90—46.)

1. A metal working machine comprising a vertically reciprocating tool carrying ram, a reversible electric motor, operative connections between said motor and ram, and means controlled by the ram and acting automatically to reverse the motor and thereby reciprocate the ram.

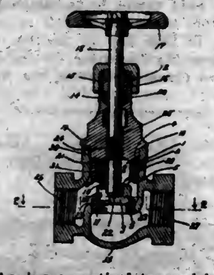
1,485,537. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 14, 1918. Serial No. 211,885. 22 Claims. (Cl. 184—6.)

10. In combination with a travelling hydrocarbon motor having a crank case, an oil reservoir, three pumps disposed in said case, two pumps having their suctions at opposite ends of the crank case and near the bottom thereof and discharging into said reservoir, the third pump having its suction connected to said reservoir, a support for each pump secured to a crank shaft bearing, each of said supports and associated bearing having a conduit opening at one end against the crank shaft, and means to convey the discharge from the third pump to each of said conduits.

1,485,538. SOUND-DETECTING APPARATUS. WILLIAM L. WALKER, New York, N. Y., assignor to Walker Signal and Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 4, 1918. Serial No. 210,380. 11 Claims. (Cl. 177—386.)

5. In apparatus of the character described, the combination of a flexible band, supports engaging the band at spaced intervals so that the portion of the band therebetween may vibrate to and fro, and means for conjointly moving the supports to and from each other.

1,485,539. SOUND-RECEIVING APPARATUS. WILLIAM L. WALKER, New York, N. Y., assignor to Walker Signal and Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed May 11, 1921. Serial No. 468,612. 22 Claims. (Cl. 181—0.5.)

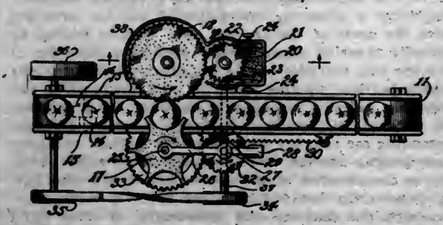


2. In a device of the class described, a diaphragm subjected to hydrostatic pressure upon one side, and means constructed and arranged to provide a balancing pressure upon the opposite side of said diaphragm, said means comprising a watch column and an associated pressure chamber of relative large surface area as respects the diameter of the column.

1,485,540. DESULPHURIZING MEDIUM AND PROCESS OF USING SAME. RICHARD WALTHER, Dusseldorf, Germany. Filed Mar. 22, 1922. Serial No. 545,875. 6 Claims. (Cl. 75—27.)

1. As a new composition of matter, the hereinbefore described desulphurising medium, which consists of a mixture of alkali and alkali earth, the alkali being present in such an amount that the mixture will melt at a temperature approximating that at which the alkali per se will melt.

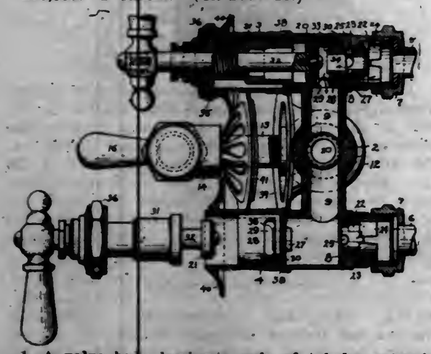
1,485,541. STEAM AND WATER VALVE. ALBERT K. WAYCOTT, Larchmont, N. Y. Filed Dec. 30, 1920. Serial No. 434,086. 9 Claims. (Cl. 251—156.)



2. A valve having a vertical tapered boring or opening between opposite ports, a tapered liner adapted for insertion in the boring, having an opening therethrough lengthwise and two opposite side openings therein, internal annular gate seating means in one end of the liner, a slidable gate for play in the lengthwise opening adapted to engage said seating means for closing the liner, a spindle adapted for turnable connection with the gate member for actuating the same, a bonnet for holding the spindle member.

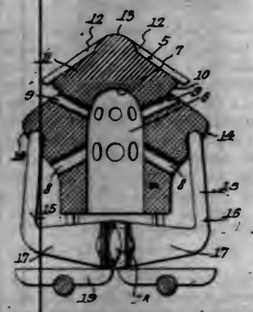
1,485,542. ELECTRIC CONTROLLER. ROBERT E. WEIMER and MATS A. SPEICHER, Colliers, W. Va., assignors, by mesne assignments, to Weimer-Warren Company, Colliers, W. Va., a Corporation of West Virginia. Filed May 19, 1922. Serial No. 562,198. 3 Claims. (Cl. 219—48.)

1. In a rheostat for an electric-motor system terminal, an armature terminal, a shunt-field winding terminal, a sectional resistance, a series of fixed contacts connected to the said field winding terminal and the sections of the resistance, a blow-out winding for the first resistance contact, a movable contact adapted to first engage the field-winding contact and then the resistance contacts in succession, the movable contact having a length sufficient to bridge all the fixed contacts, and means for short-circuiting the blow-out coil when the movable contact engages a certain fixed contact beyond the first resistance contact.



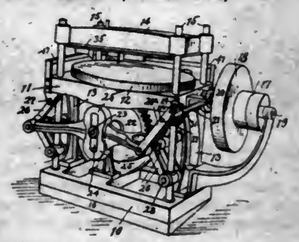
1,485,543. PRINTING MACHINE. ANSEL S. WYSONG, Long Beach, Calif. Filed Jan. 9, 1922. Serial No. 527,850. 3 Claims. (Cl. 101—37.)

1. In a printing machine frame; a belt adapted to travel and carry objects on its upper surface mounted in said frame; a printing roll revolubly mounted in said



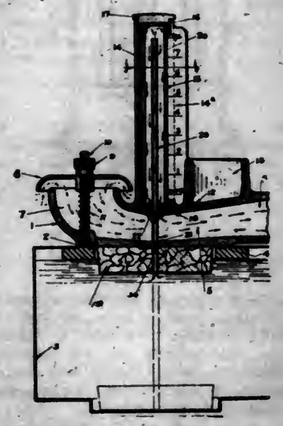
frame adjacent to the side of said belt; means to place characters in ink on said roll; and means at the side of said belt to cause the objects on the belt to engage the printing roll, said means being adapted to move toward or away from the printing roll to permit objects of different sizes to pass and to position the object so that it will engage the character on the roll, whereby the characters are transferred from the roll to the object.

1,485,544. VALVE AND FITTING. LEON B. YEISER, Cleveland, Ohio. Filed Feb. 7, 1919. Serial No. 275,523. 2 Claims. (Cl. 277—18.)



1. A valve body having a pair of tubular extensions with separate water inlets and a common water outlet, a replaceable valve seat within each extension, a check valve within each water inlet engaged and held open by said valve seat, a longitudinally-movable valve opposite each valve seat, and means for jointly supporting said valve and the replaceable valve seat within each extension.

1,485,545. ATTACHMENT FOR GRATES. NICHOLAS J. ZUZULIN, Minot, N. Dak. Filed Aug. 14, 1923. Serial No. 657,289. 2 Claims. (Cl. 126—163.)

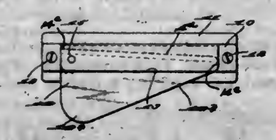


2. A coal supporting device of the character described, comprising a generally crown-shaped member arranged above the grate of the fire box, said member having an upwardly tapering upper portion forming a shoulder at its lower end, and also having an intermediate outwardly bulging portion tapering upwardly and downwardly and projecting radially beyond said shoulder for a substantial distance, said member having a centrally arranged upstanding air chamber with upwardly inclined radiating ports leading therein and discharging outwardly adjacent to the shoulder of the upper portion and also having downwardly inclined radiating ports in communication with the chamber and discharging at their outer ends adjacent to the lower reduced end of the bulging intermediate portion, said intermediate portion having notches formed in its lower downwardly inclined wall, a support embodying spaced upstanding fingers adapted for insertion within the notches and serving to prevent the clogging of the lower ports, and downwardly inclined radiating ribs arranged upon the top of the upper portion and projecting over the lower shoulder thereof to prevent the clogging of the upper ports.

1,485,546. CUTTING MACHINE. HARRY F. AFFELDER, Cleveland, Ohio. Filed Feb. 6, 1920. Serial No. 356,677. 10 Claims. (Cl. 164—23.)

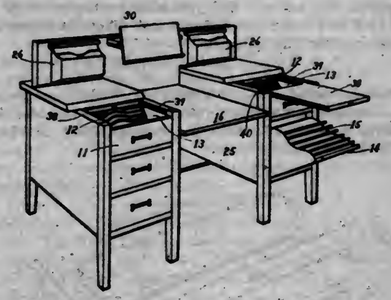
1. In a cutting machine, a head adapted to be provided with a cutter, a rotatable cutting block toward and from which the head is moved, means for imparting a regular reciprocating stroke to the head, means for imparting irregular rotative movements to the block including a friction roller bearing against a portion of said block and adapted to slip with respect thereto, and means operated in timed relation with the movements of the head for imparting rotative movements to said roller, and through said roller to said block during the movement of said head.

1,485,547. CARBURETOR. EDWARD F. ANDREWS, Chicago, Ill., assignor to Universal Engineering Company, Maywood, Ill., a Corporation of Illinois. Filed Aug. 3, 1917. Serial No. 184,205. 11 Claims. (Cl. 261—70.)



1. The combination with a carburetor and a fuel supply tank therefor, at a level below the carburetor, the fuel level in which continuously falls as the fuel is consumed by the engine, of devices through which fuel may be raised from said tank to said carburetor upon each suction stroke of the engine, said devices comprising a tube supported on the surface of the fuel in said tank, and having an opening, through which fuel is supplied thereto, below the level of the fuel in the tank so that the distance through which the fuel is raised remains constant from the full to the empty level of the fuel in said tank.

6. In a carburetor for hydro-carbon engines, the combination with a fuel tank having a float, of a fuel pipe carried by said float, and rising upwardly therefrom, a chamber surrounding the upper end of said fuel pipe, a nozzle connected with said chamber having its discharge opening in the base of said chamber, said discharge opening being subject to reduction in pressure created in the mixing chamber of the carburetor by the suction of the engine to draw fuel through said pipe into said chamber and through said nozzle.

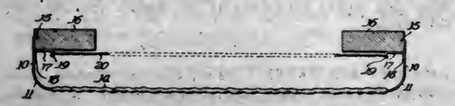


11. The combination with a carburetor having a mixing chamber of given diameter of a fuel tank for supplying fuel to said mixing chamber, said tank lying below the level of said mixing chamber, and means for lifting fuel from said fuel tank through a constant distance, and delivering it to said mixing chamber while the level of the fuel in said fuel tank varies through a distance greater than the diameter of said mixing chamber, comprising a tube having an intake opening below the level of the fuel in said tank, said tube being subject to reduction in pressure created in the mixing chamber of the carburetor by the suction of the engine.

1,485,548. ENVELOPE OPENER. WILLIAM L. BARBER, Providence, R. I. Filed Aug. 4, 1921. Serial No. 489,804. 2 Claims. (Cl. 120—35.)

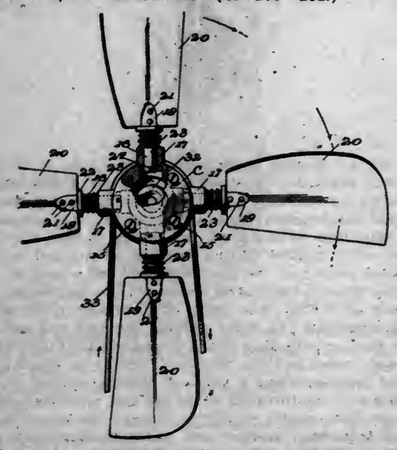
1. An envelope opener comprising a holder in the form of a plate folded upon itself to constitute a thin flat sheath, and a blade pivoted adjacent one end thereof to said holder, said blade having a relatively wide inner portion to constitute a finger-piece and tapering thence to a relatively narrow outer portion engaged frictionally within said sheath when closed, a corner of said blade engaging said holder to limit the opening of the blade to a predetermined angle with respect to the holder.

1,485,549. TYPEWRITER DESK. WALTER C. BIENEMAN, Chicago, Ill. Filed Sept. 24, 1920. Serial No. 412,500. 14 Claims. (Cl. 45—52.)



1. A typewriter desk comprising in combination, a desk top arranged at a height suitable for use as a writing top, pedestals for supporting said top and having spaces therein directly below said top for the reception of stationery and the like, a typewriter platform between said pedestals and below the level of the top and means for lowering said platform when the same is not in use, a cover for the typewriter consisting of a portion of said top, movable to uncover the typewriter, said movable portion including also portions of the desk top over the forward ends of said stationery spaces and adapted to give access thereto when said top is raised, and receptacles secured on the movable portion of said desk top and adapted to be lowered into said stationery spaces when said top is closed.

1,485,550. TOURING CAR. CHARLES W. BLAND, Cedar Rapids, Iowa, assignor of one-fourth to L. W. Davis and J. J. Dolphin, both of Ryan, Iowa. Filed Aug. 23, 1922. Serial No. 583,868. 4 Claims. (Cl. 296—23.)



1. Combined with the house-like body of an automobile, a foldable bed-couch crosswise of the rear end, seats opposite thereto, and a foldable table adapted to be dropped to usable position between the couch and said seats.

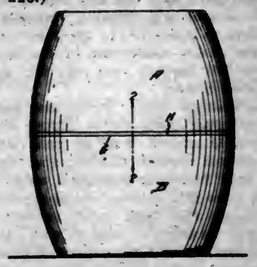
1,485,551. CURTAIN BRACKET. JAMES A. CIVIS, Chicago, Ill. Filed Nov. 4, 1921. Serial No. 512,873. 4 Claims. (Cl. 156—22.)

2. A bracket comprising in combination a single strip of metal bent into curved form, its ends lying at a right angle, one end being provided with inturned teeth and an angle secured to said strip at a point adjacent to the toothed end thereof.

1,485,552. FAN AND PULLEY THEREFOR. ELI F. COLBY, Lake Mills, Iowa. Filed Feb. 10, 1922. Serial No. 535,512. 15 Claims. (Cl. 170—162.)

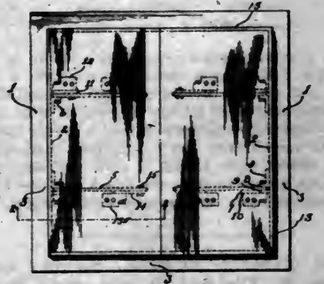
1. A hub member for a fan, comprising a cylindrical portion, a journal sleeve extending axially from one end of the cylindrical portion, a second sleeve in the form of a belt pulley surrounding the first named sleeve and extending from the same end of the cylindrical portion, and means carried by said cylindrical portion whereby a plurality of fan blades may be supported.

1,485,553. SUPPORTING FRAME FOR LIQUID-DISPENSING APPARATUS. EMORY CROUSE, Wichita, Kans. Filed Oct. 30, 1922. Serial No. 597,902. 2 Claims. (Cl. 221—100.)



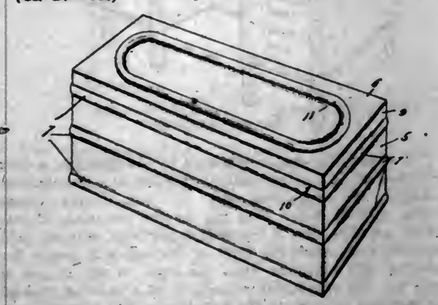
1. A liquid dispensing and measuring apparatus comprising in combination a base ring adapted to be secured to a foundation, a bowl supporting base and means for rigidly spacing said base ring and said bowl supporting base, said means consisting of the supply and the overflow pipes.

1,485,554. AIR VALVE. EMORY CROUSE, Wichita, Kans. Filed Nov. 13, 1922. Serial No. 601,694. 5 Claims. (Cl. 251—118.)



3. An air control device comprising a pair of hollow members adapted to be connected together, a diaphragm extending transversely of said members, means for clamping said diaphragm firmly in place between said members, said diaphragm having a central opening therein, a cylindrical valve member, having a flange at one end and a threaded portion at the other end, said valve member extending through the central opening in the diaphragm, an opening extending transversely through said valve member intermediate the flange and the threaded end and an axial opening extending from one end of said valve member and communicating with said transverse opening, a second member having a threaded opening adapted to cooperate with the threaded end of the first mentioned member, an axial opening extending through the second mentioned transverse member and communicating with the axial opening in the first mentioned member, a cylindrical channel in the end of the second mentioned member, a resilient washer in said channel, a tubular member slidably mounted in one of said hollow members and adapted to engage the resilient washer in the circular channel, and means comprising a spring for normally maintaining the tubular member out of contact with said resilient washer.

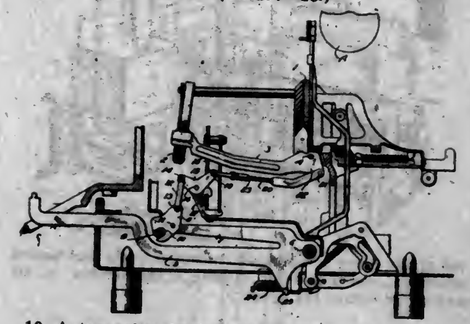
1,485,555. WELDED JOINT FOR BARRELS. SPENCER S. DAYKIN, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 10, 1921. Serial No. 443,834. 2 Claims. (Cl. 113—116.)



1. A barrel comprising two tub-like sections, the edge of one section being formed with an inwardly extending annular shoulder and the extreme edge projected outwardly, the inwardly and outwardly bent portions being inserted into the edge of the other tub-like section, said edge contacting with the inwardly extending annular shoulder of the first named section, said parts being welded together at their points of contact.

1,485,556. HINGE CONSTRUCTION. PAUL F. ELLMER and CHARLES STERN, Philadelphia, Pa. Filed Jan. 15, 1923. Serial No. 612,670. 6 Claims. (Cl. 16—163.)

1. In combination with a door and a support; an arm hinged to the support and pivotally connected with the door by a link and a lever, and a link pivotally connecting the lever with the support.



1,485,557. SELF-SEALING BURIAL VAULT. CHARLES B. HANNA, Minneapolis, Minn. Filed Jan. 14, 1921, Serial No. 437,296. Renewed July 21, 1923. 6 Claims. (Cl. 27—35.)

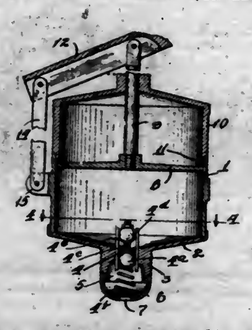
1. The combination with a box, of a cover having a pocket slidable into the box in close contact therewith,

said pocket being arranged to receive a plastic cement adapted to run into contact with the box and harden after the cover is applied.

1,485,558. TYPEWRITER ACTION. DE WITT C. HARRIS, Pineland, Fla. Filed Mar. 22, 1922. Serial No. 545,646. 10 Claims. (Cl. 197—28.)

10. A typewriter having, in combination, a key lever and type bar, and an actuating jointed draw connection between said key lever and said type bar, said draw connection having an intermediate joint which is adapted to move approximately in a line connecting the remote ends of said draw connection during the first portion of the depression of said key lever, and means consisting of a fulcrum and a slotted extension from said draw connection cooperating with said fulcrum for causing said joint to swing out of said line during the balance of the depression of said key lever.

1,485,559. FURNACE GRATE. HARRIS B. HOLT, Dormont, Pa., assignor to Rosedale Foundry & Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1923. Serial No. 627,045. 2 Claims. (Cl. 110—40.)



2. A replacement member for a chain grate which includes in its structure links, pivot rods, and fuel-supporting members, said replacement member adapted to form with a companion piece a replacement part for a grate link, said member being provided at one end with a recess adapted to engage a pivot rod of the grate structure, and at the opposite end presenting a square surface for abutment upon a companion piece, and being provided further intermediate its ends with a projection adapted to form with a corresponding projection upon the companion piece a lug for engagement by a fuel-supporting member of the grate.

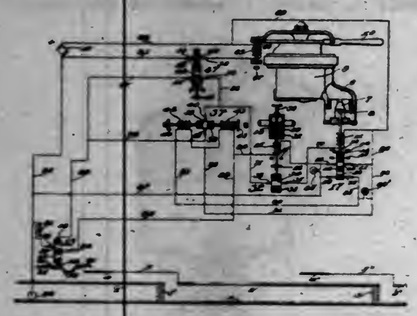
1,485,560. INDICATING FUSE PLUG. JOHN E. JOHNSON, De Kalb, Ill., assignor of one-half to C. Edward Lindgren, De Kalb, Ill. Filed Nov. 27, 1920. Serial No. 426,794. 3 Claims. (Cl. 200—121.)

1. A fuse plug having a cavity therein, a fuse mounted within the cavity, and a metal foil stretched across the mouth of the cavity and clamped substantially at its periphery against the fuse plug.

1,485,561. FLUID-DISPENSING DEVICE. CHARLES H. JOY, Jr., and LOUIS J. SAUER, Chicago, Ill., assignors to Charles H. Joy, Chicago, Ill. Filed Feb. 6, 1922. Serial No. 534,336. 3 Claims. (Cl. 221—78.)

1. A fluid dispensing device comprising a hollow cylindrical body portion adapted for receiving the fluid, a piston adapted for reciprocating in said body portion, a cover portion comprising a relatively deep cylindrical member removably attached to said body portion for forming a chamber above the piston and having an opening in its top for receiving the piston rod, means for limiting the movements of said piston to substantially the depth of said body portion, a nozzle at the lower end of said body portion, said nozzle having an upwardly extending partispherical recess for the purpose set forth.

1,485,562. REENFORCING BAR FOR CONCRETE CONSTRUCTIONS. WILFRID LUMLEY, Conneaut, Ohio. Filed Sept. 29, 1919. Serial No. 327,299. 4 Claims. (Cl. 72—111.)



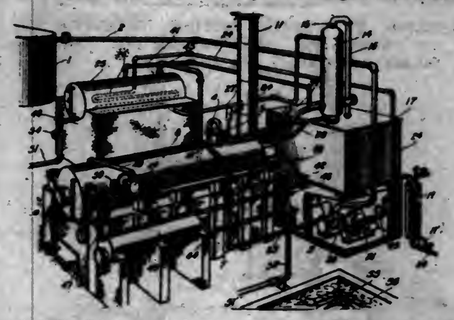
1. A reenforcing unit for concrete structures composed of two spiral flanged bars one located within the other, one spiraled in one direction, and the other spiraled in the reverse direction and on a smaller diameter than the first.

1,485,563. TRAIN-CONTROLLING SYSTEM. HAROLD A. MAXFIELD, Worcester, Mass., assignor to Ezra P. Waterhouse, Worcester, Mass. Filed Mar. 16, 1922. Serial No. 544,259. 29 Claims. (Cl. 246—70.)

10. A train controlling system comprising in combination a source of electrical energy carried by the train, an air-brake-controlling magnet normally energized by

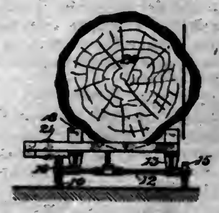
said source, an excess-current magnet, a switch actuated by said excess-current magnet, said switch controlling

the circuit of said air-brake-controlling magnet, and a switch actuated by said air-brake-controlling magnet for controlling the circuit of the excess-current magnet.



1,485,564. CAST METAL WHEEL. LEO MELANOWSKI, Cleveland, Ohio, assignor of one-third to Warren H. Cowdery and one-third to George B. Durell, both of Cleveland, Ohio. Filed Apr. 23, 1920. Serial No. 375,956. 1 Claim. (Cl. 301—64.)

A cast metal automobile wheel comprising a hub portion, a peripheral portion having tire retaining flanges, and a connecting web portion, the outer portion of said web being flat, the inner portion of said web being corrugated or fluted along radial lines, said peripheral portion being wider than the hub portion.



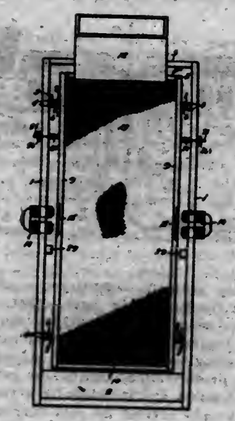
1,485,565. APPARATUS FOR CONVERTING HEAVY HYDROCARBONS INTO LIGHTER HYDROCARBONS. WILLIAM F. MEHL, Kansas City, Mo., assignor to Interstate Refineries, Inc., Kansas City, Mo., a Corporation of Missouri. Filed Mar. 17, 1921. Serial No. 453,049. 7 Claims. (Cl. 196—3.)

1. An apparatus for converting heavy hydrocarbons into lighter hydrocarbons comprising a still, means for heating the contents of the still to a vaporizing temperature, a gravity separator, means for conducting residual oil from the still to the gravity separator, a tank, a pipe through which oil may pass from the separator to the tank to carry hot oil to the tank, a preheater coil in the tank, means for feeding raw oil to said preheater coil, a tower connected to the preheater and to the still, the oil inlet to the tower from the preheater being at one end of the tower and the oil discharge from the tower to the still being at the other end thereof, a vapor outlet for the still leading into the tower above the oil discharge from the tower to the still, a vapor discharge at the other

end of the tower, a condenser connected to the last-named discharge, and means for causing a counter-flow of oil and vapor within the tower.

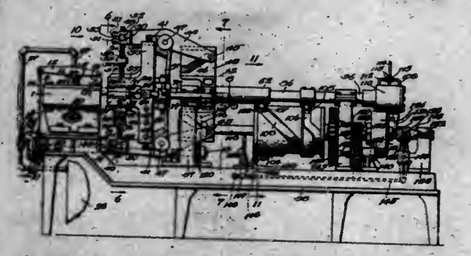
1,485,566. OFFSET FOR LOG CARRIAGES. EDWARD S. RIDEOUT, Klamath Falls, Oreg., assignor of one-half to Harold D. Mortensen, Klamath Falls, Oreg. Filed Aug. 15, 1922. Serial No. 581,919. 3 Claims. (Cl. 143—109.)

2. An offset mechanism for a log carriage comprising a carriage frame, transverse axles upon which said carriage frame is mounted and upon which it is slidable laterally, flange wheels on said axles to run upon a track, sleeves fixed on said axles, bell crank levers pivoted to the carriage frame and each having one arm connected with one of said sleeves, a rod connecting the other ends of said bell cranks, a steam cylinder having a piston with a piston rod, an operating lever centrally pivoted to said carriage frame, one end of said lever being connected with the said piston rod, the other end being connected to the rod connecting said bell crank arms whereby movement of the piston will shift the frame laterally on said axles, a valve controlling the inlet ports of said steam cylinder, and an operative connection between said valve and one of the wheels on said axles whereby movement of the wheel in one direction will actuate the valve to admit steam into one end of the cylinder to cause the carriage frame to be shifted in one direction and movement of the wheel in the opposite direction to actuate the valve to admit steam in the other end of the cylinder to shift the frame laterally in the opposite direction, said operative connection comprising a shoe frictionally geared against the face of said wheel and adapted to be shifted longitudinally by turning movement of the wheel, a bell crank pivoted to the carriage frame, one arm of said bell crank being connected to said shoe, the oter arm being connected by means of levers to said valves.



1,485,567. COAT POCKET. MYER ROBERTS, Philadelphia, Pa. Filed July 13, 1922. Serial No. 574,636. 2 Claims. (Cl. 2—15.)

1. The combination with a garment having a pocket opening of plies of cloth sewed to the garment around the opening to form two compartments, the outer ply being sewed to the edge of the opening; a welt interposed between the edge of said ply and the edge of said opening and sewed thereto; a section of cloth sewed to the ply which forms the inner side of the outer compartment to provide a pocket; a flap sewed to the upper edge of

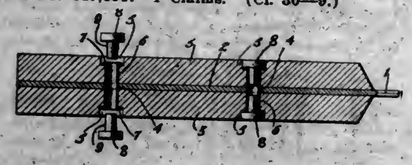


said ply and extending below the upper edge of the pocket, and a section of cloth sewed to the inner side of the inner compartment to provide a pocket having its entrance opening above the entrance opening of the first pocket and its bottom above the bottom of the first pocket.

1,485,568. SCREENING MECHANISM. CHARLES C. RUPRECHT, Olmsted, Ill. Filed May 4, 1922. Serial No. 558,421. 3 Claims. (Cl. 83—56.)

1. An apparatus of the kind described comprising a rectangular supporting frame, a rectangular screen disposed within said frame in the same plane thereof, pivoted links connecting said screen at each end to said supporting frame, electric magnets on the side rails of said supporting frame between said links, armatures carried by said screen opposite said magnets, cushioning springs disposed between said screen and said frame to each side of said magnets and means for energizing and deenergizing said magnets for oscillating said screen.

1,485,569. CASTING MACHINE. FRED F. SCHROEDER, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed May 23, 1919. Serial No. 299,341. 27 Claims. (Cl. 22—69.)



1. In a casting machine; the combination with a die carrier; of a reciprocable head upon which said die carrier is supported to move transversely of the direction of reciprocable movement of the head; a lever upon the head connected with the die carrier to effect die movement; cam mechanism for effecting operation of the lever; and mechanism for moving said head and for moving said cam mechanism.

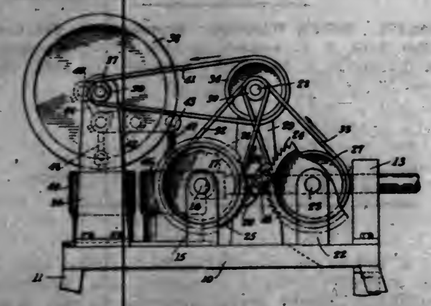
1,485,570. NUTCRACKER. OSCAR J. SCHROETER, St. Louis, Mo., assignor to Schroeter Bros. Hdw. Co., St. Louis, Mo., a Corporation of Missouri. Filed Nov. 28, 1921. Serial No. 518,366. 1 Claim. (Cl. 146—16.)

A nut cracker, comprising a frame composed of a casting having a horizontally-disposed base provided at one end with a stationary, upwardly-projecting nut engaging member that has a vertically-disposed face against which a nut is adapted to be held, an integral, tubular guide on said base disposed in longitudinal alignment with said nut engaging member, a pair of lugs projecting rearwardly from said guide above said base, an eccentric pivotally mounted between said lugs on a horizontal pin and provided at one side with a hub that bears against the inner vertical side face of one of said lugs, an integral operating handle on said eccentric, a laterally-projecting flange on one side of said eccentric, and a horizontally disposed reciprocating member in said guide formed from a piece of round rod cut away at one end so as to produce a hooked projection and a bearing face that are engaged by the flange on the eccentric during the operation of actuating said eccentric, said guide being of sufficient length to insure said reciprocating member moving in a straight line when said eccentric is oscillated.

1,485,571. KNIFE HANDLE. FREDERICK M. STEVENS, New York, N. Y., assignor to John Chatillon & Sons, a Corporation of New York. Filed Feb. 25, 1921. Serial No. 447,891. 4 Claims. (Cl. 30—9.)

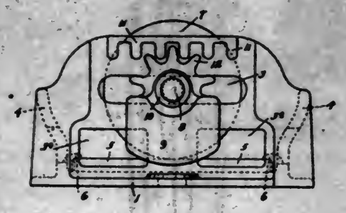
1. A tool having a handle portion provided with a hole, a handle having a countersunk hole registering therewith, a tubular headed fastening in said holes fastening said members together and within said countersink, and a headed plug frictionally engaging the bore of said fastening and fitting said countersink.

1,485,572. SUPPORTING STRUCTURE. ALOYSIUS F. STOLTE, Philadelphia, Pa. Filed June 1, 1921, Serial No. 474,163. Renewed Aug. 2, 1923. 5 Claims. (Cl. 81—41.)



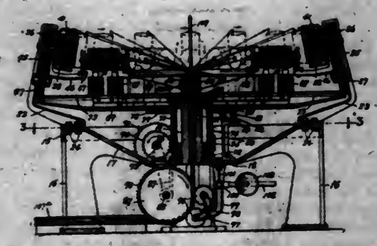
1. A supporting structure including members in telescopic slidable connection with each other, one of said members having piercing projections; means for adjustably securing said members together; and a jack including a cup in which the other of said members freely fits and is free to rotate; substantially as described.

1,485,573. TIRE. BENJAMIN C. SWINEHART, Akron, Ohio. Filed Dec. 2, 1920. Serial No. 427,771. 6 Claims. (Cl. 152—1.)



1. A cushion tire comprising an elastic body provided with a circumferentially extending series of openings which extend laterally therethrough, each opening having an outer wall which conforms to the interior surface of a cylinder and an inner wall which conforms to the exterior surface of a relatively smaller cylinder, the said surfaces being eccentrically arranged to provide an opening having oppositely disposed knifelike extremities.

1,485,574. WAVE AND TIDE MOTOR. ITALO PASQUALE VIORA, Brooklyn, N. Y., assignor to Italo Pasquale Viora, Michele Vitolo, and Carlo Fischetti, all of Brooklyn, N. Y. Filed Oct. 6, 1922. Serial No. 592,677. 2 Claims. (Cl. 253—11.)

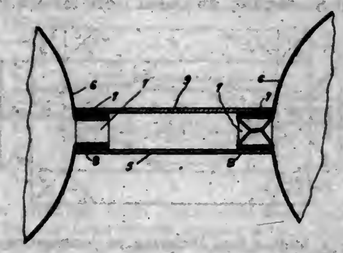


2. A wave motor comprising a float and mechanism operated thereby, said mechanism consisting of a plurality of ratchet wheels, a lever journalled to the shaft of one of said ratchet wheels, a pin in said lever, extending between said ratchet wheels and pawls upon said pin for each of said ratchet wheels, said pawls being adapted to engage said ratchet wheels alternately.

1,485,575. ROLLER SIDE BEARING. EDWIN W. WEBB, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,647. 3 Claims. (Cl. 64—64.)

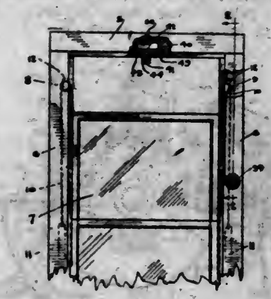
1. A side bearing for railway cars having in combination, a frame member comprising a housing, said housing having means adjacent its top for engagement by a counterweight, a bearing roller disposed in said housing, a counterweight swingingly supported at the outer side of said housing closely adjacent the side thereof, said counterweight member having means at its upper end adapted to engage the said means on the housing, and means connecting the roller and counterweight for moving said counterweight to cause the same to swing out of position when said roller moves from normal position, whereby said counterweight will return the roller to normal position.

1,485,576. BRAIDING MACHINE. ALEX WENDELBURG, New York, N. Y. Filed Sept. 27, 1919. Serial No. 326,878. 10 Claims. (Cl. 96—7.)



10. A braiding machine comprising a pair of tracks located concentrically within each other, a series of thread carriages mounted upon anti-friction devices resting upon said tracks, a series of thread carriers located about the braiding point, at least one of said series travelling in a predetermined continuous path and means whereby said carriers are individually actuated to forcibly pass the threads carried by said carriers under said anti-friction devices, the threads coming in contact with said anti-friction devices and sweeping over the upper surface of said track and electromagnets to retain said anti-friction devices upon said tracks.

1,485,577. TOY BALLOON. ARTHUR P. WITTER, Akron, Ohio. Filed May 16, 1922. Serial No. 561,472. 2 Claims. (Cl. 46—37.)



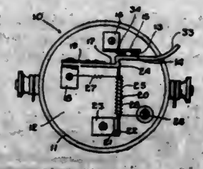
1. In a device of the class described, a pair of balloons each having an elongated tubular neck, a rigid

tubular handle therefor and a cylindrical ring secured to the neck of each balloon by being positioned thereon

with the end portion of the neck turned back on the ring, and adhesively secured to the interior surface of the handle.

1,485,578. WINDOW-CLOSING DEVICE. LEE E. WOLGEMUTH, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed May 2, 1921. Serial No. 466,052. 10 Claims. (Cl. 161—1.)

1. In a window closing device the combination with a window casing, a window movable therein, means adapted normally to move said window to closed position, comprising weights heavier than said window operating within said casing, sheaves in said casing, and flexible means connecting said weights and said window, releasable means for holding said window fixedly in open position comprising a shoe hinged adjacent a sheave and normally out of engagement therewith, and a lever passing beneath said shoe pivoted at one end to the casing and provided at its opposite free end with a spring normally urging said lever upwardly to cause frictional engagement of said shoe and sheave to prevent rotation of the latter, means for controlling the operation of said last mentioned means comprising a drum mounted in said casing, flexible means connected to the free end of said lever and adapted to be wound on said drum to release said shoe, and means adapted to rotate said drum at a predetermined interval.



1,485,579. CAN TAP. HERBERT J. WYATT, Longbranch, Wash. Filed Feb. 2, 1922. Serial No. 533,505. 1 Claim. (Cl. 221—23.)

A device of the class described comprising a tubular member having a conical collar integrally formed on its inner end, said collar being on the inside of a can and said tubular member passing outward through a hole therein; a resilient washer encircling said tubular member outside of said can; a metal washer similarly disposed outside of said resilient washer and shaped to correspond with said conical collar; and a nut screwed on said tubular member and engaging said metal washer and adapted to draw said conical collar outward and thus to

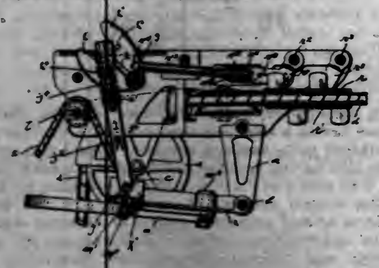
bend the edge of the hole in the container outward, whereby the edge of the hole is smoothed and is clamped between said collar and said resilient washer.

1,485,580. THERMOSTATIC CIRCUIT BREAKER. JAMES GARFIELD ZIMMERMAN, Evanston, Ill., assignor to Jefferson Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 17, 1919. Serial No. 338,494. 2 Claims. (Cl. 200—116.)

2. In combination, a mounting base, a spring arm on said base having a relatively fixed contact, a thermostatic arm attached to the base and extending toward said spring arm, an arm having an offset portion and a contact cooperable with said first contact, said arm extending between said first contact and said thermostatic arm and being adapted to be held with the contacts in electrical engagement by end-wise engagement of said thermostatic arm therewith, said thermostatic arm being adapted to be flexed from endwise engagement with said contact carrying arm into the offset portion thereof to permit opening of the switch, said contact carrying arm projecting to provide a finger piece for closing the switch.

1,485,581. SINGLE AND DOUBLE FLAT-CURTAIN-ROD BRACKET. AARON ACKER, Ogdensburg, N. Y., assignor to The Newell Mfg. Co. Inc., Ogdensburg, N. Y., a Corporation of Maine. Filed May 29, 1922. Serial No. 564,555. 4 Claims. (Cl. 156—22.)

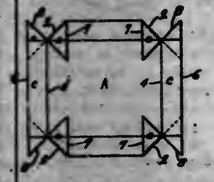
3. The new and improved method of making curtain rod blanks, which consists in cutting a blank medially and lengthwise within its marginal edges to form a plurality of rod-supporting fingers, cutting it transversely from said medial and lengthwise cuts to form a plurality of finger bases, and bending said bases and fingers substantially along the lines of junction of said bases and blank to an angular position relative to said blank.



1,485,582. JOINT LOCK FOR RAILS. LEANDER AHO, Twecoma, and ARNID J. AHO, Princeton, Mich. Filed Oct. 13, 1923. Serial No. 668,315. 4 Claims. (Cl. 238—260.)

1. A rail lock for connecting the adjacent ends of rails comprising a plate of a width to fit between the head and flange of a rail and against the web thereof, said plate being provided with lugs extending through openings formed in the web of the rail, a bar formed in two sections,

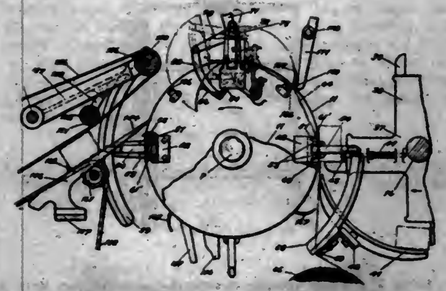
each section being pivotally engaged with one of said lugs, said sections being shiftable to points in alignment with the lugs or to points parallel to said plate, said sections embodying portions which when in the last named position abut against the opposite face of the rail web from the plate to prevent movement of the plate with relation to the rail web and of the rails with relation to one another, and means carried by one of the sections for locking the sections together.



1,485,583. CARRIER. WILLIAM GEORGE BRATTY, Fergus, Ontario, Canada. Filed Jan. 4, 1922. Serial No. 527,028. 13 Claims. (Cl. 212—112.)

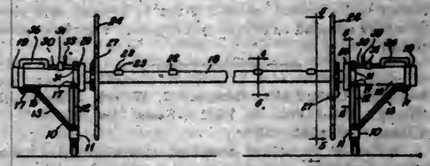
1. A carrier comprising rope gripping jaws, an oscillatory lock for opening and closing said jaws, and a reciprocating detent co-acting with and engaging the lock for holding the jaws in their open position and apertured for the movement of the lock therethrough during its oscillations, said aperture being so positioned in the detent as to be out of line with the lock when the detent is reciprocated to engage the lock and prevent its oscillation while the jaws are in their open position and to be in the path of the lock when the detent is reciprocated to release the lock for its oscillation between the jaw opening and closing positions.

1,485,584. PAPER FOLDING BOX. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Mar. 23, 1922. Serial No. 546,019. 6 Claims. (Cl. 229—32.)



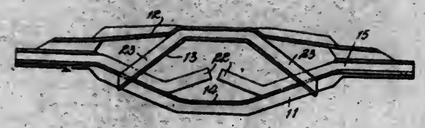
1. In a folding box, including in combination with a blank for forming a unit of the box, a diagonal slot formed in each corner of said blank, a triangular-shaped portion folded inwardly over the face of the blank, adjacent each slot on a line substantially at right-angles thereto, a marginal portion of the blank folded over each two adjacent triangular-shaped portions, whereby the box is reinforced by said triangular-shaped portions of material, one portion overlapping the other equally on both sides of each corner of the box with the apex of the triangle turned inwardly toward the closed side of the box unit.

1,485,585. PAPER FOLDING BOX. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Mar. 23, 1922. Serial No. 546,020. 10 Claims. (Cl. 229—32.)



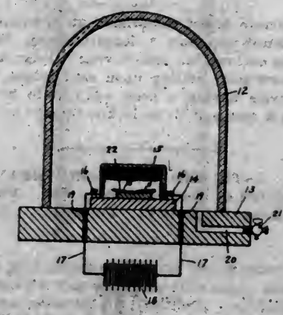
1. In a folding box, including in combination with a blank for forming a unit of said box, the corners of the blank being slotted, and portions thereof folded inwardly, opposite outwardly extended portions of said bank folded inwardly, and secured to adjacent margins thereof, and a second time folded with said margins,—the unoccupied portions of said margins being secured to the folded portions of said corners whereby to effect multiple thickness of the material of the blank over the corners and on opposite sides of said box.

1,485,586. WRAPPING MACHINE. JOSEPH BERK, San Francisco, Calif. Filed Sept. 8, 1921. Serial No. 499,307. 13 Claims. (Cl. 93—7.)



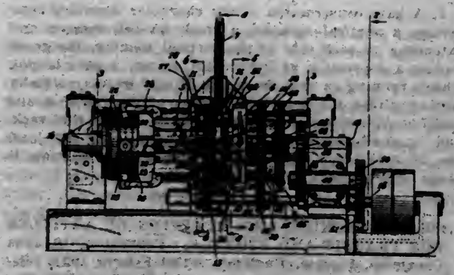
1. In a device of the character described, a device for wrapping an article comprising a platen, means for holding the article against the platen and wrapping material between the article and the platen, means for forcing one end of the material against one end of the article, means for forcing the other end of the material against the other end of the article and over the same and common control means for actuating both means.

1,485,587. DISPLAY RACK. HARRY SUMNER BEST, Galva, Ill., assignor to Charlotte S. Best, Galva, Ill., executrix of John H. Best, deceased. Filed June 16, 1923. Serial No. 645,748. 4 Claims. (Cl. 242—90.)



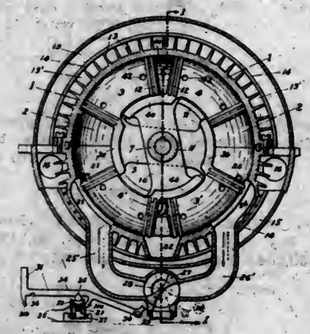
1. A device of the class described comprising a plurality of standards, a tube rotatably journaled in the standards, means for clamping one end of a carpet or the like to the tube, and hand wheels adjustably secured to the tube and adapted to guide a carpet or the like when it is wound upon the tube.

1,485,588. TRUCK SIDE FRAME. TRACY V. BUCKWALTER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed July 1, 1922. Serial No. 572,356. 7 Claims. (Cl. 105—205.)



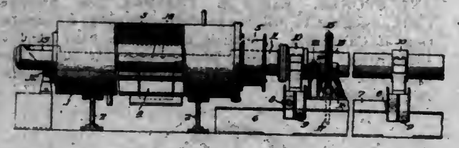
1. An expanded metal truck side frame comprising spaced top and lower chords integral with each other at their ends and strut members integral with one of said chords and secured to the other chord.

1,485,589. PROCESS OF MAKING FUSED BIFOCAL LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation. Filed Apr. 16, 1923. Serial No. 632,458. 6 Claims. (Cl. 49—82.1.)



5. In the process of making Kryptok lenses, placing the pieces of glass constituting the major and minor field in a vacuum and heating the same while therein sufficiently to fuse them.

1,485,590. MACHINE FOR SHAPING SHEET MATERIALS. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Sept. 30, 1921. Serial No. 504,410. 27 Claims. (Cl. 153—72.)



1. In a machine of the character set forth, a stationary shaft, a rotating feeding-head loosely mounted on said shaft, a body-supporting member rotating in unison with and arranged alongside of said feeding head, a slide carried by the feeding head, a cam fixed to the stationary shaft, and connections between the slide and the cam to thereby cause reciprocation of the slide by rotation of the head to move a body of sheet material transversely from the body-supporting member.

1,485,591. ROTARY ENGINE. FRANK A. BULLINGTON, Portland, Oreg., assignor to Bullington Motors, Kansas City, Mo., a Common-Law Trust consisting of Solomon Stoddard, Ernest E. Howard, and Frank A. Bullington. Filed Oct. 20, 1919. Serial No. 332,859. 6 Claims. (Cl. 123—171.)

2. In a rotary engine, a piston casing, pistons rotatable therein, the casing having ports at opposite sides for passing air transversely across the path of said pistons, and power driven suction means for creating air circulation through said casing between said pistons as they pass said ports.

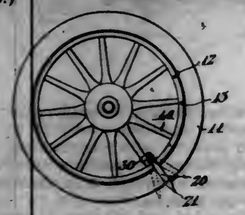
1,485,592. CASTING MACHINE. JOHN A. BYERS, Chicago, Ill., assignor to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1922. Serial No. 577,845. 8 Claims. (Cl. 22—65.)

2. In a casting machine, the combination of an elongated rotary mold, a distributor adapted to extend within the mold and provided with longitudinally separated discharge outlets, means for rotating the distributor, and means for causing reciprocation of the distributor longitudinally by its rotation.

1,485,593. TOOL FOR COMPRESSING AND INSERTING VALVE SPRINGS. JOHN CARRICART, Santa Barbara, Calif. Filed Dec. 9, 1920. Serial No. 429,361. 4 Claims. (Cl. 29—86.3.)

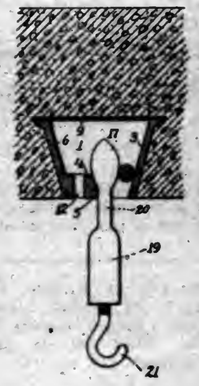
1. In a tool of the character described, the combination of spring-compressing jaws, means to move one of the

jaws toward the other to compress a spring therebetween, and a spring-transferring member having opposed arms



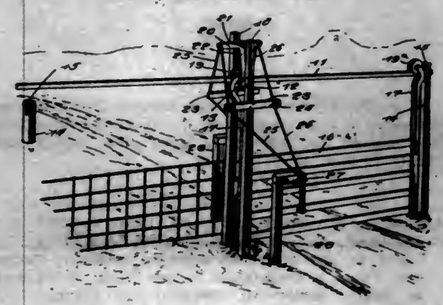
each provided with jaws to engage the opposite ends of the spring, said arms being joined together by a spring member yieldingly holding the arms toward each other.

1,485,594. COLLAPSIBLE SCENERY. JOHN L. CARROLL, Bay City, Mich. Filed Sept. 26, 1921. Serial No. 503,204. 2 Claims. (Cl. 46—70.)



1. In combination with a collapsible frame comprising spaced apart side, top and bottom members, beveled joint tongues secured to the top and bottom members, and adapted to fit beveled ways secured on the side members, an elastic edged scenery canvas, a plurality of spaced apart clasps anchored in the frame, and means on the canvas adapted to engage the clasp for detachably securing the canvas thereto.

1,485,595. SHACKLE FOR AUTOMOBILE WHEELS AND SPOKES. EARLE E. CHAPMAN, Los Angeles, Calif., assignor to Miller-Chapman Company, a Corporation of California. Original application filed Mar. 2, 1920, Serial No. 363,087. Divided and this application filed Feb. 21, 1921. Serial No. 446,898. 5 Claims. (Cl. 70—90.)

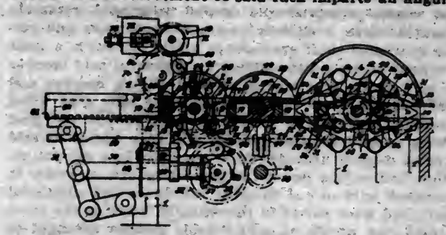


1. A shackle for an automobile wheel comprising a bumping block; arms for securing said block upon the tread of said wheel; projections on said arms meeting inside the felly of the wheel; means for locking said projections together; and a U-shaped member of proper size to encircle a spoke, said U-shaped member having holes in either limb through which said projections pass and lock.

1,485,596. CONCRETE INSERT. MAURICE E. CHASE, Cambridge, Mass. Filed Feb. 14, 1921. Serial No. 444,635. 4 Claims. (Cl. 72—105.)

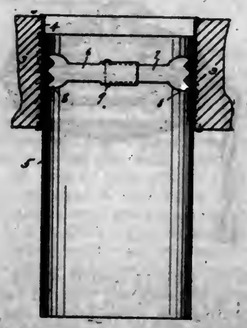
4. A concrete insert comprising an elongated box having a widened top and a longitudinally disposed slot through its bottom, the slot having a ledge at each end, a roller terminally resting upon said ledges, and a suspension device having a head adapted to be introduced through said slot and to be locked therein by said roller.

1,485,597. GATE AND OPERATING MEANS THEREFOR. CLYDE C. COOK, Sheridan, Wyo. Filed Apr. 25, 1923. Serial No. 634,543. 5 Claims. (Cl. 39—67.)



1. A gate construction of the character described comprising a vertical member, a track pivoted thereon and extending on each side of the vertical member, the track having a depression at its pivotal center, a gate having wheels running on said track, one of said wheels normally resting within the depressed portion of the track, means limiting the downward movement of the ends of the track, and manually operable means for lifting the gate and one of said whels from the depression and starting it along said track.

1,485,598. PACKING AND WRAPPING UP ARTICLES FOR TRANSIT AND STORAGE. FREDERICK CHARLES CROXFORD, London, England. Filed Feb. 8, 1921. Serial No. 443,455. 12 Claims. (Cl. 93—7.)



1. A wrapping machine of the kind described comprising in combination a stepwise rotatable holder having related pairs of jaws, plunger means associated with said pairs of jaws, and a rack, the movement of which rack

in one direction operates said plunger means for ejection, and the return movement of said rack imparts an angular

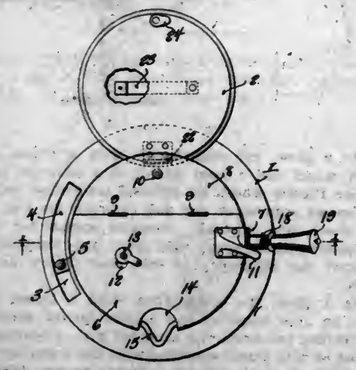
displacement to said rotatable holder for positioning the holder for the next ejection stroke, substantially as described.

1,485,599. STOVEPIPE CLAMP. MICHAEL J. DEARDA, St. Louis, Mo. Filed May 23, 1923. Serial No. 640,950. 2 Claims. (Cl. 126—318.)

1. A stove pipe clamp comprising two members pivoted together forming a jointed brace,—the outer ends of said members being serrated for frictional engagement with the inside of a stove pipe and the inner ends having a variable pivotal engagement with each other, thereby adapting the clamp to pipes of more than one diameter.

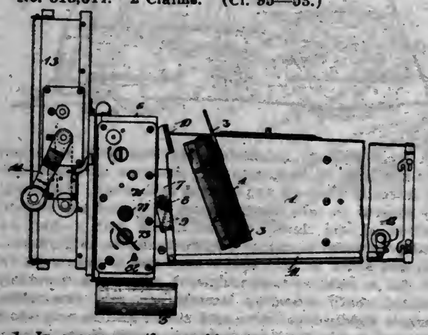
1,485,600. MEASURING DEVICE. LOUIS K. DE BUS, Cincinnati, Ohio. Filed June 24, 1921. Serial No. 480,067. 9 Claims. (Cl. 33—169.)

1. A measuring device comprising a rule with units of measurement indicated thereon, a carriage slidably mounted upon the top face of said rule for movement therealong so as to leave the bottom face of the rule free for application of the same to the work, said carriage having an indicating finger for co-operation with the indications upon said rule, said carriage being provided with a dial for indicating fractional parts of said unit of measurement according to the position of said finger, and means for locking said carriage at any point along said rule.



1,485,601. STORAGE HEATER. EDWARD H. J. DILLON, Philadelphia, Pa., assignor to The Griscom-Russell Company, a Corporation of Delaware. Filed June 19, 1920. Serial No. 390,237. 6 Claims. (Cl. 257—200.)

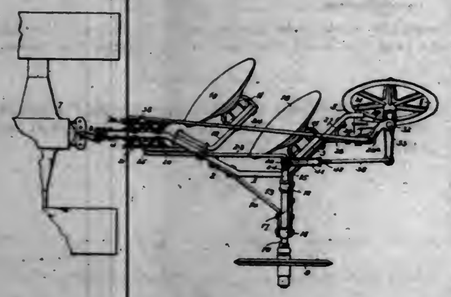
3. In a water heater, the combination of a tank, a horizontal tube bundle movable into and out of the tank, means to support the outer end of the bundle during its movement, an inclined supporting arm to support the



inner end of the tube bundle, and a track located within the tank, on which the inclined supporting arm moves.

1,485,602. COOKING UTENSIL. ARNOLD H. FLEISCHER, Milwaukee, Wis. Filed June 21, 1923. Serial No. 646,824. 1 Claim. (Cl. 53—1.)

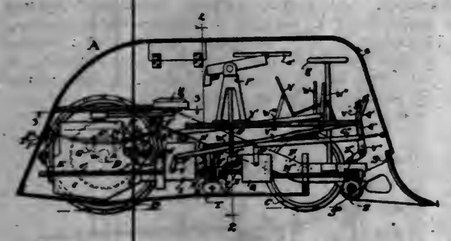
A cooking utensil comprising a pot, a handle projecting therefrom, a cover having a main part and a relatively smaller part hinged to said main part to provide access through a restricted opening to said pot, a hinge joining said main part to said pot adjacent said handle and having its axis extending at right angles to the hinged joint between said main part and said smaller part, and a thumb piece carried by said main part and located adjacent to and slightly offset from the center line of said handle.



1,485,603. AVIATOR'S CAMERA. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Mar. 3, 1919, Serial No. 280,258. Divided and this application filed Nov. 16, 1921. Serial No. 515,644. 2 Claims. (Cl. 95—53.)

1. In a camera, the combination with a body provided with a sighting device adapted to be viewed from the rear of the camera and having rigid hand grips located on opposite sides of the body at the center of balance,

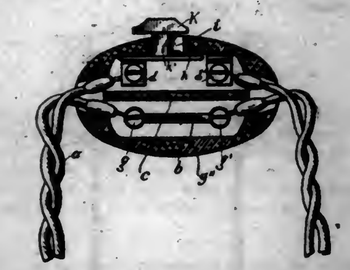
of a shutter, and a shutter operating member located adjacent to one of the handles to be operated by the hand that supports the camera through the medium of the handle.



1,485,604. WHEELED PLOW. CAMERON H. GEMBERLING, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Jan. 12, 1923. Serial No. 612,272. 7 Claims. (Cl. 97—100.)

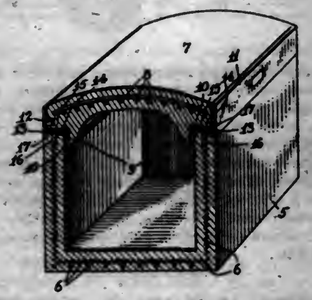
1. In a plow, the combination with a frame, a rear furrow wheel and a land wheel, of a swiveled axle for the rear furrow wheel, an inclined land-wheel axle having a crank spindle at one end entering the hub of the land wheel, and manually operable means for turning said land-wheel axle and said pivot axle simultaneously to adjust the angularity of said rear furrow and land wheels.

4. In a plow, the combination with a frame, a land wheel, an axle therefor, and a rear furrow wheel, of a lever having two arms and provided with a bearing member, one of said arms connected with the frame by a horizontal pivot, an axle for the rear furrow wheel having a part mounted in the bearing member of said lever, a hand lever, and a connection between said hand lever and the other arm of said first-mentioned lever, whereby operation of the hand lever will effect raising or lowering of the frame by tilting the same on the land wheel as a fulcrum.



1,485,605. MILITARY AUTOMOBILE. GEORGE GLATTER, Chicago, Ill. Filed May 31, 1923. Serial No. 642,590. 5 Claims. (Cl. 89—40.)

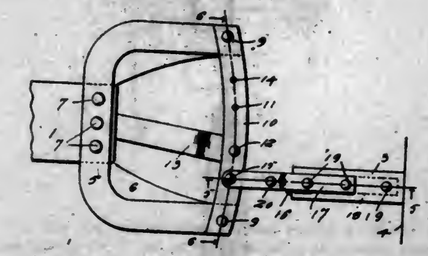
1. In a military automobile provided with an armor over the body thereof, rotatably mounted shafts extending laterally through and beyond said armor, blades rigidly secured on said shafts, means to control the vertical position of said blades, in combination with a shaft rotatably mounted to extend longitudinally on said automobile, and gears on said shafts arranged to intermesh.



4. In a military automobile, a shovel, a rotatably mounted shaft extending laterally on said automobile, brackets rigidly secured to said shovel and to said shaft and a worm wheel rigidly mounted on said shaft, in combination with an additional rotatably mounted shaft at right angles to said first named shaft, a worm rigidly mounted on said additional shaft to engage with said worm wheel, means to rotate and control the direction of rotation of said additional shaft, said means to rotate and control comprising a second additional rotatably mounted shaft, a slidably mounted member on said second additional shaft arranged to rotate therewith, a lever arranged to control the sliding movement of said member on said shaft, gear wheels on said sliding member and gear wheels on said additional shaft, an idler gear wheel rotatably mounted to intermesh with one of the gear wheels on said additional shaft, said gear wheels on said slidable member arranged to be normally in a neutral position and on the movement thereof in one direction to intermesh with one of the gear wheels on said additional shaft, and when moved in the opposite direction the other of said gear wheels on said slidable member arranged to intermesh with said idler gear wheel.

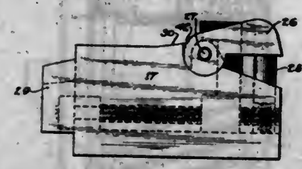
1,485,606. SWITCH FOR ELECTRIC LINES. CARL GOLDBERG, Haida, Czechoslovakia. Filed Dec. 29, 1921. Serial No. 525,760. 1 Claim. (Cl. 200—163.)

In combination with an electric wiring, a switch comprising a casing of insulating material and having openings for admitting the wires thereto and made of two parts, one part containing a groove and the other being provided with a web engaging said groove and forming two separate compartments in said casing, electrically connected terminals in one of said compartments, separate terminals in the other compartment, metal sleeves connected with the said last named terminals, a pin slidingly mounted within one of said sleeves and adapted to engage the other sleeve so as to electrically connect the said separate terminals, and means projecting outside of said casing for operating said pin.



1,485,607. BURIAL VAULT. WALTER J. GORMAN, Jersey City, N. J. Filed Feb. 18, 1922. Serial No. 537,386. 8 Claims. (Cl. 72—7.)

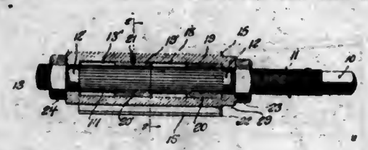
1. In a burial vault of the class described, comprising a body portion and a cover adapted to be placed thereon said cover being provided in the bottom face thereof with a channel adapted to receive a plastic seal, and said body portion being provided with a metal strip partially



embedded therein, the upper portions of said strip being adapted to project a predetermined distance into the channel of the cover to partially divide the plastic seal therein, when the cover is placed upon said body portion.

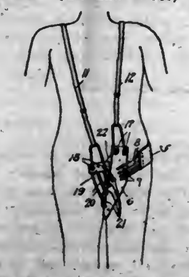
1,485,608. BINDER HITCH. OTTO HANSON, Verdi, Minn. Filed Sept. 30, 1920. Serial No. 413,746. 1 Claim. (Cl. 280—33.44.)

In a draft device for a tractor, the combination of two substantially U-shaped frames one above the other, the bight portion of one frame engaging the upper face and the bight portion of the other frame engaging the lower face of the draft lug of a tractor, a bolt passing through said bight portions and lug, a strain bar through which said bolt passes, a cross bar, bolts passing through said cross bar and the ends of both of said frames to fasten the frames and cross bar in superposed relation and the frames at an angle to each other whereby they will abut opposite sides of said draft lug to rigidify the connection of the frame thereto, said cross bar having a series of openings intermediate said ends of the frame and in a path concentric with the first mentioned bolt for adjustable attachment of draft means thereto and independently of the strain bar, and a bolt to pass through said openings selectively to fasten said strain bar to the cross bar relatively to the position of attachment of said draft means.



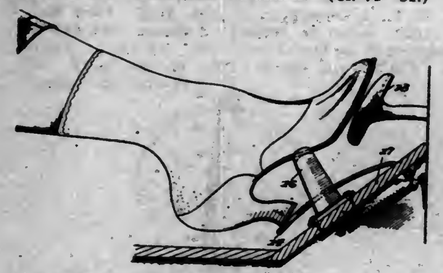
1,485,609. FORMING BLOCK. EDWARD R. HARTIN, San Diego, Calif. Filed Apr. 25, 1922. Serial No. 556,477. 10 Claims. (Cl. 76—95.)

1. A forming tool of the character described comprising a pair of substantially rectangular shaped blocks, each of said blocks being provided with adjacent forming surfaces and said surfaces being channeled from end to end, and a pivotally mounted dog forming a continuation of each forming surface, the pivotal ends of the dogs being provided with gripping faces adapted to gradually grip and form cutting edges on the bit during movement of the dies towards each other.



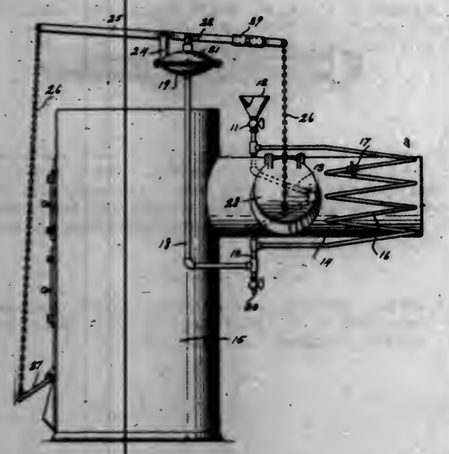
1,485,610. EXPANSION REAMER. MOSES A. HERRO, Oconomowoc, Wis. Filed Jan. 16, 1923. Serial No. 612,896. 1 Claim. (Cl. 77—75.)

An expansion reamer comprising a holder having a cylindrical opening therethrough and having four pair of slots extending from said opening outwardly, said pairs of slots being arranged successively at right angles to each other, a spindle in said opening having elongated gear teeth upon the portion enclosed by said holder, said spindle having threaded ends projecting beyond said holder, nuts upon said threaded ends adapted to lock said spindle relative to said holder, and four elongated cutting blades projecting from said holder and each having



a pair of inwardly extending spaced arms positioned in said slots provided with rack teeth meshing with said gear teeth, the arms of one blade intermeshing with the arms of the succeeding blade, whereby said blades may be greatly extended and whereby said blades are supported at spaced points.

1,485,611. TRUSS. ACHILLE JOSEPH OISHEI HOSCHEK, New York, N. Y. Filed June 26, 1923. Serial No. 647,848. 2 Claims. (Cl. 128—100.)



1. A device of the kind described comprising an abdominal supporting member extending at the front down between the legs of the wearer and thence upwardly at the rear towards the waist line, a waist band partially encircling one side of the waist line and connected at opposite ends to said abdominal supporting member, a pair of suspender loops and means for connecting opposite ends of said loops respectively to the front and rear portions of said abdominal supporting member.

1,485,612. FOOT CONTROL FOR AUTOMOBILES. HARRY E. HULL, Williamsburg, Iowa. Filed Oct. 21, 1922. Serial No. 596,023. 2 Claims. (Cl. 74—81.)

1. A safety foot controlling arrangement for automobiles including a foot rest, a toe engaging and depressible control ember at the front of the foot rest, a heel engaging and depressible control member at the rear of the foot rest, said foot rest being thus positioned between the control members and forming a fulcrum for a foot resting thereon whereby the later upon rocking movement in either direction will engage one and disengage the other of said control members.

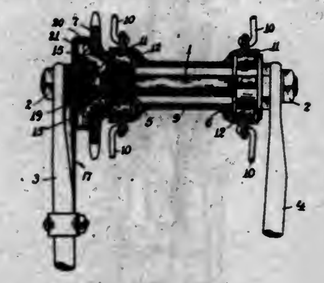
1,485,613. DRAFT-CONTROLLING DEVICE FOR FURNACES. GEORGE E. HULL, Pitcairn, Pa. Filed Sept. 8, 1923. Serial No. 661,617. 3 Claims. (Cl. 236—16.)

1. In a damper regulator for furnaces, a pivoted lever arm controlling the draft and damper doors of the furnace and normally disposed in one position and means for shifting said lever arm including a circulation system having a coil positioned to be subjected to the flames passing through the flue of the furnace, a second coil in parallel to the first named coil and subjected to the action of air, a diaphragm, and a connection between said coils and said diaphragm whereby expansion of fluid contained within the coils elevates said diaphragm to shift said lever, the connection between the coils and diaphragm comprising a bowl within which the diaphragm is located and to the upper end of which the diaphragm is sealed, a connection between the coils and the lower end of the bowl, and means resting upon the diaphragm and connected with said lever for shifting the lever.

1,485,614. ADJUSTABLE ELECTRIC-LAMP SUPPORT FOR CANDLE TUBES. ANDY JANOVSKY, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 13, 1922. Serial No. 560,529. 2 Claims. (Cl. 240—52.)

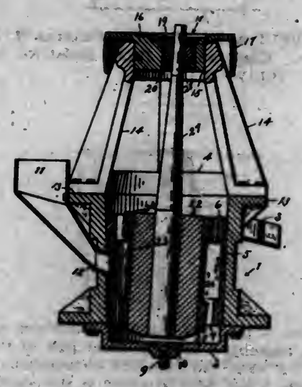
1. An adjustable electric lamp support for candle tubes comprising two members, one of which is provided with inturned longitudinal flanges, the other having a channel and outturned flanges which fit inside the inturned flanges, a plurality of serrations on one member, a spring fastened in the channel having a point on it which engages said serrations.

1,485,615. OIL-WELL REAMER. ARTHUR S. JONES, Independence, Kans. Filed Dec. 8, 1920. Serial No. 429,240. 5 Claims. (Cl. 255—76.)



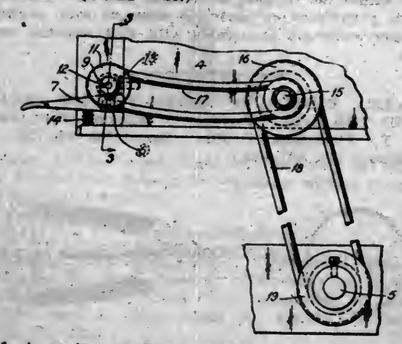
1. An oil well reamer comprising a rotatable head, a rod eccentrically carried by the head, a cutter mounted on the rod, and a friction means on the rod to oppose rotation of the cutter.

1,485,616. BOILER. LONELL S. JONES, Denver, Colo. Filed Feb. 24, 1920. Serial No. 361,033. 5 Claims. (Cl. 122—275.)



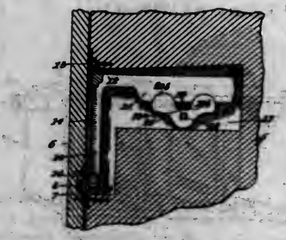
1. A boiler comprising a casing having an opening for the escape of gases, a heater at the lower end of the casing, a steam dome in the upper end of the same, upright columns connected at their upper ends with the steam dome, a connection between the lower portions of the columns and a source of water supply, and heating units positioned one above another in the space between the heater and the steam dome, and each comprising a pipe connecting the columns, and a series of curved circulation tubes connected to said pipe at opposite sides thereof.

1,485,617. COASTER BRAKE. LAZARUS S. KALLAJIAN, Boston, Mass. Filed May 22, 1920. Serial No. 383,351. 6 Claims. (Cl. 192—6.)



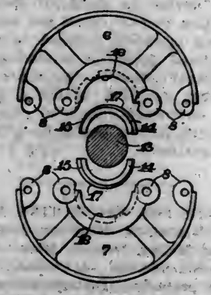
1. The combination with a wheel having a tubular hub provided with a cup at one end, of a stationary spindle in said hub, a power-receiving member turning on said spindle and having a tapered projection reaching into said cup, one of the two last-named parts having longitudinally disposed cam grooves, rotative members in said grooves, a cup engaging the outer face of said power-receiving member, one of the two last-named parts having a longitudinally grooved cone and the other a cavity co-operating therewith, and rotative members in the grooves of said cone, whereby a rotation of said power-receiving member in one direction will forcibly rotate said hub and wheel, but a partial turn oppositely will frictionally resist such rotation.

1,485,618. GYRATORY ORE GRINDER. LEWIS MARTIN KELLOGG, South Pasadena, Calif. Filed Jan. 19, 1920. Serial No. 352,260. 9 Claims. (Cl. 83—10.)



1. In combination in a gyratory ore grinder, a mortar having a removable wearing liner comprising an upper and a lower grinding ring properly spaced to form a wide intermediate grinding zone, a gyrator disposed freely and floating in the mortar and having a removable wearing shell comprising an upper and a lower grinding ring adapted to oppose the upper and lower grinding rings of the mortar liner, the rings being properly spaced to form a wide intermediate grinding zone, means for feeding ore pulp to the mortar, means for admitting to the mortar a fluid vehicle for the pulverized ore, and means for gyrating the gyrator.

1,485,619. BOBBIN WINDER. HARRY W. KRAG, St. Louis, Mo., assignor to American Shoe Machinery & Tool Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 2, 1922. Serial No. 591,803. 7 Claims. (Cl. 242—20.)



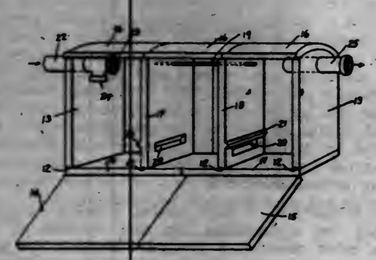
1. A sewing machine comprising a continuously rotating shaft, a bobbin winding shaft disposed parallel with said continuously rotating shaft, a normally slack belt connecting said shafts, and means for taking up the slack in said belt and thereby cause said bobbin winding shaft to rotate.

1,485,620. DOORLOCK. SHURE LARSON, Norway, Iowa. Filed Mar. 23, 1922. Serial No. 545,986. 4 Claims. (Cl. 292—236.)

1. In a door-lock, a latch having a heavy, laterally extending arm, a depending arm near the edge of the door, a catch therefor, a face-plate mortised for said catch, and an upwardly extending flange near the angle of the body of the latch, pierced for a screw, whereby the upper face-plate screw serves as a pivot for the latch.

1,485,621. PULLEY. WILLIAM LOEFFLER, Sheboygan, Wis. Filed July 23, 1921. Serial No. 487,078. 2 Claims. (Cl. 287—52.)

1. The combination, with a shaft, of a pulley including separable sections, means for clamping said sections together, the hub of said pulley being recessed and pro-

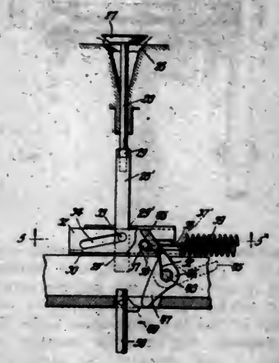


vided with concentric end bores of larger diameter than said shaft, a plurality of clamping members forming a bushing surrounding said shaft and having end portions fitting the end bores of said hub and eccentric outer surfaces within the recessed portions of said hub, and concentric projections on said hub adjacent said recessed portions wedgingly engageable with said eccentric surfaces.

1,485,622. MEASURING SERVER FOR ICE CREAM AND THE LIKE. CHARLES J. MANUEL, Tarrytown, N. Y. Filed Sept. 7, 1922. Serial No. 586,758. 7 Claims. (Cl. 107—48.)

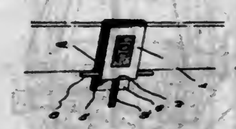
1. A server for ice cream and the like, comprising a cup, a curved knife and means for sweeping said knife across the mouth of said cup, said means being constructed first to move the knife substantially in the direction of its length and then laterally.

1,485,623. SEPTIC TANK. CHARLES MATTHEW MAYO, Indianapolis, Ind. Filed July 22, 1922. Serial No. 576,831. 1 Claim. (Cl. 210—6.)



A septic tank including a pair of end compartments and an intermediate compartment with an intake in the receiving end compartment and an outlet in the discharging end compartment, a partition wall to form the receiving end compartment, a second partition wall to form the discharging end compartment, said first mentioned partition having an elongated opening extending for a major portion thereof across the compartment and provided with an upwardly inclined lower edge and a downwardly inclined projection extending into the receiving compartment adjacent the upper edge of said opening, the other partition having a similar opening therein with a downwardly inclined edge and a downwardly inclined projection similarly positioned in the discharging compartment.

1,485,624. MEANS FOR PROTECTING THE SURFACE OF CORES. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Mar. 31, 1922. Serial No. 548,475. 4 Claims. (Cl. 22—189.)

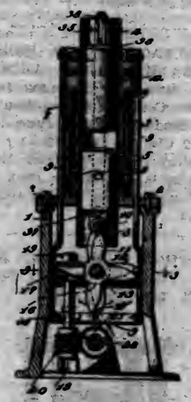


1. Means for protecting the surface of a dry sand core, consisting of the application of a substance, having the refractory qualities of magnesium oxide, mixed with a binder to the surface of the dry sand core.

1,485,625. ENGINE VALVE. GEORGE W. PETERSON, Chicago, Ill., assignor of one-fourth to Claude Dyckman, one-fourth to Rudolph W. Schroeder, and one-fourth to Patrick J. O'Keeffe, all of Chicago, Ill. Filed Sept. 11, 1922. Serial No. 587,331. 17 Claims. (Cl. 123—90.)

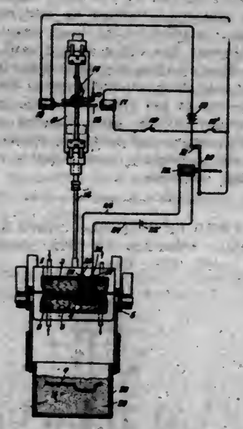
1. In an engine having a cylinder, a piston therein, a valve head and a stem therefor; a guide-way on the engine disposed transversely of the movement of the valve stem, a traverse block slidable in said guide-way and having diagonal bearing faces, projections connected to said valve stem to ride on said faces, and means actuated by the piston and timed therewith to give movement to said traverse block in one direction in said guide-way to unseat the valve, and spring means to move the traverse block in the other direction and lock the valve in its seat.

1,485,626. BELT ATTACHMENT. CHARLES H. PRINTS, Luray, Va. Filed Jan. 27, 1923. Serial No. 615,387. 2 Claims. (Cl. 24—3.)



1. A device of the class described comprising a looped member for engaging a belt, the front part of the member having its lower end bent into rectangular shape to form a passage, a slot being arranged at the center of the passage, one part of the bent end engaging the rear part of the loop member for closing the lower end of the opening formed by the loop member and a recess formed in the rear member for receiving said part.

1,485,627. INTERNAL-COMBUSTION ENGINE. CHARLES REINEKE, New York, N. Y. Filed Oct. 1, 1920. Serial No. 414,048. 8 Claims. (Cl. 74—14.)



1. In an internal combustion engine the combination with a cylinder of opposed pistons arranged therein, a power shaft, and means interposed between said pistons and power shaft whereby a multiplicity of power strokes

of the pistons is required for effecting a single revolution of the power shaft, said means including oppositely

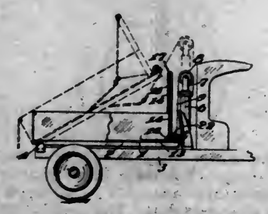
moving cams cooperatively associated with said pistons and a gearing connecting the cams to the power shaft for driving said power shaft.

1,485,628. METHOD OF CASTING. HARRY A. SCHWARTS, Defiance, Ohio. Filed Feb. 16, 1922. Serial No. 537,024. 12 Claims. (Cl. 22—94.)

1. The method of casting which involves introducing molten metal into a mold, registering the cooling tendency of the metal as it passes from the molten towards the solid state while in the mold, and timing the instant of disassociation of the casting and the mold in predetermined relation to said registration.

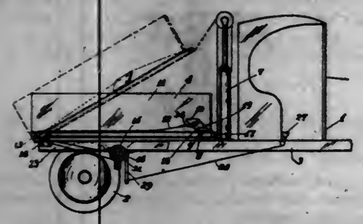
1,485,629. AUXILIARY SUPPORT. ADOLPH M. SEBOER, Toledo, Ohio. Filed May 31, 1921. Serial No. 473,884. 9 Claims. (Cl. 189—33.)

1. A crossarm mounting device comprising a structural member to be supported, an engaging member provided with seats having interfitting coaction with the structural member to maintain the structural member against torsion strains, there being means fixing the engaging position of the engaging member as to the structural



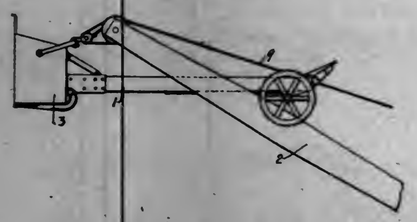
member, and anchoring means for sustaining the engaging member and through the engaging member carrying the structural member.

1,485,630. KEYLESS LOCK. RICHARD M. SEWARD, Minneapolis, Minn., assignor to Anchor Core Economy Soap Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1921. Serial No. 497,639. 4 Claims. (Cl. 24—241.)



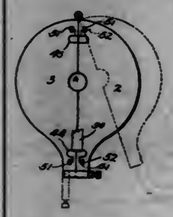
1. A non-unlockable fastener comprising a body forming a casing, a rotating tumbler cooperating therewith and means inaccessibly mounted in the casing restricting the rotation of the tumbler in one direction, said casing and tumbler being formed with cooperating recesses adapted to receive a soap anchor or the like for the purpose as specified.

1,485,631. DUMPING DEVICE. WILLIAM C. SHEA, Petaluma, Calif. Filed Mar. 29, 1922. Serial No. 547,721. 5 Claims. (Cl. 214—82.)



1. Cleaning means for a box adapted to be emptied by the lifting of one end, comprising a horizontal plate coextensive in width with the bottom of the box, a vertical member hingedly connected thereto with the hinge lying against the lower edge of the box and a pivotal support for the vertical member allowing the latter and the plate to plunge forward when the end of the box is lifted.

1,485,632. CLEANING DEVICE FOR DUMP BODIES. WILLIAM C. SHEA, Petaluma, Calif. Filed May 4, 1922. Serial No. 558,494. 6 Claims. (Cl. 214—82.)

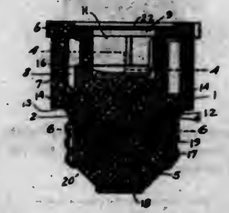


1. A cleaning device for a box form dump body on a vehicle comprising a scraper extending the width of the body and normally resting on the floor of the body at its forward end, said scraper having flanges rising from its ends in a vertical plane and slanting rearwardly, and means engaging the flanges for tilting the scraper rearwardly and pulling the same over the floor of the body whereby the latter is scraped.

1,485,633. STIFFENER FOR DIPPER STICKS. WILLIAM C. SHEA, San Anselmo, Calif. Filed Dec. 6, 1922. Serial No. 605,216. 8 Claims. (Cl. 214—145.)

1. In a device of the character described, a dipper stick consisting of two parallel bars disposed in spaced relation and means for stiffening the same, comprising a metal shoe for the rear end of each bar and a rearwardly extending element connecting the two shoes, said element being formed to clear the continuation of the space enclosed by the bars.

1,485,634. CASE FOR TAPE MEASURES. NATHAN H. SHILLMAN, Baltimore, Md. Filed June 18, 1923. Serial No. 646,172. 7 Claims. (Cl. 242—84.8.)



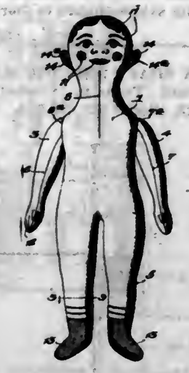
1. A casing comprising two three-walled neck-shaped similar halves, closing diametrically to form the whole, having a hinge at top, a yoke and set screw locking device at the bottom, central openings forming two bearings of unequal diameters into which fits a crank element carrying a winding drum, tongue and tape, a stuffing box element housed in the necked end of each half of said casing, and an ear secured at top and bottom of each half along the long axis on one side of casing adapted to carry a hand strap adjustably secured to buckles carried in said ears.

1,485,635. MANUFACTURE OF FERROUS ALLOYS AND OF WEATHERPROOF ARTICLES THEREFROM. JOHN MURDOCH SHELLEY, London, England, assignor to The Continuous Reaction Company, Limited, London, England. Filed June 11, 1923. Serial No. 644,751. 2 Claims. (Cl. 75—1.)

1. A ferrous alloy containing from 12 to 24 per cent of chromium, from 0.4 to 3 per cent of molybdenum, from 0.05 to 0.85 per cent of carbon and from 0.1 to 1.8 per cent of silicon.

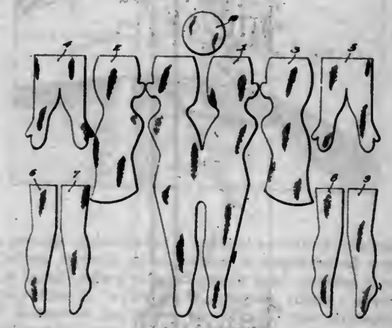
1,485,636. MULTIPLE-FUSE PLUG. JOHN F. SKINNER, Detroit, Mich. Filed Jan. 5, 1921. Serial No. 435,214. 4 Claims. (Cl. 200—125.)

1. A multiple fuse plug comprising two relatively rotative insulating members, one having an opening extending from end to end, and the other being disposed within said opening, a series of fuses and corresponding contact elements carried by the outer member, a common terminal for said fuses carried by said member, a companion terminal carried by the inner insulating member, at one end thereof, the other end of said inner member having a chamber opening therein and having an aperture in the wall of said chamber, and a spring contact arm electrically connected to the terminal of the inner insulating member arranged within said chamber and projecting through said aperture sufficiently to consecutively engage said fuse contact elements upon relative rotation of the two insulating members.



1,485,637. VEHICLE WHEEL. STEVE K. SKRIHONIUK, Detroit, Mich. Filed Apr. 17, 1922. Serial No. 553,537. 5 Claims. (Cl. 152—45.)

1. A vehicle wheel, comprising a rim construction, a spoke construction, a casing centrally mounted upon said spoke construction to provide an axial opening there-

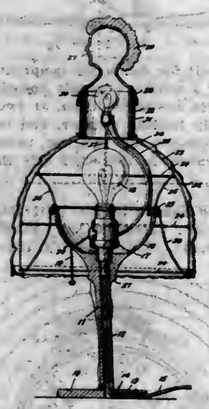


through, said casing having projections thereon laterally of the axial opening, a hub member including a disc and a hub extension extending axially from one side of said disc, a spider member fixedly secured upon the same side of said disc upon which said hub extension is connected, a resilient supporting ring mounted upon said hub extension and adapted for disposition in the opening of said casing, and a second disc adapted for adjustable mounting upon said hub extension so that said discs are on opposite sides of said casing, said spider having arms thereon adapted for operating intermediate the casing projections.

1,485,638. DOLL. ELLA L. SMITH, Roanoke, Ala. Filed June 28, 1922. Serial No. 571,407. 1 Claim. (Cl. 46—40.)

A covering for a doll body comprising a front piece, a back piece, said back piece having an opening therein, means attached to said back piece for closing said opening, arm coverings each consisting of a single piece of material attached to said front and back pieces, and ear coverings formed by attaching the front and back pieces together by stitches placed adjacent the edges of said ear coverings whereby the ear coverings are adapted to fit over ears on the doll body and whereby the ear coverings are rendered distinctive and said cover being formed to conform to the neck portion of a doll body by inserting a dart in said front piece.

1,485,639. DOLL. ELLA L. SMITH, Roanoke, Ala. Filed July 1, 1922. Serial No. 572,228. 1 Claim. (Cl. 46—40.)

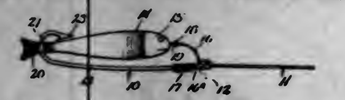


A doll body constructed of pieces and comprising a head, trunk, arms, and legs, the front of the head, trunk, and legs consisting of a single piece, the back of the head and trunk consisting of duplicate pieces and the back of each leg consisting of duplicate pieces, said front and back pieces having parts integral to form ears by stitching said parts at the edges thereof and also at the base thereof, and arm pieces each comprising a single piece.

1,485,640. MOLD FOR AND METHOD OF DOLL CONSTRUCTION. ELLA L. SMITH, Roanoke, Ala. Filed Aug. 2, 1922. Serial No. 579,103. 6 Claims. (Cl. 18—42.)

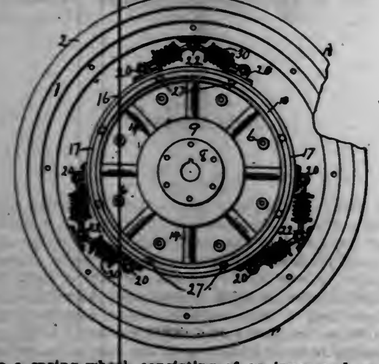
1. A mold for the manufacture of dolls comprising four parts, one of said parts adapted to mold the front of the head, one the back of the head, and two the side of the head and ears.

1,485,641. LAMP. DOROTHY R. SPARKS, Fairfield, Conn. Filed Feb. 26, 1923. Serial No. 621,204. 3 Claims. (Cl. 240—10.)



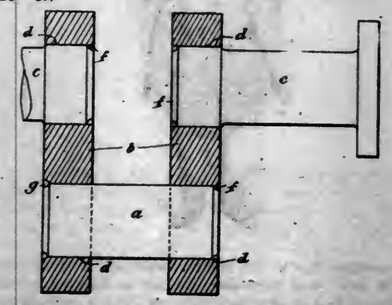
1. A lamp, comprising a base, a light supporting pillar, a shield portion at the upper end of said pillar, a lighting element supported at the upper end of said pillar above said shield portion, said lighting element being concealed from below by said shield portion, the rays of light from said lighting element being unobstructed laterally by said shield portion, a light pervious shade supported upon said pillar surrounding said lighting element laterally and terminating in spaced relation to the base to expose said pillar, said shade being annularly spaced from said shield portion, and light pervious material extending between said shade and said shield portion.

1,485,642. EXPANDING ROTARY REAMER. FREDERICK STONE, Spokane, Wash., assignor to Diamond Drill Contracting Company, Spokane, Wash. Filed Apr. 11, 1922. Serial No. 551,549. 20 Claims. (Cl. 255—75.)



1. The combination with a relatively stationary hollow cutter holder and hollow drill rod, of a movable tool including radially expansible reaming cutters, and means for admitting hydraulic pressure to the tool for expanding said reaming cutters.

1,485,643. ARTIFICIAL BAIT AND FISHHOOK THEREFOR. PAUL B. STRNICH, Joliet, Ill. Filed Mar. 20, 1922. Serial No. 545,105. 7 Claims. (Cl. 43—46.)

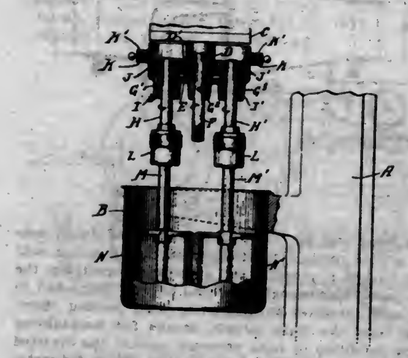


1. Artificial bait for fish-hooks comprising, a bait holding member and a flexible normally bowed bait body portion secured in its bowed condition, at two spaced places, on said bait body holding member, and capable of being flexed to pass from one side of a line, passing through its points of securement to the other side thereof.

1,485,644. SHOCK-ABSORBING WHEEL. GEORGE ELLARD TAYLOR, Jr., Columbia, Mo. Filed Dec. 21, 1922. Serial No. 608,241. 1 Claim. (Cl. 152—37.)

In a spring wheel, consisting of an inner and an outer rim, spring elements connecting said rims consisting of a plurality of push rods, means for connecting said push-rods to outer rim and to the inner rim, said means comprising heads on said push-rods which are secured to lugs, fastened tothe inner and outer rims, by a bolt through each head so as to form a hinged connection, pins inserted in said push-rods between which are arranged plates retaining a coil spring which limits the movement of the plates, each of said plates having three holes therein for said push-rods, the coil-springs being compression springs which are disposed between said plates and surround said push-rods certain of the push-rods being secured at their outer ends to the lugs on the outer rim and the others to the lugs on the inner rim, the spring system completely enclosed within two side plates which are securely fastened to both sides of the outer rim, said side-plates holding inner and outer rims in alignment, the inner side plate having a stuffing box so as to form an oil-tight joint, making an oil tight enclosure between the two side-plates, and oil within said enclosure to lubricate the mechanism.

1,485,645. CRANK SHAFT AND THE MANUFACTURE THEREOF. JOHN TINDALE, Sunderland, England. Filed Mar. 5, 1923. Serial No. 623,033. 5 Claims. (Cl. 29—6.)

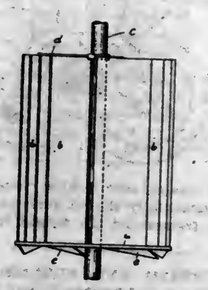


1. The method of rigidly connecting the component parts of a built-up crank shaft embodying perforated webs and longitudinal parts, which consists in securing the longitudinal parts of the shaft in the perforations of the webs solely along the free end edges of said parts; substantially as described.

1,485,646. DISPLAY DEVICE. HENRY TRAUMÜLLER and ARTHUR J. TRAUMÜLLER, Brooklyn, N. Y. Filed Mar. 1, 1922. Serial No. 540,181. 8 Claims. (Cl. 211—28.)

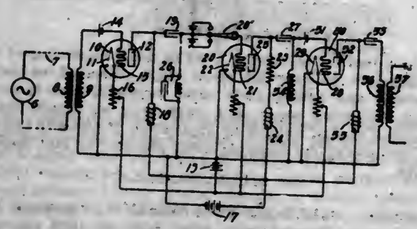
5. A tray of the class described, provided at one end with elongated and spaced apertures and at the other end and in line with said aperture with projecting pin members, a plurality of rods mounted upon the inner face of said tray in juxtaposition to and in alinement with said apertures, said rods being provided with parts extending outwardly through said apertures, and springs mounted on said rods for normally holding the same in a predetermined position.

1,485,647. MIXING AND BEATING MACHINE. HENRY TRUST, Park Ridge, N. J., and FRANK M. ASHLEY, Brooklyn, N. Y.; said Ashley assignor of his right to Josephine Trust; Josephine Trust administratrix of said Henry Trust, deceased. Filed Nov. 29, 1919. Serial No. 341,418. 2 Claims. (Cl. 74—7.)



1. A machine comprising a stationary hub, a gear fixed thereon, a shaft extending through said hub, a casing carried by said shaft, a spindle carried by said casing, a gear wheel connected to said spindle and meshing with said fixed gear and means for holding said gear wheel out of mesh with said fixed gear.

1,485,648. WORK OF ART AND PROCESS OF PRODUCING SAME. JOSEPH T. VAN DER GRACHT, Campbell, Calif. Filed Feb. 28, 1922. Serial No. 539,812. 1 Claim. (Cl. 41—34.)

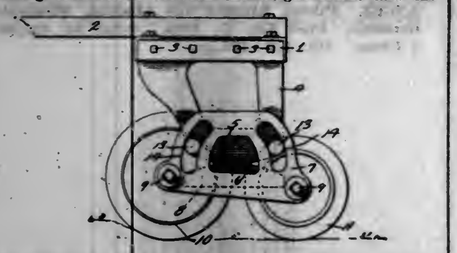


A process of producing a work of art which comprises: stretching a rough fabric which is impregnated with a water soluble adhesive upon a rigid base; soaking a paper reproduction in water until same is pliable; applying said moistened paper reproduction to the impregnated fabric and allowing the exposed surface to partially dry; forcing the body of the paper into the meshes of the canvas by the use of moderate pressure; allowing the fabric and paper to thoroughly dry; and thereafter applying a varnish to the exposed surface of said paper.

1,485,649. MEANS FOR USE IN PROPELLING AEROPLANES, HYDROPLANES, AND OTHER CONVEYANCES. PIETER BARTELD VAN LEGGELO, Wiesbaden, Germany. Filed Feb. 15, 1923. Serial No. 619,262. 1 Claim. (Cl. 170—135.)

In apparatus for propelling aeroplanes, hydroplanes and other conveyances, wherein a fan or other rotary exhauster is employed for creating a partial vacuum in advance of a disc or similar member against which the superior pressure of the atmosphere acts for the purpose of moving the said disc and the conveyance wherein it is carried, the combination, with a revolving disc or similar member, of a number of inclined vanes mounted endwise thereon and arranged in groups, the vanes pertaining to each group being so disposed that their leading edges are at gradually increasing distances from the centre of rotation; the admission of air to the vanes being prevented at one of their extremities by the disc, whilst their opposite extremities, as also their trailing edges, are open to the atmosphere.

1,485,650. GENERATING HARMONIC CURRENTS. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1919. Serial No. 293,055. 5 Claims. (Cl. 172—281.)

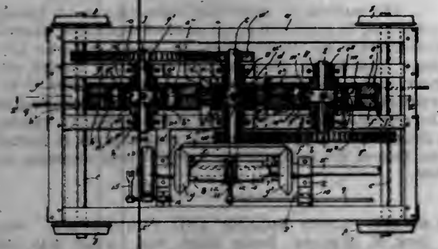


1. The method of generating harmonics in a system comprising in combination a source of alternating electromotive force, an electric discharge repeating device having a cathode, an anode and an impedance control element, and a high resistance in the output circuit of the repeating device, which method consists in impressing on the repeating device from said source cyclically varying voltage which alternates between limits chosen to include the knee of the characteristic curve of said repeating device.

1,485,651. LAND ROLLER AND PULVERIZER. JOSEPH F. WAGNER, South Bend, Ind. Filed Mar. 26, 1923. Serial No. 627,590. 18 Claims. (Cl. 55—21.)

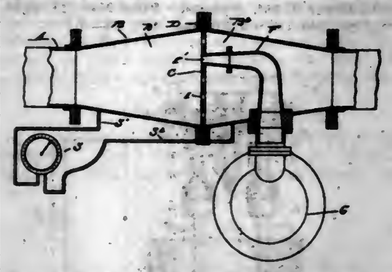
1. In a land roller, the combination of successive parallel roller carrying shafts, frames carried by the shafts

at their ends, a weight frame above said first frames and rocking connections between the weight frame and the



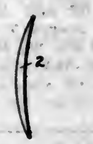
first mentioned frames, said rocking connections comprising engaging segmentally shaped surfaces, carried by the first mentioned frames and the weight frames.

1,485,652. CUTTING AND BURNISHING BROACH. JAMES WAKEFIELD and ERNEST HENRY COWGILL, Derby, England, assignors to Rolls Royce Limited, Derby, England. Filed Mar. 20, 1922. Serial No. 545,246. 4 Claims. (Cl. 90—33.)



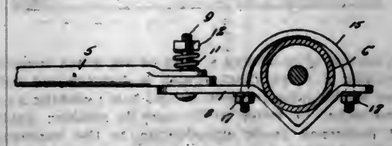
1. A tool for machining holes in metal consisting of a mandrel, a plurality of metal rings, threaded on said mandrel and having their outer circumferences formed with machining edges, said rings being so shaped that they can expand radially by application of pressure thereto and means for applying axial pressure to said metal rings.

1,485,653. CABLE-CAR TRANSMISSION. FREDERICK C. WALTERS, Eugene, Oreg. Filed Sept. 26, 1923. Serial No. 664,934. 12 Claims. (Cl. 104—235.)



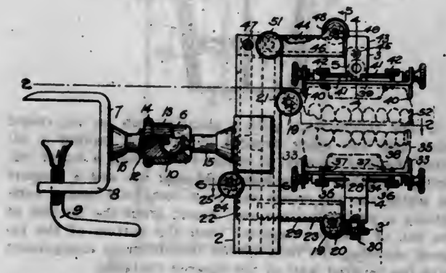
2. In a cable transmission of the character described comprising parallel shafts, and divided drums mounted thereon, a driving power applied to one of said shafts, operative connections between the intermediate and said outermost shafts, such connection including a divided member and differential gearing elements located within interior recesses provided in the opposed faces of the sections of said divided member and said drums respectively.

1,485,654. APPARATUS FOR MEASURING THE FLOW OF FLUIDS. CHARLES L. WEIL, Port Huron, Mich.; Ella S. Weil special administratrix of Charles L. Weil, deceased. Filed Oct. 6, 1919. Serial No. 328,867. 10 Claims. (Cl. 73—68.)



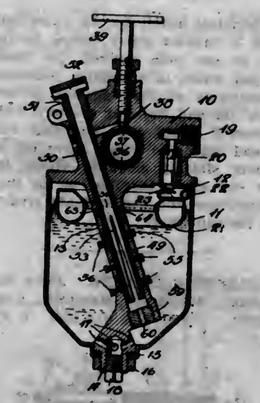
1. An apparatus for measuring the flow of fluids comprising a fluid conduit, a partition extending across said conduit having a plurality of apertures permitting the fluid to pass therethrough, a second conduit connected to one of said apertures to divert the fluid passing therethrough from the main stream, means for maintaining the same condition of back pressure against the diverted stream as against the main stream, and means for measuring the amount of fluid passing through said second conduit.

1,485,655. OPHTHALMIC LENS. ALBERT B. WELLS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 9, 1919. Serial No. 343,513. 2 Claims. (Cl. 88—54.)



1. A lens element having an ingredient possessing the property of selective retardance of invisible light and transmission of visible light, and an ingredient that changes the color of the retarding ingredient to a shade that blends with the natural flesh tints of the face and will not cast noticeable shadows on the face when the lens is in place thereon.

1,485,656. GRAIN-BINDER ATTACHMENT. CHARLES WENDT, Herington, Kans. Filed Mar. 5, 1923. Serial No. 622,881. 1 Claim. (Cl. 56—474.)

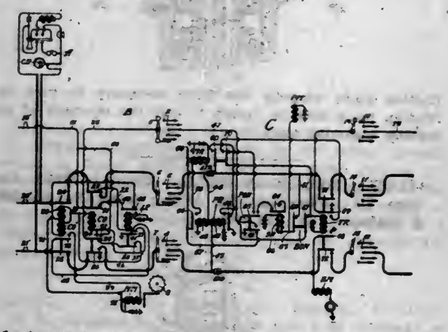


A bundle retaining arm structure adapted to be applied to the bearing of a bundle ejecting mechanism of a grain binder comprising a clamping plate having at a point between its ends a V-shaped depression adapted to receive a side portion of the bearing, a strap passing transversely through the plate beyond the ends of the depression and adapted to lie over the bearing, there being nuts screwed upon the ends of the strap and adapted to draw the same in close contact with the bearing, a bolt passing transversely through the forward end of the plate, the said plate being provided with a series of depressions which are arranged in an arc around the center of said bolt, a rod having an opening which receives the bolt and provided at its underside with a projection adapted to enter one of the last mentioned depressions, a nut screwed upon the upper end of the bolt and a coiled spring surrounding the bolt and interposed between the nut and the upper face of the rod.

1,485,657. DENTAL ARTICULATOR. FRANK L. WILLIAMS, Denver, Colo. Filed Apr. 5, 1921. Serial No. 458,674. 12 Claims. (Cl. 32—1.)

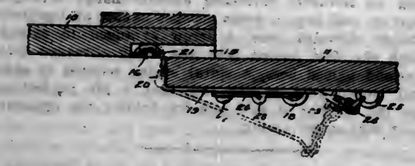
1. In a dental articulator, a standard, an upper model holding member including a bracket pivoted on the standard, a rack-bar slidable on the bracket, a pinion on the bracket cooperating with the rack-bar and a model-support connected to the rack bar at the outer end thereof, and a lower model-holding member cooperatively positioned with relation to the other.

1,485,658. CARBURETOR. DAVID L. WINTERS, Philadelphia, Pa. Filed Oct. 13, 1921. Serial No. 507,425. 4 Claims. (Cl. 261—64.)



4. A carburetor comprising, in combination, a gravity fed fuel well, a main air passage, a passage connecting said well and air passage, means to admit air to said well comprising a tube in said well having a tapered longitudinal slot with its upper end adjacent the normal liquid level in said well, means to admit air to said tube, and means to adjust the width of said slot.

1,485,659. BOILER COMPOUND FOR REMOVING SCALE. THOMAS BRUCE WRIGHT, Winnipeg, Manitoba, Canada; Mary Jane Wright administratrix of said Thomas Bruce Wright, deceased. Filed Oct. 21, 1921. Serial No. 509,398. 1 Claim. (Cl. 81—27.)

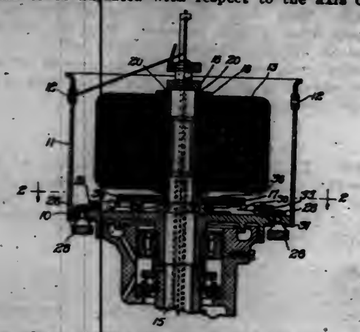


A boiler compound comprising five gallons of heavy mineral lubricating oil, two and one half gallons of kerosene, and one half gallon of turpentine.

1,485,660. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 30, 1918. Serial No. 256,175. 34 Claims. (Cl. 179—18.)

1. A telephone system including a non-numerical non-restoring automatic line switch, a test relay and a driving magnet for said switch, a circuit of said test relay including a contact of said driving magnet, and a circuit for said driving magnet including a contact of said test relay.

1,485,661. DOOR FASTENER. MAX ZIEHLKE, Linton, N. Dak. Filed Apr. 2, 1923. Serial No. 629,805. 1 Claim. (Cl. 292—285.)

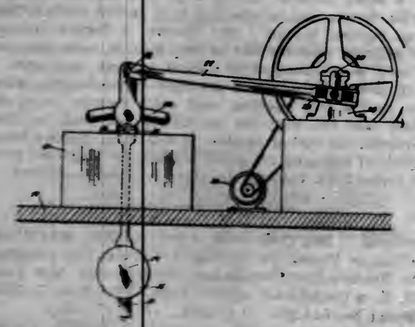


In combination with a building having a door opening and sliding doors therefor, a door fastener including a strap member having a portion formed at right angles thereto and terminating in a curved portion, said strap member having a slot therein, a flexible element for securing said member to the door, a hook mounted on said door arranged to extend through said slot, a catch member mounted on the wall of the building adjacent to the door opening, said catch member being recessed into the wall for permitting the door to slide thereover, the curved portion of said strap member being capable of engaging the catch member and a pivoted locking element for holding the strap member in position.

1,485,662. SERVING OR INSULATING MACHINE. CHARLES FREDERICK ARNHORST, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1922. Serial No. 541,884. 9 Claims. (Cl. 117—42.)

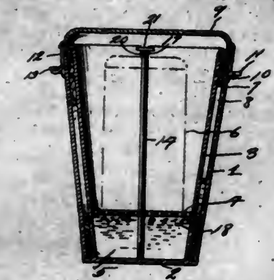
1. In a serving machine, a rotatable spindle, a serving head carried thereby, a bobbin carrier loosely mounted upon the rotatable spindle, a friction plate connected to the bobbin carrier, and friction supports for said fric-

tion plate connected to the head, said friction supports adapted to be adjusted with respect to the axis of said



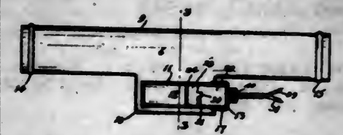
friction plate whereby the force necessary to turn the friction plate may be varied to suit the strength of the serving material used.

1,485,663. KEY-CHAIN REEL. WILLIAM BEST, Chicago, Ill. Filed July 23, 1923. Serial No. 653,300. 5 Claims. (Cl. 242—98.)



4. A key chain reel comprising a saucer-shaped housing having a guide member at one side thereof and being provided with an inwardly extending central cylindrical boss, said boss having a central bore, a tapered reel having an inwardly extending annular flange arranged to bear on said boss, a cover member having an inwardly extending threaded boss, a screw arranged to extend through the first named boss and being threaded into the second named boss, a spiral spring secured to said second named boss at one end, and a pin projecting across the interior of said reel for holding the opposite ends of said spiral spring.

1,485,664. PENDULUM. ISAAC V. BILYEU, Putnam, Ill. Filed Oct. 15, 1921. Serial No. 507,984. 5 Claims. (Cl. 185—29.)



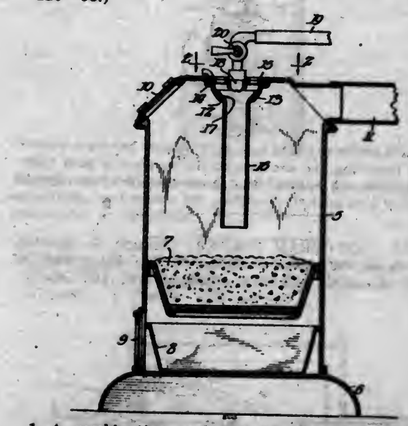
1. In a pendulum, having a staff with a weight at its lower end adjustable in longitudinal direction of said staff and a journal upon which it is mounted to oscillate; a tubular guide-way on said staff adjacent said journal and a body mounted upon said guide-way to travel thereon, said guide-way extending transversely to said staff in the plane of oscillation.

1,485,665. ICE-CREAM-SHIPPING TUB. FRED A. BOTNER, Barbourville, Ky. Filed June 29, 1922. Serial No. 571,834. 2 Claims. (Cl. 220—9.)

1. The combination with a shipping tub for ice cream cans, said tub being tapered shaped and having a tapered chamber therein, of means for forming a water collecting chamber in the bottom of said tub and a support on which the ice cream can may rest, said means comprising a perforated bottom, spaced from the bottom of the tub of greater diameter than the bottom of the tapered chamber and held spaced therefrom by engagement with the tapered wall of the tapered chamber.

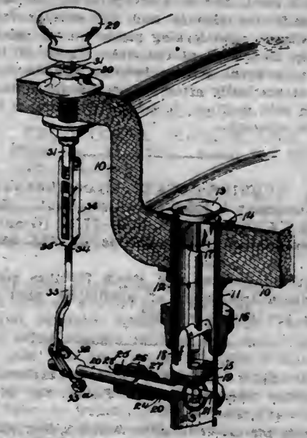
1,485,666. ELECTRIC HEATER. JOHN ROBSON HARDING COLDWELL, Winnipeg, Manitoba, Canada. Filed Mar. 23, 1922. Serial No. 546,154. 7 Claims. (Cl. 219—38.)

1. In an electrical heater for an automobile, the combination with a tubular water casing having an offset well formed at one side thereof, the well presenting bottom and end walls, of a tubular container extending into and lengthwise of the well and permanently carried by one of the end walls of the well and having the inner end thereof closed and the other end extending beyond the end wall and screw threaded, an electrical heating element slidably mounted within the container and a screw cap screw threaded on to the protruding end of the container and demountably retaining the element within the container.



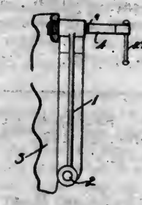
1,485,667. ELECTRIC HEATER. JOHN ROBSON HARDING COLDWELL, Winnipeg, Manitoba, Canada. Filed Jan. 8, 1923. Serial No. 611,456. 9 Claims. (Cl. 119—38.)

1. In an electric heater, a casing for receiving the electrical element, having one end permanently closed and the other end open and provided at the open end



with an exterior integrally formed circumscribing hexagonal flange and with exterior screw threads adjoining the base of the flange and at opposite sides thereof, and a closure cap screw threading onto the latter end of the casing, said cap being provided with a centrally located outlet opening.

1,485,668. COMBINATION HEATER. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 18, 1921. Serial No. 462,241. 3 Claims. (Cl. 126—93.)



1. A combination coal and gas heater comprising a casing having a firepot for containing coal or refractory material, a combustion chamber above the firepot and an ash-pit below the same, a burner pipe depending within the central portion of and directly exposed to the burning gases in said combustion chamber, and means for providing regulated supplies of air and gas to the upper portion of said burner pipe, the latter having a discharge outlet adjacent and above the top of said firepot and arranged to project downwardly into either a blast of hot air or of a highly heated mixture of air and gas, substantially as described.

1,485,669. LAVATORY WASTE. VERNER F. DAVIS, Newark, N. J. Filed Nov. 17, 1922. Serial No. 601,452. 2 Claims. (Cl. 4—24.)

1. A lavatory waste comprising a waste pipe, a stopper operable longitudinally in the waste pipe, and a stem extending laterally into the waste pipe and rotatable therein and having the part under the stopper provided with a rounded face and a flat face, the parts being disposed so that the rounded face when engaging the stopper, supports it.

1,485,670. ADJUSTABLE VISE-LOCKING SCREW. HARRY L. EISENBROT, San Francisco, Calif. Filed Mar. 5, 1923. Serial No. 622,999. 9 Claims. (Cl. 199—50.)

3. Means for locking a movable element to a stationary element comprising a recess in the latter element having a flange extending into the same and a pin threadedly engaging the movable element having a tip removably secured thereto with a flange at the end of the tip adapted to engage the flange in the recess on a turning motion of the pin whereby the two elements are drawn together.

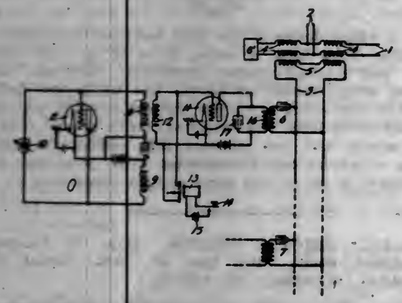
1,485,671. CHUCK. GEORGE W. EMRICK, Brooklyn, N. Y., assignor to Eastern Tube and Tool Company, a Corporation of New York. Filed June 23, 1922. Serial No. 570,465. 22 Claims. (Cl. 279—16.)

1. A chuck device of the class described comprising a suitable chuck body, a casing mounted on said chuck body and retained against detachment therefrom, said casing being capable of lateral and oscillatory movement on said chuck body, jaw members movably mounted in said chuck body, and means controlled by said casing, for moving said jaw members into position to firmly grasp a suitable tool therebetween while permitting the movement of all of said parts on said chuck body.

1,485,672. CHICKEN FEEDER. MARY E. FIELDEN, Ashland, Oreg. Filed Mar. 20, 1923. Serial No. 626,345. 3 Claims. (Cl. 119—61.)

2. A feed trough for chickens or the like comprising a central partition, two troughs disposed on opposite sides of the same, a rod removably supported above the partition and a plurality of lids adapted to be interchangeably hinged to the rod for covering both troughs, the lids having apertures of different sizes for allowing chickens of different sizes access to the troughs.

1,485,673. PRODUCT OF REDUCTION OF OXYCODEINON AND PROCESS FOR PREPARING THE SAME. MARTIN FREUND, deceased, late of Frankfort-on-the-Main, and Edmund Speyer, Frankfort-on-the-Main, Germany, by Walter Freund, administrator. Original application filed July 15, 1921, Serial No. 485,130. Divided and this application filed Sept. 11, 1922. Serial No. 587,621. 1 Claim. (Cl. 260—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

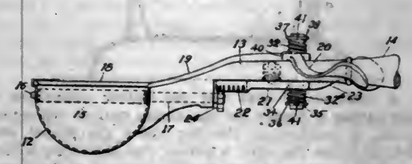


The process of preparing dihydrooxycodeinon, melting at 222° C. which consists in reducing oxycodeinon in an acetic acid solution by molecular hydrogen in the presence of palladium chloride.

1,485,674. CASTER. KASIMIERZ GLOWASKI, Philadelphia, Pa. Filed Mar. 15, 1923. Serial No. 625,240. 4 Claims. (Cl. 16—24.)

1. A caster comprising a top plate having an annular flange; a bottom plate having an opening and an annular flange, the flange on the top plate embracing the flange on the bottom plate; a ball of a diameter greater than the opening disposed between the plates and seated in the opening; a spacer between the plates, and means for securing the top plate to the bottom plate.

1,485,675. MULTIPLEX TELEGRAPHY. RALPH V. L. HARTLEY, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,330. 10 Claims. (Cl. 178—51.)

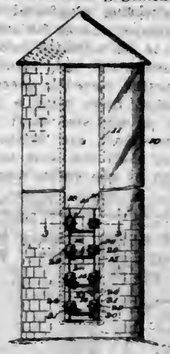


1. The method of telegraph signaling which comprises controlling a high frequency sustained wave in accordance with a telegraphic signal and passing the resulting wave through a selective circuit to suppress resultant wave components having frequencies lying to one side of said high frequency, and to transmit the corresponding wave components to the other side of said high frequency.

1,485,676. CASTER. WILLIAM C. HARTMANN, Cleveland, Ohio, assignor of one-half to C. A. Fleming, Cleveland, Ohio. Filed Nov. 23, 1922. Serial No. 602,826. 2 Claims. (Cl. 16—19.)

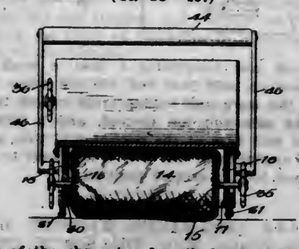
1. A caster having an upstanding shank, said shank being square in cross section and having screw threads on its corners, a guide slidably and rotatably receiving said shank, a weight supporting nut threaded adjustably on the shank under said guide, and a washer interposed between said guide and said nut, said washer having a square opening receiving the shank, and the corners of said opening being grooved to clear the screw threads of the shank.

1,485,677. ICE-CREAM DISHER. GEORGE E. HOLMES and FRANK W. GRANT, Dover, N. H. Filed Feb. 6, 1923. Serial No. 617,221. 4 Claims. (Cl. 107—48.)



1. An ice-cream disher comprising a shank, a bowl fixed to the shank, a scraper conforming to the interior of the bowl, and movable from side to side thereof, a cleaver movable across the top edge of the bowl, operating mechanism including a cleaver-operating lever connected with the cleaver, a scraper-operating lever connected with the scraper, and spring means normally holding the cleaver, the scraper and the said levers in initial positions with the cleaver and the scraper at one side of the bowl, the said levers being manually movable to shift the cleaver and the scraper from their initial positions; and locking means on the shank, operable by the movement of the cleaver lever to its initial position, to lock the scraper lever to the shank, and operating automatically after the movement of the cleaver lever from said position, to release the scraper lever and permit its operation.

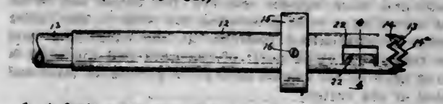
1,485,678. TURBINE BUCKET. HANS HOLZWARTH, Mulheim, Germany. Filed Aug. 23, 1921. Serial No. 494,643. 4 Claims. (Cl. 253—77.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



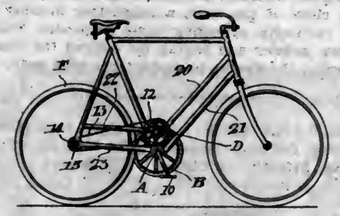
1. A bucket for gas and steam turbines adapted for high temperatures made of practically unalloyed iron having a low carbon content.

1,485,679. SILO. LEVI DEPUY HOUGHTALING, Reading, Pa. Filed July 29, 1922. Serial No. 578,479. 7 Claims. (Cl. 20—1.4.)

1. A door for use with silos having a door opening and comprising a main panel and laterally movable end pieces carried by said main panel, said movable end pieces being movable laterally outward into engagement with the inner side walls of the door opening, and being movable laterally inward and out of engagement with said walls whereby to compensate for shrinkage or swelling, respectively, and means for positively moving said end pieces outwardly or inwardly.

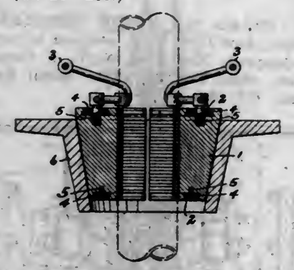


1,485,680. FLOOR POLISHER. WILLIAM H. HUGHES, Falls City, Nebr. Filed May 23, 1921. Serial No. 471,883. 1 Claim. (Cl. 15—49.)



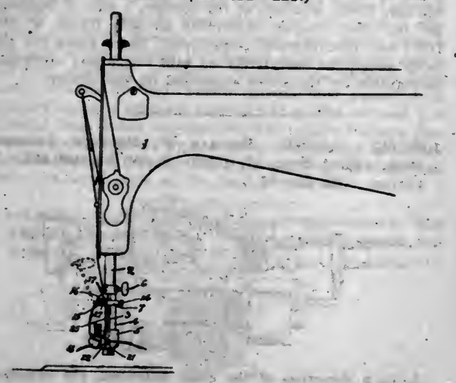
A device of the character described comprising a body provided with spaced side walls having their opposed sides formed with vertically arranged guides, polishing elements having shafts provided with bearings slidable in said guides, upper and lower springs received in said guides and contacting with opposite sides of said bearings the lower longitudinal edge portions of said side walls being extended inwardly to define flanges against which the lower springs abut, a handle connected to said side walls, castors supporting said side walls and connected to said inwardly directed flanges, and an electric motor mounted on the top for operating said polishing elements, the upper springs being greater in strength than the lower springs, whereby to urge the polishing elements into engagement with the floor.

1,485,681. FRUIT CORER. HARRY E. LAKE, Reading, Mass. Filed Dec. 28, 1922. Serial No. 609,395. 3 Claims. (Cl. 146—53.)



1. A fruit corer comprising a pair of telescoping tubes, adapted to form an annular kerf extending partly through a fruit, and partially detaching the core thereof, the inner tube being adapted to turn and move endwise in the outer tube, and provided with means actuated by a turning movement of the inner tube to complete the detachment of the core, and by an endwise movement of the inner tube, to withdraw the detached core, so that the fruit may be provided with a cavity open at one end only, the other end being left intact, stop means being provided for limiting the endwise and turning movements of the inner tube.

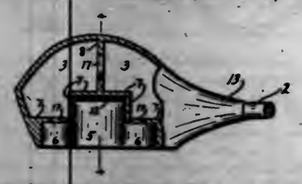
1,485,682. BICYCLE GEAR. AUGUSTUS LIEBE, Rowe, Mass. Filed July 24, 1922. Serial No. 577,169. 1 Claim. (Cl. 208—47.)



A bicycle of the character described comprising a pair of diagonal bars spaced one above the other, a pair of similarly spaced horizontal bars connected at their inner ends to the diagonal bars to form an upper and lower frame, a counter-shaft supported in a bearing in the upper frame, a pinion and a sprocket on said shaft, a crank shaft in the lower frame having an internal gear adapted to engage with the pinion on the counter-shaft, and chain means connecting the sprocket on the counter-shaft with a sprocket on the driving wheel.

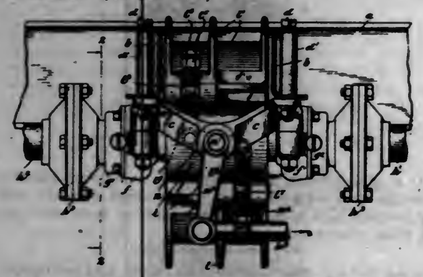
1,485,683. PIPE HOLDER. MILTON S. LIONOSKI, Houston, Tex., assignor to G. R. Livergood. Filed Feb. 13, 1922, Serial No. 536,138. Renewed June 29, 1923. 4 Claims. (Cl. 24—263.)

1. A pipe holding device including a circular inwardly tapering wall, segmental jaws, independent members passing through said jaws at their respective ends, and joining them loosely together.



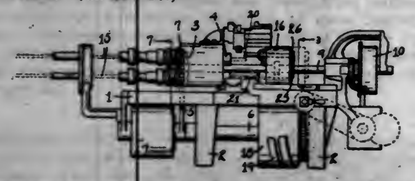
1,485,684. NEEDLE-THREADING ATTACHMENT. DAVID ALEXANDER LIVINGSTON, Metchosin, British Columbia, Canada. Filed July 19, 1920. Serial No. 397,536. 1 Claim. (Cl. 112—225.)

In a needle threading attachment for a sewing machine a thread guide consisting of a split, horizontally disposed, conical body, having the split on the under side, the



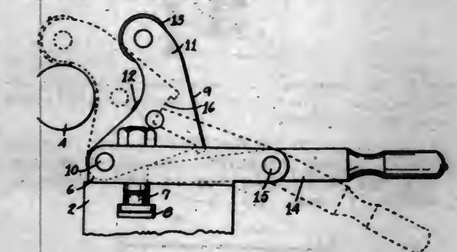
divided edges of the body being spaced apart and provided with spaced aligning extensions projecting beyond the small end of the body, horizontal sleeves carried by the opposite sides of the body, a supporting member and a pair of vertically extending arms suspended from said supporting member and having the ends of the arms bent and entering the sleeves to support the cone body.

1,485,685. GOLF CLUB. JAMES ALEXANDER MCMAHON, Hamilton, Ontario, Canada. Filed Mar. 11, 1922. Serial No. 543,052. 4 Claims. (Cl. 46—4).



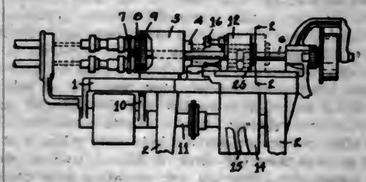
1. A golf club comprising a hollow metallic head having the driving face thereof open, a wooden insert carried within the head, the outer face of said insert coinciding with the driving face of the head, and a single balancing weight carried within the head adjacent to the center of gravity thereof and situated centrally behind the insert.

1,485,686. BRAKE FOR MOTOR VEHICLES. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1921. Serial No. 441,130. 9 Claims. (Cl. 188—74.)



1. In a motor vehicle, in combination with the side frame members of the chassis and a propeller shaft, a brake drum carried on said shaft, a frame supported on the side frame members of the chassis, a pair of bearings for the shaft carried removably on said frame, at the front and rear thereof, respectively, brake shoes for the drum supported operatively on said frame and operating mechanism for the shoes supported on said frame.

1,485,687. LATHE. HERMAN W. MELLING, Jackson, Mich. Filed Sept. 27, 1922. Serial No. 590,828. 8 Claims. (Cl. 29—57.)

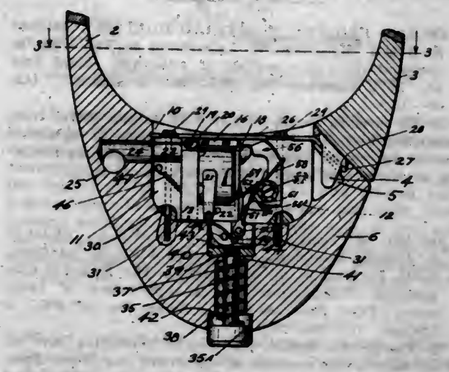


1. In a structure of the class described, the combination with a work spindle, of a cutter spindle provided with a cutter, a spindle driving shaft, a gear box member in which said spindle driving shaft is mounted, a coacting gear box member in which said cutter spindle is mounted, a stub shaft carried by said first gear box member and constituting a pivotal support for said second gear box member, means for securing said second gear box member in its adjusted positions, a gear on said spindle disposed within said spindle gear box member, a pair of coacting eccentric gears on said driving shaft and stub shaft, there being a gear connected to said eccentric gear on said stub shaft meshing with said gear on said cutter shaft, and driving connections for said spindle driving shaft and work spindle whereby the work is acted upon by the cutter during its periods of increased speeds.

1,485,688. WORK REST. HERMAN W. MELLING, Jackson, Mich. Filed Sept. 27, 1922. Serial No. 590,829. 2 Claims. (Cl. 82—38.)

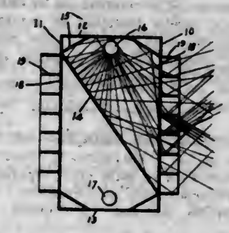
1. A work rest comprising a base, a work engaging yoke pivoted on said base and adapted when erected to overhang the work and having trust rollers thereon engaging the side and top thereof, and a locking lever pivoted on said base at the rear of said yoke so that its inner end engages the rear side of the yoke to swing the same to and lock in erected position.

1,485,689. NUT-MAKING MACHINE. HERMAN W. MELLING, Jackson, Mich. Filed Sept. 27, 1922. Serial No. 590,830. 5 Claims. (Cl. 29—57.)



1. In a structure of the class described, the combination with a work spindle, of a cutter spindle, a cutter on said cutter spindle provided with end blades, a spindle driving shaft, a train of gears connecting said spindle driving shaft and cutter spindle comprising coacting eccentric gears whereby said cutter spindle is driven with variable speed, and driving connections for said spindle driving shaft and work spindle whereby the cutter and work are driven at a ratio presenting the work to the cutter blades in alternating positions at the succeeding cuts are taken at a given point of the work and the work is acted upon by the blades during the periods of increased speed of the cutter.

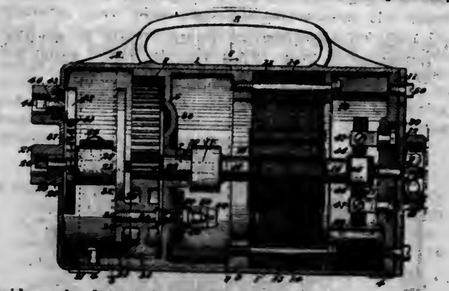
1,485,690. AUDIBLE THEFT SIGNAL FOR AUTOMOBILES. ROBERT MESTARS, Los Angeles, Calif., assignor to Security Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Oct. 27, 1919, Serial No. 333,700. Renewed Jan. 8, 1924. 15 Claims. (Cl. 116—33.)



6. An audible theft indicating signal comprising, a device adapted to be locked about the tire and felly of a wheel of the vehicle and having a body portion projecting from the periphery of the tire and which portion is

chambered; a compactly organized gun action designed to be readily mounted and secured in the said chamber, said action having a trigger member; the body portion of the said device having a bore extending to its road engaging face and provided with a series of shoulders

forming stops; and a yielding plunger mounted in the said bore and engaging one of said stops upon the rim of its inward movement during which movement the plunger actuates the gun trigger; and a device on the plunger for engaging the other of the stops to limit the outward movement of the plunger.



1,485,691. ELECTRIC SIGN. FRANK B. MILLER, Terre Haute, Ind. Filed July 15, 1921. Serial No. 484,956. 1 Claim. (Cl. 40—133.)

A sign structure comprising a housing having a representation of a design or letter thereon, a source of illumination mounted within said housing, a plurality of apertures within the side of said housing so arranged as to outline said letter or design, a reflecting surface positioned witin said housing extending at an angle to the plane through said apertures through which the rays of light are reflected thereby, and a plurality of outwardly extending honey-comb members positioned adjacent each other and secured to said housing so as to coincide with and surround said apertures, said members comprising reflecting walls extending outwardly at right angles thereto and perpendicular to said housing at substantially a distance equal to the width of said apertures for reflecting the rays of light passing therethrough.

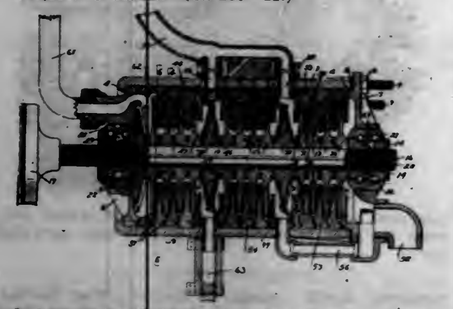
1,485,692. SPRING MOTOR. ROMAINE W. MYERS, Oakland, Calif., assignor to California Cap Company, Oakland, Calif., a Corporation of California. Original application filed Mar. 8, 1921, Serial No. 450,599. Divided and this application filed July 5, 1922. Serial No. 572,897. 8 Claims. (Cl. 185—41.)

1. In combination with a rotatably mounted element, a spring actuated planetary transmission associated therewith for operating the same, a connection between the transmission and said element including an overrunning clutch, a peripherally toothed ratchet associated with said spring, one of the teeth of said ratchet being mutilated, and a spring held pawl co-operating with the ratchet for retaining the spring in its wound position,

said pawl adapted for releasing from said ratchet only when the same is in co-operation with said mutilated tooth.

1,485,693. LACE. ALBERT E. NEWTON, West Barrington, R. I., assignor to Rhode Island Lace Works, West Barrington, R. I., a Corporation of Rhode Island. Filed Dec. 13, 1922. Serial No. 606,611. 19 Claims. (Cl. 96—24.)

1. As a new article of manufacture, a lace wherein the gimp thread coacting in series in fixed relation to each other in respect to the bobbin threads are twisted around certain bobbin threads from above and led under a plurality of bobbin threads, are twisted from below around the last bobbin threads just passed under and led over a different plurality of bobbin threads, are twisted from above around the last bobbin threads just passed over and led under a different plurality of bobbin threads, are twisted from below around the last bobbin threads just passed under and led over a different plurality of bobbin threads back to the starting stop, and are repeatedly led over the same cycle as the lace is twisted.



1,485,694. CLASP. HALFDAN JOHANNES NORDSETH, San Francisco, Calif. Filed Feb. 19, 1923. Serial No. 620,033. 1 Claim. (Cl. 24—243.)

A clasp of the character described, comprising a strip of metal bent to encircle an object having marginal flanges folded upon the outside of the strip and an insert

of different material matching the color of the object covering the body of the strip clamped between the flanges and the strip.

1,485,695. COMPRESSION PUMP. EMIL P. NORMAN, Holmquist, S. Dak. Filed Jan. 29, 1923. Serial No. 615,638. 3 Claims. (Cl. 230—11.)

2. In a device of the character described, a cylindrical housing having an internal flange at one end, an end plate adapted to be pushed against the flange from the other end, a shaft supported centrally in the housing, a plurality of discs supported on the shaft in spaced relation, a plurality of rings engaging the wall of the cylinder having annular tongues thereon extending into the spaces between the discs, the discs and the rings being adapted to be introduced alternatingly, and a second end plate adapted to be secured to the other end having means associated therewith for pushing all the members within the housing toward the first mentioned end.

1,485,696. EXTRACTING OIL FROM MILK AND CREAM. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, a Corporation of Delaware. Filed June 14, 1922. Serial No. 568,359. 1 Claim. (Cl. 99—13.)

The process herein described of extracting oil from milk and cream, which consists in separating the cream out from the whole milk, diluting and washing the cream by the centrifugal action of a separator of the same form until practically all of the casein is removed, diluting and melting the fat contained in the cream, passing the same through an oil separator and returning the fluid comprising the wash water, milk serum and unrecovered fat particles back to the whole milk prior to its being subjected to the initial step of separation.

1,485,697. PROCESS OF EXTRACTING OIL FROM MILK AND CREAM. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, a Corporation of Delaware. Filed June 14, 1922. Serial No. 568,360. 3 Claims. (Cl. 99—13.)

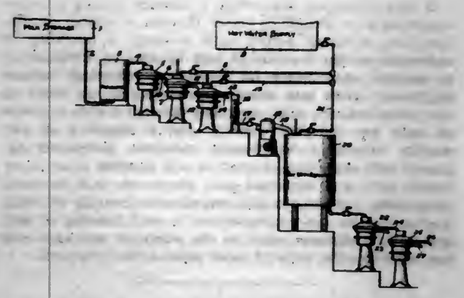
2. The process herein described of extracting oil from milk or cream, which consists in separating out the cream from the whole milk, diluting the cream with water and subjecting the mixture to a second separating process, agitating or whipping the washed cream, heating the agitated cream to a temperature sufficient to melt the fat particles and subjecting the heated cream to the action of a centrifugal oil separator for extracting the pure oil.

1,485,698. PROCESS OF OBTAINING MILK FAT. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, a Corporation of Delaware. Filed July 6, 1922. Serial No. 573,230. 5 Claims. (Cl. 99—13.)

1. The process of recovering oil from milk which consists in treating the milk or cream separated therefrom so as to produce a mixture of concentrated fat, water and a small percentage of casein or non-fat solids, subjecting this product to the action of a whey separator, and then passing the resulting product through an oil separator to obtain a pure clear oil.

1,485,699. PROCESS OF MAKING BUTTER. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, a Corporation of Delaware. Filed July 14, 1922. Serial No. 575,056. 2 Claims. (Cl. 99—13.)

2. The process herein described of making butter from emulsified artificial cream which consists in agitating the cream at the proper temperature by paddles revolving at the rate of about 700 revolutions per minute.



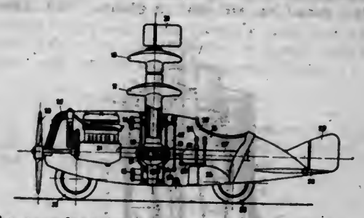
1,485,700. EXTRACTING OIL FROM MILK. CHARLES E. NORTH, Montclair, N. J., and JOHN L. LAYCOCK, North Pelham, N. Y., assignors to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 28, 1923. Serial No. 621,009. 5 Claims. (Cl. 99—13.)

1. The process herein described of extracting pure oil from milk which consists in separating the cream from the skim milk, washing the cream, freezing the washed cream, melting the frozen cream and separating out the water from the resulting mixture.

1,485,701. PROCESS OF EXTRACTING MILK OIL. CHARLES E. NORTH, Montclair, N. J., and GEORGE C. PECK, Potsdam, N. Y., assignors to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 11, 1923. Serial No. 631,353. 2 Claims. (Cl. 99—13.)

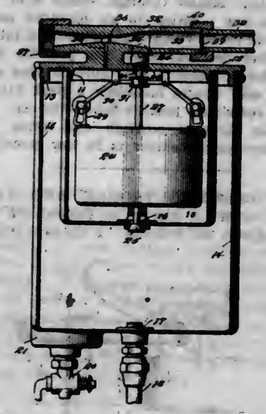
1. In the process of recovering oil or fat from milk or cream, the steps herein described of washing the cream separated from the milk, curdling the remanent casein in the washed cream by the addition of rennet and separating out the oil therefrom.

1,485,702. CONTINUOUS PROCESS OF EXTRACTING OIL FROM MILK. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 29, 1923. Serial No. 642,262. 4 Claims. (Cl. 99—13.)



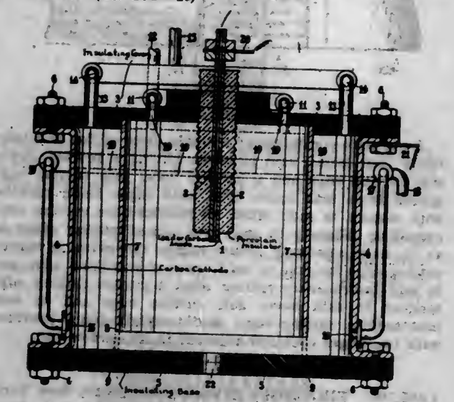
1. A continuous and automatic process for recovering oil from milk, which consists in warming the milk, separating, washing, cooling and whipping the cream, melting the whipped cream with warm water, freeing this mixture of its water, and delivering the dry oil; these steps being carried on in the sequence named and in such manner that the product of one step is directly and continuously passed to the means for carrying out the next succeeding step, all as herein set forth.

1,485,703. FUSE. ELMER L. OGLE, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1921. Serial No. 497,178. 3 Claims. (Cl. 200—123.)



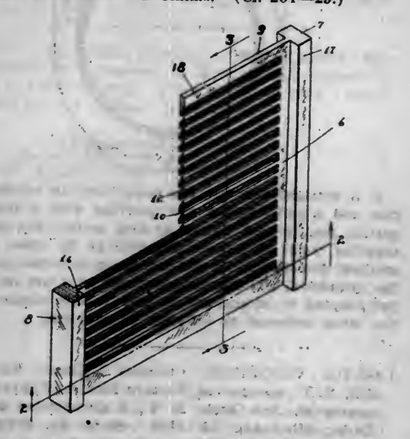
1. In an electric fuse for use in multiphase circuits, in combination with a fuse body and a removable cartridge containing a fusible element and a heating coil associated therewith, said cartridge having auxiliary contacts on the outside of its body connected to said heating coil, primary contacts on the outside of the fuse body, each primary contact consisting of a blade split at one end and provided with a stud at the other end, said stud taking through an opening in said body and being adapted for engagement with one of said auxiliary contacts.

1,485,704. AIRCRAFT. RAUL PATERAS PESCARA, Barcelona, Spain. Filed Aug. 29, 1922. Serial No. 585,092. 4 Claims. (Cl. 244—15.)



1. An aeroplane having a supporting surface mounted to rotate freely about an axis perpendicular to its larger dimension, means for driving the machine, and means for braking and locking the supporting surface to permit of the latter turning by "auto-rotation" or serving as a fixed plane.

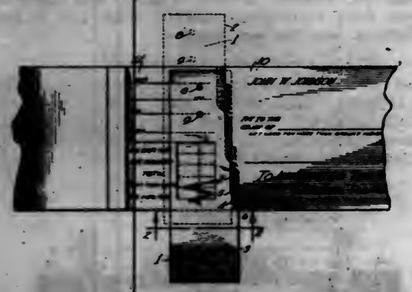
1,485,705. GASOLINE-SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WALTER PIEL, New York, N. Y. Filed Nov. 19, 1919. Serial No. 339,238. 7 Claims. (Cl. 158—36.)



1. In a device of the class described, the combination of a float chamber, having an air inlet in the upper part thereof, and a fuel discharge port in the lower portion thereof, a float in said float chamber, a valvular construction including a pair of valves rigidly connected and controlled by said float for simultaneously closing both the air inlet and the fuel discharge port when the float is at or moving from a lowered position and for simultaneously opening both the air inlet and the fuel discharge port when the float approaches the upper limit of its movement, a feed chamber for receiving the discharge directly through said port and aspirating means carried above the float chamber continuously open to the upper portion of said float chamber and tending to reduce the pressure in said chamber, said aspirating means being continuously operated when fuel is being withdrawn from the feed chamber.

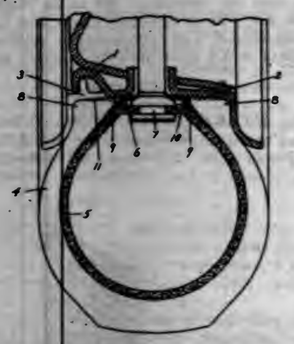
1,485,706. METHOD OF CARRYING OUT ELECTRO-CHEMICAL REACTIONS AND APPARATUS FOR USE THEREIN. GERTRUD PLAUSON, Hamburg, Germany. Filed Mar. 13, 1922. Serial No. 543,408. 10 Claims. (Cl. 204—1.)

1. A method of carrying out an electrochemical reaction consisting in passing current through an electrolytic cell such that the surface of the anode exposed to the electrolyte which is of relatively small area is heated to a high temperature and introducing a substance, which it is required to act upon, into the reaction zone at said anode.



1,485,707. SEPARATOR FOR STORAGE BATTERIES. ROY W. PORTMANN, Norwood, Ohio. Filed July 5, 1922. Serial No. 572,894. 2 Claims. (Cl. 204—29.)

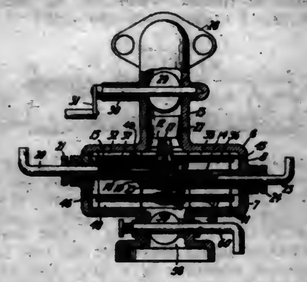
1. A separator of the class described comprising a frame carrying integral spaced ribs forming unobstructed inclined passages therethru, the ribs having inclined



walls, the inclination thereof being such that no perpendicular line can be drawn between the side faces of the separator without contacting some portion of the separator.

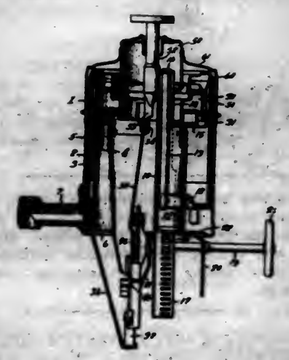
1,485,708. TEMPLATE. GEORGE E. POTTER and ELVIE L. POTTER, Chicago, Ill. Filed Feb. 2, 1921. Serial No. 441,893. 1 Claim. (Cl. 33—198.)

A template consisting of a single piece of flat and relatively thin metal, said template having a beveled upper side cutting edge and a beveled lower side cutting edge spaced from said upper edge, said edges being parallel with respect to each other, an intermediate cutting edge extending obliquely to said first named cutting edges so as to make relatively obtuse angles therewith, a curved cutting edge tangent to said upper side cutting edge and to said intermediate cutting edge, a curved cutting edge tangent to said lower side cutting edge and to said intermediate cutting edge, said template being provided with two finger openings adjacent to its narrow end.



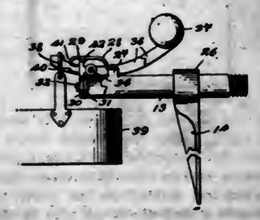
1,485,709. TIRE RIM. SYDNEY I. PRESCOTT, New York, N. Y., and FRANCIS J. RUMMLER, Lyndhurst, N. J. Filed Feb. 8, 1922. Serial No. 534,975. 2 Claims. (Cl. 301—11.)

1. A straight side tire rim comprising an endless section and a split section and provided with a tire supporting seat in part formed by each section and slightly tapering from its largest diameter at its sides to its smallest diameter in its mid-section in non-conformity to the cylindrical rim engaging surfaces of a tire as made, but adapted to be engaged by and to fully support said tire when deflected by inflation on said rim.



1,485,710. VAPORIZER. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1919. Serial No. 319,055. 6 Claims. (Cl. 48—103.)

1. A vaporizer for internal combustion engines, comprising a mixing chamber, air and fuel inlet passages and a mixture outlet passage communicating therewith, and electrically heated superimposed plates arranged to heat

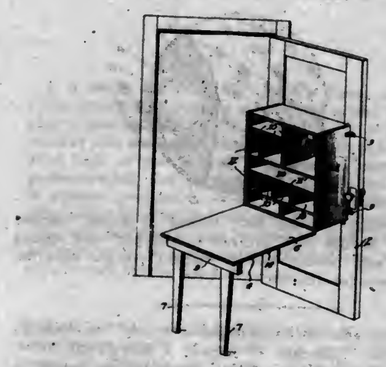


and baffle the air and mixture passing through said chamber.

1,485,711. OIL BURNER. MARC RESEK, Cleveland Heights, and HERMAN F. KLUGE, Shaker Heights, Ohio, assignors to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 7, 1922. Serial No. 605,495. 9 Claims. (Cl. 158—94.)

1. In a burner of the character set forth, an air controlling member, means through which said member is lifted from a low position to an elevated position and through which its downward movement is initiated, the member further descending to low position by gravity, and a guide for said means, said guide having a restricted portion and said means including a part fitting loosely within said restricted portion when the air controlling member is in elevated position and being withdrawn therefrom when said member is in low position.

1,485,712. WATERING TROUGH AND AUTOMATIC CUT-OFF. JOHN J. REYNOLDS, Gifford, Ill. Filed Dec. 5, 1919. Serial No. 342,835. 1 Claim. (Cl. 137—68.)



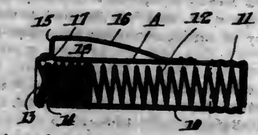
A conduit, a valve therefor, an operating member having lost motion operative relation thereto, said operating member having a receptacle supporting arm movable vertically for operation, a releasable detent and a member movable with the valve to be engaged by the detent and parts on the detent and operating member to co-engage for release of the detent.

1,485,713. TENSION TESTER OR INDICATOR. CHARLES STANLEY RHOADS, Yonkers, N. Y. Filed Apr. 29, 1920. Serial No. 377,631. 4 Claims. (Cl. 265—63.)

1. In a device for placing a flexible member under tension, a plurality of pulley members, a flexible member having lengths extending between said pulley members, said pulley members being provided with means for detachably securing the same to a flexible member that is to be placed under tension, and tension indicating means positioned in one of said lengths between said pulley members whereby said tension indicating means will be subjected to only a portion of the stress to be measured, said tension indicating means having a hook and one of said blocks having an eyelet adapted to receive said hook to connect said tension indicating means thereto.

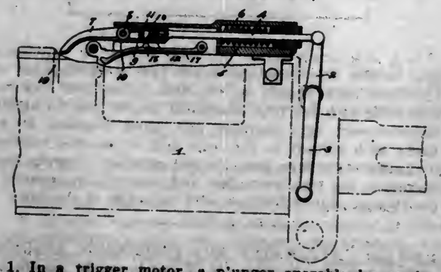
1,485,714. KITCHEN CABINET. FREDERICK M. ROACH, Detroit, Mich. Filed July 20, 1923. Serial No. 652,794. 1 Claim. (Cl. 45—51.)

A cabinet comprising, in combination, a box portion having a plurality of compartments therein, with its back secured to the inside of a closet or other door, a combined table and closure for said cabinet hingedly mounted on the box portion to swing downwardly approximately to a horizontal position and hinged supporting means mounted adjacent the free end of said closure to rest upon the floor, said supporting means being mounted to swing outwardly from the door into supporting position when the door is open and tending to resist swinging movement of the door while the cabinet is in use.



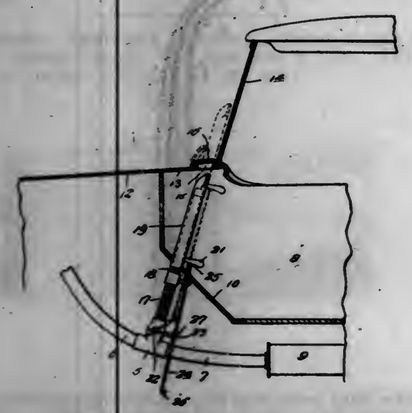
1,485,715. BLOWPIPE FOR METAL SOLDERING. FREDERICK ROBINSON, New York, N. Y. Filed Apr. 30, 1923. Serial No. 635,790. 2 Claims. (Cl. 158—27.4.)

1. A blow pipe comprising an air and a gas lead, a gradually tapering outlet pipe and a valve housing connected to the air and gas leads respectively, said outlets having a common inner wall and curved at their ends,



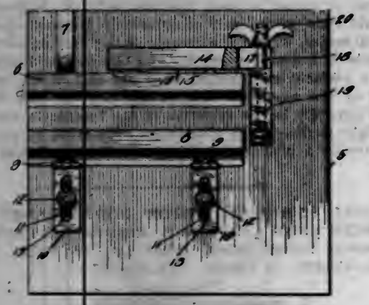
the air outlet terminating in a restricted opening and the gas outlet terminating in an enlarged triangular shaped opening disposed slightly beyond the restricted opening.

1,485,716. POCKET CONTAINER FOR CONFECTIONS AND THE LIKE. REGINALD HUBERT ROGERS, Summerside, Prince Edward Island, Canada. Filed Mar. 17, 1922. Serial No. 544,575. 2 Claims. (Cl. 206—56.)



1. A device of the character described, comprising a receptacle closed at each end and provided adjacent one of said ends with a pair of oppositely disposed openings, a feed spring within the receptacle for feeding contained articles to a position between and opposite said openings, and a resilient strip attached at one end to the exterior wall of the receptacle and having the free end thereof bent inwardly in the direction of the receptacle and then at right angles in the longitudinal direction of the strip to provide a pusher operable through one of said openings.

1,485,717. TRIGGER MOTOR FOR VICKERS MACHINE GUNS. HERBERT O. RUSSELL and GARNET C. BROWN, Detroit, Mich. Filed Apr. 18, 1922. Serial No. 555,193. 5 Claims. (Cl. 89—27.)



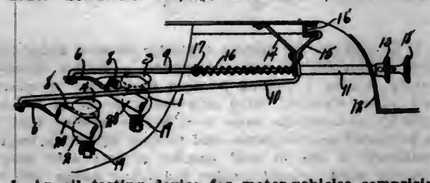
1. In a trigger motor, a plunger operable by an impulse generator, a floating arm carried by said plunger, a trigger trip lever also carried by said plunger and controlled as to its attitude by said floating arm, the latter in turn being controlled by a moving element of the machine gun on which the trigger motor is used.

1,485,718. APPARATUS FOR CLEANING GLASS PANELS. PAUL D. RYAN, Kenmore, N. Y. Filed Oct. 13, 1923. Serial No. 668,357. 2 Claims. (Cl. 20—40.5.)

1. A windshield cleaner for motor vehicles, wherein the vehicle is provided with a cowl, having an opening forwardly of the vehicle wind shield, a vertically movable nozzle normally disposed beneath the cowl and movable upwardly through said opening in position to supply a jet of gaseous medium across the outer surface of the windshield, and means to operatively associate said nozzle with an operative part of the motor vehicle from which a supply of said gaseous medium may be derived.

1,485,719. BACON SLICER. WILLIAM WALKER SADLER, Booneville, Miss. Filed May 9, 1923. Serial No. 637,762. 2 Claims. (Cl. 146—150.)

1. A supporting device including a base, a stationary jaw on the base, said stationary jaw being disposed at an angle with respect to the base, a movable jaw cooperating with the first mentioned jaw to grip an article therebetween, said movable jaw being disposed at an angle with respect to the base and in parallel relation with the stationary jaw, an end member hingedly connected to the stationary jaw and adapted to move to a position in spaced relation with the ends of the jaws.

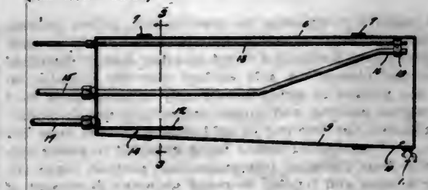


1,485,720. APPARATUS FOR DISPENSING LIQUIDS. M JAY SAGE, Brooklyn, N. Y., assignor, by mesne assignments, to Sage Air Systems, Inc., a Corporation of New York. Filed June 7, 1921. Serial No. 475,574. 3 Claims. (Cl. 251—104.)

1. In combination, a valve casing having air inlet and outlet ports, an exhaust port and a rotary valve within said casing having ports adapted to establish communication between said inlet port and outlet port at one

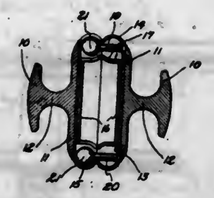
setting of the valve and means for placing said inlet port, outlet port and exhaust port in communication at the same setting of the rotary valve.

1,485,721. OIL TESTER FOR FORD AUTOMOBILES. FRANK H. SAVAGE, Gainesville, Tex. Filed June 26, 1923. Serial No. 647,932. 2 Claims. (Cl. 137—139.)



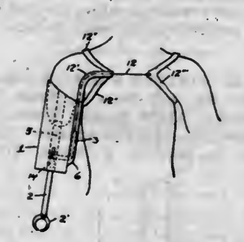
1. An oil testing device for motor-vehicles comprising a lever engaging the upper cock-handle and a lever engaging the lower cock-handle, pull-rods connected to said levers, a portion of one of said rods being a cylindrical sleeve and constituting one support for the other rod, a bracket for supporting both of said rods and a spring for automatically actuating said rods to close said cocks.

1,485,722. POWDER PUFF. THEODORE W. SCHRAMM, Bay City, Mich. Filed May 23, 1923. Serial No. 640,891. 3 Claims. (Cl. 132—78.5.)



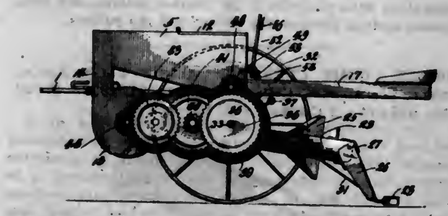
1. A flexible powder-puff having a pocket formed therein, a flexible cord secured to the puff and spaced from the said pocket, and a compact powder cake detachably secured thereto.

1,485,723. GASOLINE-SUPPLYING ATTACHMENT. JAMES S. JONES and EDWIN A. SCOTT, Beggs, Okla. Filed Oct. 13, 1922. Serial No. 594,263. 3 Claims. (Cl. 158—46.5.)



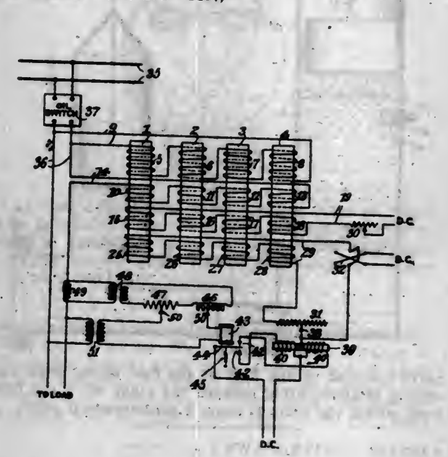
1. In a device of the class described, a main fuel tank; a carbureter; an auxiliary fuel tank located in advance of the carbureter and having a downwardly and forwardly inclined bottom defining a water pocket at the forward end of the auxiliary tank, means for draining the pocket, a supply conduit leading from the main tank to the auxiliary tank; and a delivery conduit leading from the auxiliary tank to the carbureter.

1,485,724. UNIVERSAL SNAP-FASTENER BUTTON. ALEXANDER D. SCULLY, New York, N. Y. Filed Mar. 9, 1923. Serial No. 623,825. 5 Claims. (Cl. 24—217.)



1. A separable fastener comprising a pair of members, an annular cup on each member having a plurality of slits therein, and means on said cups for interlocking a pair of cups.

1,485,725. DEVICE FOR ACTUATING ARTIFICIAL LIMBS. OSKAR SEMELEDER, Vienna, Austria. Filed Mar. 15, 1921. Serial No. 452,536. 8 Claims. (Cl. 3—12.)



1. A device for actuating artificial limbs, comprising a socket-member adapted to receive the stump of a human arm, a rod slidably carried longitudinally of said socket-member and adapted to be connected with part of an artificial limb, or with a tool, locking-means carried by said socket-member and engageable with said rod to hold it in adjusted position, a second rod also slidably carried by said socket-member and adapted to be connected with a tool, and mechanism also carried by said socket-member for selectively releasing said locking-means, or engaging said second rod to move the same.

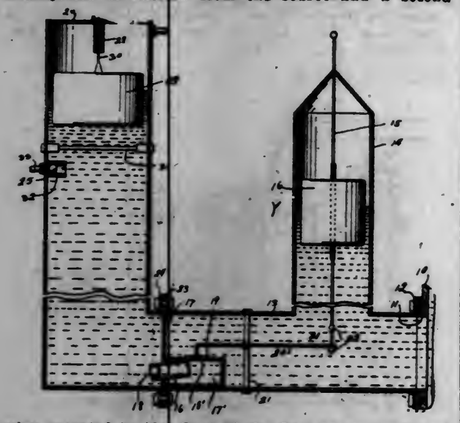
1,485,726. INSECT-DESTROYING MACHINE AND CULTIVATOR. JAMES A. SETSER, Antlers, Okla. Filed Oct. 24, 1922. Serial No. 596,569. 2 Claims. (Cl. 43—140.)

1. In combination, a portable frame, a suction apparatus mounted on the frame, a suction tube leading from said apparatus, a suction head mounted on the end of said tube and provided with a plurality of cutting knives in the manner and for the purpose specified.

1,485,727. VOLTAGE BOOSTING OR BUCKING SYSTEM. MAURICE L. SINDEBAND, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1920. Serial No. 411,479. 5 Claims. (Cl. 171—119.)

1. A voltage regulating system comprising an alternating current circuit, a transformer having a core, a primary winding connected across said circuit and a secondary winding connected in series with said circuit, a second core, a winding on said core connected in series with said primary winding, means for producing a unidirectional magnetomotive force in each of said cores, and means for producing another unidirectional magnetomotive force in each of said cores whereby the resultant unidirectional magnetomotive force is increased in one of said cores and is decreased in the other one of said cores.

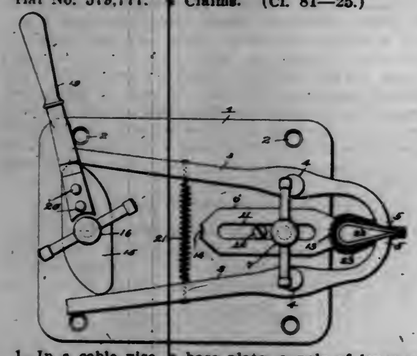
1,485,728. BELT BUCKLE. CLARENCE E. SMITH, Naugatuck, Conn., assignor to North & Judd Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed July 14, 1923. Serial No. 651,520. 6 Claims. (Cl. 24—191.)



1. A buckle comprising a face plate, an actuator supported by the face plate, and a belt gripper operable by the actuator and comprising two rows of staggered teeth.

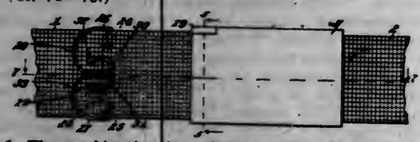
1,485,729. OIL-FEEDING APPARATUS. HERMAN E. SOMMERFELDT, Custer, Mich. Filed Apr. 18, 1923. Serial No. 632,896. 5 Claims. (Cl. 184—103.)

3. In apparatus for feeding oil to the sumps of internal combustion engines, two chambers one of which communicates with the sump to have the same fluid level therewith and has disposed therein a float, the other of which comprises a vacuum tank and is in communication with the source of vacuum and the source of oil supply, the vacuum tank having a higher level than the fluid level of the sump, and a connection between the vacuum tank and the first named tank including a valve closing



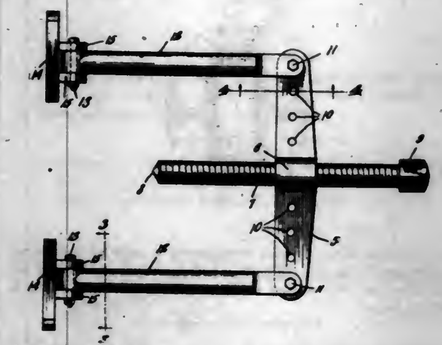
communication between the tanks when the vacuum tank is subjected to suction from the source and a second

valve operated by the float of the first named tank and closing communication between the tanks when the fluid level within the sump is above a predetermined point.



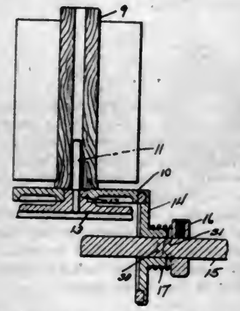
1,485,730. [WITHDRAWN.]

1,485,731. CABLE-SPLICING DEVICE. IDAR OLIVER STANGBYE, Sacramento, Calif. Filed Aug. 4, 1922. Serial No. 579,777. 4 Claims. (Cl. 81—25.)



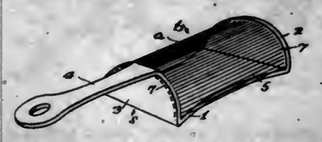
1. In a cable vise, a base plate, a pair of lever members each provided with a vise jaw mounted on said base plate, a backing plate mounted centrally between said lever members, said backing plate being so designed as to permit longitudinal adjustment toward or away from the gripping jaws of said lever members, means for causing rotation of said lever members in such a manner as to bring said jaws into clamping positions, and spring means for opening said jaws upon release of said locking means.

1,485,732. BELT. MARY STARMER, Newport News, Va. Filed Oct. 18, 1921. Serial No. 508,584. 6 Claims. (Cl. 74—75.)



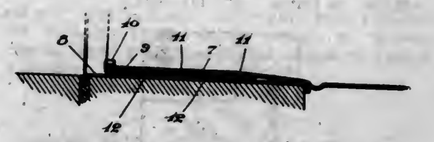
1. The combination in a device as described with belt ends, of a buckle plate having a back plate and an offset cross bar thereon, and a keeper plate having a vertically disposed tongue thereon to engage said cross bar.

1,485,733. WHEEL OR GEAR PULLER. ELLIS E. STERLING and RICHARD R. STERLING, Independence, Calif. Filed Apr. 28, 1922. Serial No. 557,104. 8 Claims. (Cl. 29—85.)



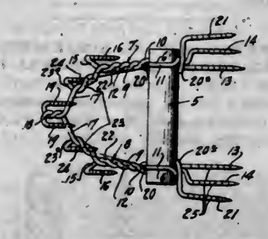
1. A gear and wheel puller comprising a body portion, a pair of pivoted arms adjustably supported on the body portion, pivoted members supported at the free ends of the arms, and said pivoted members adapted to be moved to positions in parallel relation with the arms.

1,485,734. YARN-WINDING MACHINE. SAMUEL STEWART, Lewiston, Me., and OSCAR L. OWEN, Whitinsville, Mass., assignors to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1923. Serial No. 627,619. 2 Claims. (Cl. 242—18.)



1. In a yarn winding machine having a plurality of winding members, rotatable tables supporting the supply packages, friction pulleys coacting with the peripheries of said tables to rotate them, revolving shafts centrally located beneath the rotary tables, said friction pulleys being loosely mounted thereon, collars fixed to said shafts cooperating with the hubs of the friction pulleys, and compression springs between the collars and the pulleys.

1,485,735. COMB CLEANER. AUSTIN FLINT STOCKWELL, Los Angeles, Calif. Filed Aug. 31, 1922. Serial No. 585,414. 2 Claims. (Cl. 132—29.)



2. A comb cleaner comprising comb cleaning means composed of square twisted wire; and means for holding said wires in spaced relation to each other and to form a rounded cleaning surface.

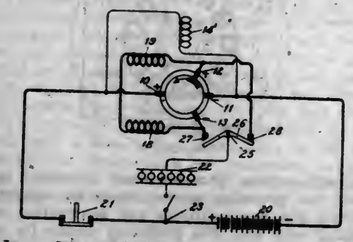
1,485,736. STOVEPIPE FASTENER. GEORGE STOLZE, Wausau, Wis. Filed Apr. 19, 1923. Serial No. 633,129. 6 Claims. (Cl. 126—318.)

1. A pipe fastener comprising a sheet metal plate to be disposed and clamped between telescoping pipe portions and having means struck therefrom on opposite sides for biting and frictionally engaging said portions to resist the separation thereof.

1,485,737. SHOCK CARRIER. LARS STORDAHL, Baltic, S. Dak. Filed Nov. 18, 1922. Serial No. 601,787. 7 Claims. (Cl. 294—86.)

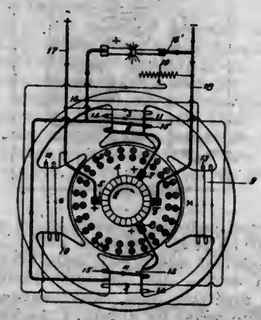
1. A carrier of the character described comprising a handle member, a set of prong members carried by each end portion of the handle member, each set of prong members comprising a plurality of strands of material, each strand being engaged with the adjacent strand of the set, said strands extending laterally of the handle, the end portions of each strand of the set being formed into prongs.

1,485,738. RECEPTACLE CLOSURE. CHARLES C. TAFT, New Haven, Conn. Filed Mar. 13, 1923. Serial No. 624,797. 7 Claims. (Cl. 220—39.)



1. In a receptacle closure, the combination with a threaded tubular member provided with a recess bounded externally by a flange spaced radially from said threads, of a threaded sleeve rotatably mounted on said tubular member through the cooperation of said threads upon said member and sleeve, and a cover pivoted to said sleeve and forming a closure for the opening therethrough, said cover being provided with means adapted to extend into said recess and cooperate with said flange to prevent said cover from being moved to open position until after said sleeve has been partially screwed off said tubular member.

1,485,739. AUTOMATIC WINDER FOR TIMEPIECES. EDWIN L. THOMAS, Buffalo, N. Y. Filed June 12, 1922. Serial No. 567,566. 7 Claims. (Cl. 58—46.)

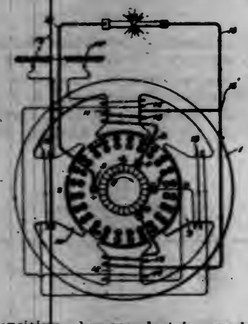


1. A time piece having a main spring, a prime mover which normally moves constantly, and means for intermittently coupling said prime mover with said main spring for rewinding the latter and constructed to permit a back lash after each winding step.

1,485,740. REVERSIBLE DOUBLE-VOLTAGE GENERATOR AND SYSTEM INVOLVING SAME. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 17, 1917, Serial No. 202,442. Renewed Nov. 19, 1923. 18 Claims. (Cl. 171—223.)

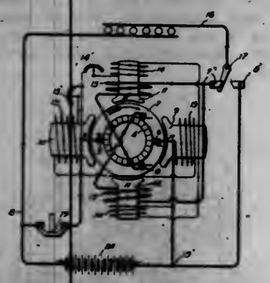
1. In a dynamo-electric machine, in combination, an armature, means for setting up a field flux threading said armature along axes spaced n degrees apart, brushes connected to said armature at points of maximum potential difference produced in said armature due to rotation in said field flux, and field windings connected to said brushes adapted to set up a field flux threading said armature along axes spaced more than n degrees apart.

1,485,741. DYNAMO-ELECTRIC MACHINE. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Dec. 19, 1918, Serial No. 267,468. Renewed July 6, 1923. 20 Claims. (Cl. 171—123.)



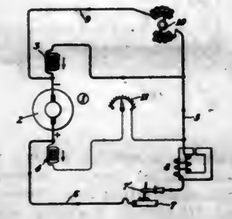
4. In a dynamo electric machine, in combination, poles of opposite polarity for setting up main flux, poles of common polarity placed intermediate of said first men-

tioned poles, and means for automatically reversing said common polarity in response to a function of the output of said machine.



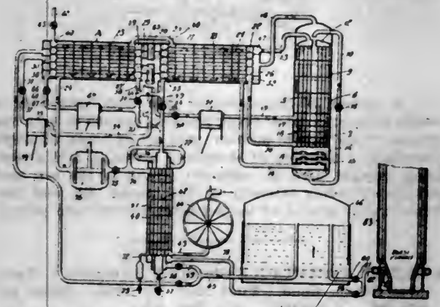
20. In combination, an armature, main field poles, brushes co-operating therewith, other brushes spaced from said first mentioned brushes, modifying poles, said modifying poles being provided with modifying windings which are connected to said other brushes and to a common point, thereby forming a local circuit including said other brushes, said modifying windings and part of said armature, said windings being so connected to said other brushes as to cause the current in said local circuit to set up a flux to oppose armature reaction.

1,485,742. GENERATOR SYSTEM. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 11, 1919, Serial No. 316,787. Renewed July 6, 1923. 14 Claims. (Cl. 171—223.)



11. A self-exciting dynamo-electric machine having main field flux producing means, means for supplying a load circuit, and flux modifying and distributing means co-operating with said flux producing means for maintaining a relatively strong magnetic field under conditions of said load circuit varying from open circuit to short circuit.

1,485,743. GENERATOR SYSTEM. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 8, 1919, Serial No. 336,707. Renewed July 6, 1923. 15 Claims. (Cl. 171—223.)



1. A system including a double circuit generator, one of said circuits being adapted to charge a storage battery, the other of said circuits being adapted to supply translation devices, said generator having main field poles and modifying poles, said modifying poles being provided with means for distorting the flux through the generator armature in response to the load on said translation circuit to hold up the voltage on said translation devices under load increases.

1,485,744. WELDING GENERATOR. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 22, 1920. Serial No. 425,763. 9 Claims. (Cl. 171—223.)

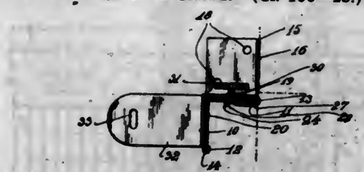
1. A welding generator having a shunt field winding and a cumulative series winding, said field windings being designed to maintain the sum of the ampere turns thereof substantially constant regardless of changes in current output and throughout voltage variations from a maximum open circuit condition to substantially short circuit condition.

1,485,745. METHOD OF AND APPARATUS FOR PROVIDING BLAST FOR METALLURGICAL FURNACES AND THE LIKE. CLAUDE C. VAN NUYS, Cranford, N. J., assignor to Air Reduction Company, Incorporated, a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,453. 32 Claims. (Cl. 266—30.)

1. A method of producing an oxygenated blast, which comprises compressing atmospheric air, subjecting a portion of the compressed air to further compression and to a liquefaction operation to separate nitrogen therefrom, discarding the nitrogen and mixing the oxygen enriched product with the remainder of the compressed air.

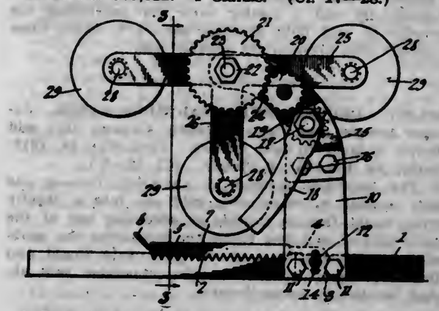
1,485,746. ANIMAL TRAP. EDWARD S. WARD, San Jose, Calif. Filed Apr. 17, 1922. Serial No. 553,397. 1 Claim. (Cl. 43—88.)

In a trap, a curved body portion having its lower edges extended at right angles to provide supports for the body portion, a depending extension formed at each end of the body portion, a pivot bolt supported by one of the extensions, a supporting bar having an opening to receive the bolt, one end of the bar having a pin, the opposite depending extension having an opening to



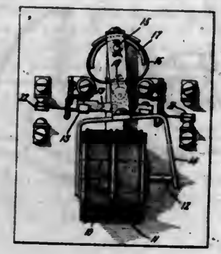
receive the pin, a pair of pivoted jaws mounted at one end of the bar, and means controlled by an animal passing through the trap for actuating the jaws to grip the animal.

1,485,747. RELEASABLE COUPLING FOR AVIATOR OR PARACHUTE HARNESS. DAVID M. WARNER, Dayton, Ohio. Filed Mar. 2, 1922. Serial No. 540,558. 4 Claims. (Cl. 294—83.)



1. A releasable coupling device comprising, in combination, pivoted members, means engaged by said members for attachment to a support, means releasably engaged by said members for attachment to a load, said first named means being engaged by said members in such a manner that the load will tend to prevent release of said second named means, and resilient means tending to prevent release of said second named means upon release of the tension due to the load.

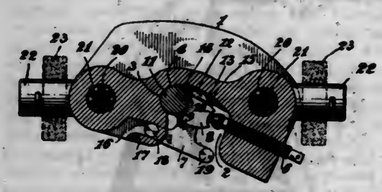
1,485,748. WINDOW-SHADE HANGER. WILLIAM C. WISSKAL, New York, N. Y. Filed Feb. 15, 1921. Serial No. 445,178. 2 Claims. (Cl. 156—23.)



2. In a shade support, the combination of a pair of angular bars telescoping with each other, end supports provided on each of the bars, a serration provided at one face of one leg of the bars, a spring rider adapted to embrace both legs of the bars and having a curved engaging end provided with a serration, said serration adapted to engage the serration of said bars and a set screw associated with said rider adapted to engage the face of the bar legs opposite to that provided with the serration.

1,485,749. MACHINE FOR PREPARING STEAK. CLINTON M. WOLFE, Coeburn, Va. Filed Aug. 2, 1922. Serial No. 579,312. 4 Claims. (Cl. 17—28.)

4. In a device of the class described, a base, a pressure member movable above the base, a standard carried by the base, a shaft mounted to rotate on the standard, means for rotating the shaft, an arm carried by the shaft and a roller journaled on the arm, the roller co-operating with the pressure member and being movable longitudinally of the pressure member in an arc of fixed radius whereof the shaft is the center.

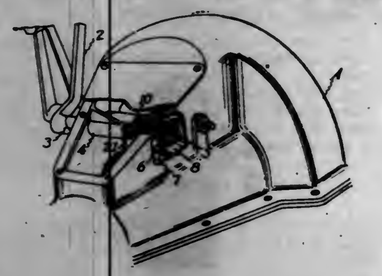


1,485,750. ELECTROMAGNETIC SWITCH. NOBLE A. WOLVE, Niskayuna, and EUGENE PONS, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 14, 1921. Serial No. 469,593. 3 Claims. (Cl. 200—100.)

1. An electromagnetic switch comprising an operating electromagnet having a reciprocable plunger, a movable strap embracing the said electromagnet cooperating with both ends of said plunger to be operated thereby, a switch member operated back and forth between two positions by the said strap, and resilient means for biasing the switch member to the position to which it is moved by the last operation of the plunger.

3. An electromagnet switch comprising an electromagnet having a reciprocating plunger, a pivoted strap embracing the electromagnet cooperating with both ends of the said plunger to be operated thereby, a pivotally mounted switch member having a cam surface and a resiliently mounted roller connecting the said strap and switch member for cooperating with the said cam surface to reciprocate the switch member about its pivoted support with a snap action responsively to the reciprocation of the plunger and for resiliently holding the switch member in the position to which it is moved by the last operation of the plunger.

1,485,751. CLAMP FOR RODS, PIPES, AND THE LIKE. ALBERT P. WORTHINGTON, Los Angeles, Calif. Filed Jan. 12, 1923. Serial No. 612,245. 6 Claims. (Cl. 24—249.)

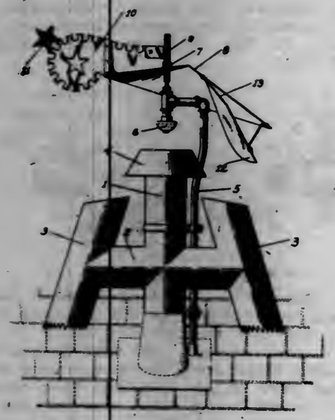


4. In a clamp of the character described, in combination, a main body having a jaw and a clamping member reversibly associated therewith and having two jaws adapted to coact separately with said jaw, said main body having a flanged recess, and said clamping member having two pairs of lugs, each pair being removably engageable in said flanged recess, separately and selectively in accordance with which jaw of said clamping member is in position for coaction with the jaw of said main body.

1,485,752. AUTOMATIC TRANSMISSION-BAND ADJUSTER. HARRY J. ZIMMERMAN, Pekin, Ill. Filed Sept. 3, 1920. Serial No. 407,899. 13 Claims. (Cl. 188—196.)

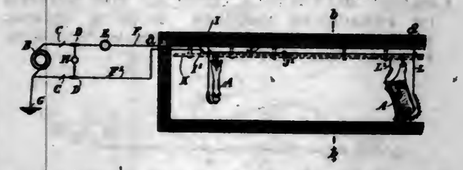
5. In combination with a transmission casing, a pedal shaft mounted therein and carrying upon one end a pedal, a block slidably mounted upon said shaft and held against rotation, a washer also slidably mounted

upon said shaft and provided with an inwardly extending tongue engaging a slot in said shaft, a ratchet nut



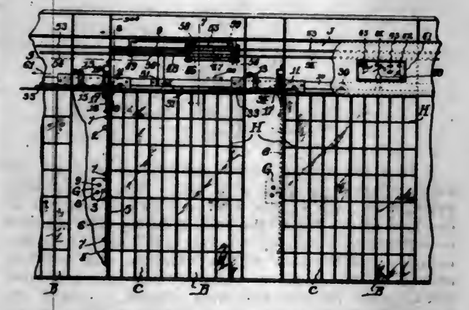
threaded upon said shaft, and a pawl mounted upon said block and adapted to engage the teeth of said ratchet nut.

1,485,753. GLASS MOSAIC. EMIL ZUNDEL, New York, N. Y. Filed Apr. 9, 1923. Serial No. 630,916. 2 Claims. (Cl. 91—72.)



1. A glass mosaic having a roughened rear surface formed by burning thereinto a composition of glass, sand, flux and whiting.

1,485,754. CHIMNEY CONSTRUCTION. FRANCK E. ALBINI, Stockton, Calif. Filed Jan. 25, 1923. Serial No. 614,717. 2 Claims. (Cl. 98—3.)

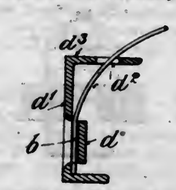


1. An exterior chimney structure comprising a vertical flue portion, laterals leading from the flue intermediate its ends, and open-ended ventilating flues connected intermediate their ends with the laterals, said ventilating flues sloping toward the main flue from bottom to top and terminating short of the top of said main flue, and a collar flaring outwardly from top to bottom fixed on top of the main flue, said collar being positioned to receive some of the air-draft rising through the ventilating flues.

1,485,755. ELECTRIC PROCESS FOR THAWING CARCASSES OF FROZEN MEAT AND THE LIKE. ALFRED UPTON ALCOCK, Melbourne, Victoria, Australia, assignor of one-half to Harry James Wagstaff, South Yarra, Victoria, Australia. Filed May 13, 1919. Serial No. 296,850. 3 Claims. (Cl. 175—265.)

1. The herein described method of thawing frozen carcasses which consists in subjecting the same to the thermal effect of an electric current whereby each carcass forms part of an electric circuit and is adapted to offer sufficient resistance to said current to raise the temperature of the carcass to normal, substantially as and for the purpose described.

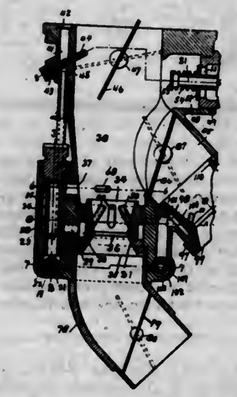
1,485,756. HYDRAULIC JAIL-DOOR-LOCKING MECHANISM. JOHN ALLENSON, St. Paul, Minn., assignor to St. Paul Foundry Company, St. Paul, Minn., a Corporation. Filed June 12, 1919. Serial No. 303,756. 12 Claims. (Cl. 189—8.)



1. The combination in a door lock actuating device, of slidable doors, latch lugs on said doors, a locking bar for engaging said lugs to lock said door, a horizontal slidable cam for operating said locking bar into locking or unlocking position, fluid pressure devices connected in series to said slidable cam for operating said cam longitudinally and a master valve for controlling the operation of said fluid pressure devices to cause them to operate said horizontally slidable cam.

1,485,757. PROCESS FOR ANALYZING GASES, JULIUS ALSBERG and PAUL J. RALPH, Chicago, Ill.; said Ralph assignor to said Alsberg. Filed May 18, 1917. Serial No. 169,475. 5 Claims. (Cl. 23—3.)

4. The improved method of analyzing furnace gas which consists in introducing said gas into a rapidly flowing liquid that is capable of absorbing one of the constituents of said gas, thereafter separating the unabsorbed constituents of said gas from said liquid and utilizing the same to indicate the proportion said absorbed constituent bears thereto.

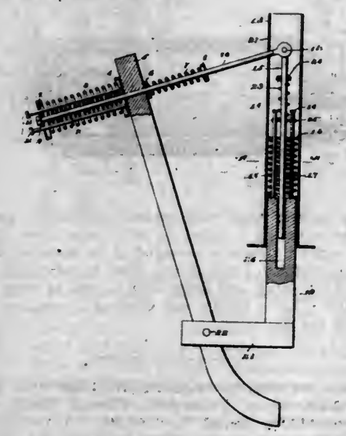


1,485,758. SPRING MATTRESS. EDWIN AMIES, London, England. Filed Aug. 16, 1921. Serial No. 492,756. 1 Claim. (Cl. 5—247.)

A spring mattress comprising a rectangular metallic frame formed of channel section members, inwardly projecting snugs formed on the vertical webs of said members, vertical pockets formed in said snugs, slots formed in the upper flanges of said members in line with the pockets in said snugs, and a plurality of longitudinal

and transverse resilient members formed by cutting off appropriate lengths of steel wire from a coil and having their ends inserted through the slots and within the pockets in the snugs, as set forth.

1,485,759. CARBURETOR. FREDERICK O. BALL, Detroit, Mich., assignor to Ball & Ball Carburetor Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 28, 1916. Serial No. 139,391. 17 Claims. (Cl. 261—41.)



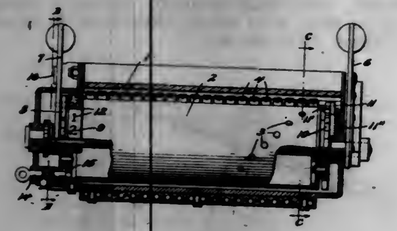
1. In a carburetor, the combination of a mixing chamber; an air passage forming a restriction leading to the mixing chamber; a spray delivering device leading to and delivering a spray of fuel and air to the restriction; a fuel conduit leading to and delivering fuel to the spray delivering device; means comprising a bypass leading from the mixing chamber to the spray delivering device for inducing a flow of fuel to the spray delivering device, the bypass having a capacity relatively to the spray delivery device making the mixing chamber pressures communicated through the bypass the dominant factor in the control of the flow of fuel from the conduit to the spray delivering device.

7. In a carburetor, the combination of a suction passage; a throttle valve in the suction passage; a spray delivering device leading to and delivering a spray of fuel and air to the suction passage nearer the intake than the throttle, said spray device comprising a well; a fuel conduit leading to the well, an air conduit leading to the well from a source having a higher pressure than the suction passage at the point of delivery of the spray device, said conduit having a capacity with relation to the spray delivering device to supply air for spraying the fuel from the well through the spray delivering device; and a bypass leading from the well to the suction passage at the discharge side of the throttle the bypass leading from a point in the well at approximately the same level as that part of the spray delivering device leading from the well to the suction passage, whereby the fuel delivered to the bypass is in the form of a spray making the influence of gravity on the fuel in the bypass negligible.

15. In a carburetor, the combination of a fuel chamber; means for maintaining a constant level therein; a suction passage having a restriction therein forming areas of varying pressures in the suction passage; a throttle nearer the discharge than is the restriction; a bypass from an area of greater pressure to a point of less pressure in the suction passage below the throttle; a branch in said bypass leading to above the throttle; a fuel connection between the fuel chamber and the bypass; and means for adjusting the level of the discharge of the fuel connection to the bypass.

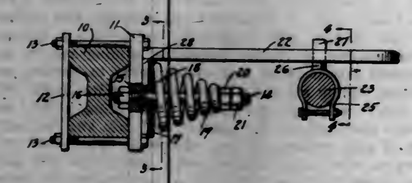
1,485,760. TAIL-SKID CUSHION. JOSEPH G. BERGER, Dayton, Ohio. Filed Apr. 10, 1922. Serial No. 551,297. 5 Claims. (Cl. 244—2.)

4. In combination with a tail skid for aircraft, a hollow rudder post, a supporting bar therefor and adapted to slide therein, said supporting bar having a counterbored portion to receive a vertical sliding rod, a disc mounted interiorly of said rudder post to receive said vertical sliding rod and a plurality of vertical guide rods, an inner and outer compression coil spring within said rudder post and bearing against said disc and the upper end of said supporting bar, additional upper and lower discs on said guide rods and said sliding rod and guide rods respectively provided with a compression coil spring therebetween, said sliding rod being pivotally connected to a lateral extending rod passing through said tail skid, discs on either side of said tail skid, to receive a plurality of compression coil springs, springs disposed concentrically around said lateral rod and retained by means of discs mounted on said lateral rod.



1,485,761. CLUTCH. CHARLES P. BREESE, Dayton, Ohio. Filed Dec. 3, 1920. Serial No. 428,122. 3 Claims. (Cl. 192—41.)

1. In a clutch, a driving shaft, a driven shaft in axial alinement with the driving shaft, an eccentric fast on the driven shaft having a working face of true circular for-



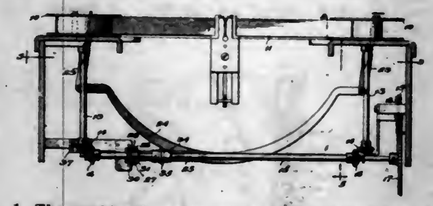
mation, an annular outer clutch member fast on the driving shaft and having an internal clutch face of true circular formation concentric with the axes of said shafts, an inner clutch member having a clutch face of true circular formation to coact with said internal clutch face and also having an eccentric opening therein in which said eccentric works, and means within said inner clutch member for effecting relative rotative movement between said inner clutch member and said eccentric to cause a clutching action between said outer and inner clutch members.

1,485,762. ELECTRIC BOMB-RACK CONTROL HANDLE. GARNET C. BROWN, Detroit, Mich. Filed Mar. 9, 1922. Serial No. 542,417. 6 Claims. (Cl. 244—1.)

1. An electric bomb rack control mechanism, embodying a drum having a spiral series of cam lobes, circuit-closing contact members arranged to be operated successively by said cam lobes as the drum is rotated, a train handle for turning said drum with a step by step movement, and a salvo handle for effecting a complete revolution of the drum.

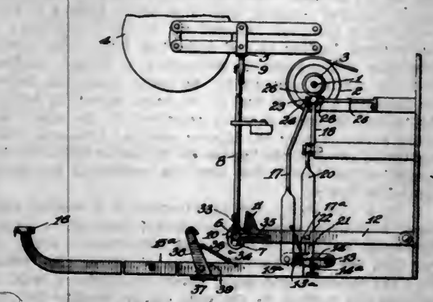
1,485,763. STEERING-GEAR STABILIZER FOR AUTOMOBILES. NEIL S. CAMERON, Tacoma, Wash. Filed May 24, 1922. Serial No. 563,300. 1 Claim. (Cl. 280—94.)

In a stabilizer of the type described, the combination with an axle, a steering link extending in substantial parallelism with the axle and shiftable transversely, of a plate attached to the axle, a stud engaged in the plate and extended toward the steering link, a second plate abutting the first named plate and having a slot extending in a direction longitudinally of the axle and through which said stud extends, an arm formed on the last named plate extending to contact with and having a sliding pivotal connection with the link, a conoidal coil spring having the large end thereof abutting the plate surrounding said stud, an adjusting nut upon the stud and abutting the spring, and means carried by the first named plate limiting transverse movement of the second named plate thereon.



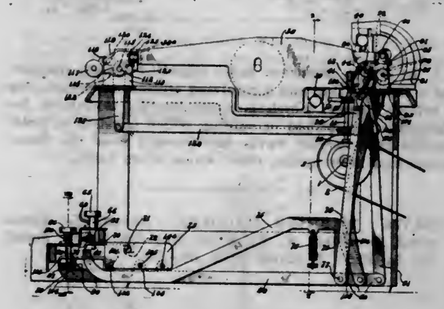
1,485,764. LOCK NUT. JOHN S. COLLINS, Tad, W. Va. Filed Jan. 27, 1923. Serial No. 615,345. 2 Claims. (Cl. 151—17.)

1. In combination, a bolt having oppositely threaded portions, nuts screwed onto said threaded portions, and an arch shaped washer located between the nuts and formed with lugs at its ends, one nut being formed with



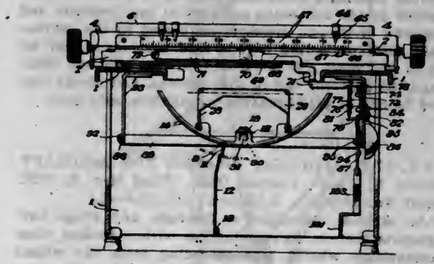
recesses receiving said lugs, the other nut having its face toward the washer formed with a rib, and the confronting side of the washer being grooved to receive said rib.

1,485,765. RIBBON-REVERSING MECHANISM. MANSFIELD C. CRAWLEY, Rutherford, N. J., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 29, 1917. Serial No. 188,773. 13 Claims. (Cl. 197—165.)



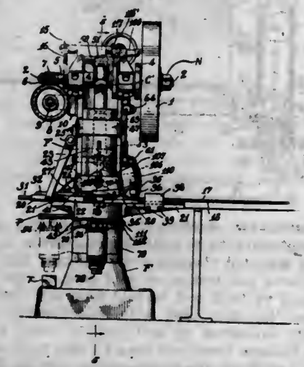
1. The combination of a pair of ribbon spools and two sets of gears for respectively driving said spools, two springs for normally holding either set of gears in mesh, means operated by the movement of the ribbon for reversing the tendency of one of said springs to cause it to neutralize the effect of the other spring and to cooperate with the thrust of the gears to reverse the tendency of the other spring and to thereby unmesh one set of gears and bring the other set of gears into engagement.

1,485,766. TYPEWRITING MACHINE. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 29, 1917, Serial No. 188,771. Renewed Apr. 16, 1923. 45 Claims. (Cl. 197—73.)



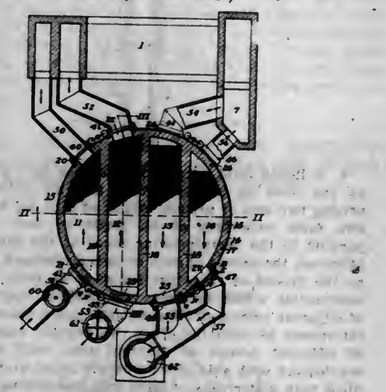
1. In a typewriting machine, a constantly-rotating power-driven shaft, a support movable to change case, mechanism for shifting said support and locking it in upper case position, means for connecting said support-shifting mechanism with said shaft, a pair of shift-controlling key levers each operable without moving the other to actuate said connecting means, and means whereby the support-shifting mechanism will be returned to normal position upon release of the key of one only of said levers, whereby the support always will remain in upper case position after depression and release of the key of the other lever and may return to normal position either after depression and release of the first key lever following an operation of said other lever or after release of the first key lever following a case-shift movement of the support effected by a depression of the key of said first key lever.

1,485,767. TYPEWRITING MACHINE. MANSFIELD C. CRAWLEY, Rutherford, N. J., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed June 29, 1918, Serial No. 242,511. Renewed July 14, 1922. Serial No. 574,981. 41 Claims. (Cl. 197—177.)



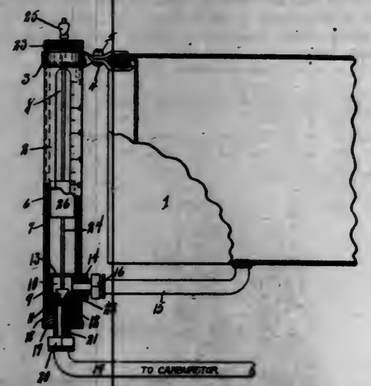
1. In a typewriting machine, the combination of a platen carriage, a denominational selector shiftably mounted on the carriage, key-controlled means, for shifting the selector relatively to the carriage in the direction of the letter-spacing movement thereof a distance equal to one or more letter spaces, a series of aligned stops supported independently of the carriage and adjustable relatively to each other longitudinally of the path of movement of the carriage, a second series of uniformly spaced stops arranged fixed distances apart longitudinally of the path of movement of the carriage, a key operatively connected to shift the first series of stops simultaneously into the path of movement of the denominational selector, independent key-operated means for selectively positioning either of the second series of stops in the path of the denominational selector, a rack supported independently of the carriage, and a carriage-arresting stop movable through the instrumentality of the denominational selector into engagement with the rack upon engagement of the selector with any stop of either series of stops.

1,485,768. TYPEWRITING MACHINE. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed Oct. 5, 1922. Serial No. 592,525. 12 Claims. (Cl. 197—112.)



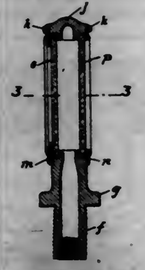
1. In a typewriter, the combination of type-carriers, a reciprocable type-carrier actuator, power means for reciprocating the actuator, type-carrier selecting means, keys for operating said selecting means, means operable by said selecting means controlling said power means to impart a single cycle of movement to said actuator, a traveling paper carriage, means for letter-spacing the carriage at the key strokes, and line-locking means controlled by the travel of the carriage for holding said power controlling means against operation by the type-carrier selecting means.

1,485,769. MACHINE FOR FEEDING, CUTTING, AND SEWING FABRICS. ALDO CURIONI, New York, N. Y., assignor to Maurice Levy, New Rochelle, N. Y. Filed Feb. 25, 1922. Serial No. 539,101. 18 Claims. (Cl. 164—21.)



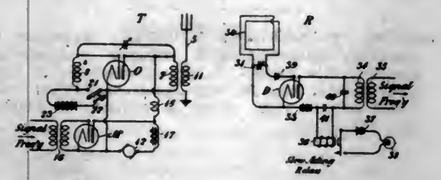
1. In combination, a support upon which superposed strips of fabric may be laid, punching mechanism adapted to punch out pieces from said strips of fabric, means for operating said punching mechanism, feeding means located in front of said punching mechanism and adapted to feed the strips of fabric thereto, clamping means located behind the said punching means and adapted to hold said strips of fabric, and means for operating the said clamping means so as to clamp the said strips of fabric while the punching means are being operated and while the feeding mechanism is inoperative.

1,485,770. REGENERATOR. BALTZAR E. L. DE MARÉ, Pittsburgh, Pa. Filed Mar. 20, 1922. Serial No. 545,131. 14 Claims. (Cl. 263—15.)



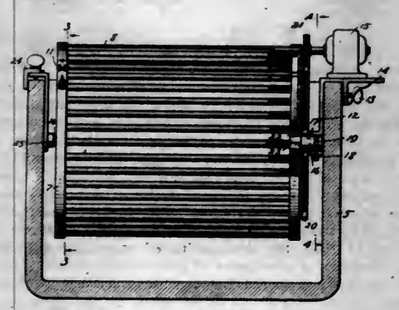
1. The combination with a furnace having uni-directional combustion, of a plurality of regenerators, and means for directing the air and combustion products alternately and in the same direction through the regenerators, including means for turning the regenerators bodily about a vertical axis to interchange the regenerators, substantially as described.

1,485,771. AUTOMOBILE FUEL-GAUGE CONTROL. RALPH B. DOWLER, Fort Worth, Tex. Filed July 24, 1923. Serial No. 653,433. 3 Claims. (Cl. 158—46.5.)



1. A gauge for gasoline tanks comprising a metallic casing provided with a vertical slot therein, a feed passage plug mounted therein, a transparent tube mounted in said casing and resting on said plug, a pipe connected to the gasoline tank and to said plug and forming communication for said tank with said tube, a feed pipe operatively connected to said plug, a valve adapted to close the passage from said plug to said feed pipe, and a float for controlling the movement of said valve and permitting said valve to close the feed passage at a predetermined measurement of gasoline.

1,485,772. LIQUID-LEVEL GAUGE. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Company, Wilmington, Del., a Corporation of Delaware. Filed July 21, 1923. Serial No. 652,921. 5 Claims. (Cl. 116—118.)

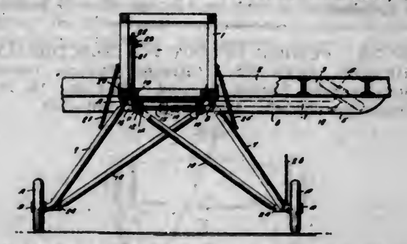


4. A liquid level gauge comprising a pipe which opens at the level to be registered; and an indicator comprising two sets of prisms, prisms of each set having each two faces extending at an angle to each other and parallel to the corresponding faces of the prisms of the other set, the prisms of each set being arranged alternately to the prisms of the other set so as to leave a space of substantial width between two parallel opposing faces of adjacent prisms of different sets, and a colored medium interposed between the other two parallel opposing faces of adjacent prisms of different sets, said spaces communicating with said pipe; whereby when said spaces are filled with water rays of light will pass through both sets of prisms and the water contained in said spaces, while when the water escapes, due to the level falling below the lower end of the pipe, rays of light passing through the prisms will be reflected from the faces of prisms adjacent said spaces and through the colored medium so as to produce a colored effect to an eye in line with the reflected rays.

1,485,773. RADIO CALLING OR SIGNALING. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 12, 1921. Serial No. 500,034. 6 Claims. (Cl. 250—2.)

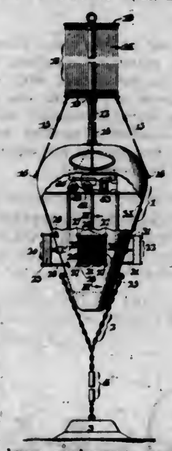
1. In a high frequency radio signaling system comprising a transmitting and a receiving station and employing a carrier current which is approximately modulated for signaling, the method of calling, which consists in sending the pure carrier waves continuously from the transmitter and interrupting these waves when calling.

1,485,774. WASHING MACHINE. ERNEST L. ETHERIDGE, Brooklyn, N. Y. Filed May 18, 1922. Serial No. 561,926. 1 Claim. (Cl. 68—18.)



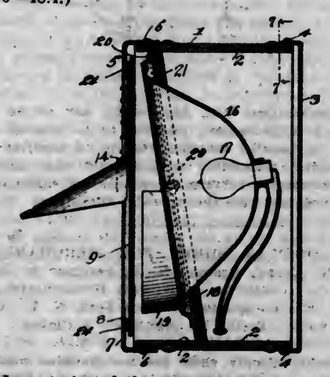
In a washing machine, brackets adapted for attachment to opposite sides of a tub and having portions depending into said tub, the depending portion of one of said brackets having a laterally extending bearing sleeve, a shaft having one end mounted in said sleeve and its other end projecting beyond the same, the portion of the shaft within said bearing having an annular groove, means extending through said bearing and engageable in said groove to prevent longitudinal movement of the shaft within said sleeve, said means being removable to permit of detaching the shaft from said bearing, a rotatable body supported by the depending portions of said brackets and having one of its end members connected to the portion of said shaft projecting beyond said bearing, a gear secured to said shaft and interposed between said end member and the adjacent end of said bearing, and means supported by one of said brackets for rotating said gear.

1,485,775. FOLDING CHASSIS FOR AIRCRAFT. ELISHA N. FALES, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,421. 3 Claims. (Cl. 244—2.)



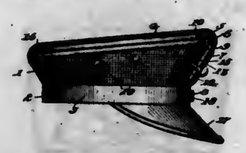
3. An aircraft embodying a fuselage, and wings having pockets therein, in combination with a folding chassis comprising wheels, legs extending from the wheels to the fuselage and pivoted to the latter to swing laterally, struts having a jointed connection with the legs and fuselage and having a slidable connection at one end, manually-operable means for swinging the legs and struts to house the wheels in said pockets in the wings

or move them to their supporting positions, and means for locking and releasing said slidable connection, the



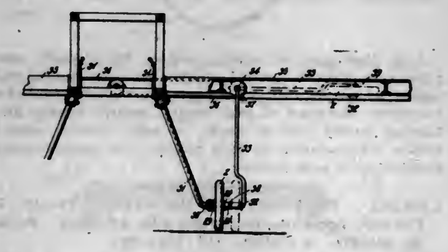
wings having fairings which streamline in said legs and struts when the wheels are housed in their pockets in the wings.

1,485,776. MARINE SIGNALING APPARATUS. JOHN K. M. HARRISON, Ogontz, Pa. Filed Jan. 3, 1920. Serial No. 349,344. 7 Claims. (Cl. 250—17.)



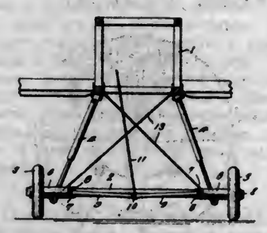
5. A signaling buoy equipment comprising a galvanic battery with pole elements exposed to the sea water as electrolyte, and means for emitting radio signals operated by power from said battery.

1,485,777. MOTOR-VEHICLE DEFLECTOR DEVICE. CHARLES A. HARTMANN, San Antonio, Tex. Filed Dec. 28, 1922. Serial No. 609,442. 6 Claims. (Cl. 240—48.4.)



1. In a device of the class described, the combination of a casing, an inclined reflector in said casing, and an auxiliary reflector secured to said first-mentioned reflector and extending forwardly therefrom and partially about the same.

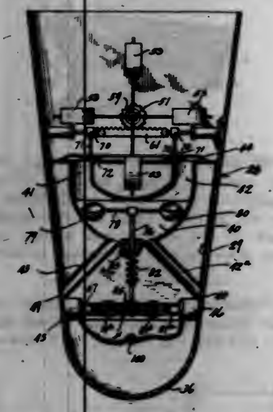
1,485,778. CAP-CROWN SUPPORT. CHARLES J. HOLZENTHALER, New York, N. Y. Filed Nov. 21, 1923. Serial No. 676,056. 3 Claims. (Cl. 2—108.)



1. In a cap of the character described, the combination with a crown of flexible material, of a rigid supporting member arranged inside of the front portion of said crown, an insignia plate on the outside of said front portion of the crown, and means for clamping said insignia plate to said supporting member.

1,485,779. FOLDING CHASSIS FOR AIRCRAFT. ELISHA N. FALES, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,422. 11 Claims. (Cl. 244—2.)

3. In aircraft, the combination of a fuselage, wings extending therefrom and having pockets in the underside thereof, a chassis embodying frame members, wheels normally journaled thereon but detachable therefrom, means operable while the aircraft is in flight for transferring said wheels from the chassis frame into said pockets in the wings and restoring said wheels to their useful positions, said means comprising pivotally mounted wheel-transferring arms, operating means for said arms, and means for effecting the removal of said wheels from the chassis frame members to the transferring arms and vice versa.

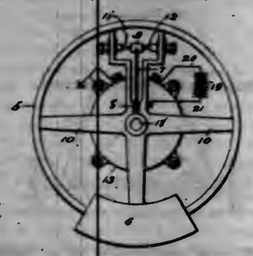


1,485,780. FOLDING CHASSIS FOR AIRCRAFT. ELISHA N. FALES, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,423. 6 Claims. (Cl. 244—2.)

5. In aircraft, the combination of a fuselage, and a folding chassis embodying an axle, movable upwardly against the fuselage, wheels slidable on said axle, and foldable legs for supporting the fuselage in relation to

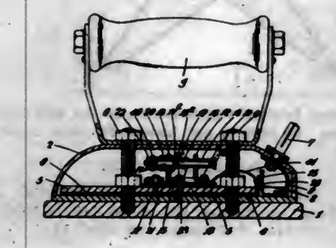
the axle, the wheels being adapted to slide inwardly on the axle as the latter is moved against the fuselage, and means for thrusting said wheels outwardly toward the ends of the axle when the axle is lowered.

1,485,781. AERODYNAMIC STABILIZER FOR AIRCRAFT. WILLIAM SHAW FERDON, Brownlee, Nebr. Filed Oct. 22, 1921. Serial No. 509,646. 11 Claims. (Cl. 249—29.)



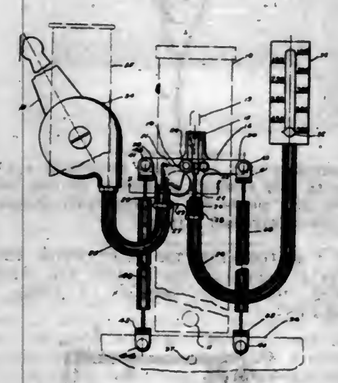
1. A directional stabilizing system for aircraft comprising an electric control system for operation of the rudder of an aircraft, aerodynamic actuated means for automatic operation of said electric control system, and limiting safety switch means in said electric control system for operation by said rudder at a predetermined positioning of said rudder.

1,485,782. PERFORATING MACHINE. PHILIP J. FISCHER, Scranton, Pa. Filed Feb. 16, 1923. Serial No. 619,454. 6 Claims. (Cl. 164—99.)



1. In a perforating machine, a shaft having a pair of spaced wheels thereon, a main perforated tubular drum, the wheels engaging in the ends of the main drum, so as to support the latter, punches extending through the drum perforations and having heads disposed interiorly of the drum, and a tubular liner drum in the main drum engaging the punch heads and having its ends abutting the inner faces of the wheels so as to be held against axial movement thereby.

1,485,783. VERTICAL STABILIZER. GRANDISON GARDNER, Dayton, Ohio. Filed Mar. 29, 1923. Serial No. 628,665. 3 Claims. (Cl. 244—29.)

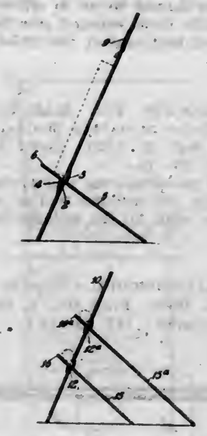


1. In a vertical stabilizer, a pendulum, a magnetic clutch adapted when energized to lock the pendulum against movement, a resilient arm on the pendulum, electrical contacts on said arm and pendulum, and an electric circuit in which said contact and magnetic clutch are included.

1,485,784. FUSIBLE CUT-OUT FOR ELECTRICALLY-HEATED ARTICLES. CHARLES EDWARD IREDELL, Regents Park, London, England. Filed July 19, 1923. Serial No. 652,543. 4 Claims. (Cl. 200—142.)

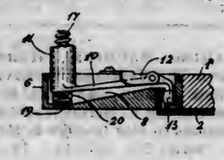
1. A fusible cut-out of the class described comprising a pair of coaxially extending members having their adjacent ends normally in contact with each other, supports for said members, a collar on one of said supports through which the movable member loosely extends, a fusible plug on the movable member between its inner end and the collar, and means for separating said members when the plug is fused.

1,485,785. COMPENSATING SIGHTING INSTRUMENT. ROBERT KAUCH, Dayton, Ohio. Filed May 13, 1922. Serial No. 560,701. 5 Claims. (Cl. 244—1.)



5. The combination with the rudder bar of an aircraft, of a pivoted bracket adapted to be rotated and maintained in parallel relation thereto, a sighting device, mechanism connecting said bracket and sighting device and means for varying the position of said mechanism in accordance with the range of the target.

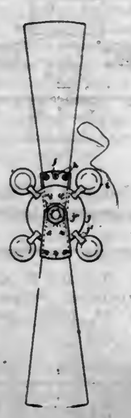
1,485,786. DISPLAY SHELF FOR MERCHANDISE. JOSEPH G. KRAFT, Orange, N. J., assignor to T. V. Kraft & Co. (consisting of William Hussennetter and Joseph G. Kraft, copartners), New York, N. Y. Filed Oct. 16, 1923. Serial No. 668,815. 4 Claims. (Cl. 211—24.)



1. A portable display shelf for merchandise comprising a front plate member provided with a horizontal closed slot located substantially centrally of its width.

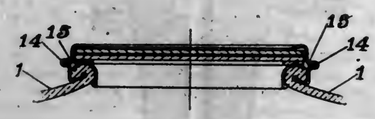
a separately formed supporting plate member arranged to extend through said slot to form a shelf portion in front of the front plate member and a brace member at the rear of the same, said members being in substan-

tially perpendicular relation to each other when in set position, and means predetermining the extent which said shelf portion projects from the front of said front plate member.



1,485,787. T-SQUARE GUIDE. FRANZ KÜTTEL, Lucerne, Switzerland. Filed Mar. 26, 1923. Serial No. 627,747. 1 Claim. (Cl. 33—76.)

In a T-square guide for drawing boards, the combination, with an angle-shaped guide-plate attached to the underside of the drawing board and parallel to one working edge thereof, and a longitudinally slotted and centrally recessed back-square which forms part of the T-square and is slidably mounted in the guide-plate, of a clamping device for securing the back-square in any position within the guide-plate, the said clamping device comprising an arm pivotally mounted in the recessed part of the back-square, a handle formed at one end of the arm, a clamping member fashioned at the other end of the arm and abutting against the inner side of the vertical member of the guide-plate, and a spring also mounted within the aforesaid recessed part and tending to press against the handle end of the arm and causing the clamping member to tightly engage the said vertical member of the guide-plate, all as and for the purpose set forth.



1,485,788. AIRCRAFT PROPELLER. OTTO LAMWERS, Paterson, N. J. Filed May 25, 1922. Serial No. 563,496. 13 Claims. (Cl. 170—165.)

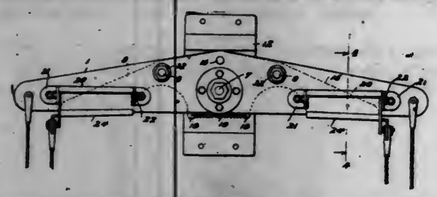
1. An aircraft propeller having one blade and a counter-balance offset longitudinally of the axis of rotation relatively to the blade, said propeller having, except for the blade and the offset counterbalance, a substantially

clear space bounded by the separate circular paths in which the blade and the counterbalance respectively rotate.

1,485,789. EYEPIECE FRAME. FRANK A. LOGAN, Edgewood, Md., assignor to Mine Safety Appliances Co., Pittsburgh, Pa. Filed Jan. 8, 1923. Serial No. 611,449. 5 Claims. (Cl. 2—149.)

1. In an eye-piece frame for gas masks and the like, a retaining ring having an end beaded and an annular pocket formed by an inturned portion of the ring adjacent to said bead and the unbeaded portion adjacent to the inturned portion for receiving the fabric to be secured to said eye-piece, an inner ring beaded at an end and having the other end turned outwardly and projecting into said pocket of said retaining ring, said beads cooperating with each other to retain the fabric of the gas mask and the like secured between said rings.

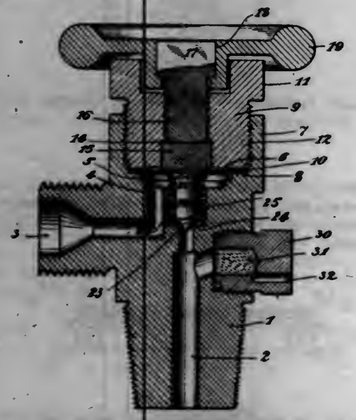
1,485,790. DYE SOLUTION AND PROCESS FOR MAKING AND UTILIZING SAME. KARL LÜTTIN, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland, a Corporation of Switzerland. Filed June 26, 1922. Serial No. 571,098. 12 Claims. (Cl. 8—6.)



1. As a new article of manufacture, a new dye solution containing at least one chloracetic acid.

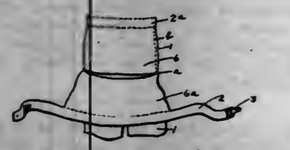
9. The herein described process for producing dyeings and printings on textile fabrics, paper, straw, leather, wood, feathers, furs, artificial substances etc. consisting in applying on the said merchandises, at ordinary temperature, a dye solution containing at least one chloracetic acid.

1,485,791. AUTOMATIC LOCKING DEVICE FOR AIRPLANE RUDDER BARS. ERNEST G. MCCAULEY, Dayton, Ohio. Filed May 13, 1922. Serial No. 560,751. 7 Claims. (Cl. 244—29.)



1. For use in an aircraft, a rudder bar, means for automatically locking said rudder bar comprising a stationary ratchet, opposing clutch levers, each pivotally

mounted on said rudder bar, and means for interconnecting said clutch levers, said clutch levers being free to

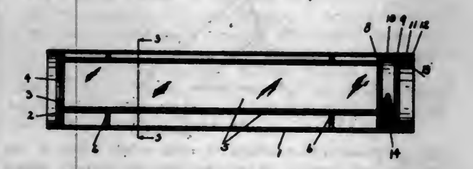


actuate while thus connected for engaging or disengaging said ratchet, when pressure is applied to one of the said clutch levers.

1,485,792. VALVE. WILLIAM F. MCKAY, Newark, N. J., assignor to International Oxygen Company, Newark, N. J. Filed Apr. 11, 1923. Serial No. 631,255. 3 Claims. (Cl. 251—11.)

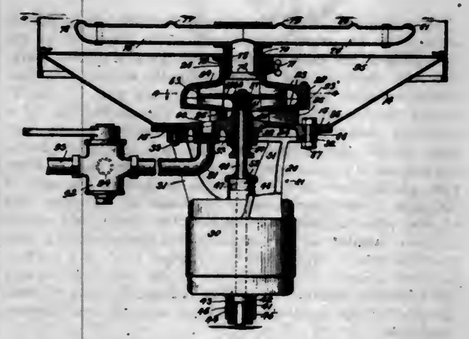
1. A valve having a valve chamber formed with inlet and outlet openings, and one wall of said chamber being an imperforate diaphragm opposite and co-axial with one of said openings; a valve element including a cone portion engaging in the latter opening, and having a broad base portion abutting against but unattached to the diaphragm; and means for centering and retracting said valve element including a helical spring, the interior of which approximately fits the exterior of the valve stem and the exterior of which approximately fits a cylindrical recess between the valve seat and the valve chamber, in combination with means for operating the valve element including external means for forcing the diaphragm inward against the pressure of said spring.

1,485,793. UNDERGARMENT. THOMAS JEFFERSON MCKEE, Waco, Tex. Filed Oct. 17, 1922. Serial No. 595,062. 1 Claim. (Cl. 2—144.)



A union garment having an inner rear flap depending from the waist line thereof and stitched along one side to the garment, an outer rear flap secured to the garment at points adjacent to the inner flap, and an elastic belt secured to the free upper edge of the outer flap and having fastening means at its ends, said inner and rear flaps being formed and having their inner faces free of connection to allow the rear tail of an outer shirt to be received therebetween, and said belt encircling the entire waistline of the garment so as to exert tension on the outer shirt throughout the waistline thereof and having its ends formed so as to allow the front tails of the outer shirt to be engaged over the outer face of the garment and held against the latter by the tension of the belt.

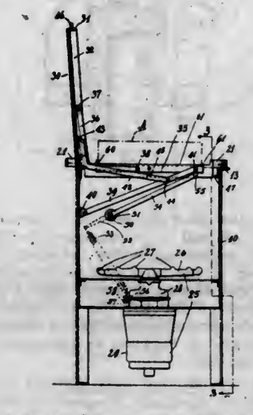
1,485,794. PROCESS FOR MAKING LEAD SULPHATE. PHILIP ALEXANDER MACKAY, London, England. Filed Sept. 28, 1920. Serial No. 413,418. 13 Claims. (Cl. 23—13.)



1. Method of manufacturing lead sulphate from metallic lead, wherein the metallic lead is subjected to the action of oleum until all the metallic lead is converted into sulphate.

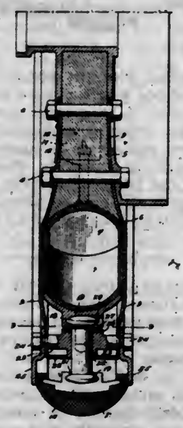
1,485,795. KALEIDOSCOPE. CHARLES A. MALLERNEE, Battle Creek, Mich. Filed Oct. 4, 1921. Serial No. 505,412. 4 Claims. (Cl. 88—15.)

1. In a kaleidoscope, the combination of an outer case, triangularly disposed mirrors supported by disks having triangular openings within the outer walls of the said case, an eye piece at one end, an object supporting compartment formed between separated disks of glass of the full size of the said case retained by suitable rings, and an annular reflector with inner cylindrical surface disposed within the projecting end of the case having an inner cylindrical reflecting wall, as specified.



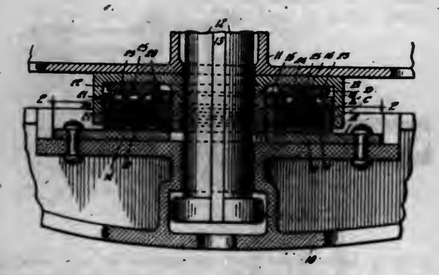
1,485,796. WASHING MACHINE. HERBERT E. MERSELES and HENRY R. MERSELES, Bronxville, CHARLES F. SIMMONS, New Rochelle, and PAUL H. ENGEL, New York, N. Y.; said Henry R. Merseles, said Simmons, and said Engel assignors to said Herbert E. Merseles. Filed May 5, 1921. Serial No. 467,046. 18 Claims. (Cl. 141—9.)

1. In combination with a receptacle having an opening in its bottom, a dish washing unit including dish washing mechanism and automotive actuating mechanism therefor, and comprising a rotary member including a part of the dish washing mechanism and a part of the actuating mechanism and a single rigid shaft on which



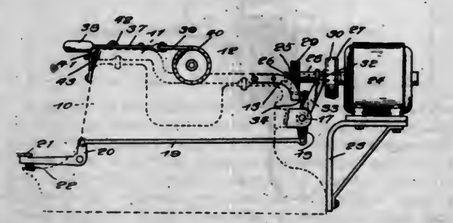
both said parts are mounted, and a single rigid non-rotary frame formed to provide supporting bearings for said rotary member and to provide a closure for the opening in the receptacle.

1,485,797. WASHING APPARATUS. HERBERT E. MERSELES, Bronxville, N. Y. Filed June 18, 1921. Serial No. 478,492. 8 Claims. (Cl. 141—9.)



1. Washing apparatus, comprising the combination of a tank open at the top, a cover for said opening, washing mechanism adapted to direct a washing medium against articles placed in washing position in the tank, a substantially vertically movable support in the tank for articles to be washed, connecting mechanism between the support and the cover adapted to lower the support when the cover is closed and to raise the support to the top of the tank when the cover is opened, means for arresting upward movement of the support when its article-supporting surface is substantially at the level of the top edge of the tank, and means for arresting downward movement of the support when the articles reach washing position.

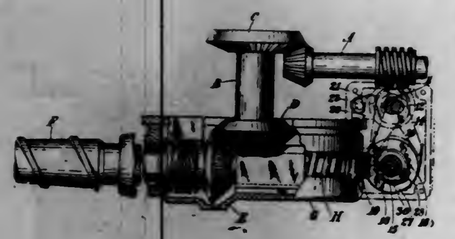
1,485,798. ROAD WHEEL. JOHN MILLAR, Arlington, N. J. Filed July 9, 1921. Serial No. 483,406. 1 Claim. (Cl. 152—29.)



A road wheel comprising: cheeks composing the body of the wheel, a cushion located between said cheeks and remote from the periphery of the wheel, an abutment member against which the cushion acts, a plurality of guides located between the cheeks, extensions on said guides passing through the cheeks and bolted thereto, annular guide members carried by the cheeks, a plurality of outer segmental members having sockets on their inner faces, a tread carried by the outer segmental members between the annular guides, a plurality of inner segmental members, bearing against the cushion between the cheeks, having sockets, and a plurality of extensible thrust members passing through said guides and having heads in engagement with the sockets of the inner and outer segmental members.

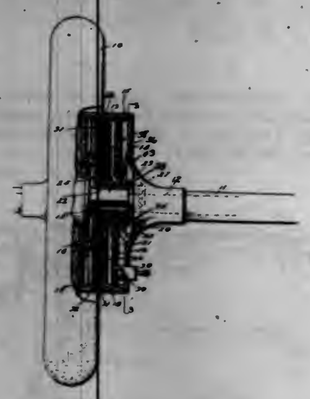
1,485,799. CENTER BEARING FOR CARS. WILLIAM H. MINER, Chazy, N. Y. Filed Nov. 12, 1921. Serial No. 514,443. 5 Claims. (Cl. 64—84.)

5. In a center bearing for railway cars having body and truck bolsters, the combination with a lower annular plate of L-cross-section secured to the truck bolster; of an annular member of channel-cross-section loosely supported on top of said plate; a series of relatively thin, finished annular plates seated within said channel-cross-section member and adapted to be immersed within oil contained by said member; an annular pressure-transmitting upper plate telescoped within said channel-section member; and an upper annular member of inverted channel cross-section and having the web section thereof seated upon said pressure-transmitting member and the circular flanges thereof telescoping downwardly over the first named member of channel-cross-section to thereby provide a dust-guard for the elements of the bearing.



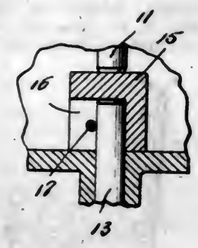
1,485,800. TYPEWRITER. JOSEPH W. MOORE, Oberlin, La., assignor of one-half to Ripley G. Corkern, Oberlin, La. Filed Apr. 7, 1923. Serial No. 630,518. 2 Claims. (Cl. 197—66.)

1. In combination with a typewriter having a shiftable carriage embodying a notch bar, a motor rigidly secured to the typewriter frame and having a shaft extending over the notch bar, a sleeve rotatably mounted upon the shaft and provided upon one end with a gear



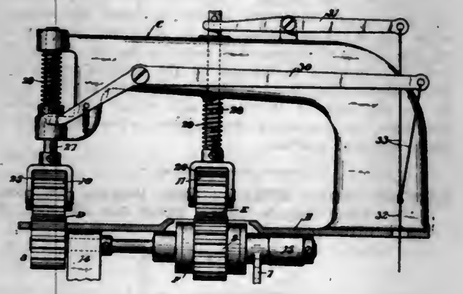
engaging the teeth of the notch bar upon the opposite end thereof with one element of the friction clutch, a second element of the friction clutch secured to said shaft, said sleeve having a groove therein, shiftable arms having pins thereon engaged in the groove at diametrically opposed points and key operated means for shifting said arms to move said sleeve in a direction bringing the clutch elements into engagement.

1,485,801. COAL CUTTER. MATTHEW SMITH MOORE and HERBERT JUBB, London, England, assignors to Cowlishaw, Walker & Company (1920) Limited, London, England, a British Company. Filed May 26, 1922. Serial No. 563,970. 5 Claims. (Cl. 262—25.)



4. In a coal-cutter, the combination with a driving shaft and a second shaft to be driven thereby, of a ratchet wheel arranged to drive the said second shaft, two oppositely directed pawls eccentrically mounted on said driving shaft and arranged to cooperate each with the ratchet wheel, and a pawl-controlling member rotatably mounted co-axially with the ratchet wheel and extending between the two pawls and arranged to lift either or both of them from engagement with the ratchet wheel.

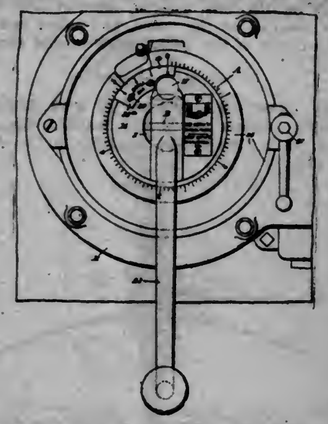
1,485,802. BRAKE MECHANISM. FREDERICK H. MORGAN, Fairfield, Ill. Filed June 4, 1921. Serial No. 475,020. 15 Claims. (Cl. 188—91.)



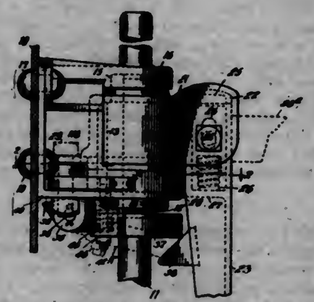
1. A brake mechanism of the class described comprising in combination, a wheel, a ring gear, means for connecting said ring gear for rotation with said wheel and hydraulic means associated with said ring gear whereby its rotative movement may be retarded.

1,485,803. FILLER BLOCK FOR CONVERTIBLE INTERNAL-COMBUSTION ENGINES. MARCUS W. MOUNT, Jr., and DONALD MOUNT, Memphis, Mo. Filed Sept. 8, 1922. Serial No. 586,839. 1 Claim. (Cl. 123—198.)

A device of the character described comprising a rectangular body adapted to be arranged on the lift rod of an internal combustion engine valve and adapted to engage the stem of the valve and provided with a kerf opened at the side thereof to permit sliding of the block laterally onto or off the lift rod to render the valve either operative or inoperative, and a transversely removable pin carried by the block to detachably fasten the latter to the lift rod.



1,485,804. PULLING MACHINE. CHARLES J. NEDDERSEN, Oakland, Calif., assignor of one-half to Sigmund Kirschberg, San Francisco, Calif. Filed Aug. 15, 1922. Serial No. 581,922. 6 Claims. (Cl. 112—203.)



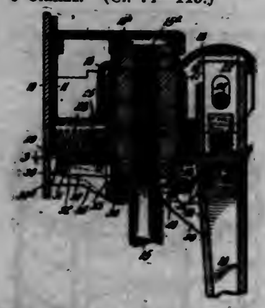
1. The combination with the sewing mechanism on a sewing machine, of two separate pairs of devices for gripping the fabric after it has passed through the sewing mechanism at two separate horizontally spaced points behind the needles, and means to operate said gripping means intermittently in unison to effect a double, side by side, pull on the fabric to prevent bunching of the fabric between the needle and the throat of the machine and thereby effect the production of a regular or straight seam.

1,485,805. COMPENSATING DEPTH GAUGE. HENRY M. NORRIS, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 13, 1923. Serial No. 624,761. 4 Claims. (Cl. 77—33.)

1. A machine for drilling holes of various diameters comprising a main scale graduated proportionally to the advance of the drill-spindle; an auxiliary cooperating scale graduated proportionally to various diameters of drills, the ratio between the auxiliary scale and the main scale being in proportion to a function of the angle made by the cutting edge of the drill with its axis; a clutch; manual means for opening said clutch to advance the drill-point into contact with the work; means for shifting the said scales into any desired coincidence; and an automatic throw-out for the clutch having its action determined by the adjusted relation of the said scales.

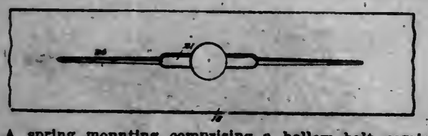
1,485,806. BRAKE FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chasy, N. Y. Filed Jan. 23, 1920. Serial No. 353,417. 12 Claims. (Cl. 74—115.)

1. In a hand brake for railway cars having a brake chain and a rotatable member for tensioning the brake chain, the combination with means for effecting rotation of said member to tension the chain, including an operating element therefor having movement about the axis of said rotatable member and being movable at right angles thereto to operative and in-operative positions; of automatically controlled means for normally locking said member against reverse rotation and adapted to be manually operated to release said member; means cooperable with said locking means to retain the latter in released position when manually so positioned; and means co-acting with the operating element for rendering said retaining means ineffective when said operating element is displaced from its inoperative position.



1,485,807. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chasy, N. Y. Filed Dec. 27, 1921. Serial No. 525,014. 7 Claims. (Cl. 64—64.)

1. In an anti-friction bearing, the combination with a base member having a bearing surface; of a pair of spaced rolling anti-friction elements on said bearing surface; a bridge plate supported on said elements and adapted to roll back and forth thereon and therewith; a supplemental anti-friction element supported on said bridge plate and adapted to roll thereon, said last named anti-friction element having its effective top bearing

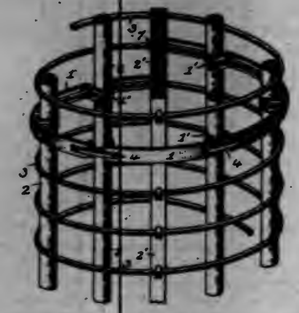


surface located above the bridge plate and thereby adapted to cooperate with an opposed bearing surface; and means for limiting the rolling movement of said anti-friction elements.

1,485,808. HAND BRAKE FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chasy, N. Y. Filed Mar. 6, 1922. Serial No. 541,313. 6 Claims. (Cl. 74—115.)

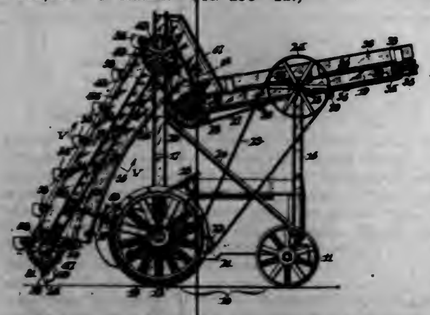
1. In a hand brake for railway cars, the combination with a vertical brake staff having a ratchet wheel thereon; of a pawl-carrying pivotally mounted operating handle cooperable with said ratchet wheel to effect rotation thereof, said handle having a horizontal operative position and a depending vertical inoperative position; a spring-controlled locking dog cooperable with said ratchet wheel to hold the staff against reverse rotation; a latch arranged to cooperate with said dog when it is in inoperative position to hold said dog in such position; and cooperable means on the latch and handle for actuating the latch to inoperative position with respect to the dog when the handle is moved from inoperative position.

1,485,809. REAR-SPRING MOUNTING. VICTOR W. PAGE, New York, N. Y. Original application filed June 18, 1921, Serial No. 478,527. Divided and this application filed Feb. 7, 1922. Serial No. 534,774. 1 Claim. (Cl. 267—50.)



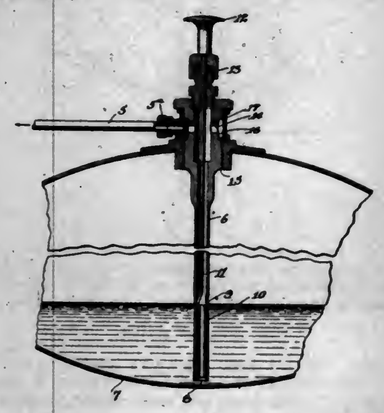
A spring mounting comprising a hollow bolt carried by a vehicle frame, said hollow bolt having diametrically opposed openings, a lubricant vehicle carried within said hollow bolt, a bearing member surrounding said hollow bolt and having passages adapted to register with the diametrically opposed openings in the hollow bolt, a spring secured to said bearing, a second hollow bolt, said second hollow bolt passing through said spring and having its passage in alinement with the openings in the bearing, and a lubricant receptacle carried by said bearing member and adapted to discharge its contents through the said hollow bolts and their openings to the said spring.

1,485,810. IMITATION MARBLE AND METHOD OF MAKING SAME. HERBERT L. PARKER, JR., and WILLIAM W. NIVIN, St. Louis, Mo., assignors to H. L. Parker Jr. & Company, St. Louis, Mo., a Corporation of Missouri. Filed May 31, 1923. Serial No. 642,715. 11 Claims. (Cl. 18—188.)



1. The method of producing imitation marble which includes applying a mixture of cement and metallic colors to a suitable base in a desired design, allowing the same to set partially, applying a coat of ground colored cement sufficient to completely cover the design and allowing the same to set partially, and then troweling the surface until the design is worked through to the extent desired.

1,485,811. COLUMN BAR SPACER. OSCAR W. PEDERSON, Chicago, Ill. Filed May 26, 1922. Serial No. 563,947. 4 Claims. (Cl. 72—76.)



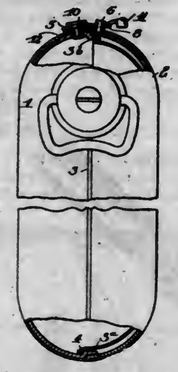
1. The combination with a concrete column reinforce composed of a spiral rod formation and a plurality of rods arranged longitudinally in the interior thereof, of a spacing band adapted to encircle and have peripheral engagement with a convolution of said spiral formation and spacing engagement with the plurality of longitudinal rods aforesaid by means of a plurality of loops in the length of the spacing band.

1,485,812. LOADING MACHINERY. CHARLES G. PFEIFFER, Philadelphia, Pa., assignor to Specialty Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 22, 1922. Serial No. 562,604. 8 Claims. (Cl. 198—12.)

1. The combination with a commercially available form of gasoline tractor including a forward transverse frame member and a rear axle housing, of a rigid frame structure including spaced vertical strut members, one adapted to be supported on the said transverse frame member and the other on the axle housing, elevator and conveyor elements mounted on the frame, and means operable by the prime mover of the tractor to drive said elements.

1,485,813. VACUUM APPARATUS FOR SUPPLYING LIQUIDS. GEORGE A. PURDY, Seattle, Wash. Filed July 2, 1919. Serial No. 308,103. 6 Claims. (Cl. 158—46.5.)

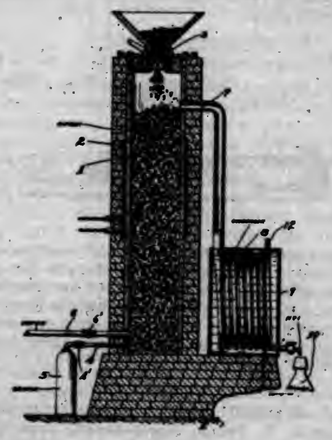
1. The combination with a fuel tank, of a delivery conduit leading therefrom to a motor, a tubular member extending into said tank and formed with an open end disposed adjacent the bottom of said tank and a port spaced from said open end, an open-ended tube fitting snugly within said tubular member between the end thereof and said port, means operable from without said tank for sliding said tube over said port to cause the flow of fuel from said tank to said delivery tube only through the open ends of said tubular member and tube.



1,485,814. DYESTUFFS CAPABLE OF BEING CHROMED AND PROCESS OF MAKING SAME. EMIL RENER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Feb. 5, 1923. Serial No. 617,174. 4 Claims. (Cl. 260—22.)

3. The herein described new dyestuffs resulting from coupling, in the presence of calcium hydroxide, of 1-amino-5-oxynaphthalene-7-sulfonic acid with the diazo-compounds derived from 2-amino-1-phenol containing one nitro group in another position than in 3 and 5, corresponding with the general formula R—N=N—R', wherein R signifies a 2-amino-1-phenol radical containing one nitro group in another position than in 3 and 5, and R' a 1-amino-5-oxynaphthalene-7-sulfonic acid radical, which constitute blackish powders dissolving in water with violet blue to blue colorations, and in sulfuric acid with violet red to bluish red colorations and dye wool violet brown to dark blue tints which become more or less greenish to bluish deep black when subsequently chromed.

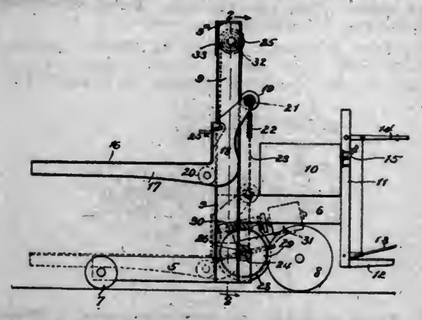
1,485,815. LATCH FOR CAMERAS. JOHN A. ROBERTSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 16, 1922. Serial No. 582,120. 1 Claim. (Cl. 292—147.)



The combination with a camera body and a back cooperating therewith, of a latch for releasably securing said parts together comprising a catch on one part, spaced guide pins on the other, a sliding bolt movable on the guide pins and adapted to engage the catch, and a

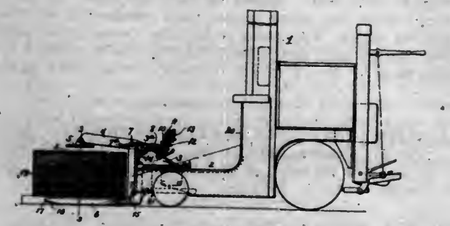
washer plate beneath the bolt consisting of a plate having spaced apertures through which the guide pins pass,

said apertures being spaced apart a distance slightly greater than that between the guide pins to cause the plate to bow and exert a frictional tension on the bolt.



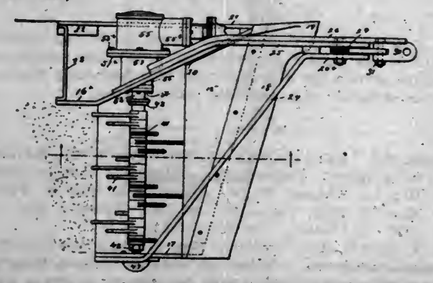
1,485,816. PROCESS FOR THE PRODUCTION OF HYDROCHLORIC ACID DIRECT FROM CHLORINE. LUDWIG ROSENSTEIN, San Francisco, Calif., assignor to Great Western Electro Chemical Company, San Francisco, Calif., a Corporation of California. Filed Aug. 1, 1921. Serial No. 488,759. 1 Claim. (Cl. 23—1.)

A method of producing hydrochloric acid and controlling the temperature during such process, which consists in passing chlorine through a mass of carbon heated to reacting temperature and introducing a sufficient volume of water to absorb the heat of reaction to such an extent as to keep the mass at the proper reaction temperature and below a temperature destructive to the furnace.



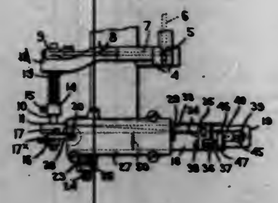
1,485,817. INDUSTRIAL TRUCK. CHARLES S. SCHROEDER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Jan. 18, 1921, Serial No. 438,084. Renewed Oct. 24, 1923. 6 Claims. (Cl. 187—11.)

1. In a self propelled elevating truck, the combination of a frame having an operator's platform, storage battery and motor at one end thereof, vertical guides on said frame located intermediate the ends of the said frame, a movable platform located on the frame at the opposite end thereof, the said movable platform having



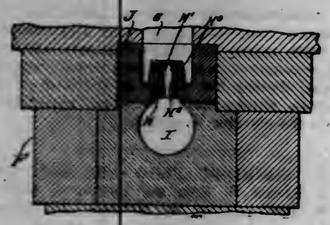
extensions at one end, the said extensions having bearing against said guides at the front and rear of the latter, and flexible means the two ends of which are connected to the extensions.

1,485,818. HANDLING AND CONVEYING MEANS. CHARLES S. SCHROEDER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 18, 1923. Serial No. 646,081. 6 Claims. (Cl. 214—147.)



1. An attachment for a wheeled conveyor having elevating means, comprising a pivotally supported load supporting arm, means for connecting said arm with the elevator or conveyor, load clamping means over said arm, and means whereby the weight of the load on said arm will operate automatically to effect clamping of the load when the elevator is raised.

1,485,819. COMBINED PLOW AND SOIL PULVERIZER. FRANK S. SHIELDS, Cleveland, Ohio. Filed Oct. 30, 1922. Serial No. 597,805. 14 Claims. (Cl. 97—10.)



1. In a device of the kind described, a scoop having a bottom, an outer wall and an inner wall, said inner wall being oblique with reference to the line of draft, a plow share and point at the front of said scoop and a landside extending rearwardly from the plow point.

1,485,820. NEEDLE-FEELING MECHANISM FOR LOOMS. JOHN TARANTO, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 13, 1923. Serial No. 612,443. 7 Claims. (Cl. 139—279.)

1. Feeler mechanism for looms comprising a yieldable feeler to engage the filling upon the filling carrier in the shuttle upon the beat-up of the lay, a needle support mounted on said feeler having a needle normally projecting beyond the filling engaging end of the feeler to penetrate the filling on the filling carrier, a bell crank lever pivotally mounted upon said feeler having one arm extending longitudinally of said feeler, resilient means acting upon said needle support to cause constant engagement thereof with the other arm of said bell crank lever, whereby relative movement between the needle support and feeler, caused by the engagement of said needle with the filling carrier upon substantial exhaustion of filling, will swing said lever laterally without lost motion and means controlled by the movement of said lever to effect a change in the operation of the loom.

1,485,821. COKE-OVEN GAS-BURNER NOZZLE. WILLIAM H. WRIGHT, Chicago, Ill., assignor to Louis Wilputte, New Rochelle, N. Y. Filed Dec. 20, 1919. Serial No. 346,354. 2 Claims. (Cl. 202—9.)

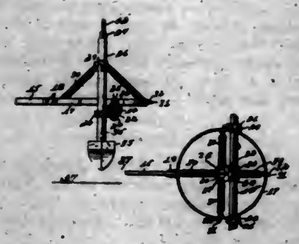
1. A coke oven burner nozzle made of fire clay formed with a gas passage comprising a short upper measuring orifice portion and a body portion of substantially greater cross-sectional area than said orifice portion.

1,485,822. REFILLABLE CARTRIDGE FUSE. ERNEST G. APPLETON, Chicago, Ill., assignor to Chicago Fuse Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 22, 1920, Serial No. 383,340. Renewed Aug. 1, 1923. 5 Claims. (Cl. 200—132.)

3. In a refillable cartridge fuse, in combination, a tubular metallic end member, an inwardly formed integral cross web carried within said end member having a rectangular opening centrally positioned therein with lateral indents in two opposite sides, a plate overlying said web having integral projections adapted to engage said indents and prevent rotation of said plate, said plate having a straight side cooperating selectively with one of the straight sides of said opening to form a narrow slit, a fuse element passing through said slit and having

its end portion overlying said plate, and means engaging said tubular end member in electrical contact adapted to clamp said fuse member to said disk abutting said web.

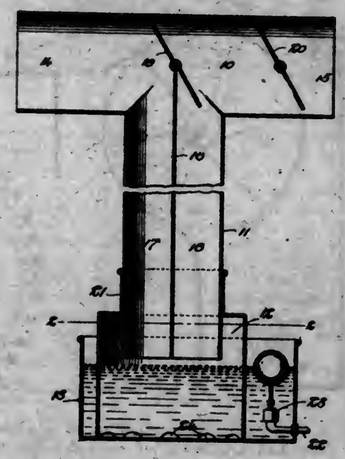
1,485,823. MEANS AND METHOD OF PRESERVING FISH. JAMES J. BARRY, Woodhaven, N. Y. Filed Apr. 21, 1923. Serial No. 633,784. 2 Claims. (Cl. 99—11.)



1. A method of treating fish consisting of immersing the fish in brine, draining, subsequently immersing in oil, draining the fish after the oil has impregnated the same, and smoking the fish after it has drained, whereby the fish and oil remaining therein are simultaneously treated by the smoke.

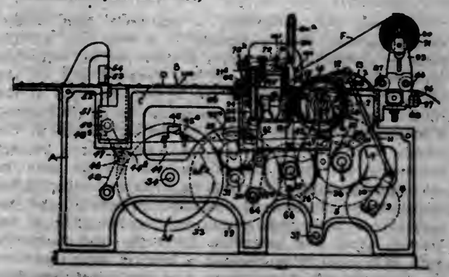
1,485,824. CLOTH-PRESSING MACHINE. RUBIN BASS, Brooklyn, N. Y. Filed Sept. 18, 1923. Serial No. 663,336. 8 Claims. (Cl. 68—9.)

1. A cloth pressing machine comprising stationary and movable bucks, impervious cloth foundations detachably secured on said bucks and having uniformly distributed, closely set, stiff needles passing through the cloth foundation, the ends of which form the pressing surfaces and communicating passageways for admitting steam through said bucks and cloth foundation.



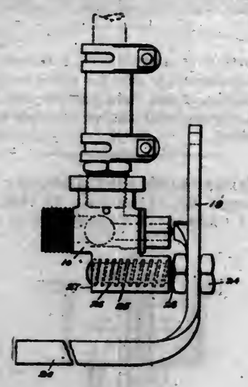
1,485,825. ANTISKID DEVICE FOR AUTOMOBILES. WELLINGTON H. BEALE, Marshalltown, Iowa. Filed Mar. 13, 1923. Serial No. 624,730. 4 Claims. (Cl. 188—6.)

1. An anti-skid device comprising a frame member, means for detachably securing the same to the axle of an automobile, a bracket located centrally with said frame



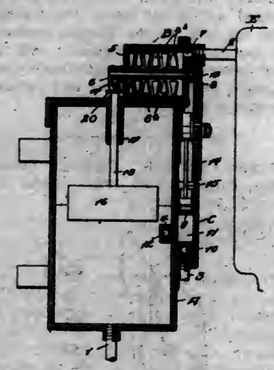
having a vertically arranged opening, a vertically arranged shaft loosely and slidably mounted therein, a surface engaging member on the lower end of said shaft, means attached to the upper end of said shaft for elevating and lowering the same, means for yieldably holding the shaft to its lower limit of movement and yieldably retaining the said lower end against lateral movement in either direction, and means for actuating said elevating and lowering means.

1,485,826. FUEL-ECONOMIZING APPARATUS. THOMAS BOCCHINO, Poughkeepsie, N. Y. Filed Nov. 6, 1922. Serial No. 599,356. 5 Claims. (Cl. 110—163.)



1. Fuel economizing apparatus comprising a pipe adapted to be connected at one end with a furnace and at its other end with a chimney, a water container, said pipe having a pair of passages leading therefrom and terminating in said water container, and an adjustable damper within said pipe between said passages operable in one position to restrict communication between the furnace and chimney through said passages and simultaneously permit direct communication between the furnace and chimney through said pipe and in another position to deny such direct communication and necessitate communication between the furnace and chimney by way of said passages and said water container.

1,485,827. MACHINE FOR MAKING WIRE FABRIC. GEORGE E. BULL, Monessen, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1922. Serial No. 602,422. 24 Claims. (Cl. 140—3.)

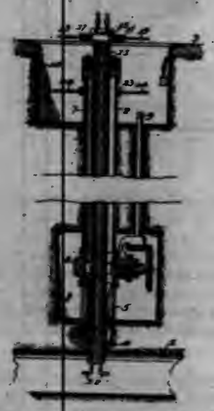


1. In apparatus for attaching sheet-material as a backing for wire-fabric, the combination with a suitable frame, of means for advancing the fabric, means for forming crimps in the strand-wires of the fabric, means for applying the sheet-material, whereby it is perforated by said crimps, and means for threading a wire through said crimps.

1,485,828. PRESSURE VALVE. GEORGE W. BURKE, JR., and ELLSWORTH BROWN, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,304. 3 Claims. (Cl. 251—181.)

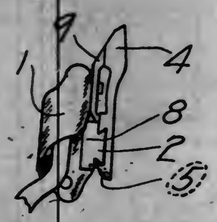
1. Valve mechanism embodying, in combination, a valve casing having an internal valve seat, a valve in said casing, a plunger acting directly on said valve to force and hold the valve tightly against the valve seat, and a plunger operating lever having its pivot offset from the axis of movement of the plunger, said pivot having rigid connection with said lever and a screw-threaded engagement with a part of the valve casing.

1,485,829. LIQUID-FUEL-SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM C. CARTER, St. Louis, Mo. Filed May 10, 1920. Serial No. 380,298. 8 claims. (Cl. 158—36.)



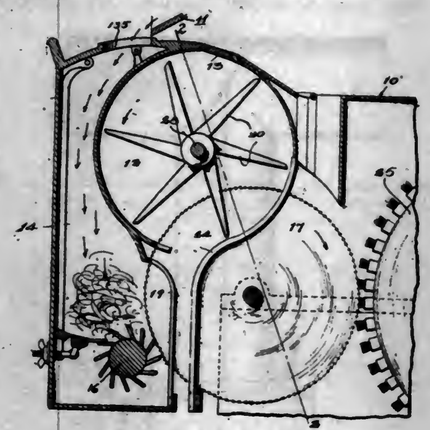
1. The combination of an internal combustion engine, an air turbine operated by the suction or vacuum produced in the intake manifold of said engine, a liquid fuel pump operated by said air turbine, a container into which fuel is delivered from said pump, and means for causing said turbine and pump to cease operating when the fuel in said container exceeds a certain quantity.

1,485,830. INGOT AND MOLD FOR SAME. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,977. 18 Claims. (Cl. 22—143.)



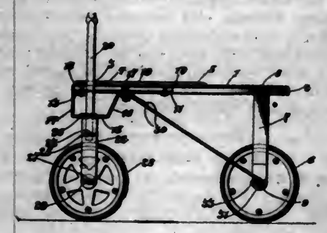
1. As an article of manufacture a horizontally cast ingot having substantially parallel plane surface sides adjacent the middle of the body portion and with reduced end portions substantially square in cross-section for the purpose specified.

1,485,831. MEASURING INSTRUMENT. JOHN ADAMS COLE, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,093. 4 Claims. (Cl. 73—167.)



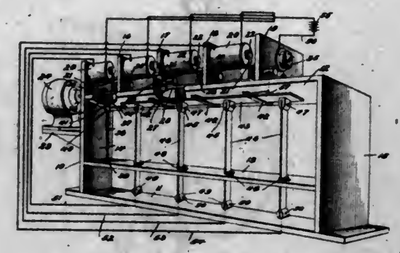
1. The combination with an underground main and a street connection extending therefrom, of a rod-meter extending through said street connection and having apertures arranged within the main, and means for indicating to the operator at the ground surface that the axes of said apertures are in alignment with the axis of the main, said indicating means including socket members pivotally mounted on the rod-meter and pointers insertible into the socket members.

1,485,832. HAIR CLIPPER. EMERSEY COLPITTS, Sangerville, Me. Filed May 26, 1921. Serial No. 472,624. 1 Claim. (Cl. 30—1.)



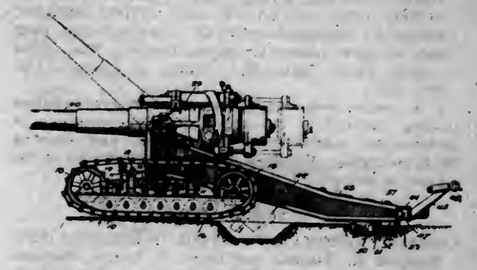
In combination with a pair of hair clippers, interchangeable stationary blade plates therefor, comprising a dovetailed slide formed across the base of the clippers back of the movable blade; stationary blade plates of varying thicknesses, each having a mortise formed along its upper side adapted to slidingly engage the said dovetailed slide and each having a registering notch in its back edge; and means for releasably locking said stationary blade plates in position, said means including a latch hinged at the back of the slide of the clippers, and adapted to engage the said registering notches in the back edges of the stationary blade plates.

1,485,833. COTTON GIN. FREDERICK B. CUMPSTON, Blooming Grove, Tex. Filed Jan. 2, 1923. Serial No. 610,291. 5 Claims. (Cl. 19—55.)



1. In a cotton gin, the combination of a plurality of spaced saws, and a plurality of staggered ribs movable between the saws.

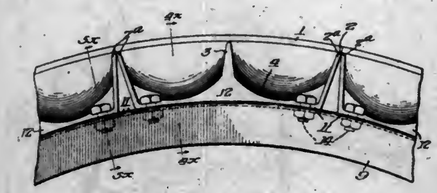
1,485,834. TOY CAR. DONALD V. DAVIS, St. Louis, Mo., assignor, by mesne assignments, to Jake S. Braunig, St. Louis, Mo. Filed Mar. 31, 1920. Serial No. 370,071. 7 Claims. (Cl. 208—165.)



1. A toy car, comprising a relatively thin racket-shaped metallic plate composed of a wide rear portion forming a resilient seat and a narrow portion extending forwardly from the seat to the forward end of the plate, leaving free play for the legs of the child at the sides of the narrow portion throughout the length thereof, a reinforcing element secured to the under side of the narrow portion of said plate, an axle shaft, a bracket secured to the under side of the wide portion near the rear end thereof and having its arms extending downwardly and connected to said shaft, wheels on the end portions of said shaft, struts bracing the ends of the bracket arms and extending forwardly and connected with said reinforcing element, a bracket supported near the forward end of said plate, a steering post extending through said plate and through said reinforcing element and said last-named bracket, and a wheel controlled by said post.

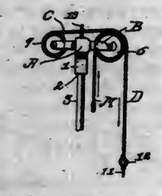
1,485,835. MACHINE FOR TESTING SHEET METAL FOR VIBRATION. GEORGE DE BOTHEZAT and IVAN I. EREMEEFF, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,517. 5 Claims. (Cl. 265—13.)

1. In a testing machine of the character described, the combination with a supporting frame, of a bar mounted on said frame for reciprocatory movement, means for reciprocating said bar, an intermediate plate in said frame having an aperture therein, and adapted to permit a sheet metal test specimen to extend through said aperture, a clamp carried by said bar for gripping said specimen, means tending to exert a slight tensile stress on said specimen, and means for indicating the number of oscillations imparted to said specimen before rupture thereof.



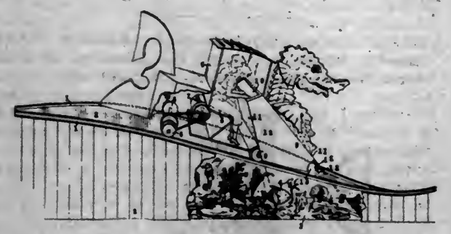
1,485,836. VEHICLE MOUNT. HARVEY DELANO, Washington, D. C., and GEORGE A. CHADWICK, Washington Grove, and SILAS V. KEMP, Baltimore, Md., assignors to the Government of the United States. Filed Mar. 22, 1919. Serial No. 284,473. 1 Claim. (Cl. 305—9.)

A traction unit of the endless track-laying type having a transverse beam member upon which the article to be carried is adapted to be mounted, longitudinally disposed members at each end of said transverse beam member for supporting the ends thereof, a frame at each end of said beam member for supporting said end members, wheels at opposite ends of said frames, an endless track passing around said wheels and under and over said frame, springs between the end supporting members and said frame and a plate above each end supporting member for supporting the track as it passes thereabove.



1,485,837. TRACTION TREAD FOR WHEELS. EDWARD P. DICKEY, Harvey, and GEORGE H. IRWIN, Chicago, Ill. Filed May 25, 1922. Serial No. 563,482. 13 Claims. (Cl. 301—40.)

8. A traction tread, comprising a medial circumferentially extending rib, vanes extending laterally therefrom, and webs filling the spaces between the vanes and extending from near the crest of the rib laterally and radially inclined to the sides of the tread; said tread being formed separately from and constructed for attachment to a wheel, and being subdivided into a circumferentially arranged series of sections, the planes of

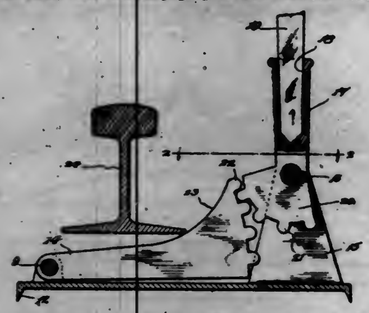


separation being coincident with penetrating edges of some of the vanes, and said sections being arranged to abut at said edges.

1,485,838. FIXTURE FOR HOLDING AND OPERATING MAPS. WILLIAM H. DIETZ, Chicago, Ill. Filed Sept. 15, 1921. Serial No. 500,902. 6 Claims. (Cl. 35—6.)

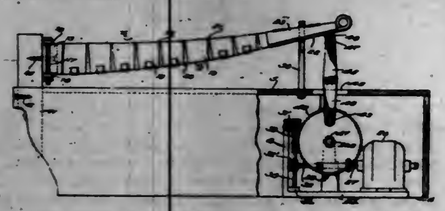
1. A supporting bar, trunnion bearings thereon, a roller having trunnions adapted to be removably supported therein, a map wound upon said roller, a smaller roller rotatively mounted on the bar between its ends, a friction strip wound upon the smaller roller with one of its ends secured thereto, and means on the smaller roller for normally holding said smaller roller with said strip wound thereon, the relation of said rollers permitting said strip when unwound from the smaller roller to have frictional bearing upon the map.

1,485,839. SCENIC RAILWAY. JAMES TAYLOR DYE, New York, N. Y. Filed Aug. 8, 1922. Serial No. 580,388. 8 Claims. (Cl. 104—84.)



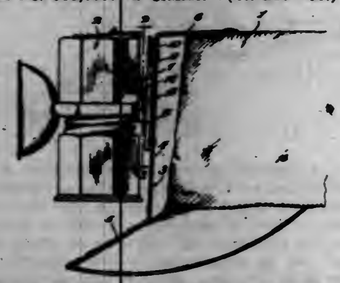
1. In a pleasure railway, in combination, a vehicle adapted to run on a track and having a passenger compartment with a seat therein and an observation conduit disposed in front of said seat and opening downwardly through the bottom of the car so as to afford an unobstructed view by the occupant to the subjacent scenery, said car being otherwise closed to external vision of the occupant.

1,485,840. DEVICE FOR LINING RAILROAD TRACKS. JOHN F. ELLIOTT, Allerton, Iowa. Filed Sept. 7, 1922. Serial No. 586,721. 3 Claims. (Cl. 254—44.)



1. A track lining jack comprising a base, ground-engaging members on said base, a "crowding bar" ful-

crumed on the base, a rocking lever similarly fulcrumed on the base, and interengaging means between said lever



and said bar for oscillating the latter, said crowding bar having an arcuate cam surface adapted to engage with the rails.

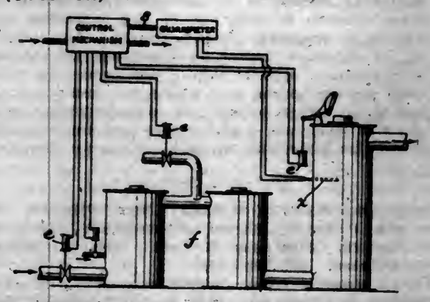
1,485,841. DEMONSTRATION APPARATUS. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Co., Chicago, Ill., a Corporation of Delaware. Filed May 24, 1922. Serial No. 563,196. 3 Claims. (Cl. 35—16.)

1. A demonstration apparatus comprising a container having a top wall, a post extending above said top wall adjacent one end thereof, an elongated flexible spring cover having one end secured to said post, said cover extending over said top wall, a motor in said container, a gear wheel driven by said motor, a pitman rod connecting the free end of said cover and an eccentric point of said gear wheel, said pitman extending through a slot in said top wall, and a guide for the free end of said cover.

1,485,842. LAMP HOLDER FOR MINERS' CAPS. JAMES J. FISHER, Austen, W. Va. Filed Aug. 23, 1922. Serial No. 583,809. 2 Claims. (Cl. 240—60.)

1. In a lamp holder for miners' caps, a back plate adapted to be secured upon a cap, spaced members secured to said plate and having forwardly converging flanges at their adjacent edges, the said flanges also converging downwardly, and a wedge member removably receivable in said socket member and having its lateral faces converging rearwardly and downwardly to engage between and be frictionally held by the flanges of the socket member.

1,485,843. MOUNTING FOR AUTOMOBILE ORNAMENTS. IRVING FLORMAN, New York, N. Y. Filed Mar. 12, 1923. Serial No. 624,675. 6 Claims. (Cl. 248—20.)



1. A mounting for an automobile ornament adapted to be attached to a temperature indicating instrument comprising a platform on which the ornament is mounted, integral portions depending from said platform, legs on said depending portions, each leg having an aperture therein, and means passing through said apertures for attaching the mounting to the rim of the temperature indicating instrument.

1,485,844. FERMENTATION OF SOLUTIONS CONTAINING XYLOSE, ARABINOSE, AND OTHER PENTOSE SUGARS WITH THE PRODUCTION OF ACETIC ACID AND LACTIC AND OTHER ORGANIC ACIDS BY MICROORGANISMS. EDWIN BROWN FRED and WILLIAM HAROLD PETERSON, Madison, Wis. Filed Aug. 7, 1919. Serial No. 315,952. 8 Claims. (Cl. 260—120.)

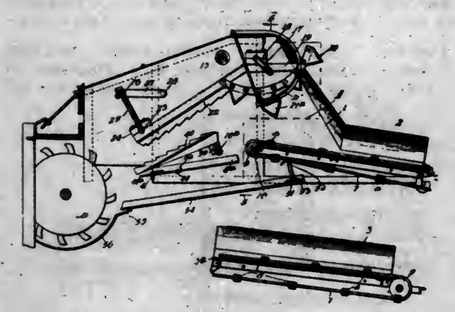
4. A process comprising subjecting hydrolyzed pentose yielding material to the action of micro-organisms of *Lactobacillus pentoaceticus*, new species, and allowing the fermentation to proceed until substantially all of the pentose is converted into lactic and acetic acids.

1,485,845. AUTOMATIC-CONTROL WATER-GAS SET. WILLIAM H. GARTLEY and OWEN B. EVANS, Philadelphia, Pa., assignors to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 15, 1921. Serial No. 492,603. 10 Claims. (Cl. 48—83.)

9. In combination, water gas apparatus, timing mechanism adapted to put apparatus valves into open and into closed positions, and thermally responsive provisions adapted to change the timing mechanism.

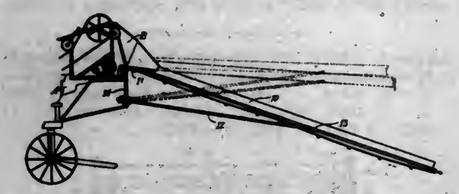
1,485,846. DISPLAY DEVICE. SYDNEY B. GRIFFIN, Mamaroneck, N. Y., assignor to T. Fred Moore, New York, N. Y. Filed Feb. 8, 1921, Serial No. 443,341. Renewed Mar. 5, 1923. 11 Claims. (Cl. 40—125.)

1. The combination with a flexible poster, of a normally straight flexible and resilient stretching member adapted to be applied to the poster to exert an outward thrust on the poster at spaced points thereof and greater in length than the distance between said points so that it is bowed when so applied to the poster, and a prop extending from a point of said stretching member and adapted to extend outwardly from the stretching member when the latter is in bowed position.



1,485,847. RAKER GAUGE. MARTIN J. HAHRE, Smithers, British Columbia, Canada. Filed Oct. 17, 1922, Serial No. 595,159. Renewed Jan. 29, 1924. 3 Claims. (Cl. 76—47.)

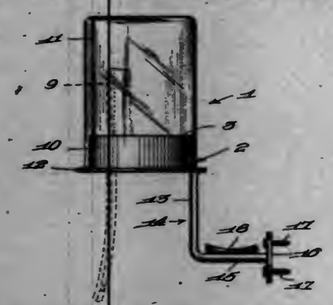
1. In a tool of the class described, an elongated body portion, L-shaped in cross-section, a groove formed on the inner side of one arm of the body portion to receive a file in one operation, and a saw in another operation, the body portion provided with a cutout portion communicating with the groove for slidably receiving a file in a further operation.



1,485,848. BAND CUTTER AND FEEDER. ARTHUR J. HARTLEY, Peoria, Ill., assignor to Hart Grain Weigher Co., Peoria, Ill., a Corporation of Illinois. Filed Feb. 17, 1921. Serial No. 445,660. 9 Claims. (Cl. 130—1.)

1. In a machine of the class described, in combination, a conveyor member, crank operated frame members, crank operated band cutters mounted on the forward end of said frame members, upper oscillating feed pans mounted on the lower end of said frame members, means for yieldingly supporting the lower ends of said frames, lower oscillating feed pans, a reciprocating litter pan, retarding means, an automatic trip mechanism controlled by the movement of the upper feed pans, a clutch mechanism in connection with said trip mechanism for throwing out of operation the conveyor mechanism and lower

feed pans, a power shaft, and a governor mounted on said shaft capable of controlling the initial operation of the conveyor and lower feed pans.



1,485,849. ADJUSTABLE CONVEYER SUPPORT FOR CONVEYERS. ARTHUR J. HARTLEY and WILLIAM HALE, Peoria, Ill., assignors to Hart Grain Weigher Co., Peoria, Ill., a Corporation of Illinois. Filed June 7, 1922. Serial No. 566,579. 7 Claims. (Cl. 198—121.)

1. In an adjustable conveyer, in combination, a supporting frame, a conveyer pivoted thereto, a reach member pivoted to the conveyer, a stop member connected with the framing, a rockable member pivoted respectively to the reach member and to the framing at a point below the pivotal connection of the conveyer thereto provided with a slot therein to facilitae adjustment of the pivotal member on the reach into off-centered relation above or below the pivotal conter of the adjustable member with the framing, whereby under conditions of raising the conveyer to a maximum working position the rockable member will be shifted into position for abutment with the stop and the pivotable member on the reach would be disposed in the slot of the rockable member in a position below the center of the pivotal support of the rockable member, and whereby in disposing the conveyer in its lowermost working position action of raising the conveyer above its normal elevated working position will dispose the pivot member of the reach within the slot of the rockable member in a position above the center of the support of the latter, whereby the weight of the conveyer will cause the rockable member to be shifted rearwardly and the pivot member thereon advanced to the rearward extremity of the slot therein to effect a stop and support for the conveyer in such maximum lowered position, and means associated respectively with the pivot member of the reach and the rockable member for effecting interlock there-between when the pivot member is disposed in the rearward portion of the slot thru the raising action of the conveyer above its normal high position whereby temporary interlock will be effected between the reach and rockable member to facilitate thrust action in the lowering move-

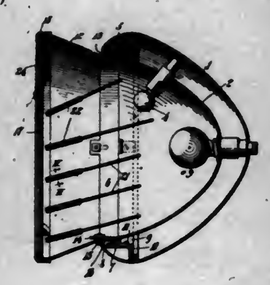
ment of the conveyer will move the rockable member rearwardly to permit rearward projection of the reach member into supporting relationship with the rockable member.

1,485,850. SANITARY TOOTHBRUSH HOLDER. GEORGE J. HOLLANDER, Portland, Me. Filed May, 21, 1921. Serial No. 471,461. 2 Claims. (Cl. 248—63.)

2. A tooth-brush holder comprising an open body including an annular supporting flange and an annular right angularly disposed tumbler guard flange, said supporting flange having a plurality of tooth brush receiving slots formed therein extending outwardly from the inner edge of said supporting flange, and terminating adjacent to the guard flange, and an outwardly extending member for securing the body to a supporting structure.

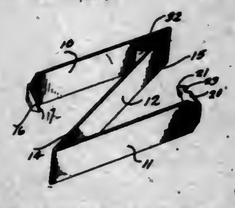
1,485,851. RETORT. ERNEST W. HOPPER, Seattle, Wash., assignor to Hopper Cannery Machinery Co., Seattle, Wash., a Corporation of Washington. Filed Apr. 3, 1922. Serial No. 549,145. Renewed Dec. 12, 1923. 5 Claims. (Cl. 126—272.)

1. A retort of the class described, consisting of a steam tight cylindrical casing, a cage rotatably mounted in said casing consisting in a pair of spaced headers, and a plurality of can receiving tubes secured at their ends to openings on said headers, a conduit extending through each of the opposite ends of said casing and arranged to register in alignment with the openings in said headers and tubes, said conduits having steam tight engagement with said headers.



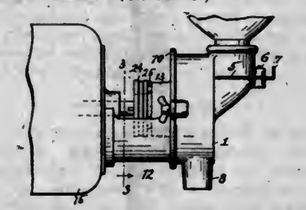
1,485,852. DISPLAY STAND. CHARLES H. JARVIS, Battle Creek, Mich., assignor to United Steel and Wire Co., Battle Creek, Mich. Filed Oct. 7, 1922. Serial No. 593,132. 2 Claims. (Cl. 211—24.)

1. In a stand, the combination of legs having angular bends adjacent their upper ends disposed in triangular relation with their angles inwardly, an annular top member welded to the upper ends of said legs, said top member being provided with cross pieces welded to the under side thereof constituting a support on which a receptacle may be placed in an upright position or in an inclined position with its bottom resting against one cross member and its side against the adjacent cross member, and a plurality of triangular horizontal members welded at their angles to said legs and constituting braces therefor, said horizontal members being provided with cross bars disposed in spaced relation to one of the side members thereof constituting a support on



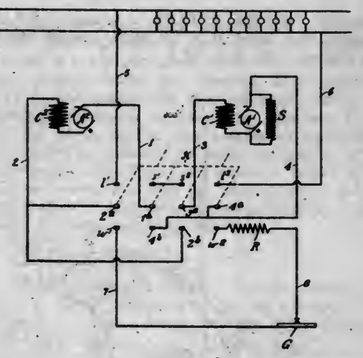
which receptacles may be placed in an inclined relation with their bottoms resting against the cross bars and their sides resting against the coacting side member.

1,485,853. ANTIGLARE ATTACHMENT FOR HEADLIGHTS. JAY D. JONES, New York, N. Y. Filed Nov. 25, 1922. Serial No. 603,281. 11 Claims. (Cl. 240—48.4.)



1. An exterior anti-glare attachment adapted to be secured to the open front of a head lamp, said attachment comprising a hood and a plurality of upwardly and rearwardly inclined vanes leading rearwardly from the front of the hood to points within the reflector back of the open front of the lamp, and a lens covering the front of the hood.

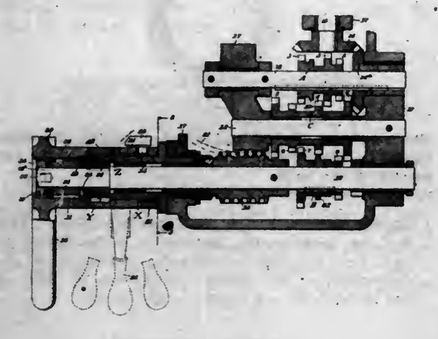
1,485,854. SAFETY CLASP. JAMES J. JOYCE, Portsmouth, N. H. Filed Feb. 3, 1921. Serial No. 442,132. 6 Claims. (Cl. 292—253.)



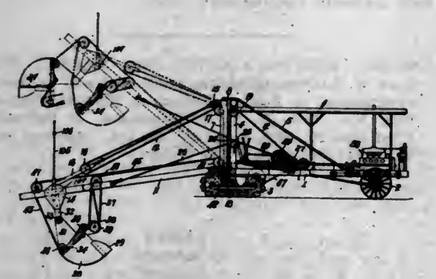
1. As an article of manufacture, a safety clasp formed of a single strip of flat material, rectangular slots within said substantially flat body, said body having reduced ends thereon adapted for insertion through said slots, said body having a triangular opening therein, and a barbed head upon an end of one of said reduced portions adapted for insertion through said triangular shaped aperture for securely locking the substantially flat body to form a safety clasp.

1,485,855. COFFEE MILL. WILLIS E. KIDNEY, Cleveland, Ohio, assignor to The Cleveland Electric Machine and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 15, 1922. Serial No. 575,248. 10 Claims. (Cl. 83—8.)

1. A coffee mill, comprising a burr housing, a stationary burr therein, a drive shaft, a rotary burr slidably keyed to said drive shaft, a flanged sleeve surrounding said shaft, movable longitudinally thereof and engageable with said rotary burr and a second sleeve having a hand wheel thereon, said second sleeve surrounding said first mentioned sleeve, engaging the flange of said first mentioned sleeve and in threaded engagement with said housing.



1,485,856. ELECTRIC GENERATOR. JOHANNES KJEKSTAD, Brooklyn, N. Y. Filed June 27, 1919, Serial No. 307,107. Renewed July 9, 1923. 7 Claims. (Cl. 171—312.)



1. In combination with two load circuits, an electric generator comprising an armature including two collector members and having part of its winding connected to one collector member and another part of its winding connected to the other collector member, and means for selectively connecting the collector members either in series into one load circuit to the exclusion of the other load circuit or in parallel into the said other load circuit to the exclusion of said one load circuit.

1,485,857. SAFETY MANUAL FEED FOR DRILLS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 5, 1923. Serial No. 649,684. 12 Claims. (Cl. 74—58.)

1. A drilling machine combining a spindle feed-shaft; automatic means for actuating said shaft including a power shaft, a third shaft, a driving connection between said third shaft and said spindle feed-shaft, and a plurality of relatively shiftable gear-units operatively connecting said power-shaft and said third shaft; manual means for rotating said third shaft to actuate said spindle feed-shaft; and a single feed-controlling element operatively connected with two of said gear-units and movable in one plane to shift one of said gear-units and movable in another plane to shift the other of said gear units to establish a driving connection between said power-shaft and said spindle feed-shaft, and simultaneously therewith to render said manual means inoperative.

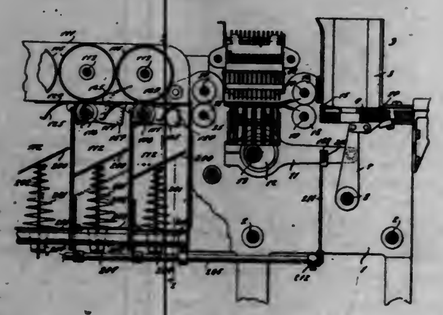
1,485,858. EXCAVATING MACHINE. LEO A. KRUPP, Findlay, Ohio. Filed June 4, 1921. Serial No. 474,882. 14 Claims. (Cl. 214—138.)

1. In a machine of the class described, a bucket having an open front and closed back disposed in lines diverging downward and outward from the top portion of the bucket and having an outwardly curved closed bottom and a cleaner blade pivotally disposed in the bucket for movements front and back of the bucket and having its pivot disposed adjacent to the top of the bucket and substantially concentric to the curve of the bottom.

1,485,859. CENTRIFUGAL METAL-PIPE MOLD. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed July 12, 1922. Serial No. 574,469. 4 Claims. (Cl. 22—65.)

4. A centrifugal long and relatively narrow metallic pipe mold having its inner surface divided into separated segments by narrow slots or grooves running both longi-

tudinally and circumferentially which are too narrow to permit the fluid metal for the pipe casting to enter under

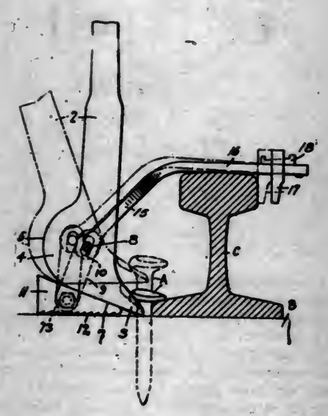


the conditions of use and which diminish the strains caused by the alternate heating and cooling of the inner portion of the mold.

1,485,860. CENTRIFUGAL CASTING MACHINE. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 28, 1922. Serial No. 603,757. 9 Claims. (Cl. 22—65.)

6. A centrifugal casting machine comprising a rotatable casing in combination with a segmental mold the segments of which are radially and longitudinally movable in the casing, interengaged means whereby a longitudinal movement of the mold segments in the mold moves them together or apart and power mechanism for moving the mold segments longitudinally.

1,485,861. SORTING-MACHINE STOP DEVICE. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed June 29, 1922. Serial No. 571,745. Renewed May 26, 1923. 9 Claims. (Cl. 83—92.)

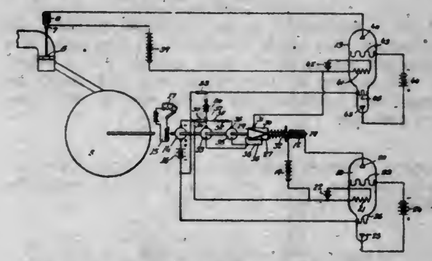


1. In an apparatus of the class described, a card-receiving hopper, power actuated means to forward cards one at a time to the receiving hopper, and means to stop the operation of said power actuated means when the number of cards in the receiving hopper has reached a predetermined number.

1,485,862. CONNECTING DEVICE. STEPHEN T. LESTER, East Bakersfield, Calif. Filed Mar. 14, 1923. Serial No. 624,991. 5 Claims. (Cl. 166—15.)

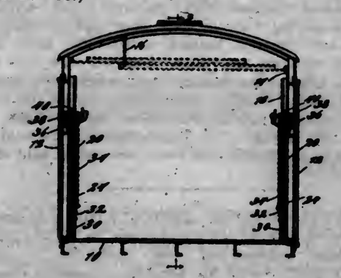
1. In a device of the class described, the combination with a pipe section, terminating in a tapered portion, of a member adapted to fit over said tapered portion and having upwardly directed slips disposed on its outer surface, said member being slit from the lower end upwardly to provide for adjustment of the member in engaging the well casing.

1,485,863. SPIKE PULLER. ANDREW MCLAIN, Carnegie, Pa. Filed Mar. 10, 1923. Serial No. 624,165. 4 Claims. (Cl. 254—27.)



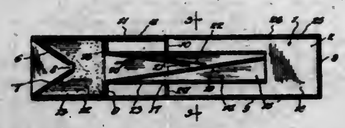
3. A spike puller comprising a claw bar having a claw, a curved working surface behind said claw and connected with said claw by a straight under surface, a wedge-shaped fulcrum member having a flat upper surface adapted to cooperate with said curved working surface, a pivot member extending through an opening in said claw bar, and links pivotally connected to said fulcrum member, said links having slots through which said pivot member extends.

1,485,864. TIRE BEAD AND METHOD OF MAKING SAME. HARVEY F. MARANVILLE, Akron, Ohio, assignor, by mesne assignments, to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 15, 1919. Serial No. 344,820. 15 Claims. (Cl. 154—14.)



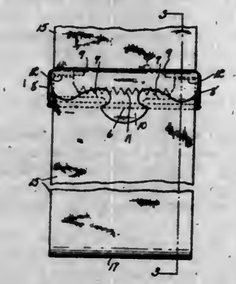
14. The process of making a reinforcement for pneumatic tire beads which contains the steps of first flattening spaced portions of a round flexible wire without deflecting the axis of said wire; second, wrapping such wire with rubberized fabric; and, third, winding a plurality of turns of said wire together to form a hoop of the required size and strength.

1,485,865. CONTROL AND REGULATION OF ENERGY-CONVERSION MACHINES. FRIEDRICH WILHELM MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1920. Serial No. 358,101. 14 Claims. (Cl. 175—355.)



9. In a controller for prime movers, the combination with means for immediately controlling the supply of motive agent to the prime mover, of control means to act upon said former means for effecting an intermittent supply of motive agent and for definitely timing the frequency of the supply periods with reference to the speed of the prime mover, and associated electro-ionic means subjected to influence of speed variations of the prime mover for controlling instantaneous values of the motive agent supply and also for independently controlling the duration of individual supply periods to thereby compensate for such speed variations.

1,485,866. SUPPLEMENTAL GRAIN DOOR FOR FREIGHT CARS. JOHN J. MILLER, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,335. 4 Claims. (Cl. 20—33.)

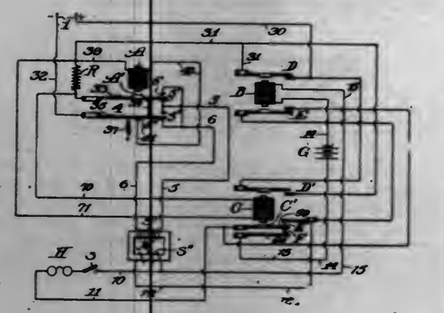


1. In an inner grain door for freight cars, the combination of a hinged frame, a door panel fixed to said hinged frame, additional panels on said frame, adapted to be slidably operated thereon, and means for operating said slidable door panels, said means comprising a windlass and chain mounted on the relatively fixed panel.

1,485,867. INSECT TRAP. WILLIAM M. MOONEY, Washington, D. C., assignor of one-half to Herbert F. Groves, Washington, D. C. Filed Nov. 20, 1922. Serial No. 602,186. 9 Claims. (Cl. 43—121.)

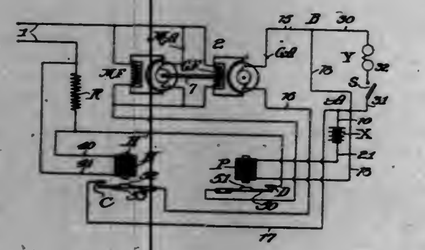
1. In an insect trap, a hollow body having an entrance passageway in one end, a partition dividing the body interiorly into bait and trapping compartments, and a runway leading through the partition and establishing communication between the said compartments, and a baffle wall within the runway having a flexible portion located in relatively close proximity to the bottom of the runway.

1,485,868. BUCKLE. WILLIAM F. MURTHA, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,719. 1 Claim. (Cl. 24—184.)



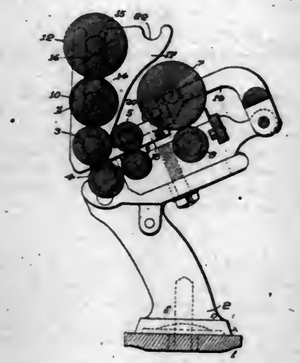
In a buckle, the combination with a one-piece wire frame bent to form a continuous straight lower bar, the ends of which are bent forward, then inward toward each other, in front of the said lower bar, then upward and then outward to the ends of the said bar to form two complementary web-gripping loops located in the vertical plane in front of the said bar, and the outer ends of the upper reaches of the said loops being bent rearward and then upward to form the side-bars of the frame, and the upper ends of the said side-bars being bent inward toward each other to form pintle-ends constituting in effect the upper bar of the frame; of a buckle-lever mounted upon the said pintle-ends of the frame, and a length of webbing having its fixed end gripped between the front face of the lower bar of the frame and the rear faces of the vertically-arranged web-gripping loops standing in front of the said lower bar of the frame.

1,485,869. SIGNALING SYSTEM. CHARLES A. NASH, Chicago, Ill., assignor of three-fourths to Amrevo Electric Company, Chicago, Ill., a Corporation of Illinois, and one-fourth to Seymour Stedman, Chicago, Ill. Filed Sept. 28, 1921. Serial No. 503,802. 16 Claims. (Cl. 171—97.)



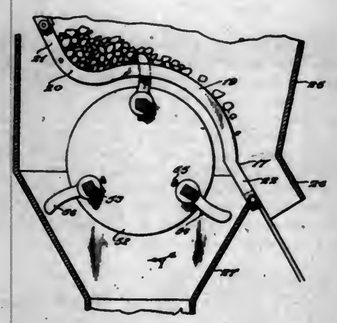
1. In a system of the class described; a transformer; a source of relatively high potential direct current connected to a circuit having in series therein the primary

winding of the transformer, a pole-changing device, and a switch (D); a low voltage circuit having in series therein the secondary winding of the transformer, a control switch, a low voltage translating device, and a switch (E'); an auxiliary shunt circuit including therein a source of potential, the control switch, and a



switch (F); a switch (E) in parallel with the switch (E'); a switch (D') in parallel with the switch (D); means operated by flow of current through the auxiliary shunt circuit for closing the switches (D and E); and means operated by flow of the relatively high potential direct current for closing the switches (D' and E') and opening the switch (F).

1,485,870. SIGNALING SYSTEM. CHARLES A. NASH, Chicago, Ill., assignor of three-fourths to Amrevo Electric Company, Chicago, Ill., a Corporation of Illinois, and one-fourth to Seymour Stedman, Chicago, Ill. Filed Sept. 28, 1921. Serial No. 503,803. 5 Claims. (Cl. 171—97.)

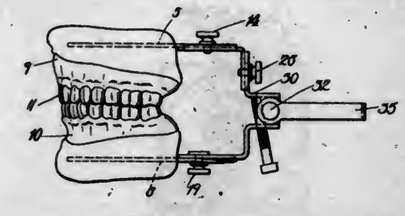


1. In a system of the class described; a motor generator set; a source of relatively high potential direct current connected to a circuit having in series therein the motor of the motor generator set, and a switch (D); a low voltage circuit connected to the generator of the motor generator set, and having in series therein a control switch, a low voltage translating device, and a switch (C); an auxiliary low voltage shunt circuit including therein a source of potential and the control switch; means operated by flow of current through the auxiliary low voltage shunt circuit for closing the switch (D); and means operated by flow of the relatively high potential direct current for closing the switch (C).

1,485,871. SPINNING FRAME. ROBERT E. NAUMBURG, Winchester, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed July 5, 1923. Serial No. 649,480. 2 Claims. (Cl. 19—135.)

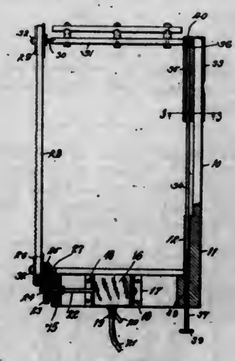
1. In a mechanism of the character described, the combination with upper and lower drawing rolls, of a clearer roll bearing on the upper drawing roll, a weighting roll bearing on said clearer roll, and means for holding said weighting and clearer rolls in their operative positions.

1,485,872. ORE-SCREENING APPARATUS. GUS NELSON, Douglas, Ariz. Filed Oct. 14, 1922. Serial No. 594,482. 4 Claims. (Cl. 83—56.)



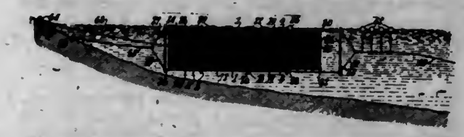
1. An ore screening apparatus comprising a screen having spaced parallel bars, parallel sided agitating elements engaging between said bars and arranged to travel in one direction thereof, a revoluble shaft upon which said elements are rigidly mounted, said bars each having an arcuate portion concentric with the axis of said shaft, and a narrow, longitudinal web on the under side, said shaft including a pair of spaced disks, flat sectioned rods engaging corresponding hubs on said elements, the ends of said rods being secured in said disks.

1,485,873. DENTAL ARTICULATOR. JAMES M. O'KEEFE, Brooklyn, N. Y., assignor to O. K. Dental Articulator Corporation, New York, N. Y. Filed Mar. 30, 1922, Serial No. 548,173. Renewed Jan. 29, 1924. 3 Claims. (Cl. 32—1.)



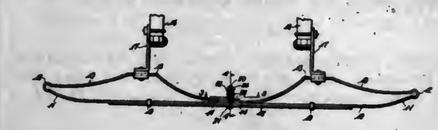
1. A dental articulator comprising a strap, an uppper and lower work moulding jaw pivotally connected to the strap and adjustably movable toward each other,

said upper jaw including a vertically adjustable and reversible annularly bent member and a longitudinally



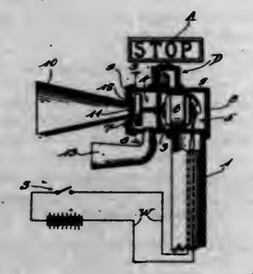
adjustabe element connected thereto, said annularly bent member and adjustable element being reversible as a unit with respect to the strap.

1,485,874. PORTABLE BANDSAW. TULLEY O'MALLEY, Cordova, Territory of Alaska. Filed Apr. 17, 1922. Serial No. 553,405. 3 Claims. (Cl. 143—19.)



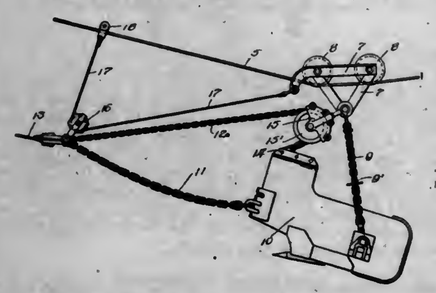
1. A band saw machine comprising a supporting frame of adjustable sections, one of which includes a guide rail while the other includes a slide mounted for longitudinal adjustment along the said rail, an endless band saw means, means on the slide for rotatably supporting one end of the saw, means on the rail for rotatably supporting the other end of the saw, an adjusting screw rod having a threaded portion adapted to thread through a portion of the frame providing the guide rail, and a head on said screw rod adapted to engage the slide for moving the same in either direction along said guide rail.

1,485,875. FLOATING FISH TRAP. TULLEY O'MALLEY, Cordova, Territory of Alaska. Filed May 5, 1923. Serial No. 636,967. 9 Claims. (Cl. 43—103.)



1. A trap comprising a trap body having an entrance and an exit, leads having aligning openings and extending inward from said entrance, shore lines for anchoring the entrant end to the shore, a main carrying "line" extending longitudinally through the central vertical plane of the trap body and being secured to said leads, buoyant members on said line, a lead forming portion in said line, anchors at the "line" ends, and spacer poles for holding portions of the trap body properly spaced, at least one of said poles being provided with end extensions and adjustable floats, and a spiller removably cooperative with said trap body.

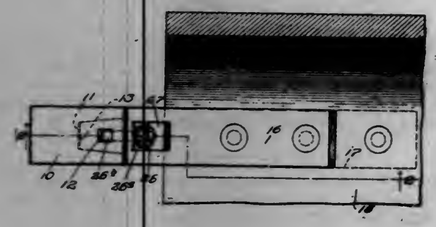
1,485,876. AUTOMOBILE BUMPER. TAGE H. OLSEN, Fresno, Calif. Filed Oct. 19, 1923. Serial No. 669,585. 4 Claims. (Cl. 293—55.)



1. In an automobile bumper a metal bar bent to form a front bumper bar and spaced rearwardly arranged supporting bars provided with overlapping ends and means passing through said front bar and overlapping ends for uniting the same, said overlapping ends being formed with slots for the purpose described.

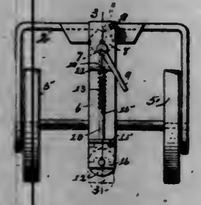
1,485,877. RAILROAD SIGNAL. JOHN W. OSBORNE, Winchester, Ill., assignor of one-half to Henry C. Six. Filed Mar. 15, 1923. Serial No. 625,322. 4 Claims. (Cl. 246—126.)

2. In an audible signal, a casing, an air intake connected thereto, vibrating elements in the casing in the path of the air, and a rotor in the casing for drawing air into it and against the vibrating elements.



1,485,878. EXCAVATING DEVICE. JOHN W. PAGE, Chicago, Ill. Filed Nov. 24, 1922. Serial No. 602,968. 14 Claims. (Cl. 37—117.)

1. In an apparatus of the character set forth, the combination of a main cable, a carriage movable thereon, a scraper bucket pivotally mounted on said carriage in the rear of the center of gravity of the bucket when loaded, a hauling line for pulling the bucket along said main cable, a block attached to the carriage, a holding chain running from the front of the bucket over said



block to the hauling line, means arranged in connection with said block whereby a leverage in favor of the end of the holding chain attached to the hauling line is established when the bucket is in load-retaining position and destroyed when said bucket is in partial or complete dumping position, and means engaging said hauling line in advance of said bucket operating at a predetermined point to accelerate the movement of said carriage along said main cable relative to the movement of said hauling line, for the purpose set forth.

1,485,879. DETACHABLE TOOTH FOR EXCAVATING SHOVELS. JOHN W. PAGE, Chicago, Ill. Filed Aug. 3, 1923. Serial No. 655,489. 2 Claims. (Cl. 37—142.)

1. A device of the character described comprising a tapered tooth-supporting lug, a detachable tooth provided with a complementary tapered recess adapted to embrace the tapered end of the lug, and means for drawing the tooth onto the lug, said means comprising a bolt arranged substantially parallel with the longitudinal axis of the lug and having one end engaged with a part on the lug and the other with a part on the tooth, whereby tightening of the bolt causes a seating of the tapered tooth-supporting lug in the complementary tapered recess in the tooth.

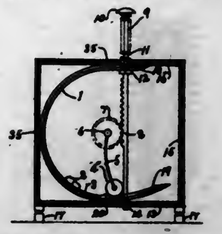
1,485,880. PLATFORM TRUCK. FRANK PALMER, Naugatuck, Conn. Filed Oct. 10, 1922. Serial No. 593,539. 7 Claims. (Cl. 280—44.)

2. A truck of the class herein described comprising a wheeled platform; a steering-wheel duly supported at the advance end of said platform, vertically adjustable into and out of contact with the surface thereunder and at all times spring-pressed upwardly; and means whereby said steering-wheel may, at the will of the user, be protracted downwardly into contact with the surface thereunder, against the stress of its controlling spring, and with pressure sufficient to lift the front carrying-wheels of the truck clear of said surface.

1,485,881. CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1921. Serial No. 491,490. 34 Claims. (Cl. 235—59.)

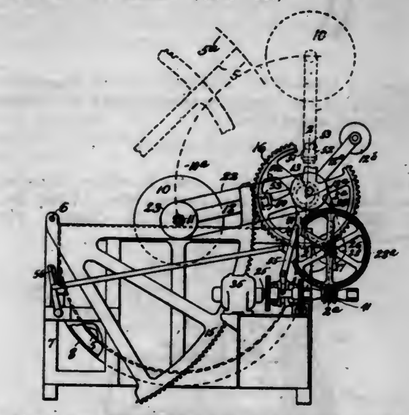
1. In a calculating machine, the combination with a traveling carriage, a totalizer, an actuator for said totalizer, and clearance-proof mechanism including a key, of means for automatically locking an essential

part of the machine at a predetermined point in the travel of said carriage, and means whereby said key releases the lock.



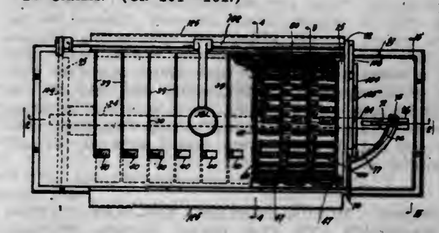
1,485,882. STEM WINDING AND SETTING AUTOMOBILE CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Feb. 13, 1923. Serial No. 618,782. 3 Claims. (Cl. 58—67.)

1. In a stem winding and setting clock, the combination with the winding-arbor thereof, of a stem winding and settting mechanism, comprising an oscillating yoke, a hollow stud carried thereby, a setting-wheel turning loosely upon the said stud, and a setting pinion also carried by the yoke and meshed into by the said setting-wheel, the said hollow stud being large enough for the said winding-arbor to pass through it with sufficient play for the oscillation of the yoke.



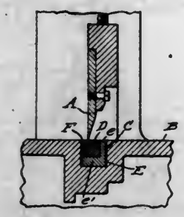
1,485,883. SIGNAL-TRANSMITTING DEVICE. EDWARD JOSEPH QUINN, Ringsend, Ireland. Filed Feb. 15, 1922. Serial No. 536,714. 2 Claims. (Cl. 178—79.)

1. A general character signal transmitting device for wireless, flash-light and land line systems of telegraphy of the kind described herein, comprising a member or series of members of semi-circular formation and having impressed thereon signal characters, and in combination therewith a roller or wheel member spring-pressed against each semi-circular member aforesaid by means of a springable spoke secured to a spindle adapted to be revolved by a free-wheel pinion on said spindle, a rack engaging said free-wheel spindle, said rack being connected in each case to a spring-backed indicator key, said



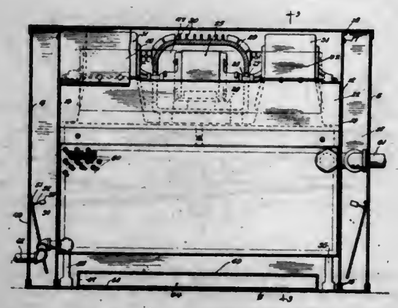
spring-backed indicator key being adapted under pressure to cause said roller or wheel member to revolve and so make intermittent electrical contact with said signal characters.

1,485,884. DYEING MACHINE. ROBERT CARL RAHM, Wyomissing, Pa. Filed July 19, 1922. Serial No. 575,941. 10 Claims. (Cl. 8—19.)



1. The combination with a liquid tank, a pivoted fabric receptacle mounted to swing into or out of said tank, and a rotary agitator pivotally mounted to swing into and out of said receptacle; of a common drive shaft and intermediate operating means adapted to either rotate said agitator independently, or to swing both said agitator and receptacle.

1,485,885. CHECK PROTECTOR. KARL ROSS, Los Angeles, Calif. Filed Jan. 26, 1923. Serial No. 615,019. 16 Claims. (Cl. 101—101.)



1. In a device of the character described, a plurality of individually movable type carriers which may be moved to put selected types into a printing line, a depressible mounting common to all the type carriers, and a single means to depress the mounting and all the type carriers at a single operation; said type carriers being arranged alongside each other and having type bar slots which are brought into register when selected type is put into the printing line, type bars slidably carried in the slots of the several carriers, and means to slide the type bars from slot to slot in the several carriers to move them into a compact printing line.

1,485,886. CUTTING STICK FOR PAPER-CUTTING MACHINES AND THE LIKE. CHARLES B. RUSSELL, Buffalo, N. Y. Filed Sept. 28, 1921. Serial No. 503,834. 10 Claims. (Cl. 164—58.)

1. A cutting stick adapted to be inserted in a slot in a cutting machine and including a clamping bar, a strip engaged by said bar and adapted to be clamped in said slot, and yielding means adapted to be moved into said slot and to bear against a side of said slot to yieldingly move said clamping bar into a position to grip said strip.

1,485,887. VENTILATING APPARATUS. CHESTER J. SCANLAN, Bloomington, Ill. Filed June 30, 1922. Serial No. 571,868. 5 Claims. (Cl. 98—27.)

2. In ventilating apparatus, a casing provided with an air inlet, means adjustable to close said air inlet, the casing having a second air inlet, means influenced by gravity to normally close the last-mentioned air inlet and operable upon the creation of suction within the casing induced by closing of the means associated with the first-mentioned air inlet to move to open position, the casing having an air outlet, and means within the casing for creating an inflow of air into the casing through the effective inlet and an outflow of air from the casting through the outlet.

1,485,888. TOWLINE. GEORGE SCHONBERG, Rolla, N. Dak. Filed Aug. 23, 1922. Serial No. 583,919. 2 Claims. (Cl. 280—33.14.)

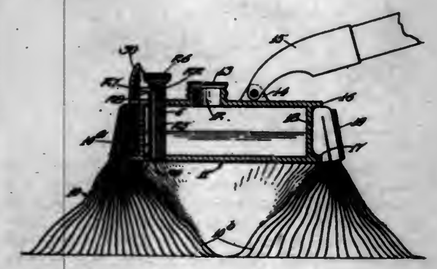
1. In a tow line, a connecting plate, a tow chain having connection with the connecting plate, securing members, chains for connecting the securing members to the connecting plate, each of the securing members including a body portion having a right angled portion

and an inwardly extended end portion, a clamping arm mounted to slide on the right angled portion, said clamping arm adapted to cooperate with the body portion to

clamp an article therebetween, and resilient means for normally urging the clamping arm towards the body portion.

1,485,889. SAFETY DEVICE FOR AUTOMOBILES. JULIUS SCHMIDT and EDMUND SCHMIDT, Brooklyn, N. Y. Filed Mar. 18, 1921. Serial No. 453,469. 1 Claim. (Cl. 188—106.)

A vehicle brake comprising a brake drum adapted to be mounted on a transmission shaft, a flexible brake band partly encircling said drum, one end of said band being rigidly held on the vehicle frame and the other being free, a bell-crank fulcrumed on the frame of the vehicle, one arm of said bell-crank being pivotally connected to the free end of the brake band, a hand lever in the rear of the brake drum fulcrumed intermediate its length, a rod connecting said hand lever to the bell-crank, said lever having an eye thereon, a sector rigid on the vehicle frame having an eye therein, the eyes of the hand lever and sector when aligned being adapted to receive means for locking the brake band, a foot lever pivoted forward of the brake drum, a rod connecting the foot lever and bell crank.

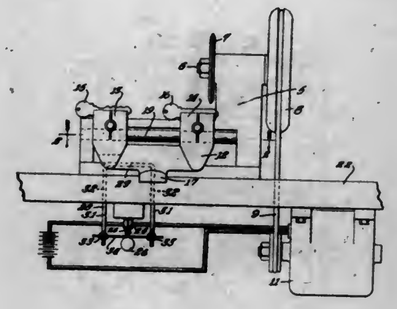


1,485,890. HOT PLUG. HAROLD F. SHEPHERD, Grove City, Pa., assignor to The Bessemer Gas Engine Company, Grove City, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1921. Serial No. 507,519. 6 Claims. (Cl. 219—38.)

1. In a hot plug, the combination of a receptacle, the walls of which form the hot plate of the plug; a mounting from which the receptacle projects; a condenser carried by the mounting, said condenser being out of alinement with the receptacle and arranged above the same;

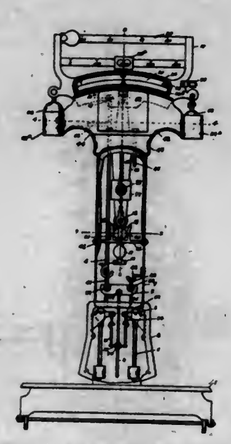
a connection between the condenser and the receptacle; and a liquid in the receptacle vaporizing at the desired predetermined temperature.

1,485,891. FOUNTAIN MOP. JOHN B. SIBLEY, Littleton, and HERBERT C. JENKINS, Boston, Mass. Filed Jan. 27, 1922. Serial No. 532,201. 2 Claims. (Cl. 15—131.)



1. A fountain mop comprising a reservoir, mop material carried by said reservoir, a substantially vertical supply tube extending therethrough from top to bottom, and having a discharge opening at its lower end, said tube having a vent port and a discharge port communicating with the interior of said reservoir adjacent the top and bottom theerof, respectively, and having also an arcuate slot above said reservoir, and a rotary plug valve within said tube said valve having means for placing said vent port in communication with said slot and said discharge port n communication with said discharge opening and and a pin secured to said valve and guided in said slot for limiting the rotary movement of said valve.

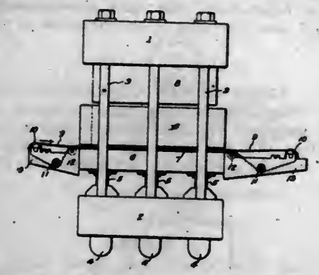
1,485,892. MOTOR CONTROL FOR KEY-CUTTING MACHINES AND THE LIKE. MATHEW SPINELLO, Rockford, Ill., assignor of one-half to Archie J. Shimp, Rockford, Ill. Filed May 25, 1922. Serial No. 563,685. 1 Claim. (Cl. 90—13.2.)



In a key cutting machine, the combination of a motor driven cutter, a carriage for carrying a key and a key blank mounted to swing vertically about a horizontal

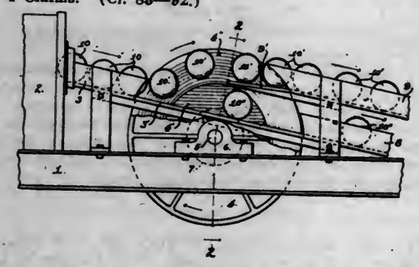
axis for moving the key blank toward and from the cutter and to slide longitudinally of said axis to feed

said blank horisontally past the cutter, and a motor controlling switch actuated by said carriage for starting and stopping the motor.



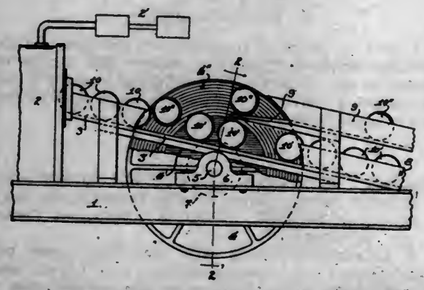
1,485,893. SCALE CONSTRUCTION. WALTER F. STIMPSON, Louisville, Ky. Filed Jan. 7, 1918, Serial No. 210,739. Renewed Aug. 2, 1923. 38 Claims. (Cl 265—62.)

1. In a scale, the combination of a laterally extending capacity beam, an index chart carried by the capacity beam, and extending longitudinally thereof, a platform mechanism for operating the capacity beam from the platform, a depending arm rigidly connected to the capacity beam, an index hand pivotally mounted upon said arm, and means for effecting a movement of the index hand upon and independently of the movement of the capacity beam.



1,485,894. APPARATUS FOR MANUFACTURING PULP ARTICLES. DANIEL MANSON SUTHERLAND, Jr., Trenton, N. J. Filed May 10, 1923. Serial No. 638,035. 8 Claims. (Cl. 92—61.)

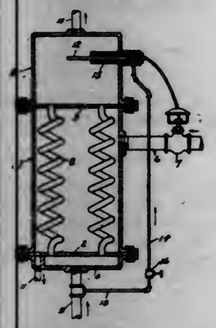
1. Apparatus for forming compressed pulp products, comprising a press having two members between which the pressing is effected, one movable toward and from the other; means for effecting such movement; and an endless wire belt suitably supported and extending in two stretches between said press members, whereby the two



stretches may be pressed into immediate contact and constitute a draining surface for pulp introduced between said press members.

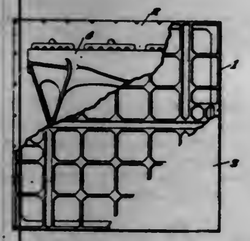
1,485,895. METHOD OF AND APPARATUS FOR SEPARATING LEAKS FROM TIGHT CANS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed June 20, 1923. Serial No. 646,576. 4 Claims. (Cl. 83—92.)

1. The method of separating the "leaks" from the tight, product-filled, sealed cans, comprising first exposing the cans in a heated region adapted to bulge the ends of some cans, leaving others non end-bulged; and then automatically presenting all the cans to a space closed to the passage of the end-bulged cans but open to the passage of the non end-bulged cans.



1,485,896. METHOD OF AND APPARATUS FOR SEPARATING LEAKS FROM TIGHT CANS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Nov. 7, 1923. Serial No. 673,394. 4 Claims. (Cl. 83—92.)

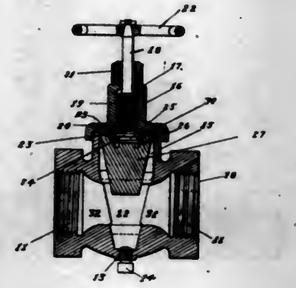
1. The method of separating the "leaks" from the "tight" product-filled, sealed cans, comprising exposing the cans in a region under fluid pressure above atmos-



pheric, adapted to equalize the external and internal pressure upon the "leaks"; discharging the cans from said region, to release the external pressure and cause the "leaks" to bulge their ends; and automatically segregating said cans according to the difference of their end bulge.

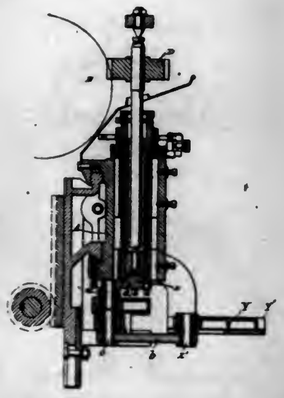
1,485,897. TEMPERATURE-CONTROLLING DEVICE. PERRY WEST, Newark, and EARL P. MASON, Summit, N. J., assignors to Anti-Corrosion Engineering Company, Inc., a Corporation of New York. Filed June 20, 1921. Serial No. 478,849. 6 Claims. (Cl. 236—19.)

1. In a device of the class described, the combination with a temperature controlling means normally operated by the flowing fluid whose temperature it controls, of means adapted to cause a fluid of different temperature to flow simultaneously therewith and to accelerate the operation of the temperature controlling means, and means to regulate the relative flow of said fluids.



1,485,898. MATCH-BOARD STRUCTURE FOR MOLDS. JOHN C. WICKHAM, Springfield, Ohio, assignor to The Wickham Piano Plate Company, Springfield, Ohio, a Corporation of Ohio. Filed Sept. 14, 1921. Serial No. 500,579. 2 Claims. (Cl. 22—157.)

1. In a structure of the character described, a rigid, metallic, reticulated frame, a wooden slab rigidly attached to one of the faces of said frame whereby it will be supported thereon, and metallic pattern parts secured to the outer face of said slab.

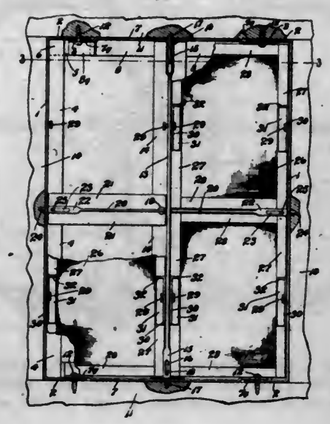


1,485,899. AUTOMATIC CUT-OFF VALVE FOR GAS-SUPPLY PIPES. JOHN WILBUR, Marshalltown, Iowa. Filed Aug. 30, 1922. Serial No. 585,141. 4 Claims. (Cl. 137—162.)

3. An automatic cut-off valve comprising a body portion having a valve opening provided with a valve seat, a detachable cap for the valve opening, a valve stem in said cap having one end extending downwardly in said valve opening, said downwardly extending end being provided with a number of projecting pins, a valve for said valve seat, the upper face of said valve being provided with openings for receiving the downwardly projecting members of said stem in such a manner that the valve is

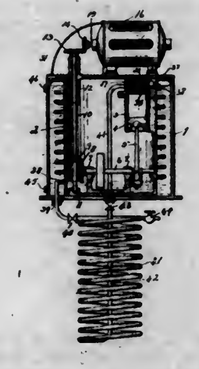
free to slide off of said downwardly extending portions by gravity, and fusible means for connecting said stem and said valve.

1,485,900. LINK SYSTEM FOR CONTROLLING ROLLING MOVEMENTS. SVEN GUSTAF WINQUIST, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Apr. 13, 1921. Serial No. 461,157. 3 Claims. (Cl. 74—14.)



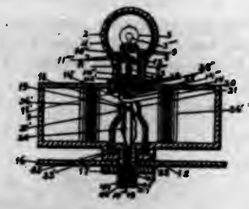
1. A link system for imparting a rolling and sliding movement to a body of revolution, comprising in combination a crank rigidly connected to the axis of the body of revolution and having a length equal to the radius of the said body of revolution, an auxiliary link pivotally and slidably connected to the free end of said crank, a stationary controlling axis and a movable controlling axis for said auxiliary link, the auxiliary link having a constant length between the said controlling axes as and for the purpose set forth.

1,485,901. WINDOW CONSTRUCTION. FAY A. YEAGER, Muskegon, Mich. Filed Mar. 14, 1922. Serial No. 543,606. 6 Claims. (Cl. 20—55.)



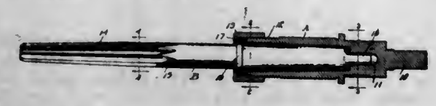
1. A construction of the class described comprising a rectangular frame having parallel sides and ends of angle cross section, each side and end having an inwardly extending flange, division members dividing the space within the frame into substantially equal sections, said

division members having oppositely extending flanges lying in substantially the same plane with the flanges of the sides and ends of the frame, means at the ends of the division members for detachably connecting the same



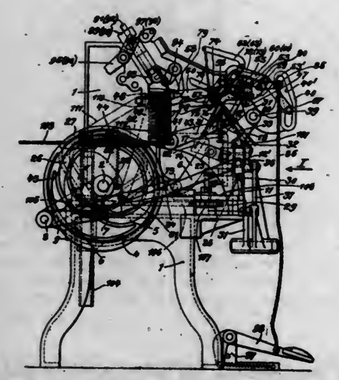
to the frame and to each other, movably mounted locking devices mounted on the sides of the frame and certain of the division members over said flanges whereby members of glass or screen may be secured in the frame against said flanges, or readily removed therefrom.

1,485,902. REFRIGERATING APPARATUS. WERNER ZEINDLER, Philadelphia, Pa., assignor of one-half to George L. Gay, Philadelphia, Pa. Filed Jan. 2, 1920. Serial No. 348,743. 1 Claim. (Cl. 62—115.)



In a refrigerating apparatus, the combination of a casing, a jacket surrounding said casing and spaced therefrom to form a compartment for the circulation of water, a coil disposed in said compartment and encircling the casing, a cylinder within the casing with which said coil communicates, valves controlling the communications between the coil and cylinder, a secondary valve forming a communication between one of the first named valves and the interior of the casing, and a piston reciprocatingly mounted in the cylinder.

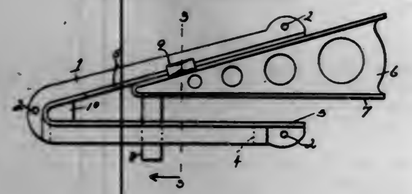
1,485,903. PARKING AND SIGNAL LIGHT. JOSEPH LE ROY BANKS, Baltimore, Md., assignor to The Rae-Lite Manufacturing Company, Incorporated, Baltimore, Md. Filed Oct. 13, 1923. Serial No. 668,365. 3 Claims. (Cl. 40—133.)



1. A signal lamp comprising a shell having a cam shaped aperture in which a second lamp shell is keyed by a complement of the cam shaped aperture.

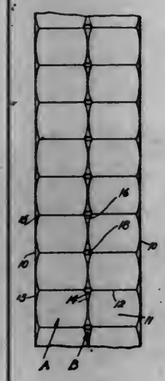
1,485,904. REAMING TOOL. SIDNEY M. BELLRINGER, Waynesboro, Pa., assignor to Wayne Tool Manufacturing Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,668. 2 Claims. (Cl. 279—91.)

1. In combination, a reamer having a tapered head having an integral inner collar at the base of the tapered portion and an integral tang at one end, a spindle having a tapered socket, another socket communicating with the said tapered socket for receiving the tang, an annular collar having a threaded connection with the lower end of said spindle and also having a flange to extend under the collar of the reamer to draw such tapered parts into close engagement with each other and to force the tang into its socket, substantially as set forth.



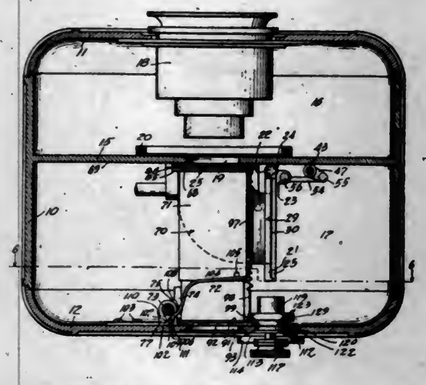
1,485,905. BOOK-FASTENING MACHINE. ULRICH BISCHOF, Horgen, Switzerland, assignor to the Firm Gebr. Stäubli & Co., Horgen, Switzerland. Filed June 1, 1922. Serial No. 565,278. 11 Claims. (Cl. 112—21.)

1. In a book fastening machine the combination of a movable table upon which a sheet to be fastened is to be laid, a trough for receiving liquid paste, means for



moving the trough towards the table and returning the same from the table, and means for automatically removing paste from said trough and laying it stripewise on the sheet to be fastened.

1,485,906. SELF-ADJUSTING BENCH CLAMP. EDWIN BONHAM and JOSEPH C. WILTBANK, Camden, N. J. Filed May 9, 1923. Serial No. 637,663. 4 Claims. (Cl. 144—307.)

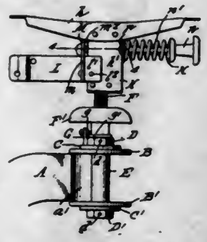


1. A self adjusting clamp of the character described consisting of a stationary member cast in V shape having a jaw and a guide flange, and a sliding member cast in wedge shape having a lip adapted to travel upon the guide flange and also having a bar adapted to project through a longitudinal slot formed in the stationary jaw.

1,485,907. MOTION-PICTURE OR CINEMATOGRAPH FILM. LLOYD BROWN, Los Angeles, Calif. Filed Apr. 19, 1921. Serial No. 462,660. 11 Claims. (Cl. 88—19.5.)

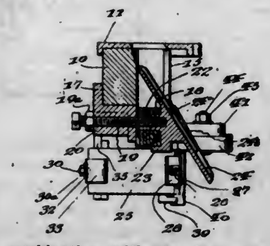
1. A cinematograph film having a picture area extending continuously longitudinally of it and continuously transversely of it to its edges, and a plurality of supporting areas in spaced relation longitudinally and transversely of it.

1,485,908. FOCUSING SYSTEM FOR CAMERAS. LLOYD BROWN, Los Angeles, Calif., assignor to himself and C. B. Hurtt, trustees. Filed May 24, 1921. Serial No. 472,195. 12 Claims. (Cl. 95—44.)



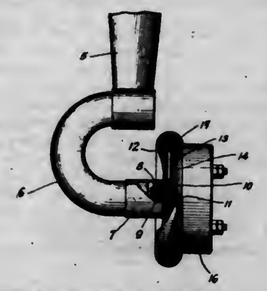
1. The combination with a camera of a telescoping focusing tube pivotally mounted within the camera case, and means to move said tube in and out of operative position.

1,485,909. PROCESS OF TREATING SULPHIDE ORES OF LEAD, SILVER, AND COPPER. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Original application filed Oct. 8, 1919, Serial No. 329,397. Divided and this application filed Oct. 4, 1922. Serial No. 592,408. 4 Claims. (Cl. 75—18.)



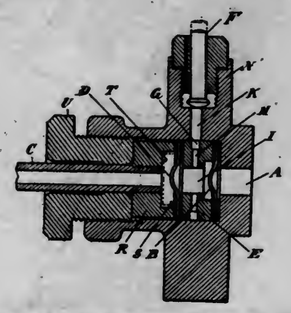
1. The process of treating ores containing some of the sulphide minerals of lead, silver and copper, which consists in treating said ores with a hot concentrated chloride brine solution containing ferric chloride and thereby dissolving the metals of said minerals in said solution as chlorides.

1,485,910. FITTING FOR REVOLVING CHAIRS AND THE LIKE. ROBERT K. DAWSON, Guelph, Ontario, Canada. Filed June 13, 1921. Serial No. 477,074. 7 Claims. (Cl. 155—57.)



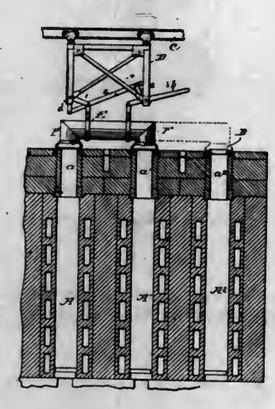
1. In a chair, the combination of a seat supporting member having upwardly extending parts, a pair of back supporting arms each of which is pivotally secured at one end to one of said upwardly extending parts and extends rearwardly therefrom and is provided at its other end with means for supporting a chair back, a plate connecting said arms between the ends thereof and extending transversely thereof, a spring for drawing said plate toward said upwardly extending parts, parts on said plate adapted to engage said upwardly extending parts to limit the movement of said back supporting arms in one direction and a bridge member pivotally engaging said upwardly extending parts and against which said spring bears.

1,485,911. PICKER-STICK CHECK. NAT H. ELLIS, Greenville, S. C., assignor of one-half to Joseph E. Leach, and one-half to F. G. Bunker, both of Greenville, S. C. Filed Nov. 3, 1921. Serial No. 512,540. 2 Claims. (Cl. 139—165.)



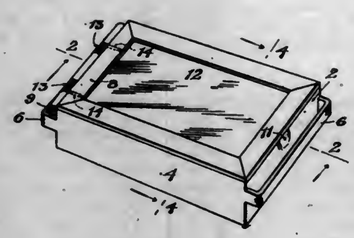
1. The combination with the lay of a loom; of a picker check consisting of a strap composed of pieced sections, a plate to the outer face of which the strap ends are secured for maintaining the strap in looped form, and a guard plate extending alongside the loop at one end thereof on the outside of the strap.

1,485,912. PHONOGRAPH CONNECTION FOR TELEPHONE RECEIVERS. JOHN J. GHEGAN, East Orange, N. J. Filed Apr. 13, 1923. Serial No. 631,815. 5 Claims. (Cl. 179—100.1.)



2. In combination with a telephone receiver having a diaphragm and an ear piece detachably engaged thereover and perforated for the passage of sound waves, a sleeve constructed for detachable engagement with the tone-arm of a phonograph and adjustable screw means for clamping engagement with the ear cap through the perforated portion thereof.

1,485,913. GAS-SAVING SAFETY DEVICE. CARL JULIUS ALEXANDER GOTTLIEB, Aarhus, Denmark. Filed Feb. 23, 1921. Serial No. 447,294. 2 Claims. (Cl. 137—53.)

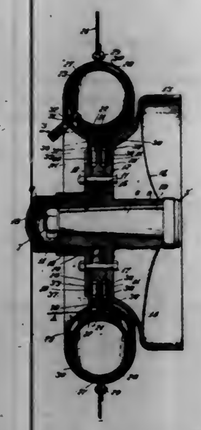


1. In a safety-device for compressors or the like the combination of two yieldable members arranged between the high-pressure side and the suction-side of the compressor, with a channel connecting said yieldable members and normally connected to the atmosphere by an automatic acting air-valve or the like which closes when the high-pressure opens the way for the escape of pressure.

1,485,914. MEANS FOR DISCHARGING SMOKE AND GAS FROM COKE OVENS. JOHN W. GREENE, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Aug. 12, 1921. Serial No. 491,654. 6 Claims. (Cl. 202—9.)

6. A battery of coke ovens, each of which has a vent opening, provided with a pipe movable longitudinally of the battery and adapted to be connected with the vent openings of adjacent ovens so as to provide a communicating passage between such ovens.

1,485,915. WRIST VANITY CASE. MONROE HAMMEL, New York, N. Y. Filed June 13, 1923. Serial No. 645,072. 2 Claims. (Cl. 224—4.)

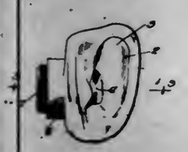


2. An article of the class described comprising a case, a cover hinged thereto, a catch for said cover, a mirror on the outer face of the cover, and a spring located at the hinge for swinging the cover open when the catch is released and holding said cover vertical or nearly so whereby the mirror in said cover is conveniently positioned for use.

1,485,916. WHEEL. HARRY S. HANDLER, Chicago, Ill. Filed May 8, 1922. Serial No. 559,301. 1 Claim. (Cl. 152—46.)

In a resilient wheel, in combination, a hub having an annular shoe, an annular housing in which said shoe is disposed, a pneumatic casing on the shoe within said

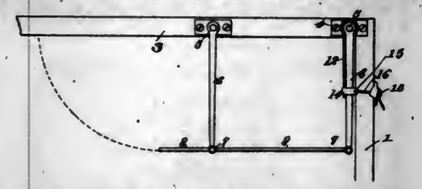
housing, radial walls on said hub for supporting said shoe, said housing having spaced walls engaging said hub walls, said spaced walls having recesses therein, an



annular web for said shoe, and said web having a plurality of projections for loose engagement in said recesses.

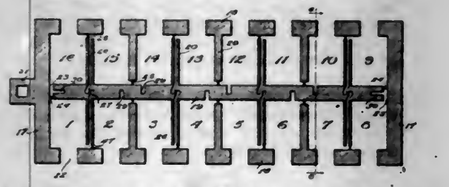
1,485,917. METHOD OF AND APPARATUS FOR MAKING A SHEET-METAL PRODUCT. LOUIS HARTER, Pittsburgh, Pa. Filed June 14, 1922. Serial No. 568,259. 9 Claims. (Cl. 153—77.)

1. The process of forming a sheet metal product which consists in corrugating a sheet of metal and then applying pressure to opposite faces of the sheet in the direction of the height of the ribs to bulge the sides of the corrugations outwardly transversely of their height.



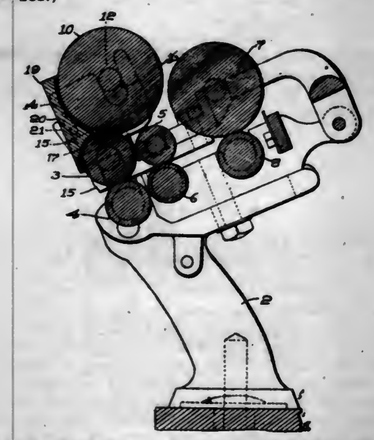
1,485,918. TELEPHONE MOUTHPIECE. HIRAM SAMUEL HEARN, Denver, Colo. Filed Jan. 22, 1923. Serial No. 614,239. 1 Claim. (Cl. 179—187.)

A telephone mouth piece having the form of a human exterior ear provided with a sound passage therethrough having undulations adapted to eliminate the reflection of sound waves.



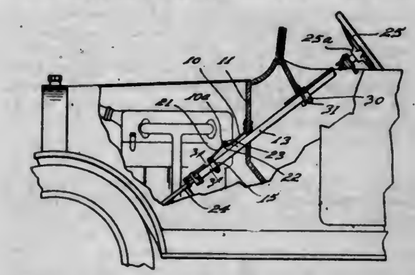
1,485,919. WINDSHIELD CLEANER. GEORGE N. HEIN, San Francisco, Calif. Filed Aug. 10, 1922. Serial No. 581,012. 2 Claims. (Cl. 15—255.)

1. A wind shield cleaner including a pair of arms pivoted at corresponding ends to swing in arcuate paths, a horizontally disposed wind shield wiper pivotally connecting the free ends of said arms, a second wind shield wiper pivotally mounted at one end adjacent to the



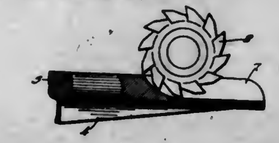
pivot point of one of said arms and disposed with its opposite end connected to one end of said first mentioned wiper and means for operating said arms.

1,485,920. KILN. PETER HEMPEL, Hastings, Nebr. Filed Oct. 5, 1922. Serial No. 592,529. 6 Claims. (Cl. 25—134.)



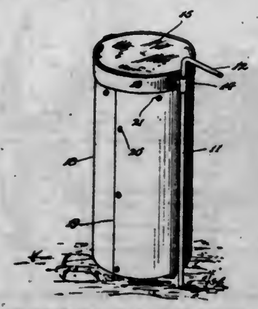
1. A kiln comprising side walls, end walls, a central longitudinal partition terminating short of the end walls, and a plurality of transverse partitions terminating alternately short of the side walls and the longitudinal partition and defining compartments, the longitudinal partition having a smoke-flue extending the length thereof and also being provided with passages establishing communication between said flue and the inner ends of alternate compartments defined by the transverse partitions, and the transverse partitions which terminate short of the side walls being constructed with passages therethrough establishing communication between the smoke flue and the outer ends of the alternate compartments.

1,485,921. SPINNING FRAME. ROBERT F. HERRICK, Jr., Westwood, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed July 5, 1923. Serial No. 649,486. 5 Claims. (Cl. 19—135.)



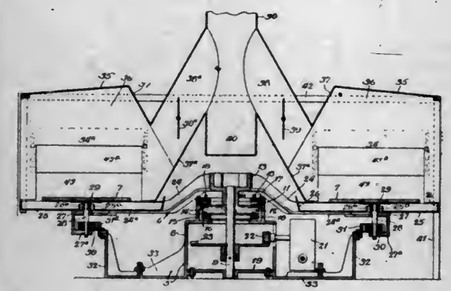
4. In a mechanism of the character described, the combination with a spinning frame including upper and lower drawing rolls, of a weighting roll bearing on said upper drawing roll, brackets at the opposite ends of said rolls having slots therein to receive and guide extensions projecting from the ends of said weighting roll, a clearer engaging the surface of said weighting roll, and projections extending from the opposite ends of said clearer and resting in slots formed for them in said brackets.

1,485,922. STEERING-COLUMN STABILIZER. WILLIAM J. HIGGINS, Lakewood, Ohio. Filed July 10, 1922. Serial No. 573,909. 7 Claims. (Cl. 280—87.)



1. The combination with the steering column of an automobile, of an adjustable device connected to said column and to a stationary part of the car and adapted when adjusted to move the column upwardly to take up the slack between it and the hub of the steering wheel.

1,485,923. TROLLEY HANGER AND METHOD OF MAKING THE SAME. OARIS C. HIRTZEL, North East, Pa. Filed Oct. 26, 1922. Serial No. 597,098. 2 Claims. (Cl. 29—155.5.)



1. The method of forming a trolley hanger having a groove with walls adapted to close around a trolley wire which consists in casting the hanger of metal with a solid groove bar, condensing and shaping the cast metal of the groove bar by forging, and then forming the trolley receiving wire groove therein by cutting.

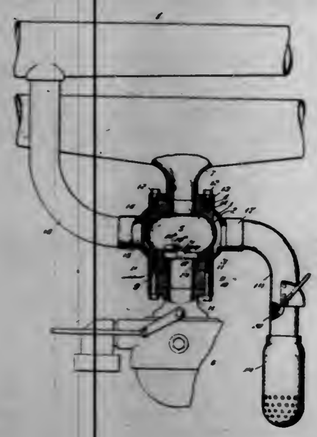
1,485,924. PLANT PROTECTOR. WILLIAM H. HOBBS, Barnesville, Ohio. Filed Feb. 28, 1923. Serial No. 621,863. 8 Claims. (Cl. 47—31.)

1. A plant protector comprising a supporting stem adapted to be pushed down in the ground, an open frame slidably mounted upon said stem, and a cover suspended on said frame adapted to surround the plant.

1,485,925. WORKTABLE FOR USE IN COATING ARTICLES. WILLIAM HOGENSON, Chicago, Ill., assignor to Chicago Vitreous Enamel Product Company, Cicero, Ill., a Corporation of Illinois. Filed Sept. 8, 1922. Serial No. 586,910. 4 Claims. (Cl. 91—60.)

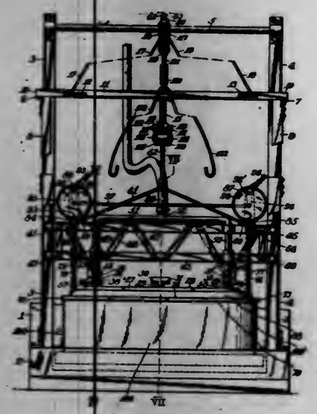
2. A spraying table comprising a rotatory frame, drip pans removably resting on said frame, turn tables removably supported above said drip pans, and means for intermittently rotating said turn tables on their own axes, including pinion shafts, one for each turn table, each shaft extending above and below the bottom of an associated drip pan.

1,485,926. HYDROGENATION OF OILS. HIRAM CHESTER HOLDEN, Chicago, Ill., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 9, 1919. Serial No. 329,541. 7 Claims. (Cl. 87—12.)



1. The method of hydrogenating liquid fats and oils, which comprises subjecting them, in the presence of a catalyst, to the hydrogenating influence of an uprising body of fine bubbles of hydrogen rising uniformly from a porous distributing plate, the porosity being such to minutely disseminate the hydrogen without permitting obstructive filtration of the oil into the plate; substantially as described.

1,485,927. VAPORIZING DEVICE. KIRK D. HOLLAND, Chicago, Ill. Filed Jan. 8, 1920. Serial No. 350,143. 6 Claims. (Cl. 48—180.)

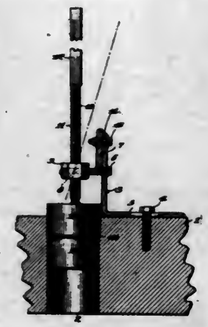


1. A vaporizing device for hydrocarbon engines comprising a casing formed with an inner chamber having an inlet communicating with the carburetor and an outlet communicating with the inlet passage of the engine and formed also with an exhaust vapor jacket in communication with the exhaust passage of the engine and surrounding said inner chamber, and a deflector arranged adjacent the inlet of said chamber and arranged to produce a whirling motion in a column of carbureted mixture extending across said chamber from said inlet to said out-

let and surrounding the axis of such chamber, the heated wall of said chamber expanding laterally intermediately of said inlet and outlet to form an enlargement of the

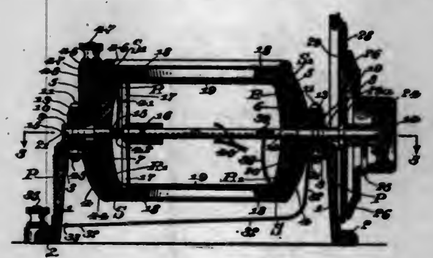
passageway around said whirling column and the chamber being unobstructed forwardly from the plane of said deflector.

1,485,928. METHOD OF AND MEANS FOR MAKING SHEET GLASS. GEORGE W. HOLSINGER, Vincennes, Ind. Filed Mar. 8, 1920. Serial No. 363,928. 11 Claims. (Cl. 49—17.1.)



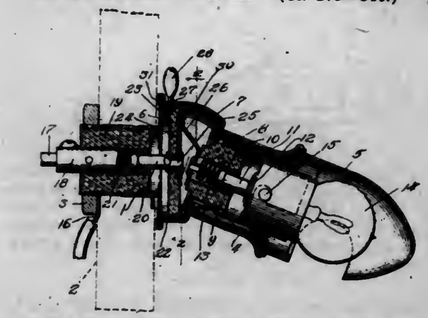
5. Glass-making apparatus including a head frame guided for vertical movement, a former arranged below the head frame and provided with a plurality of controlling rods, synchronously-operated devices mounted on the head frame and having supporting and controlling connections with the controlling rods, a bait to co-operate with the former and provided with lifting devices spaced apart on the top thereof, carrying devices secured to the head frame and extending downward therefrom to be connected to the lifting devices, means to lock the lifting devices detachably to the carrying devices, and a lug device centrally fixed upon the top of the bait to support the bait when the lifting devices are disconnected from the carrying devices.

1,485,929. LENS. LODEWYK J. R. HOLST, Philadelphia, Pa., assignor to Arthur Brock, Jr., Philadelphia, Pa. Filed May 28, 1919. Serial No. 300,395. 3 Claims. (Cl. 88—57.)



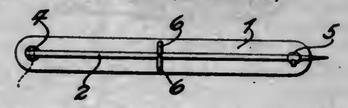
1. A composite lens composed of not less than three separated elements all made from the same material, said separations being regulated relatively to the powers of said elements so as to cause the combined action thereof to substantially eliminate chromatic differences throughout the entire range of the spectrum passed by the material of said elements.

1,485,930. CYLINDER-REBORING TOOL. VICTOR G. HOWIND, Newport, Ky. Filed Feb. 24, 1922. Serial No. 538,934. 3 Claims. (Cl. 77—58.)



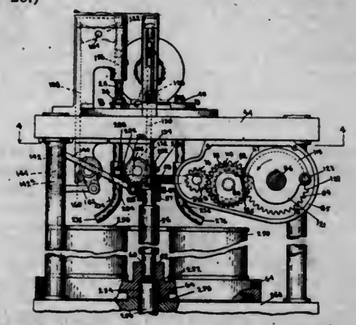
1. A cylinder re-boring tool, comprising a circular disk cutter having cutting teeth about its periphery, a cylindrical pilot member secured at one side of the cutter of a diameter corresponding to the normal diameter of the cylinder to be re-bored, and a cylindrical follower member secured at the opposite side of said cutter of a diameter approximating the cutting diameter of the cutter, said cutter and members connected together as a unit.

1,485,931. COUPLING AND TUNING APPARATUS. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Oct. 30, 1922. Serial No. 597,778. 29 Claims. (Cl. 171—242.)



1. Apparatus of the character described comprising coil supports, one of said supports disposed within the other, one of said supports having a spherical winding surface, and means connecting the inner support at its one end with one end of the outer support.

1,485,932. SWITCHING SOCKET. THOMAS J. KERWIN, Chicago, Ill., assignor to Edmunds & Jones Corporation, a Corporation of New York. Filed Aug. 1, 1921. Serial No. 489,140. 4 Claims. (Cl. 173—346.)



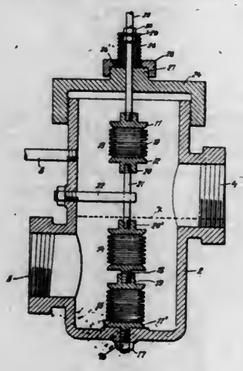
1. In a lamp socket, a shell, a spring pressed terminal-forming plunger carried by the shell, a circular collar rotatable in the shell, an insulating disk in the collar, a radial arm embedded in one face of the disk, a tubular rivet extending through the disk center and the arm to anchor the latter to the disk, said plunger having a tapering tip engaging in one end of the rivet, said arm having a depressed part and said disk having a depressed part to one side of the arm, and a flat spring forming the other terminal and having a nub formed to alternately engage in each of said depressed parts.

1,485,933. SAFETY CATCH FOR PINS. FELIX P. KINTZELE, St. Louis, Mo. Filed Mar. 19, 1923. Serial No. 625,979. 3 Claims. (Cl. 24—156.)

1. A bar pin comprising a bar, a pin having one end pivoted near one end of the bar, and a catch for the pin near the opposite end of the bar; in combination with a pair of resilient arms in connection with the bar arranged to engage the pin between said catch and said pivot and hold the intermediate portion of the pin closer to the bar than either of the end portions.

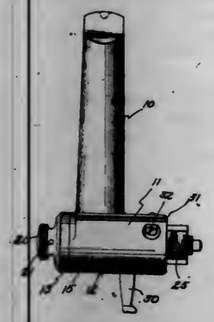
1,485,934. CHAIN-MAKING METHOD AND MACHINE. WILLIAM I. MACOMBER, Providence, R. I., assignor to Martha M. Macomber, Providence, R. I. Filed Feb. 26, 1921. Serial No. 448,011. 100 Claims. (Cl. 59—25.)

1. The method of making chain that comprises feeding wires successively through a link of each of a plurality of chains, and simultaneously with the feeding of each wire forming into a link one of the wires that has been previously fed through a link of one of the chains.



67. A chain-making machine having, in combination, means for successively feeding untreated wires, each through a link of a chain, and means for simultaneously forming a previously fed wire into a link.

1,485,935. SPRING FORK FOR MOTOR CYCLES AND OTHER CYCLES. JOHN PERCY MACLEAN, Newcastle, New South Wales, Australia. Filed Oct. 8, 1921. Serial No. 506,461. 3 Claims. (Cl. 208—97.)

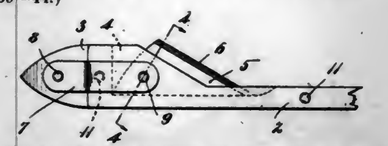


1. In a device of the character described in combination with a crown column of the frame of a cycle and bell crank levers swingably mounted on the ends of the axle of the front wheel of the cycle, of a fork turnably connected to the crown column and having the lower portion pivotally connected with the forward arms of the bell crank levers, other levers fulcrumed to the upper portion of the fork, a yielding connection between the upper ends of the last mentioned levers and the upper portion of the fork, operable connections between the lower portion of said last mentioned levers and trailing portions of the bell crank levers and approximately parallel with the main lower portions of the fork, substantially as and for the purposes set forth.

1,485,936. VACUUM REGULATOR. JOSEPH F. MUSSELMAN, Bronxville, N. Y., assignor to Anti-Corrosion Engineering Company, Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,259. 7 Claims. (Cl. 103—15.)

1. In combination with a chamber adapted to have water circulate therethrough, means for creating a vacuum in said chamber, and a plurality of connected and co-operating means for automatically regulating said vacuum creating means according to the volume of gas given off by and temperature of the water flowing through said chamber and adapted to maintain a predetermined differential relationship between the temperature of the water and the degree of vacuum in the chamber.

1,485,937. ADJUSTABLE BORING TOOL. PHILIP J. RAAB, Beaver Falls, Pa. Filed Mar. 6, 1923. Serial No. 623,295. 1 Claim. (Cl. 279—6.)

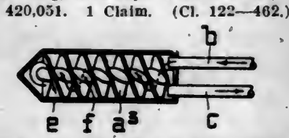


A boring head comprising a main horizontal body having a square longitudinal passage, a tapered shank formed at one end of said body, said body having a slit extending parallel to its axis and adapted to give resiliency to the wall of said body, a screw at one end of said body traversing the slit, a square bar slidable in said body and having a longitudinal threaded hole, said bar having an opening passing thru said bar at right angles to the threaded hole, the opening being offset with respect to the length of the bar, the opening being adapted to receive a cutting tool, a screw stud engaging the threaded hole in the bar and being adapted to retain the cutting tool in place in the opening, the slit when closed being adapted to lock the slidable bar in position in the body, a screw at the shank end of said body engaging the threaded hole in the corresponding end of the bar, said screw when rotated being adapted to offset the cutting tool with respect to the axis of the shank, and means for retaining said screw in place in the body.

1,485,938. HAND-POWER ATTACHMENT FOR WINDMILL SUCKER RODS. JOHN W. TAYLOR, Fort Worth, Tex. Filed July 30, 1923. Serial No. 654,706. 4 Claims. (Cl. 103—207.)

1. Hand pump attachments for sucker rods comprising a severed sucker rod, extension members riveted to the severed ends of said sucker rod, each extension member having a loop which receives the other extension member loosely by which said extension members are guided in their vertical motion, a link bar pivotally connected to one of said extension members, and a lever fulcrumed in said link bar and pivotally connected to the other extension member.

1,485,939. PILE WIRE. RALPH E. THOMPSON, Brookline, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Nov. 1, 1920. Serial No. 420,962. 5 Claims. (Cl. 139—44.)

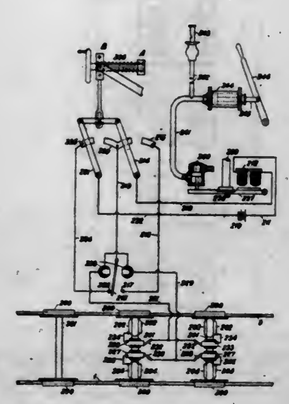


4. A pile wire constructed at its free end of sheet metal folded along the bottom edge of the wire and provided with a blade-receiving recess formed half in one fold and half in the other, said folds being in contact with and secured to each other in front of and behind the recess.

1,485,940. PURIFICATION OF FUSEL OIL AND AMYL ALCOHOL. HERMAN F. WILLKIE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 29, 1921. Serial No. 525,757. 7 Claims. (Cl. 260—158.)

1. The process of purifying an impure amyl alcohol comprising treating it with an oxidizing agent while cooling the reaction mixture.

1,485,941. SUPERHEATER. WILHELM WULF, Neumunster, Germany, assignor to Edeldampf-Gesellschaft m. b. H., Hamburg, Germany. Filed Oct. 27, 1920. Serial No. 420,051. 1 Claim. (Cl. 122—462.)

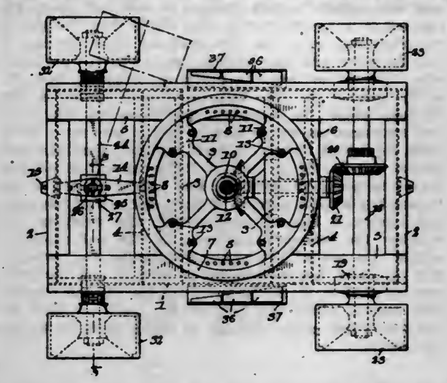


In a tubular boiler, the combination, with a plurality of smoke-tubes, of superheating elements located within them and consisting each, firstly, of a superheating tube-head consisting of a closed casing located within the smoke-tube near to its furnace end, and of two spirally shaped blades wound one within the other, forming two steam-passages running one within the other and being connected with each other at the furnace end of the said casing; and secondly, of two straight tubes connected with the said steam-passages, extending through the other portions of the smoke-tubes and connecting the said passages with the two header spaces.

1,485,942. CONNECTION FOR CARBON BRUSHES AND THE LIKE. CHARLES W. ADAMS, Saginaw, Mich., assignor to The United States Graphite Company, Saginaw, Mich., a Corporation of Michigan. Filed Apr. 25, 1923. Serial No. 634,602. 5 Claims. (Cl. 171—326.)

3. A carbon block having a hole therein and an electrical conductor in the hole with a securing means therefor, consisting of hammered copper powder, in flaky condition and cleansed and packed into position.

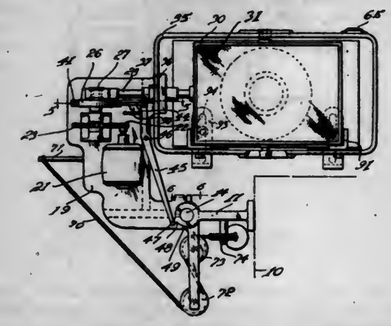
1,485,943. CONTROL OF RAILWAY TRAINS. ARTHUR REGINALD ANGUS, Stockholm, Sweden. Filed Sept. 5, 1918. Serial No. 252,779. 6 Claims. (Cl. 246—4.)



1. Train-controlling apparatus comprising controlling means located on a train and adapted to tend constantly to produce a train-controlling operation, electrical restraining means adapted when energized to restrain the operation of said controlling means, direction-corresponding means adapted to occupy an "up" position and a "down" position in accordance respectively with the directions of travel of said train, an electro-responsive device which is located on said train and whose movable portion is adapted to assume an "up" position and a "down" position in accordance respectively with the directions of flow of the current energizing said electro-responsive device, a circuit located on said train and including a generator of electricity and said electrical restraining means and adapted to be closed by said direction-corresponding means and said movable portion of said electro-responsive device only when both are in said "up" positions or both are in said "down" positions, and means adapted to enable currents to be, externally of said train, caused to flow through said electro-responsive device in opposite directions.

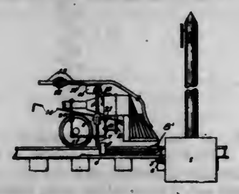
1,485,944. LUBRICATING AND TIGHTENING COMPOSITION FROM PEAT. OSKAR ANZBÖCK, Vienna, Austria, and FLORIAN HOOGENDOORN, Dusseldorf, Germany. Filed Mar. 21, 1923. Serial No. 626,714. 11 Claims. (Cl. 64—19.)

1. As a new composition of matter, a lubricating and packing material, and consisting of a mixture of substantially pure peat fiber with a lubricant.



1,485,945. EXCAVATOR SUPPORTING FRAME AND TRACTION MEANS THEREFOR. SVANTE R. W. M. BAGER, South Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 7, 1921. Serial No. 443,106. 12 Claims. (Cl. 212—70.)

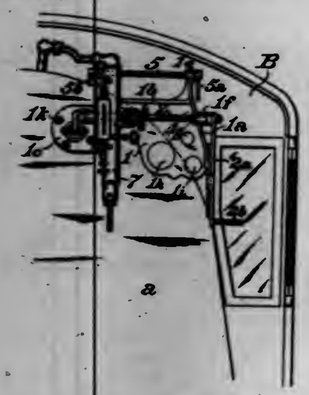
1. A supporting frame for heavy portable machinery comprising a pair of side bars, a plurality of transverse connecting bars secured to the side bars, a superstructure track mounted on certain of said bars and connected with the same, said track having a central opening, radial arms extending inwardly from the track, a central bearing sleeve having said arms secured thereto and supported thereby, tie bolts extended through said arms adjacent said track and engaged with certain of said transverse bars, and tie-plate members disposed on the



tie-bolts beneath the last mentioned transverse bars whereby said track, last mentioned bars and tie plates are bound rigidly together.

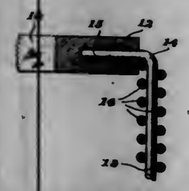
1,485,946. SIFTING MACHINE. JOHN N. BATTENFELD, Cleveland, Ohio, assignor to Jesse R. Battenfeld, Kansas City, Mo. Filed Nov. 18, 1921. Serial No. 516,090. 8 Claims. (Cl. 83—56.)

1. In a power riddle, a frame to support the riddle, means to move the riddle to operative position, power means mounted on the frame for operating the riddle, and means whereby the operation of moving the riddle to position automatically causes the power means to operate.



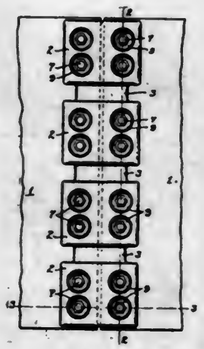
1,485,947. RAILWAY SAFETY DEVICE. WILLIAM O. BAYLESS, Knoxville, Tenn. Filed June 16, 1923. Serial No. 645,863. 5 Claims. (Cl. 246—192.)

4. The combination with an air brake pipe line of a locomotive, a relief valve arranged in said pipe line and having a valve arm, a rock shaft mounted on the locomotive and having a cam engaging said valve arm, one



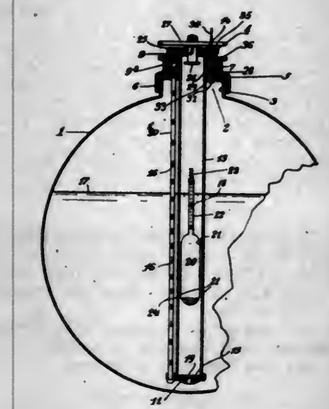
end of said rock shaft being turned downwardly, a swinging arm pivotally mounted in the lower end of said downwardly turned portion of the rock shaft and adapted to be engaged by an obstruction along the side of the track and move the rock shaft to cause the cam to lift the valve arm and release the air in the air brake pipe line for setting the brake, a swinging link pivotally carried by the locomotive and having a slot through which the swinging arm passes to allow the free rearward movement thereof and to prevent a transverse movement thereof, a shaft mounted upon the locomotive and having an arm at its upper end, a rod connected to said arm and extending within the cab of the locomotive, an arm carried by the lower end of the shaft and having a link connection with the swinging link whereby the rearward movement of the rod extending within the cab of the locomotive causes the swinging link to move inwardly carrying with it the swinging arm so that it is moved inwardly beyond the obstruction carried along the side of the track so that the locomotive can pass a danger set signal without setting the brakes.

1,485,948. LOCOMOTIVE-BOILER-ACCESSORIES SUPPORT. CHARLES M. BELL, Schenectady, N. Y. Filed July 19, 1923. Serial No. 652,604. 8 Claims. (Cl. 105—37.)



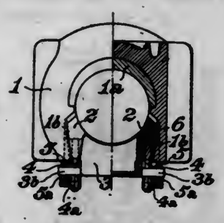
1. An integral support for locomotive boiler accessories, comprising a plate, bearings for a throttle shaft, and a stuffing box for a throttle pull rod.

1,485,949. FURNITURE AND METHOD OF MAKING SAME. JOHN H. BERNS, Jr., and RUDOLPH HOEDT, Tampa, Fla. Filed July 3, 1922. Serial No. 572,391. 2 Claims. (Cl. 155—191.)



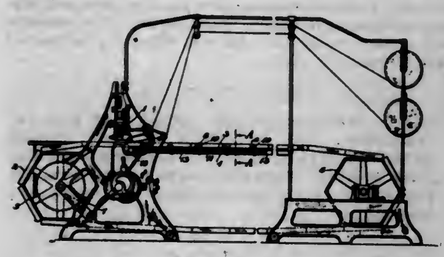
1. An article of furniture comprising a rigid frame structure and a reed structure comprising reeds extending at substantially right angles to the plane of the frame structure and having their ends inserted into the edge of the frame structure at substantially right angles to their major axis forming said angles substantially at the edge of the frame and a woven fabric carried by such inserted reeds maintaining the inserted ends in position.

1,485,950. BELT CLAMP. PAUL ROBERT GEORGE BIEDERMANN, Taft, Calif. Filed July 16, 1923. Serial No. 651,702. 3 Claims. (Cl. 24—37.)



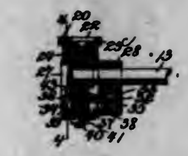
1. A belt-clamp comprising an elongated member having a plurality of longitudinally aligned sections, each section having a smooth belt receiving face with a rectangular depression on each side of the major axis of said member, said depression occupying approximately the semi area of the section; and bolts associated with said member for forcing the belt into frictional engagement with said depressions.

1,485,951. COMBINED LIQUID-LEVEL AND SPECIFIC-GRAVITY INDICATOR. LOUIS BIRK, Brooklyn, N. Y., assignor to International Gauge & Appliance Corporation, a Corporation of New York. Filed Dec. 10, 1921. Serial No. 521,310. 1 Claim. (Cl. 73—120.)



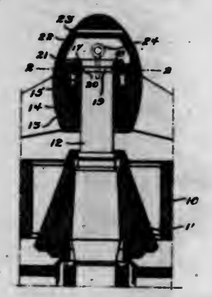
A measuring device comprising a stopper, a bottom member, a glass tube interposed between said stopper and said member, a plurality of rods for securing said bottom member and glass tube to the stopper and for protecting said tube against breakage, the said stopper and the said bottom member each being provided with an opening communicating with the interior of the said tube, a valve for closing the said opening in the stopper, a hydrometer supported within the said tube, means on said hydrometer for guiding the same within the tube, a spring supported at the upper end of said hydrometer and cushioning means interposed between the said tube and the said bottom member.

1,485,952. LOCOMOTIVE DRIVING BOX. JAMES G. BLUNT, Schenectady, N. Y. Filed June 14, 1923. Serial No. 645,806. 7 Claims. (Cl. 64—55.)



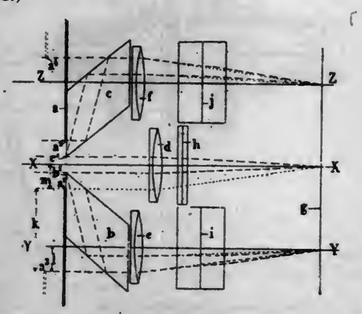
1. The combination of a locomotive driving box; a crown brass therein; supplemental bearings, fitted in the driving box, below its horizontal axial plane; and means to take up wear of said supplemental bearings by a vertical movement.

1,485,953. MACHINE FOR USE IN MAKING BOXES CHARLES H. BOMBARDIR, Chicago, Ill., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Apr. 15, 1921. Serial No. 461,536. 9 Claims. (Cl. 1—83.)



1. A machine for use in making boxes comprising, in combination, work-forwarding means including box part positioning members; binding-wire-applying mechanism; and means to control the location of said positioning members to position a group of box parts in predetermined spaced relationship on said work-forwarding means, said controlling members being adapted to control a succession of groups of positioning members to position a succession of groups of box parts in like spaced relationship.

1,485,954. DOORSTOP. LOUIS F. BRASCH, Newark, N. J. Filed Jan. 4, 1923. Serial No. 610,601. 4 Claims. (Cl. 292—275.)

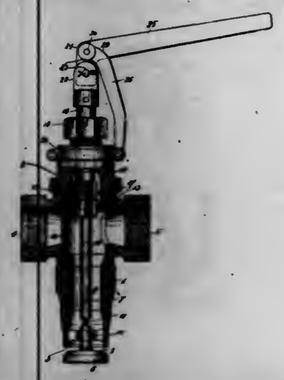


1. A door stop comprising a pivoted rod with a projection at its free end, a member comprising a support and a casing swivelled one on the other, the casing comprising two parts, the upper part having on one end a bearing for the rod and having a recess to receive the projection, the lower part having a recessed portion, a latch pivoted at one end with its free end in the recessed portion, and a spring in the recessed portion, said spring bearing on the under side of the latch.

1,485,955. STONE CRUSHER. CHARLES A. BRAWN, Philadelphia, Pa., assignor to Birdsboro Stone Company, Philadelphia, Pa. Filed Aug. 29, 1921. Serial No. 496,331. 1 Claim. (Cl. 64—48.)

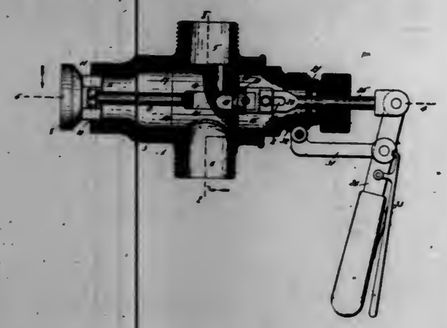
In a device of the class described, the vertical shaft in combination with a split collar arranged about the upper portion thereof, and an annular flange and groove connection between said shaft and collar, said connection between said shaft and collar being arranged at a greater distance from one end of said collar than from the other, as and for the purpose specified.

1,485,956. APPARATUS FOR TAKING AND EXAMINING COLOR PHOTOGRAPHS. CHARLES EMILE BRÉDON, Paris, France. Filed July 30, 1920. Serial No. 400,169. 13 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



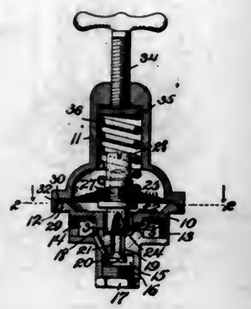
1. In an apparatus for taking photographs in colors by the trichrome process, reflecting faces adapted to divide into several pencils the entering light rays,—objectives so arranged as to be respectively traversed by these light pencils,—a single common diaphragm for the entrance of the light rays, arranged in front of the reflecting surfaces, the opening of the said diaphragm being approximately equal to the utilizable opening of the objectives used.

1,485,957. VALVE. ARTHUR L. BRIDGHAM, Boston, Mass., assignor of one-half to Charles H. Sherburne, Boston, Mass. Filed Apr. 26, 1923. Serial No. 634,763. 6 Claims. (Cl. 277—25.)



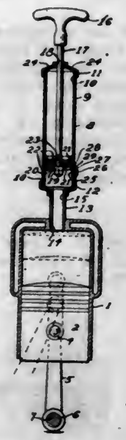
1. In a valvular device, a chambered body having an inlet and an outlet, an inwardly-closing main valve for controlling the inlet, an auxiliary valve socketed to turn within said body for controlling the outlet, a stem connection extending through said auxiliary valve and connecting with said main valve, said stem connection being movable endwise with relation to said auxiliary valve and

being also rotative and in engagement with said auxiliary valve whereby the auxiliary valve may be rotated and positioned as said stem connection is turned, a lever con-



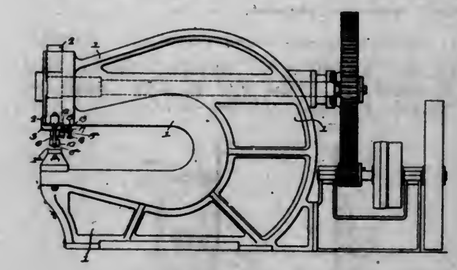
necting with said stem connection for operating it either with an endwise or a rotary movement, and a rotary mounting for said lever.

1,485,958. VALVE. ARTHUR L. BRIDGHAM, Boston, Mass., assignor of one-half to Charles H. Sherburne, Boston, Mass. Filed Feb. 2, 1921. Serial No. 441,780. 3 Claims. (Cl. 137—139.)



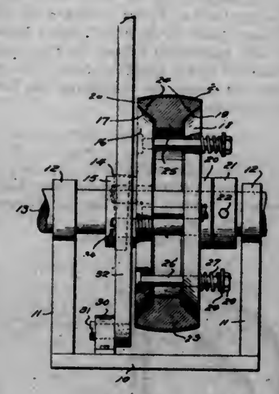
1. A valvular device comprising a chambered body having an inlet and separate outlet passages, a member socketed to turn within the body and close one or the other of said outlet passages dependent upon its turned position, said member having an opening through it whereby entering fluid will pass above said member, said member having also a passage through it from the rear side thereof communicating with that one of said outlet passages closed by said member, a main valve for controlling said inlet from the entry of fluid under pressure, said valve being arranged whereby it will be subjected on opposite sides thereof to the fluid pressure when the valve is open, an auxiliary valve located within the chamber of said body above said socketed member and subjected to entering fluid pressure, said auxiliary valve being arranged whereby it will be subjected in a part thereof facing said main valve to atmospheric pressure entering through the passage through said socketed member from one or the other of said outlet passages whereby said main valve will be overbalanced and maintained by the fluid pressure in an open position and whereby, also, said main valve will be moved by the fluid pressure inwardly to a closed position for closing said inlet passage upon undue drop in pressure within the chamber of said body.

1,485,959. PRESSURE-REGULATING VALVE. WILLIAM J. BROWN, Newark, N. J., assignor to Howard W. Beach, Newark, N. J. Filed Aug. 15, 1922. Serial No. 582,056. 5 Claims. (Cl. 50—23.)



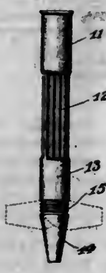
1. A pressure regulating valve comprising a valve casing, a bonnet on the valve casing, a diaphragm secured at its edge between the casing and bonnet, said diaphragm consisting of laminated sheets successively decreasing in diameter, a valve stem secured to the diaphragm and supported thereby, the valve casing having ports therein, and a valve on the stem for controlling the passage of fluid through the ports.

1,485,960. METHOD OF AND APPARATUS FOR DETERMINING THE LOCATION OF THE PISTON WITHIN A CYLINDER OF AN INTERNAL-COMBUSTION ENGINE. BYRON J. CHAPMAN, St. Louis, Mo. Filed May 7, 1923. Serial No. 637,240. 2 Claims. (Cl. 116—114.)



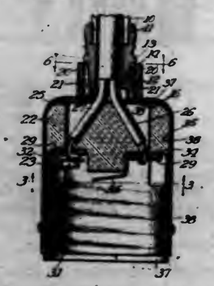
2. An apparatus for determining the location of the piston within a cylinder of an internal combustion engine, comprising a pump and means for attaching same to the cylinder so that the interior of the pump is in communication with the interior of the cylinder, the said pump being provided with air-escape ports forming a whistle operating when the piston is moving in one direction of its stroke to sound with more or less intensity than when the said piston is moving in the opposite direction of its stroke.

1,485,961. PUNCHING MACHINE. EUGENE C. CLARKE, Chambersburg, Pa., assignor to Chambersburg Engineering Company, Chambersburg, Pa., a Corporation of Pennsylvania. Filed Jan. 19, 1922. Serial No. 530,808. 7 Claims. (Cl. 164—104.)



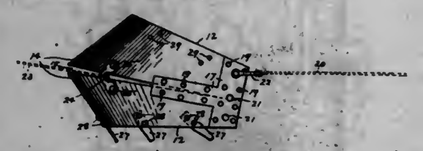
1. The combination with a frame, of a head slidable therein, means for reciprocating said head, a tool carried by the head and movable with respect thereto, an element movably mounted in the head and adapted in one position to engage and retain the tool immovable therein and in another position to disengage the tool, a second element movably mounted on the head and connected with the retaining element, and a pair of spaced elements carried by the frame and adapted to engage the said second element at opposite ends of the stroke of said head to actuate the retaining element in different directions.

1,485,962. CLUTCH. FREDERICK COATES, Cincinnati, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 27, 1921. Serial No. 464,831. 2 Claims. (Cl. 192—150.)



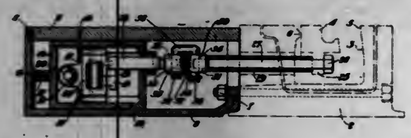
1. In a clutch, a shaft, a pair of opposed friction disks carried by said shaft, one of said disks being fixed to said shaft, an annular driving member located between said disks and frictionally engaged therewith, said member being arranged for engagement by a driving element, means constantly urging the other clutch disk towards the fixed clutch disk, and means for locking the disks and shaft from movement comprising stop pins on one of said disks and a lever pivoted adjacent the stop pin provided disk and having a notch wherein said stop pins may selectively engage.

1,485,963. PROTECTOR FOR DENTAL HANDPIECES. WARD E. CURRY, Bradentown, Fla., assignor to Curry Hand-Piece Protector Co., Hillsborough County, Fla., a Common Law Company. Filed Aug. 9, 1922. Serial No. 580,793. 4 Claims. (Cl. 32—10.)



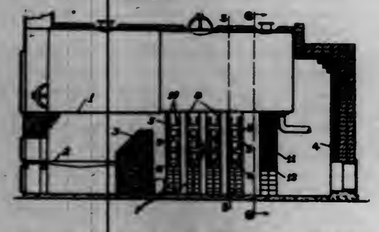
1. A sanitary protector for dental handpieces comprising a tubular member proportioned to cover and grip the hand-piece and having a bellows joint formed intermediate its ends.

1,485,964. LAMP SOCKET. JOHN CUTHBERT, Chicago, Ill., assignor, by mesne assignments, to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Dec. 4, 1916. Serial No. 135,050. 4 Claims. (Cl. 173—358.)



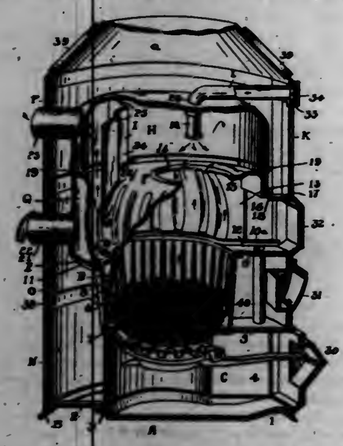
1. In combination with an enclosing shell, of a lamp socket; an internally-threaded sleeve, or member secured to the shell, and circumferentially divided for clamping attachment to a fixture and a ring surrounding said clamping member, having an inwardly-projecting part to clamp the member on the fixture when the ring is rotated on its support.

1,485,965. DRAG SCRAPER. WILLIAM H. DANCE, Cambridge, Mass. Filed Jan. 9, 1922. Serial No. 527,863. 6 Claims. (Cl. 37—147.)



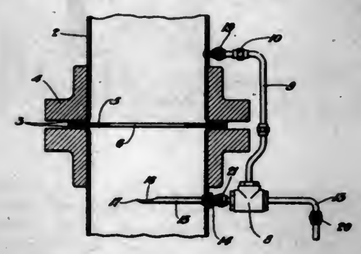
1. A drag-scraper comprising an invertible bucket, having lower and upper edges, each adapted to bear on the ground, substantially flat end portions, perpendicular to the plane of said edges, and an intermediate gathering portion, formed to provide a load-retaining recess between the upper and lower edges, at the front side of the bucket, and provided with a vent-opening between said edges, whereby water accumulated with a load is permitted to escape from the back side of the bucket, and air is permitted to enter the bucket to prevent adhesion of a load thereto, when the bucket is backed.

1,485,966. SWITCH-OPERATING MECHANISM. ISRAEL K. DIXON, Johnstown, Pa. Filed Nov. 3, 1923. Serial No. 672,552. 7 Claims. (Cl. 246—452.)



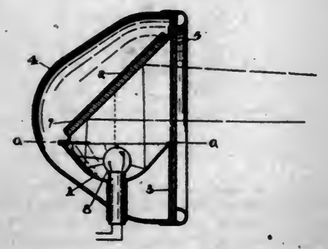
3. A switch tongue connecting rod comprising two parts arranged end for end and provided with apertures adjacent their abutting ends, and a U-shaped connecting link having its lugs passed through said apertures to connect said parts.

1,485,967. COMBUSTION CHAMBER OF BOILER FURNACES. DAVID MILNE DUNCAN, Toronto, Ontario, Canada. Filed May 8, 1922. Serial No. 559,456. 2 Claims. (Cl. 110—97.)



1. The combination in a combustion chamber of a boiler furnace, of a transverse screen removed from the furnace bottom constructed of isolated brick-work forming small spaces for the passage of hot gases, and spaced grilles interposing the said screen and a gate bridge, said grilles being removed from the furnace bottom, each grille comprising alternate courses of spaced longitudinal bricks and a double row of spaced transverse bricks.

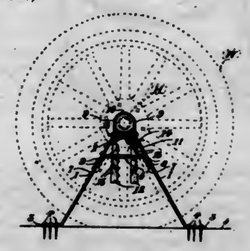
1,485,968. HOT-AIR HEATING FURNACE. JOHN W. DUPUY, Beaver Falls Borough, Pa. Filed Jan. 11, 1923. Serial No. 611,944. 21 Claims. (Cl. 126—99.)



1. In a hot air heating furnace, the combination of a primary combustion chamber receiving the products of combustion from the fire pot, a secondary combustion chamber surrounding said primary combustion chamber and forming a tight closure over the top of the same, the top of said primary combustion chamber being provided with an orifice opening into said secondary combustion chamber and which forms an escape port through which the furnace gases pass upwardly from the primary combustion chamber into the secondary combustion chamber, and an escape port for the furnace gases from the secondary combustion chamber.

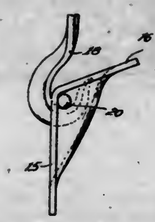
1,485,969. LUBRICATING DEVICE. DEXTER EDGE, Pittsburgh, Pa. Filed Feb. 10, 1922. Serial No. 535,486. 4 Claims. (Cl. 184—56.)

4. The combination with a steam main having a restricted portion intermediate its ends adapted to form a high pressure area above said portion and a low pressure and high velocity area below said portion, of a forced feed lubricator comprising a combined oil reservoir and pre-heating chamber, a conduit leading from said high pressure area in said main into the top of said chamber, said conduit having a restricted portion intermediate its ends, a conduit leading from one end of said chamber into the low pressure and high velocity area of said main, said last named conduit extending into the center of the flow path of the steam passing through said main and terminating in an atomizing nozzle, a third conduit entering the other end of said chamber and adapted to conduct oil to said chamber, said conduits being so proportioned and arranged as to maintain a relatively large head of oil at all times in said chamber whereby any pulsations caused by the irregular flow of oil are absorbed and a constant flow of oil is supplied to said nozzle, and means for regulating the flow through each of said conduits.



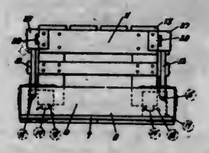
1,485,970. VEHICLE HEADLIGHT. DONALD D. ELDER, Toronto, Ontario, Canada, assignor to Elliptic Auto Light Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,123. 2 Claims. (Cl. 240—41.)

1. In a headlight, the combination of a concave reflector of elliptical form in transverse cross section; a source of light located within said reflector; a plane mirror supported adjacent the concave reflector inclined longitudinally so that the optical axis of the reflector intersects its reflecting surface at substantially an angle



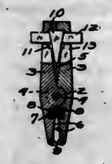
of 45° and set so that the axis of the beam reflected therefrom is substantially in the same plane as the major axes of the elliptical transverse sections of the concave reflector; and means to trap light rays which normally reach the portion of the edge of the concave reflector immediately adjacent the plane mirror.

1,485,971. COMBINED BUCK AND HOLDDOWN. EDWARD S. EVANS, Detroit, Mich., assignor to E. S. Evans & Co., Inc., Detroit, Mich., a Corporation of Delaware. Filed May 24, 1923. Serial No. 641,187. 11 Claims. (Cl. 188—32.)



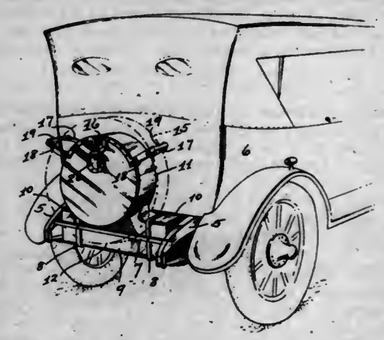
1. In a combined buck and holddown, a buck, and a holddown slidably and interlockingly associated therewith.

1,485,972. MEANS FOR CONNECTING A LOAD TO LOAD-LIFTING MECHANISM. BENJAMIN F. FITCH, Evanston, Ill. Filed Mar. 22, 1922. Serial No. 545,668. 8 Claims. (Cl. 220—91.)



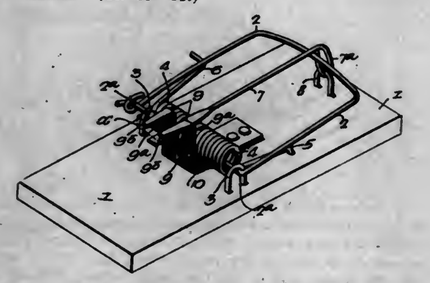
1. In a device of the character described, a one piece member having bearing surfaces thereon lying in two intersecting planes, and having a pocket formed by a portion struck up from said member, so as to interrupt the line formed by the intersection of said surfaces.

1,485,973. FOLDING BOX OR CRATE. CORNELL FLAGSTAD and OSCAR A. FLAGSTAD, Minneapolis, Minn., assignors to The Folding Crate and Box Co., Minneapolis, Minn., a Corporation. Filed Jan. 13, 1923. Serial No. 612,502. 5 Claims. (Cl. 217—47.)



1. The combination with a collapsible crate of the character described, of a hinge plate having one end portion formed at right angles to the opposite end portion and integral with the adjacent edge thereof, hinge bearings formed in said portions by being struck up therefrom.

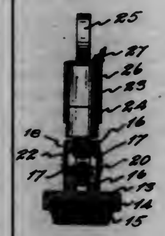
1,485,974. NAIL PULLER. ALBERT G. FLORIAN, Toledo, Ohio. Filed May 15, 1922. Serial No. 561,049. 2 Claims. (Cl. 254—24.)



1. In a nail puller, a substantially cylindrical device formed of two semi-cylindrical slotted parts pivotally connected together near the center of the said parts, a wedge located between the upper ends of the said parts and having arms located in the said slots of the said parts for forcing the lower ends of the parts towards each other, substantially pointed clamping jaws located in the lower ends of the said parts whereby the said jaws may be driven into the material in which the nail is located and means for moving the cylindrical device to draw the nail.

1,485,975. GAS TANK FOR AUTOMOBILES. HENRY H. GEIGLEIN, Baltimore, Md. Filed Sept. 6, 1921. Serial No. 498,671. 2 Claims. (Cl. 224—29.)

1. A gas tank for motor vehicles having a lower elongated portion and a circular portion extending upwardly from the elongated portion,—the interiors of said two portions being in communication and said circular portion being of a diameter to be encircled by a tire rim, and means for holding said rim in place on said circular portion.

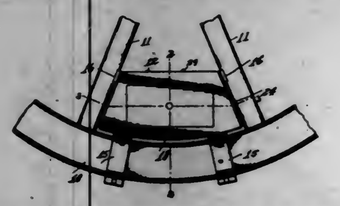


1,485,976. ANIMAL TRAP. WALTER A. GIBBS, Wilmington, Del. Filed Mar. 21, 1921. Serial No. 454,042. 6 Claims. (Cl. 43—81.)

1. In an animal trap, the combination with a spring-actuated animal-engaging element, of a movable member adapted to engage and retain the said element against actuation by the spring, and a relatively fixed element

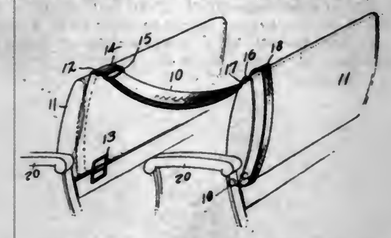
constituting an abutment for a body interposed between the said fixed element and the retaining member, which body prevents movement of the retaining member to release the animal-engaging element.

1,485,977. CUSHION WHEEL. GEORGE A. GILLEN, Jersey City, N. J., assignor to Gillen Laboratories Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1922. Serial No. 541,935. 2 Claims. (Cl. 152—47.)



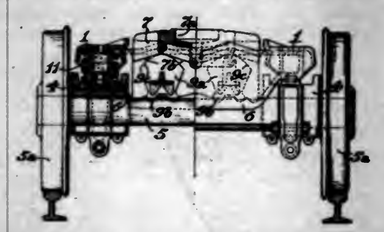
2. A resilient wheel comprising a rim, a hub, a plurality of telescopic spokes connecting hub and rim, and substantially independently inflated rubber cushions with each spoke exerting outward pressure on its telescoping parts, the rim being subjected to circumferential tension by the radial pressure exerted by the several spokes.

1,485,978. METAL CASING FOR LEAF-SPRING COVERS. ALBERT E. GOLDRICK, Cleveland, Ohio, assignor to Carl W. Schaefer, Lakewood, Ohio. Filed Jan. 10, 1922. Serial No. 528,331. 13 Claims. (Cl. 267—37.)



1. A spring cover comprising a spiral casing adapted to engage the spring on three sides thereof, and a closure member for the fourth side, said member cooperating with the casing to form a tube completely surrounding the spring.

1,485,979. HAND WARMER. ETHEL E. GURR, Oxford, Ohio. Filed Mar. 12, 1923. Serial No. 624,572. 1 Claim. (Cl. 126—206.)



A hand warmer for attachment to the steering wheel of an automobile comprising an approximately trapezoidal box one longer side of which is longitudinally curved to lie against the inner curved face of the wheel rim, the upper wall of the box being formed with an access opening, a fuel receptacle disposed within said opening, draft openings in the box and receptacle, wheel rim engaging clamps carried by said curved side of the box, the inclined ends of the box adapted to lie against the side faces of an adjacent pair of spokes, and spring members secured to the end walls and having their intermediate portions depressed for engaging the said adjacent spokes.

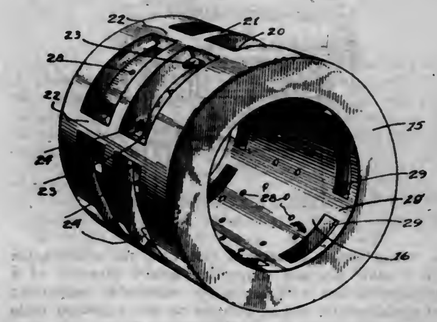
1,485,980. CAR-SEAT HEADREST. FRANCIS CADWALADER HALL, Washington, D. C. Filed July 13, 1922. Serial No. 574,766. 2 Claims. (Cl. 155—174.)

1. A head rest comprising a sling, separated means for suspending the sling to extend in the direction forward of a car seat, one of said means including a strap that passes from the top of the car seat back downward and having a device to interlock with the bottom edge of such back, and a detachable connection between the strap and the sling.

1,485,981. TRUCK FOR RAILROAD ROLLING STOCK. ROBERT F. HALL, Schenectady, N. Y. Filed Nov. 29, 1922. Serial No. 603,916. 5 Claims. (Cl. 105—187.)

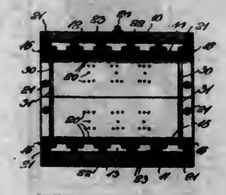
1. In a railroad truck, the combination of a frame; a bolster adapted to traverse laterally relatively thereto; and a swinging rocker, journalled in bearings on the frame extending transversely to the bolster, said rocker having cam surfaces abutting against the bolster, which cam surfaces are curved on radii, the centres of which are exterior to the axial lines of the rocker journals.

1,485,982. TRUCK FOR RAILROAD ROLLING STOCK. ROBERT F. HALL, Schenectady, N. Y. Filed Nov. 29, 1922. Serial No. 603,917. 3 Claims. (Cl. 105—187.)



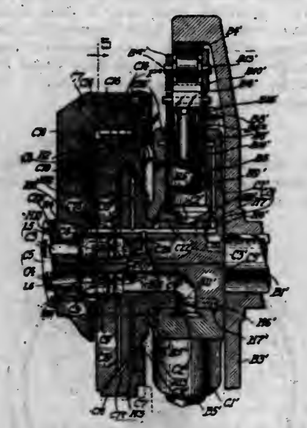
1. In a railroad truck, the combination of a frame; a bolster, adapted to traverse laterally relatively thereto; a swinging cam rocker, journalled in bearings on the frame, extending transversely to the bolster; and means for positively coupling the bolster and the rocker, comprising a pin, fixed in one of said members, and a slot, of varying width, formed on the other, in which slot said pin engages.

1,485,983. HAIR-DRYING APPARATUS. SAMUEL HUDSON, Los Angeles, Calif. Filed Oct. 2, 1922. Serial No. 591,828. 9 Claims. (Cl. 34—26.)



1. A hair drying apparatus, including a blower, a rigid air conduit carried by said blower, the latter being oscillatably mounted so as to be adjustable to raise or lower the discharge end of said conduit and an air directing hood carried at the discharge end of said conduit; said hood being angularly adjustable on said conduit.

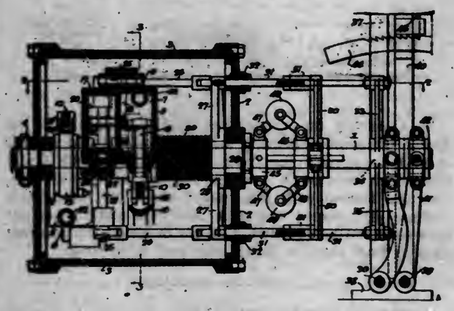
1,485,984. SELF-OILING HUB BEARING. JOHN D. JONES, Walla Walla, Wash. Filed June 30, 1923. Serial No. 648,773. 9 Claims. (Cl. 64—24.)



1. A self oiling bearing of hollow cylindrical form and having a centrally disposed annular oil chamber and annular packing receiving recesses at its ends in communication with said chamber, said bearing having a series of longitudinally extending ribs arranged across the oil chamber to divide the same into an annular series of pockets, said bearing having small apertures leading from its interior to the oil chamber and larger packing receiving apertures leading from the interior to said recesses.

1,485,985. VACUUM-CONTROLLED LUBRICATING BEARING. JOHN D. JONES, Walla Walla, Wash. Filed Aug. 3, 1923. Serial No. 655,465. 9 Claims. (Cl. 64—24.)

2. A vacuum controlled lubricating bearing, comprising a shaft and a sleeve, an oil chamber in communication with the interval between the shaft and sleeve, and means to employ atmospheric pressure to maintain a liquid seal between the chamber and the external air.

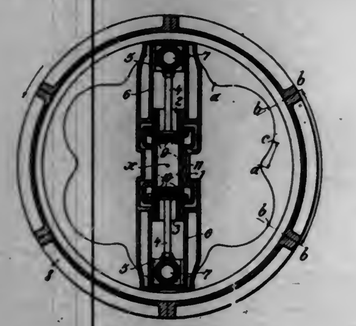


1,485,986. HYDRAULIC TRANSMISSION. WILLIAM E. MAGIE, Buffalo, N. Y., and WALTER FERRIS, South Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 25, 1918, Serial No. 224,503. Renewed Aug. 15, 1921. Serial No. 492,460. 21 Claims. (Cl. 60—53.)

1. In a hydraulic transmission mechanism the combination of a support, a pintle block adjustable thereon, abutting faces on said support and block, fluid passages in said support and block communicating through said faces, a piston and cylinder assembly subjected to the pressure of fluid in said passages and producing a thrust on said block, and opposed faces on said support and block, said opposed faces being inclined in a direction away from the line of said thrust and toward said passages thereby reacting under said thrust to maintain said abutting faces in close contact.

15. In a hydraulic transmission two members rotatable about substantially parallel axes, one of said members having a series of radial cylinder bores, a series of cross heads reciprocating longitudinally in said other member, one opposite each bore, and a thrust transmitting piston reciprocating in each bore and rockably engaged with the adjacent crosshead.

1,485,987. HYDRAULIC CLUTCH. ALBERT H. MANWARING, Noble, Pa., assignor of one-half to Roy A. Manwaring, Noble, Pa. Filed Dec. 23, 1920. Serial No. 432,748. 14 Claims. (Cl. 192—60.)



1. The combination of driving and driven members; a fluid clutch operatively connecting said members; a governor operative on said clutch and responsive to the speed of the driven member for maintaining such speed

constant; means independent of the governor for adjusting the clutch to maintain a definite difference in speed between the driving and driven members; and a device for throwing the clutch into and out of operation independently both of said adjusting means and of the governor.

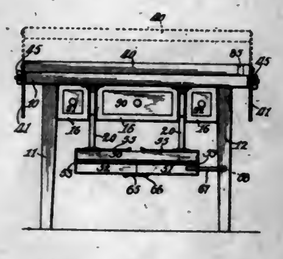
3. The combination of driving and driven members; an eccentric actuated from one of said members; a cylinder connected to the other member; a piston for said cylinder actuated by said eccentric; and valve mechanism controlling the flow of fluid under the action of said piston, with a pump also actuated by the eccentric for supplying fluid to the cylinder.

1,485,988. ENGINE. HERMANN MICHEL, Voorde, Holstein, Germany. Filed Oct. 20, 1922. Serial No. 595,749. 4 Claims. (Cl. 74—14.)

1. In a machine, the combination, with a cylinder, and a piston reciprocating therein, of a cam member cooperating with said piston to control the reciprocating movement thereof, said cam member and cylinder being movable relatively to each other, the configuration of the cam face of said cam member being such that the acceleration of the piston caused by the cam member is smaller at any part of the movement of the piston than the retardation of the piston caused by other forces acting thereon.

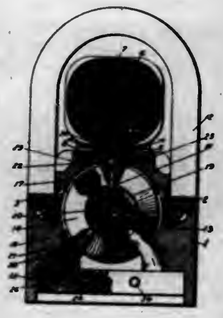
1,485,989. DOUBLE CURTAIN-ROD FIXTURE. LONNIE M. MOORE, Hopkinsville, Ky., assignor of one-third to C. Hewlett Jackson and one-third to Vitas L. Gates, both of Hopkinsville, Ky. Filed Sept. 29, 1922. Serial No. 591,305. 3 Claims. (Cl. 156—22.)

3. A fixture for supporting double curtain rods on double windows comprising a plate adapted to be secured to and lie against the front face of the middle frame member of the window, said plate having turned out ends, and also formed with two spaced struck up lugs, intermediate said turned out ends, said lugs and turned out ends constituting supporting means to which the adjacent ends of both pairs of double rods may be secured.



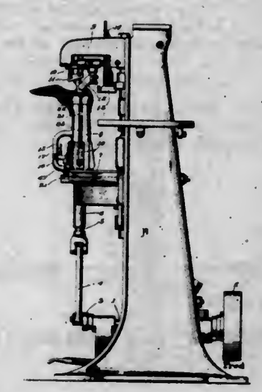
1,485,990. CURTAIN FASTENER. ROBERT A. MOORE, New York, N. Y. Filed Dec. 13, 1922. Serial No. 606,563. 6 Claims. (Cl. 24—221.)

4. In a fastener as set forth, the combination of a head provided with a groove, a co-operating socket member adapted to receive said head and make positive interlock therewith when one is turned at an angle to



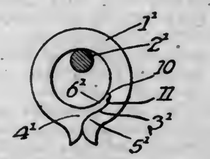
the other, and a tension device carried by the socket member and co-operating with said groove to prevent undesired unlocking of the fastener.

1,485,991. COMBINATION KITCHEN FURNITURE. SIDNEY P. MULLEY, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,712. 6 Claims. (Cl. 45—17.)



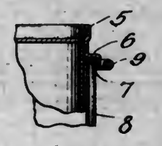
1. In an article of kitchen furniture, the combination with a table top and supporting means therefor, of a supplemental top, and means for adjustably supporting said supplemental top in relation to the aforesaid table top comprising four elongated members fixed to the supplemental table top at their upper ends, and their lower ends having adjustable connections with the other table top.

1,485,992. MAGNETO CONSTRUCTION. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 30, 1920. Serial No. 420,646. 4 Claims. (Cl. 123—149.)



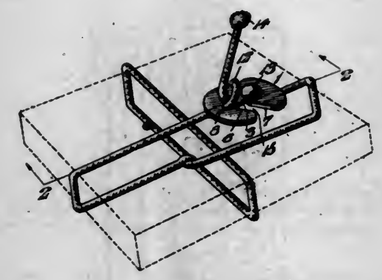
1. In a magneto construction a magneto base, a rotor within the base, a distributer spool located on said rotor within the confines of the base and brushes mounted in the base in contact with the distributer spool.

1,485,993. HEEL-NAILING MACHINE. FRED A. REARDON, Bridgeport, Conn., assignor to Hamel Shoe Machinery Company, Bridgeport, Conn., a Corporation of Massachusetts. Filed Dec. 8, 1920. Serial No. 429,095. 9 Claims. (Cl. 1—32.)



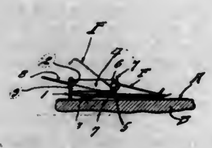
1. In a heel-nailing machine, a shoe-supporting jack, a plurality of nail driving mechanisms disposed within said jack, means for simultaneously actuating said mechanisms, and means for angularly adjusting each of said mechanisms with respect to the others to vary the spacing of the nails.

1,485,994. PROTECTIVE INSULATING SLEEVE. MOSES B. SALISBURY, Chicago, Ill. Filed Dec. 21, 1922. Serial No. 608,340. 6 Claims. (Cl. 173—28.)



1. A protective sleeve for the purpose specified, made of resilient insulating material, said sleeve being split lengthwise and comprising a lip formed on one of its severed edges which overlaps the other severed edge thereof and bridges the slit of said sleeve.

1,485,995. SHEET-METAL CONTAINER. HENRY J. SCHAFFER, Brooklyn, N. Y., assignor to Jacob Schaffer, Brooklyn, N. Y. Filed May 13, 1922. Serial No. 560,524. 5 Claims. (Cl. 220—41.)

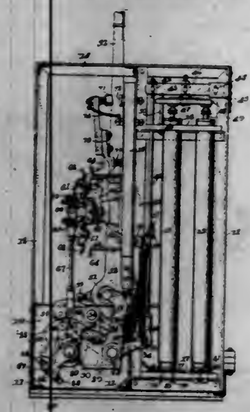


1. In a sheet metal container, a wall having a flanged end edge, and another wall having its periphery formed around the flanged edge for anchoring the walls together and then offset adjacent thereto to form a trackway for guiding a sliding closure.

1,485,996. PACKAGE TIE. GEORGE W. STOUT, Merchantville, N. J. Filed Apr. 18, 1922. Serial No. 555,107. 2 Claims. (Cl. 24—18.)

1. A package tie, comprising a tie body having an oblique slot entering one edge thereof and terminating near the middle of said body in converging walls, which extend at an angle to said slot and meet at an apex located out of alignment with said slot, and an inclined passage formed by converging side walls merging into said oblique slot and terminating in an eye located on substantially the median line of said body, the diameter of said eye being greater than the width of said passage leading thereto at its terminal, and the edge of said body opposite to said oblique slot having a recess therein located intermediately of said apex and eye, and a cord passing freely through said eye but incapable of disengagement therefrom and having cement heads attached to its ends, whereby said cord is incapable of disengagement from the tie body in a lateral or longitudinal direction and forms a unitary structure therewith.

1,485,997. PAPER-FEED GUIDE FOR PLATEN PRESSES. HOSEA H. STRAIT, Overland, Mo. Filed July 25, 1921. Serial No. 487,238. 8 Claims. (Cl. 101—415.)

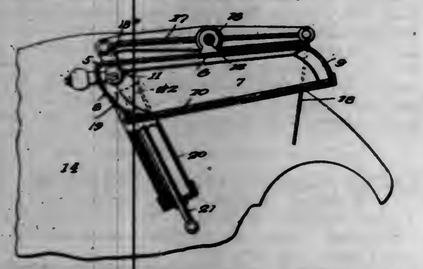


1. A feed guide comprising an abutment, a prong located entirely at the rear of said abutment and having a pointed rear end adapted to pass through a tympan sheet, side arms at the rear of said abutment, a longitudinally adjustable tongue confined between said side arms and extending forwardly from said abutment, said side arms being located at the side edges of said tongue to prevent lateral displacement of said tongue, and a gripping lever adapted to contact with a portion of said tongue whereby said tongue is forced toward said prong.

1,485,998. ELECTRIC-CURRENT CONTROLLER. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 12, 1920. Serial No. 395,707. 65 Claims. (Cl. 219—51.)

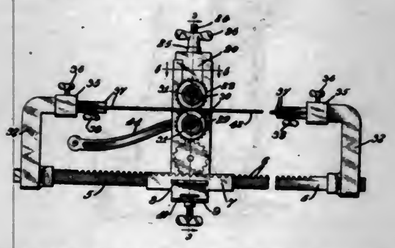
1. An electric current controlling device including an elongated frame oblong in cross-section, a compressible resistance means and a mechanically operated rocking type switch mechanism disposed side by side in said frame, a lever independent of the switch mechanism and

disposed at one of the relatively longer sides of the frame and having a pivotal mounting at one end portion of the frame for movement in a plane substantially parallel to



said side of the frame, and means operable by said lever for compressing the pile and operating said switch mechanism.

1,485,999. WIRE STRETCHER. EDWARD J. ABELL, Riley, Kans. Filed Mar. 6, 1923. Serial No. 623,233. 2 Claims. (Cl. 254—72.)



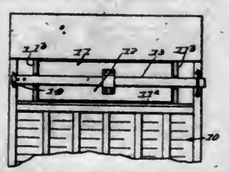
2. A stretcher consisting of a stock, said stock having means to which an element to be stretched may be attached, means movable with respect to said stock to which a second element may be fastened, said stock having spaced bars between which said movable means operate, said first named fastening means being located adjacent one end of said bars, means adjacent said first named fastening means for fastening one of said elements to the stock, and said bars being offset relative to the longitudinal median line of the stock.

1,486,000. LIGHTING MEANS. WILLIAM N. ALLAN, San Antonio, Tex., assignor to The Allan Automobile Accessory Association, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed Apr. 23, 1921. Serial No. 463,776. 9 Claims. (Cl. 240—41.)

1. A lighting organization comprising a body fully open at the bottom and normally disposed at an upward angle of inclination, the body having closed sides, front and rear ends and top, the front end of the body having less depending extent from the top than the rear end and the sides correspondingly decreasing in dependence towards the said front end, a light source mounted in the center of the rear end of the top, the interior portion of all parts of the body having smoothly merging and reversed curved contours, and means for mounting and adjusting the body and operable to always return the body to predetermined normal inclined position and maintain the light source above the lower edge of the front end of the body.

1,486,001. SAW SET. THOMAS COOPER ALLISON, Hohenwald, Tenn. Filed Dec. 15, 1922. Serial No. 607,131. 3 Claims. (Cl. 76—59.)

1. In a saw set, a body portion, gearing supported by the body portion, a pair of cooperating setting dies disposed laterally of the body portion, a bar movable through the body having teeth in mesh with one of the gears to cause the bar to move through the body portion when the gears are rotated, saw supporting means on the bars, means for permitting movement of one die with respect to the other die, and said saw supporting means adapted to support a saw to cause the teeth thereof to move between the setting dies.

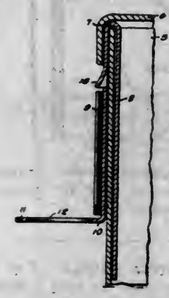


1,486,002. PROCESS FOR THE PRODUCTION OF WATER-SOLUBLE DURABLE PREPARATIONS CONTAINING ACETYL-SALICYLIC ACID. PAUL ALSLEBEN, Berlin, Germany, assignor to Johann A. von Wulfing, Berlin, Germany. Filed July 22, 1922. Serial No. 576,874. 6 Claims. (Cl. 167—7.)

1. The process for the production of water-soluble durable preparations containing acetyl-salicylic acid, characterized by the feature that acetyl-salicylic acid is mixed in equivalent proportions with the slightly water soluble acid neutralizing compounds of the non-poisonous alkali earth metals and preferably pressed into tablets.

4. As new products the herein described tablets which contain acetyl-salicylic acid with equivalent proportions of slightly water soluble acid neutralizing compounds of the non-poisonous alkali earth metals.

6. As new products the herein described tablets which contain acetyl-salicylic acid with equivalent proportions of the carbonate of magnesium.



1,486,003. SELF-SOAPING WASHBOARD. WILHELM ANDERSSON, Pearson, Wash. Filed Sept. 16, 1922. Serial No. 589,173. 1 Claim. (Cl. 68—29.)

A wash board having an open soap seat adapted for the reception of soap in bar form and spanned at its front side substantially in the plane of the rubbing plane of the board by stop rods for limiting the forward move-

ment of a soap bar, a follower fitted in the soap seat for contact with a contained soap bar, and a follower actuating and carrying spring hingedly mounted for supporting the follower in contact with the rear side of a soap bar mounted in the seat, means being provided for securing the free end of said spring in its operative position.

1,486,004. TAG HOLDER AND BOX PULL. GUY C. BACKUS, Cleveland, Ohio. Filed May 29, 1923. Serial No. 642,283. 4 Claims. (Cl. 40—8.)

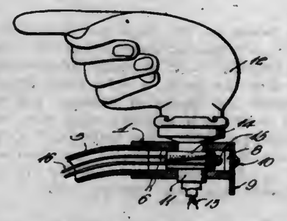
1. A pull clip and tag holder for boxes and the like, comprising a body portion, a finger portion projecting from said body portion, and a label carrying means associated with said body portion, the finger portion forming the bottom wall of the label-carrying means and the support for the label carried thereby, said bottom wall extending throughout the width of the body portion.

1,486,005. SHOCK ABSORBER. CHARLES H. BANKHEAD, Elkins, W. Va. Filed Oct. 28, 1919, Serial No. 333,904. Renewed Jan. 21, 1924. 1 Claim. (Cl. 188—88.)

In a shock absorber for a vehicle, the combination with the upper and lower springs of the vehicle, of a clip plate for the upper spring having a lateral extension formed with a socket, a clip plate for the lower spring, a transversely bored boss, a cylinder having a piston therein, the rod of the piston having a ball movably held in the said socket, and a stem rotatably retained in the said boss transversely of the spring and having a forked outer end embracing the cylinder and having its arms pivotally connected thereto—the last-named pivots being disposed in a plane at right angles to that of the stem.

1,486,006. GLOVE. ALBERT BLOM, Buenos Aires, Argentina. Filed Dec. 6, 1921. Serial No. 520,380. 3 Claims. (Cl. 128—157.)

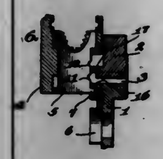
1. Means to keep on the finger-nails all products applied thereto with the object of curing, beautifying, cleaning and preserving the same, which means consists of a glove having openings in its thumb and each finger adjacent the tips thereof to allow the part which covers



the ends of the fingers, to be fixed thereto after the glove has been put on, and the medicaments applied to the finger-nails without spreading the said medicaments.

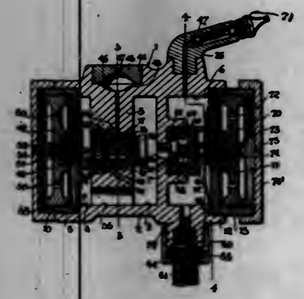
1,486,007. COMBINED PENCIL SHARPENER AND HOLDER. WILLIAM T. BOICE, Davenport, Iowa. Original application filed May 17, 1922, Serial No. 561,670. Divided and this application filed May 9, 1923. Serial No. 637,841. 1 Claim. (Cl. 120—87.)

In combination, a pencil sharpener including a tubular split body portion formed with a cone-shaped extension, a knife in the cone-shaped extension, a cam on the body portion, a sleeve provided with a pocket for receiving the cam rotatable thereon so that when the same is moved to place the pocket out of coincidence with the cam the size of the split may be made smaller.



1,486,008. REAR-SIGNAL MOUNTING. EDWIN BOYCE, Pine Bluff, Ark. Filed Sept. 1, 1923. Serial No. 660,631. 2 Claims. (Cl. 116—46.)

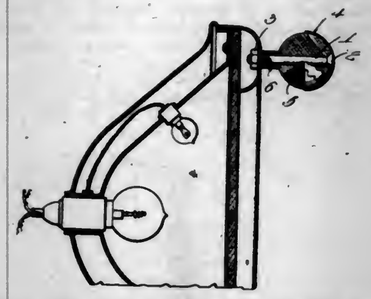
1. A device of the class described comprising a hollow supporting body having a bearing opening in at least one horizontal side, a relatively large opening in one vertical side and a cable opening in another vertical side, a collar insertable into said body through said relatively large opening, a signal carrying shaft passing through said bearing opening and into said collar, means for se-



curing said collar on said shaft to prevent removal of the latter from the body, and an operating cable passing through said cable opening and passed aronnd said collar, whereby the latter functions also as a drum for rotating said shaft.

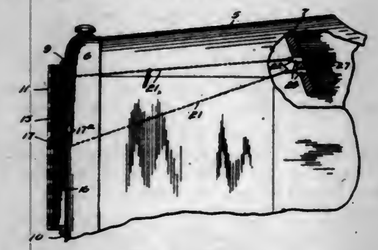
1,486,009. TYPE-BAR-CASTING MOLD. CHANA H. BRIGGS, Little Rock, Ark. Filed Feb. 5, 1923. Serial No. 617,126. 1 Claim. (Cl. 199—47.)

In combination with an elevator and matrices having primary and auxiliary faces carried by the elevator, said matrices having lugs, of an improved mold comprising a mold base having a thin lip, a keeper raised 4 points above the normal position to the thin lip, said lip cooperating with the matrices' lugs, a cap for the mold also having a thin lip to cooperate with the elevator, and end-liners of substantially 18 points between the mold base and cap.



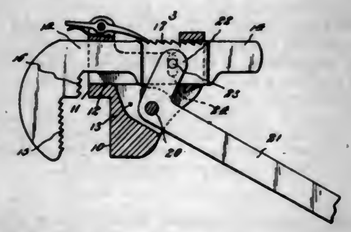
1,486,010. LOW-PRESSURE ALARM. WALTER HENRY BROWN, Pasadena, Calif. Filed May 5, 1923. Serial No. 636,883. Renewed Jan. 21, 1924. 7 Claims. (Cl. 116—34.)

2. In a device of the character described, a casing attachable to a source of pressure and having an outlet, an alarm adapted to be actuated by pressure passing outwardly from the outlet, a valve controlling communication between the source of pressure and the outlet, said valve including a movable valve disk, and a diaphragm supported within the casing and adapted when flexed in one direction to abut a movable part of the valve and to effect bodily movement of the valve disk, said diaphragm being free from the valve.



1,486,011. HEADLIGHT INDICATOR. JOHN A. CAMPBELL, Carbondale, Ill. Filed Jan. 8, 1923. Serial No. 611,407. 3 Claims. (Cl. 240—46.)

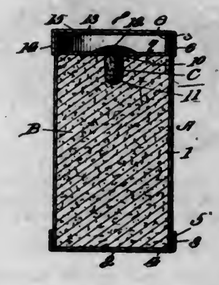
2. A headlight indicator comprising a stem adapted to be connected to and to extend forwardly from a headlight casing, a rearwardly facing reflector mounted on the front end of said stem, a translucent body mounted on said stem in contact with the rear portion of the



reflector, and a spacing sleeve surrounding the stem behind said translucent body for contact with the rim of the headlight casing.

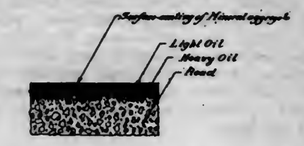
1,486,012. RADIATOR SHIELD. LEO CHRISTY, Frankfort, Ind. Filed July 2, 1921. Serial No. 482,108. 2 Claims. (Cl. 257—132.)

1. The combination with an automobile radiator, of a shield wholly at the front thereof and comprising a rectangular frame having a plurality of transverse openings therein for the admission of air to and through the body of the radiator, a plurality of vertically movable independent groups of sections slidable over the openings and arranged exteriorly of the frame, and independent controls for the different groups of movable sections leading to the instrument board of the vehicle, whereby said groups of sections may be operated together or independently from a position at the driver's seat.



1,486,013. WRENCH. ARMOGENE ROBICHAUX and WILLIAM JOSEPH COLEMAN, New Iberia, La. Filed Nov. 9, 1922. Serial No. 599,902. 1 Claim. (Cl. 81—128.)

In a wrench, a body including a jaw and a guideway having spaced side portions and spaced transverse holding bands and with a socket communicating with the guideway, a stock slidable through the guideway and



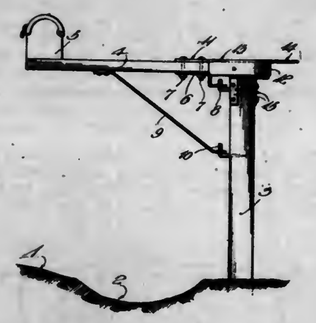
having an opposing jaw and reduced laterally intermediate the ends with ratchet teeth in the reduced portion, an operating lever pivoted in the socket and forked to engage the reduced portion of the stock and pivoted thereto, and a stop pawl carried by the body and engaging the ratchet teeth.

1,486,014. FLARE LIGHT. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 12, 1921. Serial No. 514,688. 5 Claims. (Cl. 102—24.)

1. A flare light comprising a container having a burning compound receiving chamber, a primer for the compound carried by a supplemental cap within the container, the primer provided with a fuse, and a primer protecting chamber above the primer and the supplemental cap.

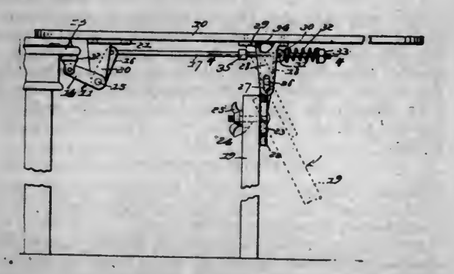
1,486,015. ROAD AND METHOD OF WATERPROOFING THE SAME. CALVERT BURKE FILBERT, New Orleans, La. Filed Oct. 14, 1922. Serial No. 594,588. 5 Claims. (Cl. 94—23.)

1. A method of treating ready made road structures having a surface portion of porous mineral aggregate, consisting in first removing dust from the surface portion, then applying a priming water-proofing liquid containing asphalt to the remaining rigid road surface, allowing the major portion of said liquid to be absorbed by the road structure, applying to the road a heavier liquid water-proofing material containing asphalt in a greater proportion than said priming liquid, and then adding a surface dressing of mineral aggregate substantantially coarser than common road dust, upon the second water-proofing material.



1,486,016. DRAWBAR ATTACHMENT. KAREL F. HAIN, Bee, Nebr. Filed Aug. 17, 1922. Serial No. 582,428. 2 Claims. (Cl. 55—84.)

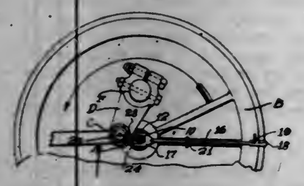
1. In a draw-bar attachment, the combination of a comparatively small bar, cables secured to the bar, a comparatively long bar arranged in rear of the short bar and secured thereto by means of clevises; said clevises comprising loops open at one end and adapted to be firmly secured about the bars by means of bolts; one of said clevises having an eye formed therein and a hook arranged on one of the bolts adjacent the eye and secured thereto, a bar arranged in rear of the second bar and secured thereto by means of hooks and having teeth arranged thereon.



2. In draft means the combination of a short shaft, cables secured to the shaft, a comparatively long shaft adjacent the first shaft and in rear thereof, rings secured in removable manner on the shafts, bolts for closing the open end of the rings securely about the shafts, an eye produced in one of the rings and a hook secured on the bolt of the opposing ring, and a bar secured to the long shaft by means of hooks.

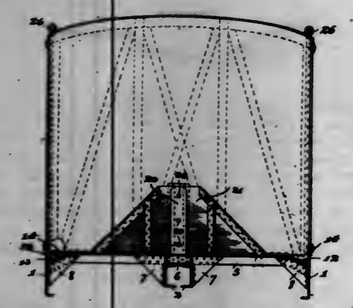
1,486,017. RURAL-MAIL-BOX-MOUNTING MEANS. WILLIAM S. HARDIN, Owaneco, Ill. Filed May 21, 1923. Serial No. 640,514. 3 Claims. (Cl. 232—4.)

1. Means for mounting a rural mail box on a post, comprising a box-carrying arm and means for pivoting it to the post on a vertical axis, a vertically yieldable but horizontally rigid arm connected to and extending from the inner end of said box-carrying arm, and a horizontally curved bar adapted to be mounted on the upper end of said post and having shoulders for engagement with said vertically yieldable arm to normally hold the box-carrying arm against pivotal movement.



1,486,018. IRONING BOARD. GEORGE M. HENRIE, St. Louis, Mo. Filed Oct. 22, 1921. Serial No. 509,594. 4 Claims. (Cl. 68—10.)

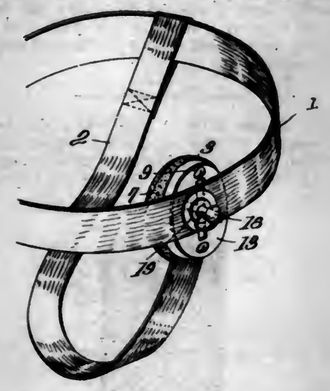
1. An ironing board having a clamp for engaging the edge of a table top or ledge and including a movable jaw, a standard pivotally mounted for swinging move-



ment into a plane parallel with the ironing board, a latch carried by the standard for engagement with a stationary catch when the standard is in its operative or supporting position, and a tensile connection between said latch and the movable jaw of the clamp yieldingly engaged with the former.

1,486,019. ECCENTRIC-ARM-REPLACEMENT GAUGE. JOHN M. HOPKINSON, Savannah, Ga. Filed June 14, 1922. Serial No. 568,336. 6 Claims. (Cl. 33—180.)

1. A device of the character described including a shaft having means whereby it may be centered upon and held in alignment with a driving axle, an arm mounted upon this shaft, and an angular indicator having its shank adjustably engaged with said arm for movement of the indicator toward or from the axis of the shaft.

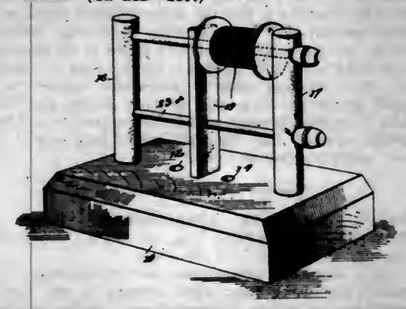


1,486,020. RAILWAY CAR. HENRY F. JEROLAMAN, Chicago, Ill., assignor, by mesne assignments, to Alfred H. Smith, Chappaqua, N. Y. Filed Aug. 18, 1921. Serial No. 493,440. 8 Claims. (Cl. 105—366.)

1. In a railway car, the combination of an under-frame formed with side sills and a plurality of cross-bearers having downwardly inclined end portions attached to said side sills below the upper edges of the latter, and a removable upper-frame seated directly on said cross-bearers and having longitudinal ribs beneath the floor thereof lying between the upper edges of the side sills and the inclined ends of the cross-bearers, substantially as described.

1,486,021. TRUSS. DEWITT C. JOHNSON, National Soldiers Home, Va. Filed Jan. 3, 1923. Serial No. 610,458. 2 Claims. (Cl. 128—124.)

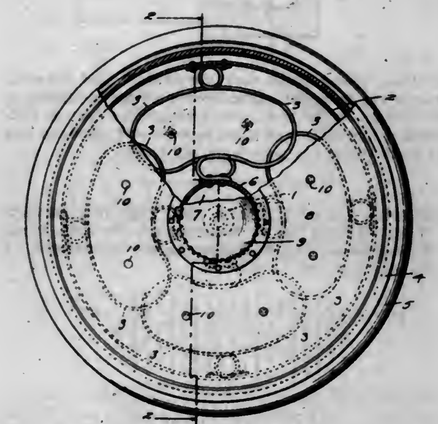
1. A pad for trusses composed of spaced ring-shaped members of different diameters, one of said ring shaped members being provided with a perforated plate, a rubber sponge arranged over said plate and secured to said member by a chamois covering, the other member being provided with top and bottom plates provided with cross-shaped slots, one of said plates being provided with projections and a belt for supporting said pad having a



bolt extending therethrough and passing through the cross-shaped slots, said bolt having a flange for clamping said belt against the projections of said plate.

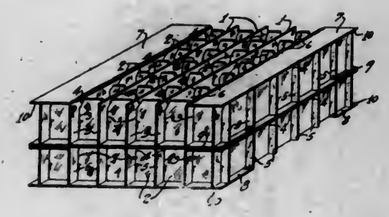
1,486,022. SHEAF CARRIER FOR BINDERS. HOWARD MILTON JOHNSTON, Toronto, Ontario, Canada, assignor to Massey-Harris Company, Limited, Toronto, Canada. Filed Aug. 28, 1922. Serial No. 584,876. 4 Claims. (Cl. 56—478.)

1. The combination with a harvester binder of a shaft journalled thereon adjacent the outer edge of the binder deck; a plurality of curved fingers having journals journalled on said shaft on axes transverse of the shaft; means for rocking the shaft to swing the fingers up and down; crank arms formed on the ends of the journals of the fingers; a connecting rod pivotally connected with said crank arms; and means for longitudinally moving said connecting rod simultaneously with the rocking of the shaft.



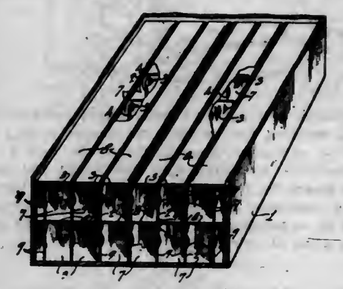
1,486,023. SPOOL HOLDER. WILLIAM KEIM, Brooklyn, N. Y. Filed Sept. 10, 1921. Serial No. 499,699. 1 Claim. (Cl. 242—139.)

A spool holder including a base having openings in the top face thereof, removable posts having reduced ends for insertion in said openings, a central partition



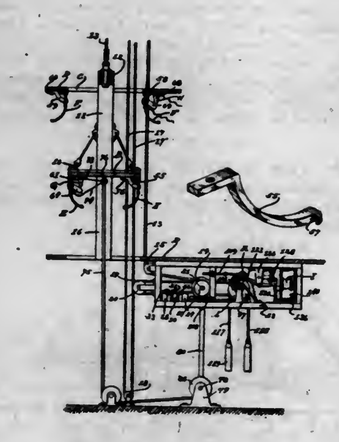
post adapted to be secured in certain of the said openings in the base, said removable posts and central partition post being provided with aligned apertures therein, and rods extending through said openings of the respective posts.

1,486,024. SPRING WHEEL. ARTHUR H. KUTSCHE, Monroe, Mich. Filed May 2, 1923. Serial No. 636,187. 3 Claims. (Cl. 152—51.)



2. A spring wheel having a hub, a felly, resilient spokes, said spokes each having a loop, each loop having its terminals reversed and formed into auxiliary loops, said auxiliary loops being secured to said hub and felly, said spokes being arranged in pairs, and the different spokes of each pair being reversed and having their auxiliary loops in overlapping relation.

1,486,025. EGG CASE. BERTHOLD A. LANGE, St. Louis, Mo. Filed Nov. 24, 1922. Serial No. 602,973. 1 Claim. (Cl. 217—34.)



A cellular filler or case for egg crates comprising a plurality of intersecting strips of material spaced from each other to provide a series of egg-cells, predetermined strips adjacent the end walls of said filler being equipped with integral extensions on one longitudinal edge bent at right angles to form parallel pairs of reinforcing flanges, the latter covering the outer rows of cells and projections of said strips, and one pair of flanges being on top of the filler and the other pair on the underside thereof, and said pairs being disposed at right angles to each other.

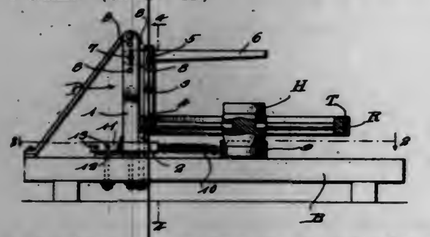
1,486,026. EGG CASE. BERTHOLD A. LANGE, St. Louis, Mo. Filed Nov. 24, 1922. Serial No. 602,974. 5 Claims. (Cl. 217—31.)

1. An egg-crate filler formed of flexible strips arranged transversely of each other so as to form pockets and each of the strips extending in one direction only carrying a strip extension forming a lid for each individual row of pockets and a floor on the superposed row of pockets.

1,486,027. ELEVATOR SAFETY DEVICE. FRANK E. MAYOTTE, Adams, Mass. Filed July 3, 1922. Serial No. 572,548. 11 Claims. (Cl. 187—40.)

5. The combination with an elevator car and a hoistway, a drum for raising and lowering the elevator car, means for operating said drum including a drive pulley operatively connected to the drum, and a pair of drive belts normally disposed on opposite sides of the drive pulley for operating the drive pulley in different directions, belt shifting means for moving either one of the belts on and off of the drive pulley, of a safety appliance for the elevator including circuit closers carried by the elevator car and by the sides of the hoistway, means for operating the circuit closers carried by the elevator car and hoistway, a pair of electromagnets, the energizing of which is controlled by the circuit closers, a shaft, means for operating the shaft in one direction, means for rotating the shaft in the opposite direction, means operatively connecting the shaft with the belt shifting means, and means controlled by the electromagnets for preventing operation of said shaft rotating means.

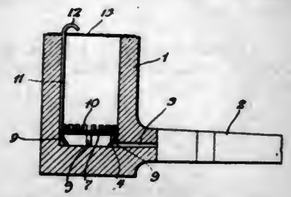
1,486,028. FISH BAIT. MURRY M. MEIGHEN, Marion, Ind. Filed May 11, 1922. Serial No. 560,081. 1 Claim. (Cl. 43—35.)



An artificial bait having a hollow body portion, hooks pivotally mounted for swinging movement in said body portion for extension laterally therefrom, and a draft loop operatively connected with the hooks and having terminal means for the attachment of the line, the hook extending movement of the draft loop being frictionally retarded by engagement of the side walls of the cavity with the arms of said loop.

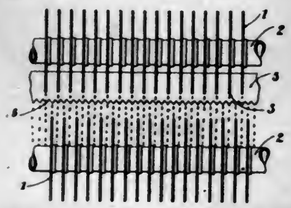
1,486,029. DOOR BOLT. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed June 27, 1921. Serial No. 480,575. 3 Claims. (Cl. 292—143.)

1. In a device of the character described, a casing, a bolt slidable in the casing, a lever mounted on said casing, and a cam supported by said bolt, said cam having a contacting surface cooperating with said lever extending from side to side of said bolt, and curved to provide an extensive rolling contact between the cam and said lever for a substantial extent of the throw of the bolt.



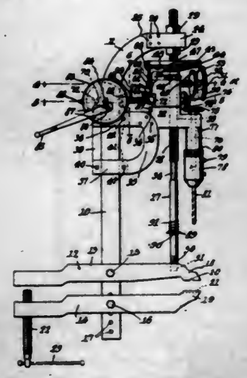
1,486,030. TIRE REMOVER. JOHN W. PENCE, Buffalo, Kans., assignor of one-half to George B. Blackburn, Chanute, Kans. Filed Jan. 2, 1923. Serial No. 610,301. 3 Claims. (Cl. 157—11.)

1. A tire remover comprising a press for forcing the wheel rim from the tire, said press having a ledge to support the tire and a tire engaging stop to prevent movement of the wheel rim onto said ledge, means for supporting the wheel with its tire resting on said ledge, including a movable hub-receiving collar, and a spring having one end anchored to a portion of the press and its other end engaged with said collar to move the wheel and retain the tire in contact with said stop when the spring is stretched.



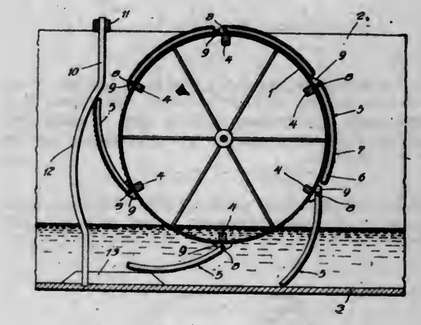
1,486,031. ATTACHMENT FOR TOBACCO PIPES. JOSEPH FLOYD PHILLIPS, New Orleans, La. Filed Nov. 8, 1921. Serial No. 513,770. 1 Claim. (Cl. 131—12.)

A charge supporting device for tobacco pipes, comprising a skeleton frame of ring form having a large central opening and supporting bars therein, and spaced apart lugs and elongated pieces at the outer peripheral marginal edge of said ring, the lugs being bent upwardly at right angles to the frame for contact with the inner wall of a pipe bowl to center the frame therein, and the



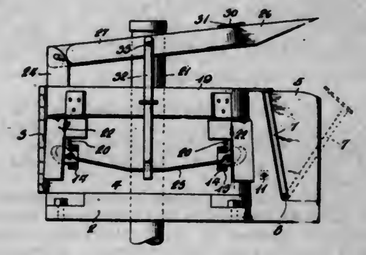
elongated pieces being bent downwardly and inwardly beneath the frame for adjustably supporting the frame on the bottom of the bowl, and a reticulated bottom positioned on the frame and fitted between said upturned lugs for maintaining the bottom on the frame.

1,486,032. AIR SCRUBBING AND COOLING DEVICE FOR ALTERNATORS. MARIUS LÉON POUBCEL, Paris, France. Filed Oct. 24, 1922. Serial No. 596,696. 2 Claims. (Cl. 261—112.)



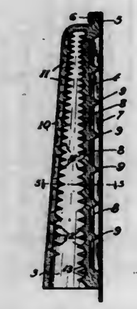
1. A liquid distributing and spreading device for air scrubbing and cooling apparatus of alternators which comprises superposed tubes provided with fins and mounted in a substantially horizontal position, the fins having their upper and lower parts cut in the shape of saw teeth.

1,486,033. DRILL. BENJAMIN RAEBEL, Milbank, S. Dak. Filed June 30, 1923. Serial No. 648,765. 8 Claims. (Cl. 77—19.)



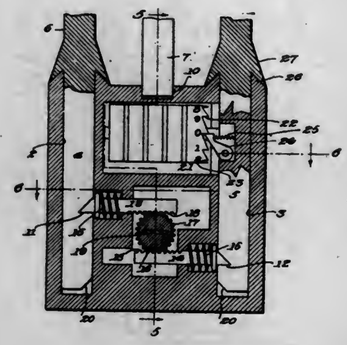
1. A drill of the character described comprising, a support, a carriage movable longitudinally of the support, a chuck secured to the carriage, means to rotate the chuck, means to feed the carriage longitudinally, and means to operate the rotating means and the feeding means including an element mounted to swing with relation to the carriage and also adapted to be bodily shifted to a plurality of positions with relation to the carriage, said element carrying a part to engage the feeding means when the element is in one position and to disengage the feeding means when the element is shifted to another position.

1,486,034. FISH SCREEN. CLARENCE H. RHUDY, Bishop, Calif. Filed Mar. 21, 1922. Serial No. 545,449. 3 Claims. (Cl. 210—174.)



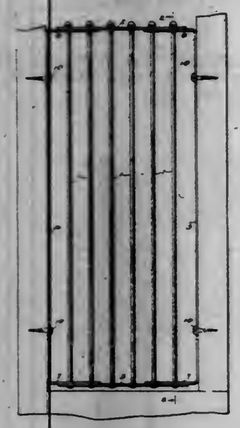
1. The combination with a waterway, of a screened cylinder rotatably carried between the sides thereof and above the bottom, paddle blades on the cylinder for rotation thereof, arcuate screened guards pivoted to the periphery of said cylinder to swing outwardly therefrom on descent and engage the bottom of the waterway, a vertical guide in said waterway and bowed outwardly of the cylinder to engage successive guards for gradual lowering thereof, and abutments on the bottom of the waterway adjacent said guide to engage and retain successive guards in raised position during an appreciable rotation of the cylinder.

1,486,035. PIPE-SUSPENDING APPARATUS. WILLIAM EUGENE RICH, Bradley, Ark. Filed Apr. 2, 1923. Serial No. 629,539. 3 Claims. (Cl. 34—249.)



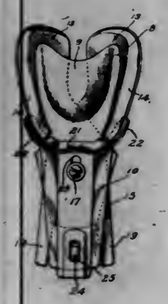
1. A device of the character described comprising a base formed of separable sections, means for securing said sections in assembled relation, a plurality of clutch dogs pivotally mounted through each of said sections, springs connecting the outer ends of said dogs and adjacent base sections, said springs acting to depress the inner ends of said dogs, rods connecting the outer ends of all of the clutch dogs on each section, depressible levers on each of said base sections, means for connecting said levers as a unit when said base is assembled, depending links pivoted to said levers on each section and engaged with said connecting rods whereby said rods and dogs are depressed on depression of the levers to elevate the inner ends of the clutch dogs.

1,486,036. RADIANT. FRANK V. RISINGER, Cleveland, Ohio. Filed Sept. 9, 1922. Serial No. 587,172. 6 Claims. (Cl. 126—92.)



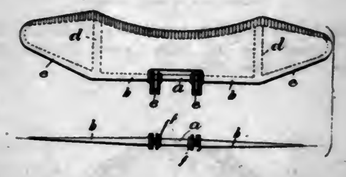
1. A radiant having parallel closed sides, inclined perforated front and straight recessed back, whereby dead air spaces are formed at the back of the radiant.

1,486,037. LOCK. JOHN ROUSSEAU, Chicago, Ill. Filed May 9, 1921. Serial No. 467,871. 2 Claims. (Cl. 70—110.)



1. In a lock, a body, a substantially U-shaped shackle having spaced shanks, said body provided with entrance openings to receive said shanks, said shanks having recesses upon their inner faces, a rotatable cylinder extending transversely of the body, teeth on said cylinder, a locking bolt upon opposite sides of the cylinder engaging said teeth, springs normally urging the outer ends of said locking bolts into the entrance openings for engaging the recesses in the shanks to retain the shackle in locking position, a recorder mechanism carried by said body, and means operable upon unlocking movement of said shackle to operate said recording mechanism.

1,486,038. DOOR GRILL. TURNER C. RUSH, Lexington, Ky., assignor to John B. Erd, Lexington, Ky. Filed Aug. 1, 1922. Serial No. 578,915. 3 Claims. (Cl. 20—71.)



1. A door grill comprising a plurality of parallel bars supported by end plates, a pair of lateral plates having slotted projecting limbs slidably engaged with the end plates and bars for the adjustment of the width of the grill, said lateral plates having bayonet slots to engage with suitable fastening means on the frame of the opening in which the grill is to be disposed.

1,486,039. DENTAL IMPRESSION TRAY. JUAN DE JESUS SANTOS, New York, N. Y. Filed Dec. 5, 1923. Serial No. 678,707. 2 Claims. (Cl. 32—6.)

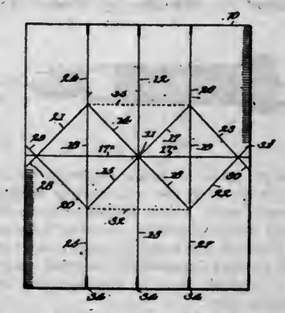
1. In a dental impression tray, a base plate including an extension at one end, side sections including intermediate plates arranged in superimposed relation pivotally connected to said base plate and having extensions at adjacent ends projecting outwardly beyond the longitudinal edges of the extension of said base plate when the side sections are in contracted position, said extensions of the plates of said side sections forming handles for swinging the side sections about their pivotal connection with said base plate, and a front section superimposed upon the extension of said base plate and capable of longitudinal movement with respect to said plate when the extensions of said side sections are moved in one direction.

1,486,040. TUNED MECHANICALLY-OSCILLATING SYSTEM. GEORG HEINRICH SCHIEFERSTEIN, Charlottenburg, near Berlin, Germany. Filed Aug. 24, 1921. Serial No. 495,142. 7 Claims. (Cl. 115—28.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The method of propulsion in a fluid medium, which consists in setting up high frequency oscillations in a flexible blade by vibrating it at a rate of speed synchronized or in tune with the natural period of oscillation of said blade.

1,486,041. PORTABLE FIRE EXTINGUISHER. KARL SCHMIDT, Neuruppin, Germany. Filed July 13, 1923. Serial No. 651,414. 2 Claims. (Cl. 299—95.)

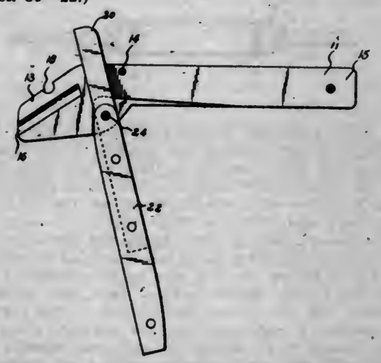
1. In a portable liquid fire extinguisher of the kind described having plural discharge tubes in connection with a common discharge nozzle, a ball valve for normally closing one of said tubes when the other is functioning, and means for holding said ball valve open when the extinguisher is being charged with liquid.



1,486,042. GALVANIC ELEMENT. RICHARD SCHUSTER, Berlin-Halensee, Germany, assignor to Schuster-Adams Chemical Company, a Corporation of Delaware. Filed Aug. 25, 1923. Serial No. 659,380. 10 Claims. (Cl. 204—38.)

1. A galvanic element having a carbon electrode and a zinc electrode arranged in two electrolytes, the carbon electrolyte comprising an alkali bichromate, sulphuric acid and water and the zinc electrolyte, a solution of an alkali, to which sulphuric acid has been added until neutralization is attained.

1,486,043. PAPER BAG. ISABELLA SCHWARTZ, New York, N. Y. Filed May 26, 1922. Serial No. 563,899. 4 Claims. (Cl. 229—61.)

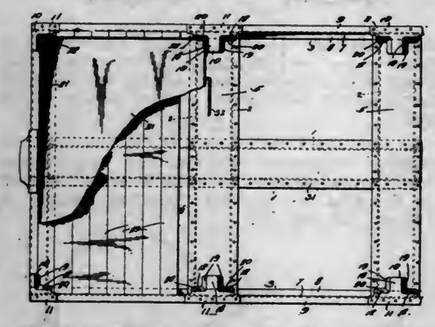


3. An oblong blank of paper for forming a paper bag, characterized by an uneven number of longitudinal fold lines extending substantially throughout its length, and

by an even number of medial fold lines, the latter constituting two squares with their inner corners together

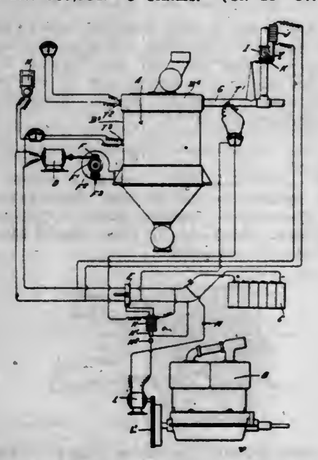
in coincidence with the intermediate longitudinal fold line and whose walls are foldable with respect to each other.

1,486,044. TOOL. GEORGE SHELLCROSSLEE, Canton, Ill. Filed Apr. 30, 1923. Serial No. 635,683. 1 Claim. (Cl. 86—22.)



A device of the class described comprising a stationary member formed in longitudinal sections and each including a head offset therefrom, the offset portions having channels therein adapted to form a bore for the fuse, a blade holder operating between said sections, a blade mounted in the holder and adapted to be moved to position for causing said blade to pass longitudinally through the bore, said blade holder including parallel metallic strips having registering apertures and the blade also having an aperture, and a pivot member passing through all of said apertures and through the heads.

1,486,045. LIFT TRUCK. JACOB P. SHUFORD, Gaffney, S. C. Filed Mar. 29, 1923. Serial No. 628,480. 2 Claims. (Cl. 254—2.)



1. A lift truck comprising a frame, bearings thereon near the corner portions of the frame, two spaced shafts journaled in the bearings, cams fast on the shafts near the corner portions of the frame, short plates hinged to the corner portions of the frame and resting on said cams, said plates being widely separated both longitudinally and transversely of the frame and having ridges extending in widely separated alinement to initially receive the load, said plates having angular end portions adjacent the ridges to support the load in the raised positions of the plates, and means to rotate the shafts.

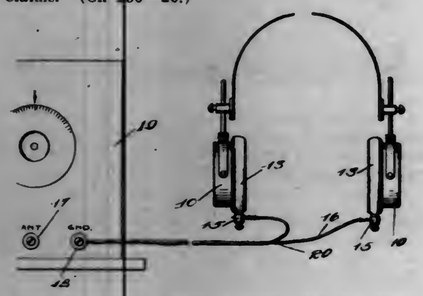
1,486,046. COMPARTMENT FREIGHT CAR. ALFRED H. SMITH, New York, N. Y. Filed July 29, 1920. Serial No. 399,677. 15 Claims. (Cl. 105—366.)

9. The combination with a less than car load lot compartment, of a casting depending from said compartment at each corner thereof below the floor of the compartment and provided with a key way.

1,486,047. GAS PRODUCER. DAVID J. SMITH, London, England, assignor, by mesne assignments, to Thomas G. Tulloch, London, England. Filed Mar. 29, 1920. Serial No. 369,514. 8 Claims. (Cl. 48—87.)

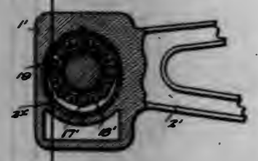
1. A method of operating a gas producer, which comprises controlling the output of gas electrically and automatically in accordance with the temperature of the fire within the producer.

1,486,048. METAL RAILWAY TIE AND RAIL FASTENER. WARREN SMITH, Los Angeles, Calif. Filed July 17, 1923. Serial No. 652,130. 3 Claims. (Cl. 238—272.)



1. A railway rail fastener comprising a chair member including an intermediate portion with vertical sides and horizontal top and adapted to be rigidly attached

to a railway tie, said intermediate portion having diagonally opposite slots, each slot extending into both the vertical sides and horizontal top, and diagonally opposite apertures in the vertical sides, tie bolts extending through said apertures and provided respectively with



hooked terminals extending through said slots and adapted to bear over the flanges of railway rails from opposite sides, and clamp nuts engaging said bolts and bearing against the adjacent vertical portion of the chairs.

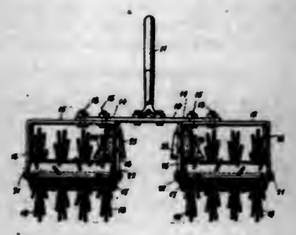
1,486,049. WIRELESS TELEGRAPH AND TELEPHONE INSTRUMENT. GEORGE B. SPRING, Milford, N. H. Filed Oct. 21, 1922. Serial No. 596,011. 3 Claims. (Cl. 250—20.)

1. An aerial for wireless receiving sets embodying a receiving head set comprising a metallic cap carried by the receiver of the head set and adapted to engage against the ear of the wearer, and an electrical connection between said metallic cap and the aerial binding post of the receiving set.

1,486,050. JOURNAL BOX. LEO K. STAFFORD, Detroit, Mich., assignor to The Stafford Roller-Bearing Car Truck Corporation, Lawton, Mich., a Corporation of New Jersey. Filed Jan. 27, 1920. Serial No. 354,425. 2 Claims. (Cl. 64—62.)

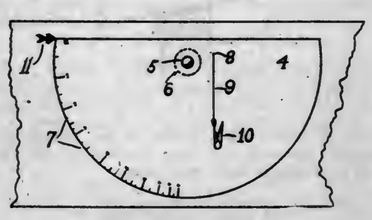
1. A roller bearing for railway trucks comprising a boxing having a bore therein for receiving the axle spindle having lubricant openings in the bottom thereof, the wall of the bore and the spindle each being provided with a groove, a case hardened tube located in the bore having openings registering with the openings in the boxing and having a rib thereon engaging the groove, a case hardened tube carried by the spindle and having an interior rib engaging the groove in the spindle, a roller cage located between said tubes, said cage consisting of a series of rings and bars connecting the rings together, the inner rings contacting with each other, a plurality of rollers carried by each pair of rings and retaining means for the cage.

1,486,051. POWER-OPERATED HAND IMPLEMENT. JOSEPH STEJSKAL, Jr., Oak Park, Ill. Filed Jan. 25, 1923. Serial No. 615,430. 4 Claims. (Cl. 29—26.)



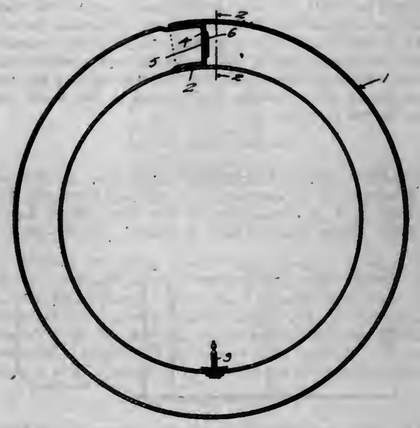
1. A power operated hand implement comprising a handle part, a rotary power transmitting member mounted in said handle part, means including a flexible torsion shaft and an interchangeable connector adapted to effect a specific mode of operation for supplying rotary power to one end of said transmitting member and means for attaching a working tool to the opposite end of said transmitting member.

1,486,052. PRINTING ROLLER. JAMES STEPHENSON, Augusta, Me. Filed Apr. 23, 1923. Serial No. 634,099. 1 Claim. (Cl. 271—51.)



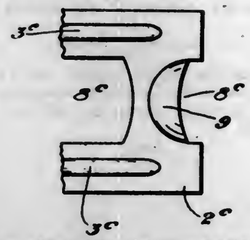
A pinch roller for presses comprising a roller body having externally reduced end portions with shoulders between the larger surface portions of the roller body and the reduced ends, said shoulders being undercut, a collar fitted for axial withdrawal against the end of the roller body and having a flange adapted to snugly fit over the outer part of the reduced end portion of the roller body, said flange being continuous all around the roller and having its free edge portion under-cut and lying in axially spaced relation from the under-cut shoulder, and two semicircular sections fitting together to constitute a continuous ring, the side edges of the ring being beveled to fit within the under-cut shoulder and flange edge, said ring projecting beyond the surface of the roller body and beyond the surface of the flange.

1,486,053. GARDEN CULTIVATOR. JONATHAN M. STEWART, Canton, Ohio. Filed Aug. 3, 1922. Serial No. 579,420. 7 Claims. (Cl. 97—58.)



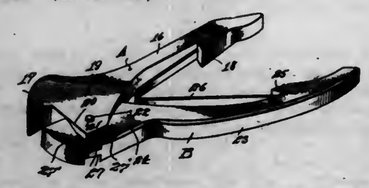
1. A cultivator comprising a cross bar, brackets eccentrically pivoted at each end of the bar, rotatable members secured to said brackets having radially extending spikes thereon, said brackets being adapted when turned on their pivots substantially a half revolution to bring the rotatable members close together or to space them a distance apart sufficient to straddle a row of growing plants and means for holding the brackets in their adjusted position.

1,486,054. LETTER SCALE. ROBERT ALVIN STEVENSON, Lancaster, Ohio. Filed Mar. 23, 1921. Serial No. 454,643. 1 Claim. (Cl. 265—61.)



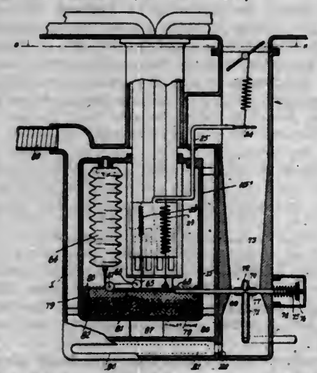
In a device of the class described, the combination with a supporting element having an indicating mark thereon, of a relatively flat member having an arcuate outer edge thereon struck from a center within the area of said member, means fixedly pivoting the member at the center from which said arcuate edge is struck to the support upon which said indicator mark is positioned, whereby the member depends under its own weight to have said arcuate edge lowermost with respect to the pivotal mounting of the member, and means providing delineations upon the plate adjacent the outer arcuate edge thereof extending from said indicator mark upon the support below the pivot point of the member when the same is normally suspended, a flexible cord eccentrically pivoted upon the member upwardly of the pivotal point of the member upon said support, and an article gripping device supported upon the lower free end of said flexible cord.

1,486,055. INNER TUBE FOR PNEUMATIC TIRES. JAMES F. STRANAHAN, Milwaukee, Wis., and JOHN F. MORA, Oakland, Calif. Filed Apr. 10, 1922, Serial No. 551,078. Renewed July 12, 1923. 2 Claims. (Cl. 152—18.)



1. A device of the character set forth comprising a tube having its ends disposed one within the other and vulcanized, a wall formed on the innermost end of the tube and provided with an opening, and a reinforcing collar carried by said wall and surrounding the opening.

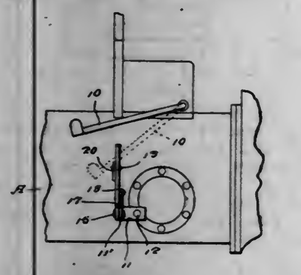
1,486,056. PALLET FOR BLOCK-MAKING MACHINES. FRANCIS J. STRAUB, New Kensington, Pa., assignor to Crozier-Straub, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,890. 1 Claim. (Cl. 25—121.)



A molding pallet made of comparatively thin sheet metal and provided with an upwardly extending rib at each side and with transverse core openings, and upwardly pressed hand-engaging portions.

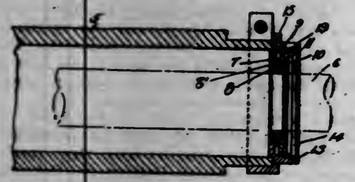
1,486,057. BOLT HOLDER. JOHN A. SWITZER, Parr, Ind. Filed Mar. 27, 1923. Serial No. 628,055. 1 Claim. (Cl. 81—13.)

A bolt holding tool for use in connection with an engine crank-case and comprising a pair of pivotally connected bolt head gripping jaws and operating shanks, said shanks being arranged to bear against the side of the crank-case to prevent turning of the tool under the turning tendency of the bolt, and having cooperating stop means for limiting the opening movement of the jaws beyond a parallel position, the inner faces of the outer ends of the shanks having shoulders, and a V-shaped spring between the shanks and having its legs retained by said shoulders for urging the jaws into gripping engagement with the head of the bolt and for supporting the tool in such position without external aid.



1,486,058. APPARATUS FOR SUPPLYING VAPORIZED LIQUID FUEL TO INTERNAL-COMBUSTION ENGINES. PERCIVAL L. TA'BOIS, New York, N. Y., assignor of one-half to William B. Robeson, Port Huron, Mich. Filed Aug. 26, 1920. Serial No. 406,082. 14 Claims. (Cl. 123—133.)

1. A fuel vaporizing device comprising a closed casing, means for maintaining a level of liquid fuel therein,



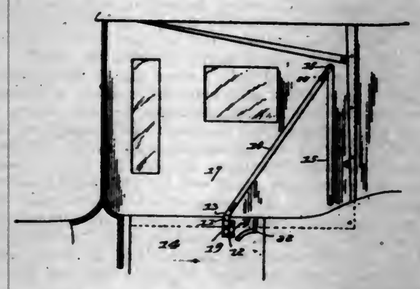
a jacket surrounding said casing, means for passing heated air through said jacket, means for producing and maintaining rarefaction in said casing in order to cause said fuel to vaporize quickly, and a plurality of means directing said vapor and the air of said jacket in proper proportion to the cylinder of an internal combustion engine.

1,486,059. CLUTCH-LEVER LOCK. LEO TRANK, Chico, Calif., assignor to George Trank, Hamilton City, Calif. Filed Aug. 5, 1921. Serial No. 490,035. 2 Claims. (Cl. 74—81.)

1. A tractor attachment comprising a bracket adapted to be secured to the tractor, a lever pivoted upon the bracket and arranged in juxta-position to the clutch pedal, a downwardly inclined hook-like portion constituting one terminal of the lever and adapted to engage the said pedal when the latter is depressed and hold the clutch disengaged, and a partially bifurcated lever pivotally secured to said first mentioned lever adjacent the hook like extremity for engaging and releasing said pedal upon further depression of the latter.

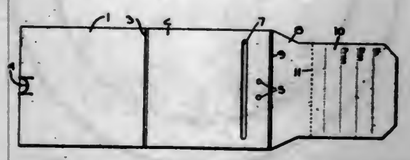
1,486,060. GREASE RETAINER. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed Oct. 28, 1921. Serial No. 511,200. 1 Claim. (Cl. 286—7.)

In a grease retainer, a body portion having an inner circular flange formed with an inclined wall, the side wall of the grease retainer having its inner surface inclined, a washer positioned in the grease retainer and having an inclined wall cooperating with the inclined wall of the flange, to grip a packing therebetween, said grease retainer having a circular flange at its outer end extending inwardly from the side wall thereof, a coiled spring disposed between the circular flange at the free end of the grease retainer, and the washer and said coiled spring adapted to press the washer into close engagement with the packing positioned between the washer and first mentioned flange to compress the packing.



1,486,061. COMBINED FOLDING MAP AND TOURIST'S GUIDE. IRVIN M. VARNER, Boise, Idaho, assignor of one-fifth to John D. Selby, Barber, Idaho. Filed Apr. 2, 1923. Serial No. 629,380. 1 Claim. (Cl. 35—6.)

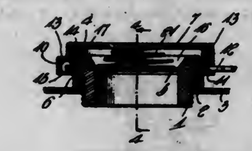
In a device of the character described, a vertically disposed blank, a horizontally disposed blank superimposed upon said vertically disposed blank, a supporting member secured to said blanks a pad secured to the overlapping portions of said blanks, pads secured to end



portions of said blanks outside of the margin of said overlapping portions and maps secured to the opposite side of said blanks from said pads.

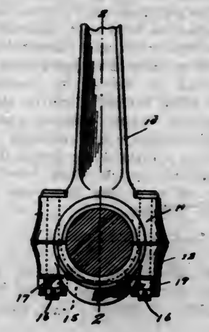
1,486,062. DOOR-CURTAIN SUPPORT FOR VEHICLES. ARNOLD A. VINES, Princeton, W. Va. Filed Mar. 2, 1922. Serial No. 540,411. 1 Claim. (Cl. 296—139.)

In combination with a vehicle door and a flexible door curtain supported above the door, a curtain support comprising a socket member mounted in the vicinity of the free edge of the door, a standard member which is rigid throughout its length, one end of the standard being secured in the socket member, an intermediate portion of the standard bearing upon the upper edge of the door and the upper portion of the standard being disposed above the upper edge of the door and inclined rearwardly and with its upper end disposed beyond the vertical free edge of the door, means for attaching the curtain to the standard, a stretcher arm pivotally connected with the upper end of the standard and normally disposed vertically beyond the vertical free edge of the door and means for attaching the curtain to the lower portion of the stretcher arm.



1,486,063. MARKING TICKET. GUSTAF A. WALLIN, Flushing, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1922. Serial No. 579,433. 1 Claim. (Cl. 40—25.)

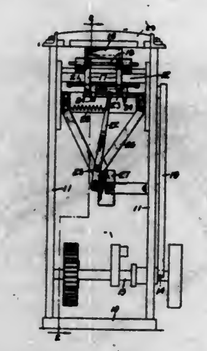
A marking ticket comprising two connected foldable main flaps adapted to receive between them the article to be marked, one main flap near its free end having a transverse slot and the other main flap near its free end having a fastening device provided with a portion adapted to pass through the fabric and the slotted flap and engage therewith, a covering flap connected to the free end of the slotted main flap, foldable thereupon



over the fastening device and of a width enabling it to be passed through said slot and extend between the main flaps, and a coupon flap separably connected to the free end of the covering flap, normally concealed between the main flaps, and removable without disturbing the functioning or external appearance of the ticket when in marking position.

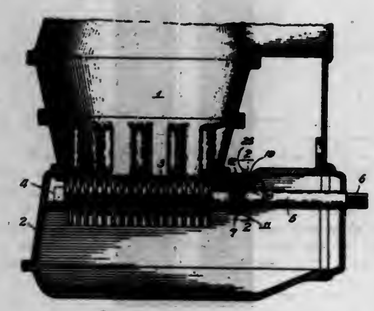
1,486,064. TANK CLOSURE. JOSEPH A. WARREN, Manchester, N. H., assignor of one-half to Cleophas J. Giroux, Manchester, N. H. Filed Nov. 7, 1921, Serial No. 513,507. Renewed May 21, 1923. 3 Claims. (Cl. 220—40.)

1. A device of the character described comprising a neck having a valve seat, a cap for fitting upon the outer end of said neck, a valve loosely fitting in said cap, abutment means carried by the cap for limiting outward movement of the valve, and a spring in the cap engaging the valve to hold the valve plate in tight engagement with the valve seat, when the cap is secured upon the neck.



1,486,065. CONNECTING-ROD BEARING. PLEASANT M. WESTBROOK, Ashland, Ga., assignor to Grover Alexander McFarland, Toccoa, Ga., and Allen Watkins Beddingfield, Atlanta, Ga. Filed Sept. 23, 1920. Serial No. 412,342. Renewed Aug. 11, 1923. 1 Claim. (Cl. 64—55.)

A bearing including a stationary bearing member, a movable bearing member, confronting lugs formed on the bearing members, bolts passed through said lugs for connecting the bearing members together, a spring associated with the movable bearing member and having bifurcated portions to receive said bolts whereby the said spring is held in position for use for the purpose specified.

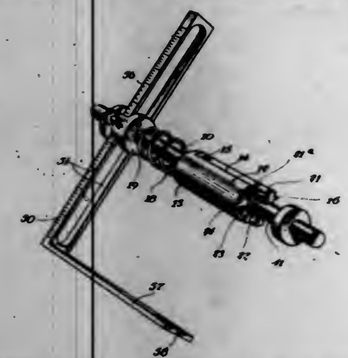


1,486,066. SAFETY ATTACHMENT FOR PAPER-BOX MACHINES. ISAAC WINGARD, ARTHUR W. SAXON, and JULIAN D. STONE, Nashville, Tenn. Filed Dec. 27, 1921. Serial No. 525,049. 6 Claims. (Cl. 192—132.)

1. An attachment for paper box ending machines comprising a die, a pair of brackets for pivotally supporting the die, blocks adapted to prevent pivotal movement of the brackets, a rod slidably supporting the blocks, a lever attached to the blocks, a bracket on which the lever is pivoted, a spring for moving the lever in one direction

and a cam mounted in stationary relation to the lever for moving it in the other direction, substantially as set forth.

1,486,067. GRATE HANGER FOR FURNACES. WILLIAM L. WYMER, De Kalb, Ill., assignor to Standard Foundry & Mfg. Company, De Kalb, Ill., a Corporation of Illinois. Filed May 19, 1921. Serial No. 470,990. 12 Claims. (Cl. 126—181.)

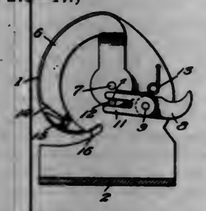


1. In a furnace construction having a base and a grate member, a support for each end of said grate member, the support at one end of the grate member having a removable supporting member for supporting said end of the grate member, a lock member located exteriorly of the base and having parts thereof extending within said base and cooperating with said supporting member for normally holding the same against displacement.

1,486,068. WIREWORKING MACHINE. AH LEON STANLEY YU, Hongkong, China. Filed Jan. 26, 1923. Serial No. 615,158. 12 Claims. (Cl. 140—77.)

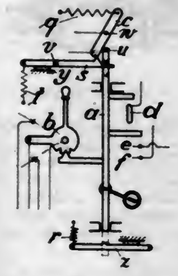
1. In a wire working machine, a post, a work table including a stock slidable on the post and having a section fixed to the post, said stock having a plurality of grooves constituting seats for the wires to be united and having ribs complementary to said grooves, a head integral with the fixed section of said stock and having a transverse opening therein adapted to receive the binding wire, a coil spring arranged on the post and engageable with the stock, a stationary die carried by the post within the stock, a movable die having a pair of bits, one of said bits being cooperable with the head for sev-

ering the requisite length of the binding wire and both of said bits being engageable with the severed length to partially bend the binding wire and to move it into



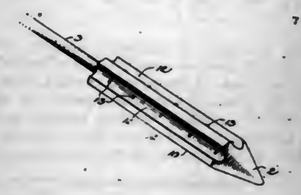
engagement with the stationary die, said stationary die being adapted to complete the bending of the binding wire.

1,486,069. GALVANIC ELEMENT. ALBERT ADAMS, Macon, Ga., assignor to Schuster-Adams Chemical Company, a Corporation of Delaware. Filed Aug. 25, 1923. Serial No. 659,329. 5 Claims. (Cl. 204—38.)



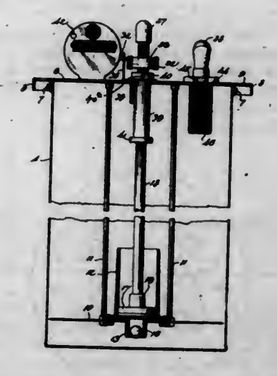
5. A galvanic element comprising a zinc receptacle a carbon electrolyte consisting of bichromate of soda, sulphuric acid and water, a zinc electrolyte consisting of a solution of potash, one electrolyte resting upon the other but insulated therefrom throughout the larger part of their contiguous surfaces as described.

1,486,070. THREAD TIER. HARRY BOEDKER, Plymouth, N. C. Filed Feb. 25, 1922. Serial No. 539,254. 7 Claims. (Cl. 270—17.)



5. A thread tier including a head, a lever and a trigger pivoted thereto and slidably connected with each other, the trigger protruding at one end beyond the edge of the head in position to be engaged by the threads in tying the knot and the lever curved substantially in conformity with the adjacent edge of the head, the head having an open slot in one edge to receive the threads and the lever having a V-shaped notch or recess to receive and hold the threads and a knife adjacent thereto to cut the threads.

1,486,071. COMBINED LOCKING APPARATUS FOR THE DISTRIBUTING SWITCHES OF ELECTRIC-LIGHTING INSTALLATIONS OF MOTOR CARS. JACQUES BOHLI, Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed July 12, 1922. Serial No. 574,518. 2 Claims. (Cl. 200—44.)



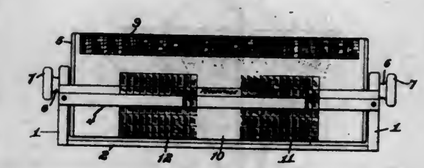
1. A combined locking apparatus for the distributing switches of electrical installations for motor-cars, including a lighting control switch, a biased ignition switch, a movable locking member capable of resting in three positions, viz, a locking position, an unlocking mid-position and a terminal position for switching in a starting motor, a biased pivoted locking pawl, and a projection on said locking member coacting with part of said pawl, said locking pawl tending to hold said ignition switch in a non-operative position when said movable locking member rests in its mid-position, and being forced aside when said ignition switch is moved by external pressure, said locking pawl being carried along by the said projection on said movable locking member and freeing said ignition switch immediately said movable locking member is brought into its third or terminal position for starting; said ignition switch when freed being moved automatically by its own bias from the non-operative into the operative position.

1,486,072. FIRE LIGHTER. BERTRON K. BOYD and HENRY KIRSCH, Detroit, Mich. Filed Nov. 8, 1922. Serial No. 599,709. 5 Claims. (Cl. 158—10.)

1. A fire lighter comprising a hollow burner head having an exterior longitudinal groove open at one end at the outer end of the head and formed with orifices opening into the bottom of said groove, and means for supplying gas under pressure to the hollow head including an imperforate tubular member and a gas supply conduit directly connected to said member to supply gas thereto under full pressure.

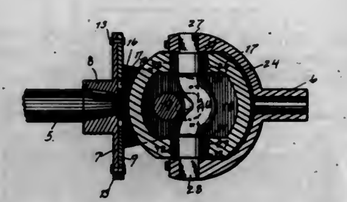
1,486,073. OIL SUPPLY AND DELIVERY APPARATUS. JOHN W. COATES, Detroit, Mich. Filed Jan. 18, 1923. Serial No. 613,403. 4 Claims. (Cl. 221—103.)

1. A device of the character described, comprising a tank having a top, a supporting member in the tank near the bottom thereof, means for suspending said member from the tank top, a cylinder carried by said supporting member, a check valve to permit free flow of fluid into the lower end of said cylinder from the tank, a piston in said cylinder, a tubular piston rod for said piston and communicating with the interior of said cylinder through said piston, a check valve to permit free flow of fluid from said cylinder into said rod and to prevent flow of fluid into said cylinder from said rod, an operating handle operatively connected to said piston rod to reciprocate the same, a flexible conduit connected to the outer end of said piston rod, a nozzle member on the free end of said conduit, and a check valve in said nozzle, said valve being normally yieldingly held in closed position to prevent escape of fluid from the conduit and being opened by fluid under pressure within the conduit.



1,486,074. YARN-TUBE UNIT. CHARLES H. COLLINS, Amsterdam, N. Y. Filed Oct. 10, 1923. Serial No. 667,630. 5 Claims. (Cl. 139—10.)

2. A yarn tube unit comprising a metal angle having a series of perforations through one flange thereof, and a plurality of yarn tubes the upper part thereof soldered to the face of the perforated flange of said angle.



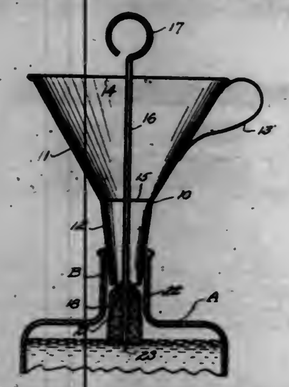
1,486,075. CALCULATOR. JAMES S. CRAIN, El Paso, Tex. Filed Sept. 12, 1922. Serial No. 587,775. 2 Claims. (Cl. 235—87.)

1. A calculator comprising a frame, a fixed indicating member having a transversely disposed units reference column and a longitudinally disposed column of figures subdivided into transverse columns containing the various figures, and a movable indicating member bearing a chart having a transversely disposed column of figures for cooperation with the units designating column of the fixed indicator and having columns of figures subdivided into longitudinal and transverse rows in registering

alinement respectively with the figures in the units column of said movable indicating member and with the figures in the subdivisions of the longitudinal column of the fixed indicating member.

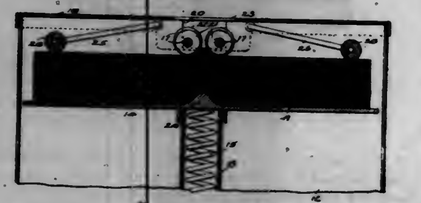
1,486,076. UNIVERSAL JOINT. IRSLE H. CUPPS, San Francisco, Calif. Filed Jan. 19, 1923. Serial No. 613,740. 3 Claims. (Cl. 64—91.)

1. In a device of the character described, a power shaft, a disc secured to said power shaft and having outwardly extending side pieces, a ball positioned between said side pieces, a yoke straddling said ball, the medial line of the arms of said yoke being removed 90° from the medial line of said side pieces, shafts extending between the opposite ends of said yoke and the opposite ends of said side pieces, and offsets formed in said shafts, substantially as and for the purpose specified.



1,486,077. PROCESS OF MAKING LITHOPONE. LOUIS C. DREFAHL, Lakewood, and EDWARD A. TAYLOR, Cleveland, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 6, 1922. Serial No. 541,582. 7 Claims. (Cl. 134—78.)

5. Process of making lithopone which comprises, mixing a solution of barium sulfid with a solution of zinc sulfate and adding a solution of sodium silicate of 42.5° Bé. containing sodium oxid and silica in the ratio of 3.25 to 1 in quantity amounting to from 1 to 2 per cent of the weight of the resulting precipitate in the dry state.

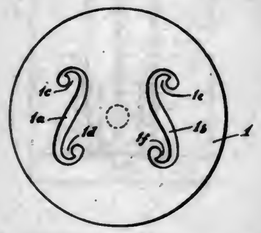


1,486,078. FUNNEL. JOSEPH-WILFRID DUMONT, Katahdin Iron Works, Me. Filed Dec. 23, 1922. Serial No. 608,671. 3 Claims. (Cl. 226—35.)

1. A funnel comprising a tapered body terminating in a reduced spout adapted for insertion within a filling opening in a receptacle to be filled, guides within the body, a tube slidable through said guides and having one end formed into a handle loop projecting above the top of the shell, both ends of the tube being open, and a buoyant stopper secured upon the lower end of the tube beneath said spout and adapted to be moved upwardly

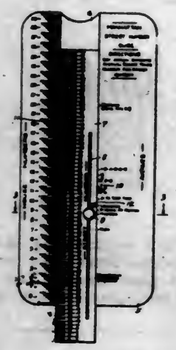
for closing the same when the level of liquid within the receptacle being filled reaches a certain point, said stopper being formed near its upper end with passages leading from the outside thereof to the tube, said tube being formed with holes registering with said passages.

1,486,079. HOLDER FOR PAPER NAPKINS. JOHN M. FERNANDEZ, New York, N. Y. Filed Aug. 15, 1922. Serial No. 582,080. 5 Claims. (Cl. 211—8.)



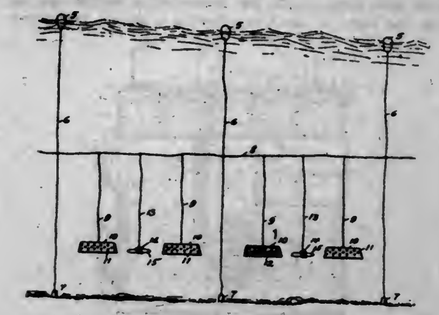
1. In a holder of the class described, a support adapted to receive stacked sheets, and a pair of pickup rollers above the support, each roller comprising a shaft, toothed disks on the shaft and sleeves loose on the shaft between the disks and adapted to assume an eccentric relation to the disks to cause detachment of the sheets tending to wind about the disks.

1,486,080. NONSKID TIRE HOOD. MARCUS FINK, New York, N. Y. Filed Nov. 7, 1922. Serial No. 599,592. 6 Claims. (Cl. 152—14.)



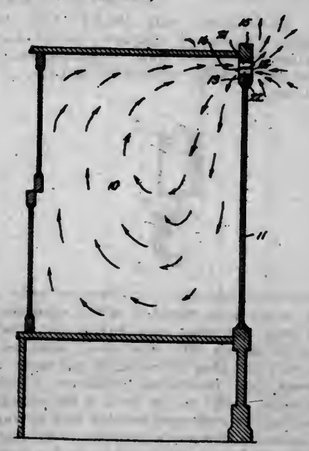
1. A non-skid tire hood including an elongate strap of flexible fibrous material, an elongate strap of flexible metal on the inner side of the strap of fibrous material, and cross chains at spaced points along the hood on the outer side of said strap of fibrous material, said cross chains being secured in place at opposite ends near the opposite side edges of the hood.

1,486,081. SOUND-PRODUCING DIAPHRAGM. HERMANN FISCHER, New York, N. Y., assignor to C. Brandes, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 24, 1922. Serial No. 596,630. 1 Claim. (Cl. 179—115.)



An electromagnetic sound reproducer, comprising in combination a casing, an electromagnetic mechanism carried therein, a diaphragm mounted in said casing in operative relation with said electromagnetic mechanism and adapted to be operated at the center thereof by said electromagnetic mechanism, said diaphragm containing a pair of ƒ-shaped apertures symmetrically located on opposite sides of the center of said diaphragm in parallel lines substantially spaced apart and equidistant from the point of actuation of said diaphragm by said electromagnetic mechanism.

1,486,082. COMPUTING DEVICE. CLARENCE B. FOWLER, New York, N. Y. Filed Feb. 1, 1923. Serial No. 616,364. 4 Claims. (Cl. 235—70.)

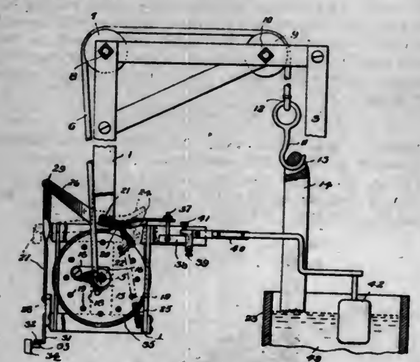


4. A new article of manufacture, including fixed and movable surfaces having indicia thereon designating the names of streets and the numbers of houses, and means on said surface for determining the location of a street and house number with respect to adjacent streets.

1,486,083. DEVICE FOR DRIVING FISHES. CHARLES KAATZ FREER, La Crosse, Wis. Filed Jan. 27, 1923. Serial No. 615,382. 4 Claims. (Cl. 43—4.)

4. A subaqueous alarm comprising a substantially hollow, perforated member, and a disk suspended within said hollow member in such a manner that water will pass through the perforations of said hollow member and vibrate the disk and cause it to contact with the hollow member to produce sound.

1,486,084. VENTILATOR. GEORGE W. GEARHART, Ashland, Pa. Filed Mar. 9, 1922. Serial No. 542,415. 3 Claims. (Cl. 98—32.)

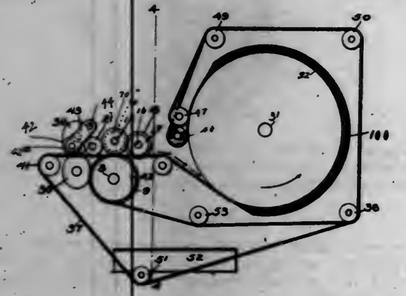


3. A ventilator of the character described comprising a rectangular frame and a shutter adjustably mounted therein for horizontal swinging movement, said shutter comprising a reversely curved blade adapted when adjusted to one position to close the space formed by said frame, and adapted in its other adjusted positions to form superposed passages provided with restricted outlet ends and enlarged inlet ends.

1,486,085. AMMETER. PHILO M. GELATT, La Crosse, Wis., assignor to National Gauge and Equipment Company, La Crosse, Wis., a Corporation of Wisconsin. Filed May 23, 1922. Serial No. 563,143. 2 Claims. (Cl. 171—95.)

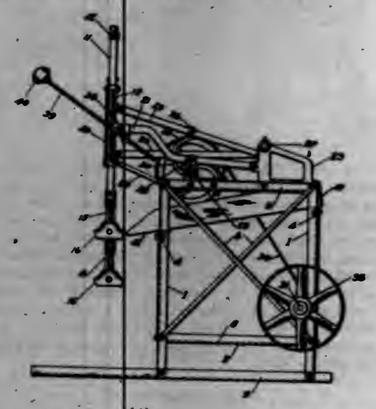
1. In an electrical measuring instrument, a main support, a single conductor located on said support and elevated above the base thereof, a unitary armature support comprising a base supporting member, an upper supporting member, a plurality of armatures located within said unitary support and between the upper and lower supporting members, said unitary supporting member being so located that the single conductor will project between the two armatures and in parallel relation thereto when the instrument is at rest.

1,486,086. METAL FEEDER FOR TYPE-CASTING MACHINES. JULIUS F. GRAESSLE, Fond du Lac, Wis. Filed Feb. 5, 1921. Serial No. 442,722. 2 Claims. (Cl. 22—80.)



1. In a metal feeding mechanism, a feeding shaft, an escapement disc rotatable thereon, a spring actuated pawl pivotally carried by said escapement disc, means on said shaft engaged by said pawl for connecting the disc to the shaft, an escapement mechanism including a lever arm, an escapement lever operated by said arm, a pin carried by said escapement lever for cooperation with said escapement disc to control rotation of the disc, a brake band about said escapement disc, a lever for moving said brake band into and out of braking position, and a float operated lever for controlling operation of said brake band operating lever.

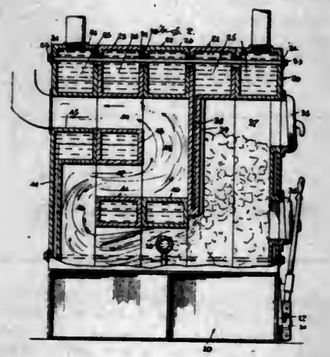
1,486,087. TOBACCO-STEMMING MACHINE. AARON GRODSKY, Cincinnati, Ohio, assignor to American Tobacco Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1921. Serial No. 521,820. 1 Claim. (Cl. 131—57.)



In a tobacco stemming machine having a front lower roller, rear upper and lower rollers having male and female knives at their central portions for cutting a stem from a leaf passing between the rear rollers, a front upper roller arranged between the rear rollers and front lower roller and having an annular groove aligned with said cutters to receive the stem of a leaf fed to the cutters, pivotally mounted arms carrying said front upper roller and adapted to permit the front upper roller to be raised while inserting a leaf beneath the same, pairs of upper and lower brushes diverging from said front rollers and adapted to smooth and clean a leaf as it passes between the front rollers, a stem stripping roller arranged rearwardly of the rear rollers and having a circular stripper wheel extending into the female cutter, a booking

drum arranged rearwardly of the stripping roller, guide rollers, the combination of a central pair of belts passing between the front rollers and rear rollers, beneath the stripper roller, around the drum and then over the guide rollers back to the lower front roller, two pairs of side

belts out of contact with the front rollers and passing between the rear rollers, beneath the stripper rollers, around the drum and then over the guide rollers back to the lower rear roller, and positive means for driving the brushes, front upper roller, rear rollers, stripper roller and drum.



1,486,088. MACHINE FOR TAMPING CONCRETE. CHARLES R. HARNY, Fredericktown, Ohio, assignor to The J. B. Foote Foundry Company, Fredericktown, Ohio, a Corporation of Ohio. Filed July 22, 1921. Serial No. 486,792. 1 Claim. (Cl. 25—41.)

In a machine of the character described, a series of vertically movable plungers having tamping feet, a series of lifter arms, means for adjustably connecting the forward ends of said lifter arms to said plungers, pivoted crank arms to which the rear ends of said lifter arms are adjustably connected, and means for alternately raising said lifting arms and their connected plungers and permitting them to drop by gravity.

1,486,089. SECTIONAL BOILER. MICHAEL EDWARD HERBERT, Chicago, Ill. Filed Sept. 23, 1921. Serial No. 502,816. 2 Claims. (Cl. 122—212.)

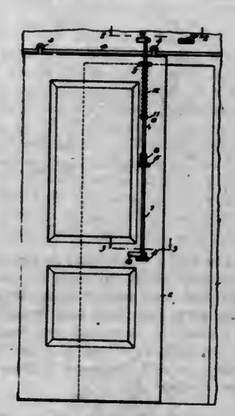
1. A sectional boiler including a base having a water tube bridge wall and comprising a front section and a complementary section defining a magazine, the complementary section including a depending hollow wall constituting a water leg and the back wall of the magazine, intermediate sections having transverse water tubes adjacent their lower ends abutting each other in assembly and one of said water tubes abutting the depending hollow wall of the complementary section adjacent the lower end thereof, said transverse water tubes overlying the water tube bridge wall, the intermediate section remote from the front of the boiler having a second transverse

water tube overlying its first mentioned transverse water tube, and a rear section including the back wall of the boiler and a transverse water tube abutting the second transverse water tube of the adjacent intermediate section, said last-mentioned transverse water tubes being also spaced from the top of said sections.

1,486,090. AUXILIARY AIR INLET AND MIXING CHAMBER. CHARLES E. KLUEGEL, JAMES JAGIELSKI, CHARLES HOLDMANN, and FRED A. HOLDMANN, Chicago, Ill. Filed Oct. 7, 1922. Serial No. 593,141. 1 Claim. (Cl. 48—180.)

A gas equalizer including a cylindrical body open at one end, a rotary plug mounted in the open end of the body, said body and plug each having an arcuate slot adapted to be moved into registering positions, means connected with the plug for rotating the same to bring said openings into registering positions, a cylindrical housing at right angles to the body, a flat engaging portion connecting the body and housing and having a plurality of openings therein to provide direct communication between the body and housing, and a mixing fan rotatably supported in the housing.

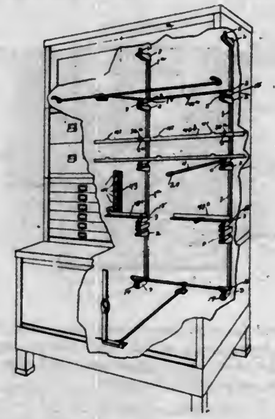
1,486,091. PROCESS FOR DEFECATING SUGAR JUICE. WILLIAM DODGE HORNE, Yonkers, N. Y. Filed Nov. 13, 1919. Serial No. 337,828. 3 Claims. (Cl. 127—50.)



1. A process for defecating sugar containing liquids which consists in adding to said liquids sufficient lime to give a complete precipitation of all substances precipitatable by lime and to impart a strong alkalinity to the sugar containing liquid, maintaining said liquid at a temperature ranging from 105° F. to 150° F., separating the precipitate, subjecting the solution of strong alkalinity to the action of a mixture of phosphoric acid and sodium carbonate to precipitate both the free lime and the lime contained therein in the form of dissolved lime salts, and then raising the temperature of the liquid to a point above 150° F. to facilitate the last mentioned reactions.

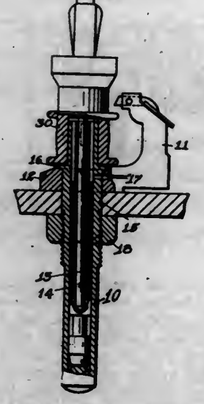
1,486,092. HOSE SUPPORTER. WILLIAM O. JOHNSTONE, North Tonawanda, N. Y. Filed Feb. 8, 1922. Serial No. 534,914. 7 Claims. (Cl. 241—6.)

1. A hose supporter comprising a limb encircling band and means for yieldably connecting the ends thereof, said yieldable connecting means comprising spring arms, transversely extending cross rods formed on the arms, a loop formed on the lower ends of the arms, a flap connected to the transversely extending cross rods, and a stud carried by the flap and adapted to be received in the loop.



1,486,093. ELEVATOR DOORLOCK. JOHN B. KAISER, Helena, Mont. Filed Sept. 8, 1922. Serial No. 586,913. 3 Claims. (Cl. 292—228.)

1. A door lock of the character described, comprising a support, aligned shaft sections mounted on the support and having a limited independent movement, a pawl carried by one shaft section, a ratchet block adapted to be engaged by the pawl, a spring tending to move the pawl to locked position, and a handle on the other shaft section to release the pawl.

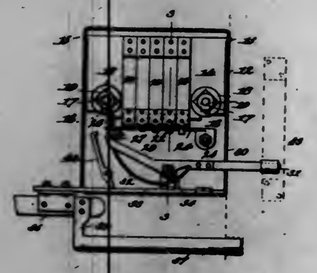


1,486,094. SECTIONAL-CASE LOCK. EDWARD G. LEHMAN, Canton, Ohio, assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Sept. 28, 1918. Serial No. 256,018. 4 Claims. (Cl. 45—94.)

1. A lock operating device for a sectional case including means for engagement with an adjacent section by sliding directly rearward thereon, an upright rock shaft mounted in the case, a crank arm at the upper end of the shaft having an upright post protruding above the case, and a crank arm at the lower end normally extending straight forward from the axis of the shaft having a radial slot adapted to be engaged by the upright post of an adjacent section, whereby an engagement and

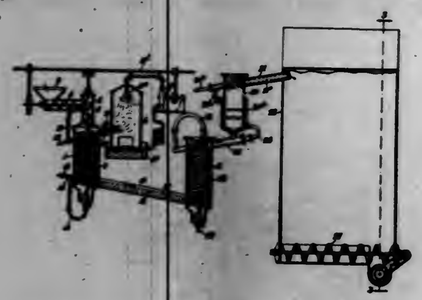
disengagement of the case sections may be normally made, and disengagement is prevented when they are swung to an inclined position by a rotation of the rock shaft.

1,486,095. SPINDLE BEARING. DAVID LEMOINE and GEORGE P. FOURNIER, Whitinsville, Mass. Filed Oct. 12, 1922. Serial No. 594,169. 2 Claims. (Cl. 64—73.)



1. As an article of manufacture, a spinning spindle bearing cylinder consisting of a cold rolled steel tubular part closed at the bottom and open at the top, having an integral collar near the top, and provided with a space therein for receiving a bolster and the bottom of the spindle and a collar therefor of cast steel, fitting on the cylinder just under the first named collar with a driving fit and provided with a projection thereon at one side having a passage communicating with the interior of the cylinder for delivering oil thereto.

1,486,096. ALARM MECHANISM. SALVATORE LIGAMMAR, Chicago, Ill., and BERNARD DALLIO, Lodi, N. J. Filed Oct. 1, 1921. Serial No. 504,810. 5 Claims. (Cl. 116—11.)

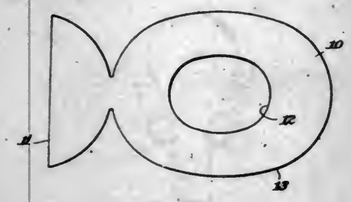


4. An alarm mechanism adapted to be secured to a closure member comprising a casing, a plate pivoted in said casing, a plurality of spring pressed firing pins

mounted on said plate and normally held in operative position by means of a trigger, a plurality of detonators, a slide mounted in said casing, a lever pivoted on said

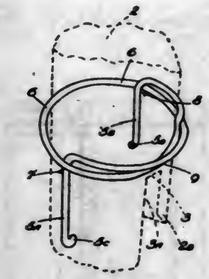
slide and held in engagement with the trigger when the same is in operative position, and means secured to a stationary member for engagement with the lever for releasing the detonators seriatim.

1,486,097. PROCESS AND APPARATUS FOR PURIFYING CAMPHOR. EVARTS G. LOOMIS, Newark, N. J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 16, 1918. Serial No. 222,859. 33 Claims. (Cl. 260—133.)



1. An apparatus for purifying camphor comprising a melting vessel, a baking vessel communicating therewith, means for heating said two vessels, and a vaporiser communicating with said baking vessel, said heating means being located with respect to said baking vessel for prevention of cooling of the melted camphor in its passage from the melting through the baking vessel to the vaporiser, and the baking vessel and the vaporiser being relatively assembled and located to provide for the maintaining of a body of molten camphor in said vaporiser in sealing relation to said baking vessel.

22. The continuous process of refining camphor comprising continuously and progressively melting the camphor, and continuously and progressively baking the camphor at a different location from that in which it was melted.

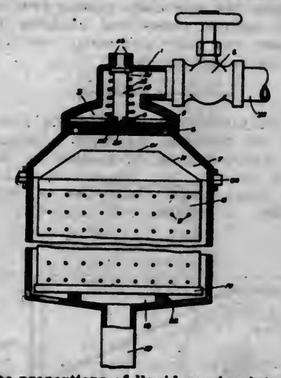


1,486,098. SUNSHADE FOR HATS. HILDRED MCGAFFEY, New York, N. Y. Filed Mar. 14, 1923. Serial No. 625,075. 2 Claims. (Cl. 2—112.)

2. As a new article of manufacture for use in conjunction with a hat, a shade element comprising a shade proper, a part integral with said shade proper adapted to be folded over a portion of said shade proper, and means for fastening the end of said part to said shade proper after the same has been folded to form a pocket for the reception of a portion of the brim of the hat therein in

the application of the element to the hat, and a marginal portion of the shade proper extending beyond the edge of the brim in the application of the element.

1,486,099. CLOTHESPEG. ALEXANDER MURDOCH MCSWAN, ROBERT ANDERSON EWING, and WILLIAM THOMSON, Dunedin, New Zealand. Filed Nov. 17, 1922. Serial No. 601,579. 2 Claims. (Cl. 24—138.)



2. A clothes pin and a reinforcing means therefor, comprising a wire wound about the body of the pin immediately above the legs and having depending portions to overlie and bear upon the legs, said depending portions having lateral terminals to engage the legs, the coil of the wire about the body overlying and bearing upon both depending portions to hold the same in close contact with the legs of the clothes pin.

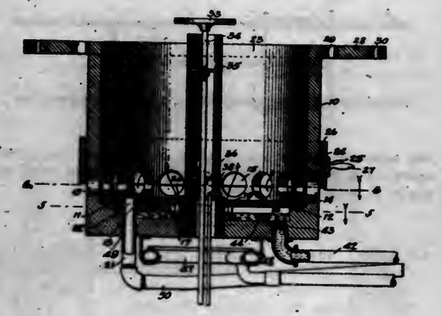
1,486,100. SOAP AND WATER MIXER. FRED Y. MCKENNEY and WILLIAM H. CHENEY, Chattanooga, Tenn., assignors of one-sixth to Manly A. Watson, one-sixth to J. A. Kelly, one-sixth to J. F. Kelly, one-sixth to G. L. Robinson, one-tenth to R. E. Robinson, jr., and seven-thirtieths to Jackson Zinn Easley. Filed Aug. 10, 1922. Serial No. 580,868. 15 Claims. (Cl. 299—83.)

1. An apparatus of the character described comprising a chamber having a water inlet at one end and an outlet for the solution at the other, a container for soluble material with an open top and a perforated enclosing wall mounted within said chamber, and means for directing part of the water from the inlet end into the soap container and part of it outside of said enclosing wall, substantially as set forth.

2. In an apparatus of the character described, the combination of a chamber, a soap holder therefor having perforated sides, an inlet passage for liquid above the holder, means to cause part of the liquid entering the chamber to pass down the outer wall of the holder and another part to fall on the soap in the holder, means for

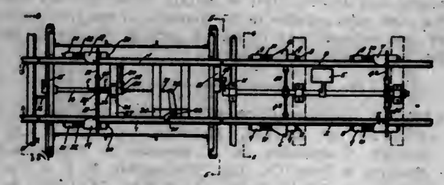
varying the proportions of liquid passing into and around the holder, and a discharge outlet, substantially as set forth.

1,486,101. TOY. NORRIT O. MEGORDEN, Clearwater, Wash. Filed Apr. 4, 1922. Serial No. 549,609. 1 Claim. (Cl. 46—45.)



In a device of the character described, the combination of a body portion, a tail portion, said tail portion being pivoted to said body portion at one side thereof and at a point near one end thereof, a jaw portion pivoted to said body portion at the opposite end from said tail portion so as to be capable of up and down movement, a crank mounted in said body portion, wheels secured to said crank, a tongue slidably supported on said body portion at a point below said movable jaw, a rod connecting said tongue and said crank, a link connecting said tail and said crank, and a rod contacting the underside of said crank, said rod being secured to said jaw portion.

1,486,102. CAP. PERCY MERTON, Park Ridge, N. J. Filed Sept. 26, 1923. Serial No. 664,987. 5 Claims. (Cl. 2—176.)



2. As an article of manufacture, a cap having the crown attached to the visor outward from the inner edge of the visor, said visor having a ventilating area adjacent its inner edge affording ventilation through the visor directly to the interior of the crown, and a cover for said ventilating area and disposed at the upper surface of the visor, said cover adapted to assume a position closing the ventilating area or a position away from and forward of said ventilating area.

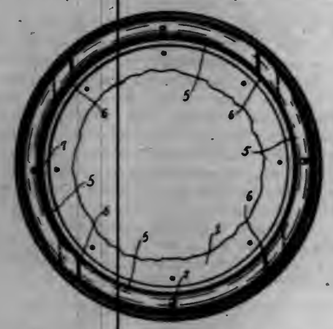
1,486,103. OIL BURNER. JOHN JOSEPH MILNES, Jr., New York, N. Y. Filed Feb. 1, 1923. Serial No. 616,356. 7 Claims. (Cl. 158—58.)

7. An oil burner of the character described, comprising an oil well, means for supplying oil to said oil well, means for evenly distributing the oil supplied to said oil well, means for automatically shutting off the supply of oil when the burner is not in operation, means for vaporizing the oil in the oil well, a combustion chamber positioned above the oil well and communicating with the same through an opening the shape of a hollow circle, an air pipe having an enlarged base which defines the inner edge of said opening shaped like a hollow circle thus spacing the opening outside of the upper portion of the air pipe, a spreader adjustably mounted in the air pipe for directing a current of air outward, and a pilot light extending upward into said air pipe for igniting the gas when the burner is set in operation.

1,486,104. ROTARY-DUMP FEEDER MECHANISM. JAMES A. NOLAN, Bowerston, Ohio. Filed Aug. 7, 1922. Serial No. 580,260. 4 Claims. (Cl. 214—55.)

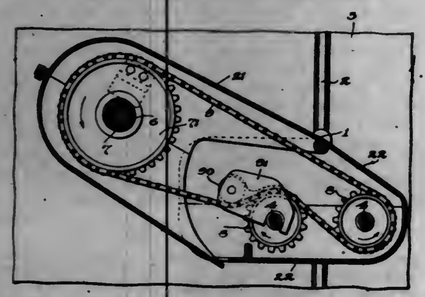
1. In combination with a rotary dump structure including a track section, and approach and receiving tracks at the ends of the dump, inner and outer stops on the approach track, stops on the dump, means for closing the inner stops and opening the outer stops, means for closing the dump stops, means for opening the dump stops and holding them open when the dump is returned to loading position, means for opening said inner stops and closing the outer stops on return of the dump to loading position, and means for releasing the dump stops to permit closing of the same as a loaded car moves into the dump a predetermined distance.

1,486,105. AUTOMATIC FEEDER. JAMES A. NOLAN, Bowerston, Ohio. Filed Apr. 25, 1923. Serial No. 634,618. 6 Claims. (Cl. 104—253.)



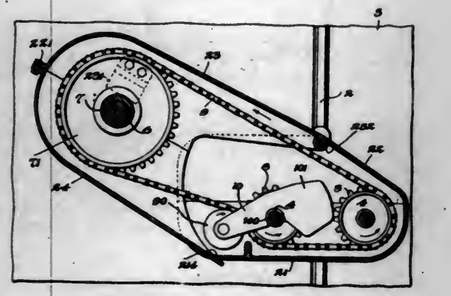
1. In combination with a dump and an approach track leading thereto, stops on the approach track, a rock shaft, connections between said shaft and the stops for opening and closing the latter in accordance with rocking of the shaft, means for rocking the shaft in stop-opening direction as the dump returns to loading posi-

tion, and car actuated means on the approach track operated to a predetermined extent by each car traveling apast said car actuated means toward the dump, said



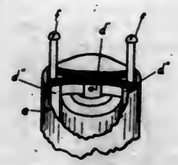
car actuated means acting after it has been successively operated a predetermined number of times to rock said shaft in stop-closing direction.

1,486,106. TIRE. FAUSTINO PALOMBO, Bedford, Ohio. Original application filed Oct. 27, 1922, Serial No. 597,309. Divided and this application filed Mar. 29, 1923. Serial No. 628,588. 3 Claims. (Cl. 152—5.)



2. A tire, comprising an onter shoe and an inner core, said core of solid material and comprising a circular series of sections having tongue and groove joints, the tongue and groove joints of certain of the sections having their ends parallel to the diameter of the tire whereby said sections may be moved radially relative to the tire for insertion and removal.

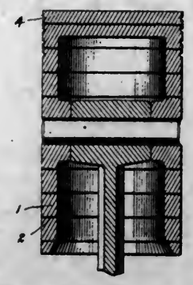
1,486,107. CHAIN-DRIVE MECHANISM FOR BOBBIN SHAFTS OF ROVING FRAMES. GEORGE F. ALBRECHT, Woonsocket, R. I., assignor to Woonsocket Machine & Press Co., Inc., Woonsocket, R. I., a Corporation of Rhode Island. Filed Sept. 24, 1923. Serial No. 664,510. 3 Claims. (Cl. 118—41.)



1. Chain-drive mechanism for bobbin-shafts of roving frames comprising, in combination with two bobbin-shafts, each provided with a driven sprocket-wheel fixed thereto, and a driving sprocket-wheel operatively combined with the roving frame compound and actuated thereby, a sprocket-chain constituting a direct or one-step sprocket-chain connection between the driving sprocket-wheel and both of the driven bobbin-shaft sprocket-wheels, the said chain passing over one of the said driven sprocket-wheels and engaging the upper portion thereof and under and partly around the other thereof in engagement therewith.

1,486,108. CHAIN-DRIVE MECHANISM FOR BOBBIN SHAFTS OF ROVING FRAMES. GEORGE F. ALBRECHT, Woonsocket, R. I., assignor to Woonsocket Machine & Press Co., Inc., Woonsocket, R. I., a Corporation of Rhode Island. Filed Sept. 14, 1923. Serial No. 662,669. 10 Claims. (Cl. 118—41.)

1. Chain-drive mechanism for the bobbin-shafts of roving frames comprising, in combination with a driving sprocket-wheel operatively combined with a compound and actuated thereby, and two bobbin-shafts each provided with a driven sprocket-wheel fixed thereto, a sprocket-chain engaging directly both of the bobbin-shaft sprocket-wheels and constituting a one-step sprocket-chain connection between the driving sprocket-wheel directly with each of the bobbin-shaft sprocket-wheels.

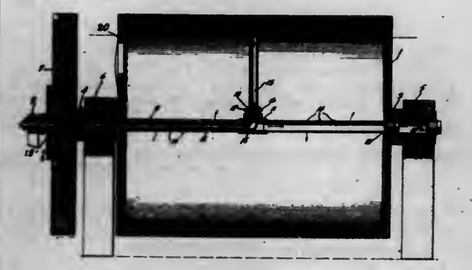


1,486,109. ELECTRIC TRANSFORMER. BRUCE W. DAVID, Cleveland Heights, Ohio, assignor to Walter M. Scott, Cleveland, Ohio. Filed Apr. 5, 1922. Serial No. 549,922. 8 Claims. (Cl. 175—361.)

1. As a new article of manufacture, a transformer of the class described, comprising primary and secondary transformer windings, laminated core members associated therewith, an enclosing shell therefor, and means for wedging said laminated members securely into engagement with the interior of the shell, whereby they are held in place.

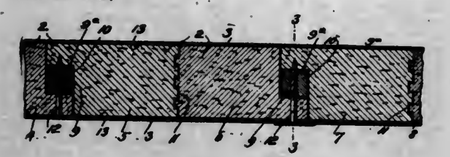
8. The herein described method of constructing transformers, which consists in providing the transformer coils with peripherally laminated members extending within and about said coils, inserting said parts as assembled within a snugly-fitting enclosing casing, and wedging the laminated members apart into close engagement with the interior of the casing, whereby they are retained in place.

1,486,110. PISTON. CHARLES W. HACK, Topeka, Kans., assignor to The Home Refrigerating Company, Topeka, Kans., a Corporation of Kansas. Filed June 5, 1922. Serial No. 565,827. 2 Claims. (Cl. 74—108.)



1. A non-metallic piston having fiber as a component part thereof, the ends of the fiber being exposed to the surface of the piston, and circumferential, lubricant-containing grooves in the periphery of the piston to supply lubricant to the fiber.

1,486,111. COMPOUND METER-VALVE MECHANISM. WILLIAM H. LARRABEE, Worcester, Mass., assignor to Union Water Meter Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 17, 1922. Serial No. 575,441. 9 Claims. (Cl. 251—127.)



1. In a compound water-meter valve mechanism, the combination, with the internally partitioned valve-chamber casing arranged for the water-supply flow therethrough, and having high-duty and low-duty metering devices connected therewith, and valve elements operative for the purpose set forth; of a skeleton formed cage having the valve-seats, valves, and valve-stem guide assembled and supported thereon in their complete operatively organized order, as a self-contained structure, the exterior of said cage being provided with surfaces that fit the openings in the internal partitions of the casing; said cage with the complete assembled valve-elements being adapted for removal bodily from the valve chamber casing, and leaving said casing, in its connected relation, in condition for continued water-supply service.

1,486,112. HEATING OR DRYING DRUM. JAMES D. MCCRACKEN, Cincinnati, Ohio, assignor to The United States Playing Card Company, Norwood, Ohio, a Corporation of Ohio. Filed June 25, 1923. Serial No. 647,424. 4 Claims. (Cl. 34—4.)

1. A drying cylinder, comprising a rotative hollow cylindrical drum adapted to hold a volume of water, a steam admission conduit extending axially into the drum and through the axis of the drum at one end thereof for non-rotatively sustaining said conduit within said drum, and a second conduit extending axially into the drum and terminating at an angle thereto providing a water level controlling offtake conduit.

1,486,113. HEAT-INSULATING STRUCTURAL MATERIAL. WILLIAM MACK BAXTER, Chicago, Ill., and ANDREAS P. LUNDIN, Bayside, N. Y., assignors to American Balsa Company, Inc., a Corporation of New York. Filed June 14, 1921. Serial No. 477,428. 14 Claims. (Cl. 20—91.)

1. A composite heat-insulating structural material composed of a body of wood having substantially the qualities of balsa wood, a ground of a tougher and harder material associated with said body of soft wood, a sheathing of a rigid and tough structural material, and means for fastening said sheathing and soft-wood body together by connection to the said ground.

Patents Nos. 1,486,114 to 1,486,847.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 320—No. 2. TUESDAY, MARCH 11, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Feb. 21, 1924.*

Calista O. Van Slyck, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William A. Whitmore, 810 West Pratt Street, Baltimore, Md., for registration of a trade-mark and trade-mark registered March 19, 1895, No. 26,243, to Calista O. Van Slyck, Lamanda Park, Calif., and a notice of such declaration sent by registered mail to said Van Slyck at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Van Slyck, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Mar. 3, 1924.*

Clarence E. Kenyon, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Eckman Chemical Company, 526 Paxton Block, Sixteenth and Farnam Streets, Omaha, Nebr., for registration of a trade-mark and trade-mark registered October 12, 1915, No. 106,110, to Clarence E. Kenyon, Great Falls, Mont., and a notice of such declaration sent by registered mail to said Clarence E. Kenyon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Clarence E. Kenyon, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Mar. 4, 1924.*

William P. Sumner, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Kinney Brothers, 243–245 Water Street, Binghamton, N. Y., for registration of a trade-mark and trade-mark registered January 15, 1907, No. 59,624, to William P. Sumner, Jacksonville, Fla., and the Office having been unable to secure service upon said party, notice is hereby given that unless said William P. Sumner, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Mar. 4, 1924.*

The Lithotone Colortype Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Niagara Lithograph Co., 209–219 West Thirty-eighth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 10, 1900, No. 34,443, to The Lithotone Colortype Company, Chicago, Ill., and a notice of such declaration sent by registered mail to The Lithotone Colortype Company at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless The Lithotone Colortype Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(D. C. N. Y.) The Perkins patent, Reissue 13,436, for glue, claims 28, 30, and 31 *Held* not infringed. *Perkins Glue Co.* v. *Crandall Panel Co.*, 294 Fed. Rep. 135.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,249,041, R. A. Demme, Carbon and method of producing the same, decided February 19, 1924, claims 1, 2, 3, 4, 5, 6, and 8.

Pat. 1,338,046, K. Sollie, Mine car, decided February 19, 1924, claims 3, 4, 5, 6, and 8.

Condition of Applications Under Examination at Close of Business February 29, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 62,504; Trade-Mark Division, 1,668. Oldest new case, May 30, 1923; oldest amended, June 2, 1923. The dates given are 1923 except where * indicates 1924. Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE GOTTHEIL.

Decided January 28, 1924.

ABANDONMENT—PROSECUTION WHICH DOES NOT SAVE—CORRESPONDENCE RELATIVE TO A PROPOSED INTERFERENCE—LETTERS FROM LAW EXAMINER UNDER RULE 93.

Correspondence relative to a proposed interference does not affect the period for proper amendment to the case, and letters from the Law Examiner under rule 93 are not actions on an application.

PETITION to revive.

UNIVERSAL HOLDING PLATE.

Mr. B. Singer for the applicant.

KINNAN, *First Assistant Commissioner:*

The last Office action in this case was mailed January 29, 1921. In this action one claim was rejected on a reference, and the drawing, specification, and claims were criticised.

Answering a letter received January 24, 1923, applicant was told that his application stood abandoned.

The request for revival is based upon the fact that correspondence was held with applicant under the provisions of rule 93 during the period beginning November 3, 1921, and ending April 24, 1922. The applicant was asked for a statement of his date of conception of certain subject matter. Finally, on March 21, 1922, the required statement was furnished, which was followed by a letter from the Office, dated April 24, 1922, stating that no interference would be declared, but that the application of the senior party, as soon as patented, would be cited as a reference.

The applicant argues that this correspondence extended the year for amendment; that in view of the fact that the senior party's application was, presumably, pending as late as February 12, 1923, on which date the applicant wrote to this Office urging a withdrawal of the holding of abandonment previously made applicant was not so fully advised by official action of all the facts so as to be in a position to amend as his interests might require.

The contention is clearly not sound. Rule 77, third paragraph, makes it plain amendment was due within a year from January 29, 1921. The character of the Office action of January 29, 1921, required a responsive amendment within a year irrespective of the proposed interference subject matter. Correspondence relative to the proposed interference did not affect the period for proper amendment to the case.

No showing other than expressed above is made as to why an amendment was not made within the year, and no amendment accompanies this petition. The applicant was told, on February 17, 1923, that the holding of abandonment was made final. The letters from the Law Examiner under rule 93 are not actions on an application. The applicant waited until December 14, 1923, before filing this petition and no showing is made excusing this delay.

The petition is denied without prejudice to its renewal accompanied by a proper verified showing accounting for the delay in amending and also in bringing this petition. This renewal of the petition must be promptly filed.

U. S. Circuit Court of Appeals—Sixth Circuit.

HEIDBRINK ET AL. *v.* MCKESSON.

Decided July 17, 1923.

[290 Fed. Rep. 665.]

1. CLAIMS—COMPREHENSIVE WORDS AND PHRASES—CLAIMS WHICH IN FORM COVER FUNCTIONS OF A MACHINE, BUT ARE EQUIVALENT TO PROCESS CLAIMS.

A claim which in a very general way calls for means is not necessarily bad—quite the contrary—nor should a claim be hastily condemned for this reason which, by its functional quality, only becomes equivalent to that valid process claim which the inventor might have obtained through another form of his application.

2. SAME—TOO BROAD—FUNCTIONAL—ATTEMPT TO COVER ANY MEANS WHICH ANY ONE MAY DISCOVER—ATTEMPT TO DEFINE A PROCESS ONLY BY ITS RESULT.

A claim for a machine which is drafted to cover any means which any one ever may discover of producing the result is invalid because functional and is clearly to be condemned under the rule stated in *O'Reilly v. Morse*, and a claim to a process which attempted to define the process only by its result would be no less objectionable than a corresponding claim to a machine.

APPEALS from the District Court of the United States for the Western Division of the Northern District of Ohio; D. C. Westenhaver, judge.

Suit by Jay A. Heidbrink and others against Elmer I. McKesson, in which defendant set up counterclaim. The bill and counterclaim were dismissed, and both parties appeal. Affirmed.

Mr. F. A. Whiteley for the appellants and cross appellees.

Mr. George B. Kirk for the appellee and cross appellant.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DENISON, *C. J.:*

These patents relate to devices for administering anæsthetics. Nitrous oxide was commonly used where effectiveness for very short periods was sufficient, as in tooth extraction; but if its administration was long continued it became dangerous. Accordingly a process was developed by which oxygen could be mixed with the nitrous oxide, and a

more prolonged use of the anæsthetic became feasible. In practice, the operator procured his gases from prepared tanks, which contained the respective gases at high pressure, and in that form were a market product. It was found that a desirable mixture was approximately in proportion of one part of oxygen to four parts of nitrous oxide, and that this proportion, or such slight variance as the particular patient or the immediate exigencies of the case might require, must be maintained with substantial accuracy. A variation of the oxygen content of as much as 1 or 2 per cent from the right proportion, might produce a loss of the anæsthesia, or a loss of life.

For the purpose of adjusting proportions to fit the needs of the patient, and for the purpose of maintaining proportions when fixed, and since the relative pressure of the supply tanks might be constantly changing, the anæsthetist had to resort to frequent and perhaps almost continuous manual adjustment of the outlet valves upon the two tanks. The safe use of the method, therefore, required the exclusive attention of a skilled anæsthetist, and even he could judge of the quality of the mixture only by the effect produced on the patient—a judgment sometimes formed too late to be useful. Heidbrink claims to have been the first to devise any apparatus by which the respective pressures of the two gases, in their conduits leading from their supply tanks into the mixing chamber, and thus their respective predetermined flow volumes, could be automatically kept constant, whereby the attention and skill required of the anæsthetist were greatly reduced and the utility of the method much advanced. He also claims that he was the first to produce any device by which, when the volume of the flow from the mixing chamber to the patient was increased at the will of the operator, the existing proportions of the mixture would be automatically maintained. The patents which he thinks secure to him these broad inventions are No. 1,265,910, dated May 14, 1918, and No. 1,309,686, dated July 15, 1919. In the court below he brought suit against McKesson, based upon claims 1 and 2 of the first and claims 6 and 7 of the second. These claims are given in the margin.[1] Heidbrink's application for No. 1,309,686 was filed Nov. 23, 1911, and for No. 1,265,910, September 26, 1912. In 1910 McKesson filed application for a patent upon a device for using these two gases to produce anæsthesia, and this application resulted in Patent No. 1,028,582, dated June 4, 1912. He also had Patent No. 1,028,583, issued June 4, 1912, upon application filed May 1, 1911, covering improvements in one feature of his apparatus. In 1913, having devised further improvements, he filed another application which resulted in Patent No. 1,320,900, issued to him November 4, 1919.

Heidbrink's suit, upon his two patents, is based upon the use and sale by McKesson of a device constructed in substantial accordance with McKesson's 1919 patent, with the addition of a device not shown therein but added by him to his commercial machine in 1916. McKesson answered this suit, making all the customary defenses and also setting up, as counterclaims against Heidbrink, the allegations that Heidbrink's commercial machine infringed several of the claims of each of McKesson's three patents. The trial court dismissed the bill and the counterclaim upon the theory that the machines of the two parties were of different types and that neither one infringed the patents of the other. Both parties appeal.

We consider first claims 1 and 2 of Heidbrink's earlier patent, issued upon his later application. For the purposes of this opinion only, we assume that Heidbrink was, as he claims, the first to construct any apparatus by which the predetermined proportions of the mixture would be automatically maintained in spite of an increase in volume of the flow of the mixture to the patient; that he showed operative means of accomplishing this result, both in his earlier and his later applications, whereby he was at liberty to take valid broad claims therefor in the earlier patent to issue; and that this result was exceedingly useful.

Having as elements in such a machine, the respective conduits leading to the mixing chamber, valves opening therefrom into the mixing chamber, and a discharge passage leading away from the mixing chamber, it is at once obvious that if it is desired to increase the outflow without changing the proportions, there are two methods by which it can be done—though the successful application of either may require invention. One method is to increase the valve openings from the two conduits into the mixing chamber and increase them in proper relation to each other, while the pressure of the respective gases in the respective conduits remains unchanged. Because of the increased valve openings, more of the respective gases will get into the mixing chamber, but in the same proportion, and there will be a larger supply for the outflow. The other is to leave the valve openings into the mixing chamber unchanged, but to increase in proper relative proportion the gas pressure in the respective conduits. By this method, also, more gas, but in the same proportions, will come into the mixing chamber and be ready for the outflow. For simplicity it seems best to assume, as both parties have, that the gas pressures in the two conduits should always equal each other; otherwise the problem of proportioning by valve openings is very complicated. It is not impossible that still a third method may be devised, which would be a combination of the other two, and which would change in unequal proportions both the valve openings and the gas pressures back thereof; but we are not advised that this has been done, and it perhaps presents unsurmountable difficulties. McKesson, by his device with his 1916 addition, obtains this result—increasing outflow while automatically maintaining proportions—by increasing at the operator's will the equal pressure in both conduits leading into the mixing chamber, keeping the valve openings therein unchanged. Heidbrink gets this result, in his device as shown in his later application and (with the possible exception to be noted) in the form shown on his earlier application, by maintaining his equal pressure in the two gas conduits while he enlarges in the same proportion the valve openings from the conduits to the mixing chamber.

[1] With this statement of the situation, we come to his two claims of 1,265,910. We are compelled to think that they are invalid because functional. They are apparently most deliberately and skillfully drafted to cover any means which any one ever may discover of producing the result; that is, to accomplish the one thing while avoiding the other. We think they are clearly to be condemned under the rule stated in *O'Reilly* v. *Morse*, 15 How. 62, 112; 14 L. Ed. 601; *Risdon* v. *Medart*, 158 U. S. 68, 77; 15 Sup. Ct. 745; 39 L. Ed. 899; 71 O. G. 751, and the many familiar cases applying the rule, and that they are not within the principle of the *Telephone Case*, 126 U. S. 1, 534; 8 Sup. Ct. 778; 31 L. Ed. 863; 43 O. G. 377. We do not mean to say that a claim which in a very general way calls for means is necessarily functional and bad—quite the contrary (*Davis* v. *New Departure Co.* [C. C. A. 6] 217 Fed. 775, 782; 133 C. C. A. 505; 212 O. G. 1057); nor would we hastily condemn for this reason, a claim which, by its functional quality, only became equivalent to that valid process claim which the inventor might have obtained through another form of his application; but a claim to a process which attempted to define the process only by its result, would be no less objectionable than is a corresponding claim to a machine.

For this reason we do not go into the many other questions involved. The decree dismissing Heidbrink's bill as to Patent No. 1,265,910 is affirmed.

In his first application (Patent No. 1,309,686) Heidbrink undertook to solve the problem of automatically maintaining the predetermined, and preferably equal, pressure in his conduits from supply tanks to mixing chamber by inserting therein an expansible supplementary chamber, with relatively large capacity, intended to hold the gas at a relatively small pressure. The expansible reservoir was in horizontal bellows form. Obviously the weight of the upper portion tended to collapse it, and the internal pressure need be only enough to lift this weight. Extending horizontally from the top of the bellows chamber he had a metallic arm and, upon the nearby frame, upper and lower stops with which this arm would make contact as the top of the bellows arose to its extreme expansion or as it fell a very slight distance, possibly an inch, therefrom. By a very complicated and elaborate system of electric wiring, solenoids and revolving parts he provided that when the arm contacted with the lower stop, the outlet valve from the supply tank should be slightly opened, and as soon as the bellows rose to its upper position, the same valve should be closed. It would result that the bellows would automatically maintain such a gas pressure therein as to keep the top of the bellows between the two stops; that is to say, the internal gas pressure would be automatically maintained at the predetermined point, with only such fluctuations or fluttering as the distance between the two stops might produce. Giving Heidbrink the benefit of all doubts as to operativeness, this is the disclosure upon which his claim 6 is drawn; and it is this electrical system and apparatus which he shows as the "means for automatically controlling the pressure in such reservoir," which is one of the elements of his claim. McKesson departs very far from this disclosure of means. His elastic reservoir, a rubber bag, by its expansion operates one end of a hinged lever arm, and the other end of this arm then directly closes, by a plunger movement, the supply tank outlet valve. As the elastic reservoir collapses, the operation is reversed and the outlet valve is opened. This elastic bag will therefore flutter as Heidbrink's bellows should do, and maintain a practically constant pressure therein.

[2] Upon balancing the considerations affecting the proper construction of this claim 6, the majority of the court concludes that the claim is not rightly capable of such a broad interpretation as to include defendant's device. We have already assumed that Heidbrink's described electrical means were operative—although this is strenuously denied, and is, at least, doubted by part of the court; but before he put his machine on the market or had procured from his single specimen of the bellows apparatus any use that could cause it to be, at the most, little more than experimental, he discarded the whole idea of any such interposed expansible, supplementary reservoir, as being unnecessary, and substituted therefor, as the outlet valve of the supply tank, an ordinary pressure-reducing valve found upon the market; and by adopting this valve, he solved in a simpler way, as he thought, the whole problem of maintaining constant pressure in this conduit. The pressure-reducing valve has a measure of analogy to the automatically-regulated expansible chamber; but the analogy is imperfect. Then came McKesson (accepting, as we do, the district judge's findings as

[1] No. 1,265,910.

1. A gas-administering device having a mixing chamber, means for supplying thereto from independent sources a plurality of gases each under pressure and in fixed proportions at their respective pressures, and means for definitely regulating and determining the aggregate volume of flow of said gases into the mixing chamber at their respective pressures while maintaining said fixed proportions.

2. A gas-administering device having a mixing chamber, means for supplying thereto from independent sources of supply a plurality of gases each under pressure and in fixed proportions at their respective pressures, means for controlling the respective pressures at which the several gases are delivered to the mixing chamber, and means for definitely regulating and determining the aggregate volume of flow of said gases into the mixing chamber at their respective pressures while maintaining said fixed proportions.

No. 1,309,686.

6. In a device of the class described, a series of fluid and gas retainers, valves and flexible expansion chambers having connection with said retainers, means operative from the expansion of said chambers for operating said valves to provide a mixture of varying proportion, and an indicator for indicating the proportion.

7. In anæsthetic apparatus arranged to be equipped with a compressed gas cylinder, a regulating valve in communication with the gas supply from such cylinder, an expansible elastic gas bag constituting a variable pressure reservoir for a relatively large volume of gas at a relatively low pressure in free communication with the gas-administering passages of the apparatus, and means governed by the inflation of such bag for controlling said regulating valve.

to priority) and by a simplification of self-regulating means as applied to an elastic bag—itself much older than either party—made the expansible-reservoir idea practically a commercial success. However broadly Heidbrink's claim might be read as to variant electrical devices or even closely analogous mechanical devices, we cannot make it cover McKesson's construction; and hence it is not necessary to state the further contentions against infringement, since we conclude that this one must prevail.

We do not overlook, but find no occasion to decide, the controversy whether Heidbrink discloses a "variable-pressure reservoir," in the sense and to the extent which would make McKesson's elastic bag and forcing bar an equivalent. Precisely the same considerations determine the controversy as to infringement of claim 7. Its concluding element is "means governed by the inflation of such bag for controlling said regulating valve." Heidbrink's means are electrical, roundabout and dubious; McKesson's means are simple, direct and mechanical; Heidbrink's form has never been commercially used to any substantial extent and was almost at once abandoned by him; McKesson's form has had at least substantial commercial adoption and approval. The majority of the court thinks there is no infringement.

The decree dismissing the bill as to Patent No. 1,309,686 is affirmed.

We come now to the contentions of the cross-complaint. McKesson alleges infringement of his Patent No. 1,028,582, as to claims 1, 7, 8, 9, 10, and 14. Claim 1 calls for check valves between the sources of supply and the mixing chamber which prevent the flow of any gas through these conduits until the valves are lifted by the suction effect of the inhalation by the patient. Heidbrink does not use these. Claims 7 and 8 are directed particularly to the so-called rebreathing bag, but call, though in more general terms, for these same check valves, and Heidbrink does not have them or their equivalent. This call cannot be minimized; it forms part of the distinction from the earlier art on which these claims must rest. Claims 9, 10, and 14, like claim 1, more specifically require these same check valves.

As to Patent No. 1,028,583, infringement is alleged of claims 2, 8, and 9. This patent is directed to a peculiar form of rebreathing bag, the two parts of which telescope in order to adjust its size. Claims 8 and 9 are clearly limited to this telescoping feature which Heidbrink does not use. Claim 2 describes one of these telescoping parts in more general terms; but, in view of the specification, it cannot be read broadly enough to cover the very different adjusting device in that one of Heidbrink's rebreathing bag forms which is said to be an infringement.

As to Patent No. 1,320,900, infringement is claimed as to 14 claims, which may be divided into five groups. It is first to be noticed that since the court below held—and we are accepting the holding—that upon this patent McKesson is confined to his filing date, many of these claims would be anticipated by Heidbrink's patents, if the claims were read as broadly as McKesson now insists. The only matters which can require attention beyond this observation are in those details which are found in the Heidbrink commercial machine and not in his patents. It is sufficient to say that we have reviewed the contentions of McKesson as to all of these claims and are satisfied that, when construed as they must be, no infringement appears.

The decree dismissing the cross complaint is affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

924,605, A. Gee, Manufacture of fashioned hosiery, suit filed Nov. 6, 1923, D. C., E. D. Pa., Doc. 2893, *Chipman Knitting Mills* v. *Quaker Hosiery Co.*

Changes in Classification.

(ORDER No. 2,852.)

U. S. PATENT OFFICE, *Washington, Dec. 31, 1923.*

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 2, Apparel (Division XXIV), abolish the existing subclasses and establish in lieu thereof the following subclasses and definitions:

2.—APPAREL—Continued.
Body garments—
Union type—
Skirted—
76. Waistbands, adjustable or elastic,
Bifurcated—
77. Men's union shirts,
78. Underwear,
79. Trousers and overalls,
80. Children's,
81. Heat resistant,
82. Water resistant,
83. Bed garments,
84. Hooded,
85. Overcoats—
86. Convertible to bifurcated,
87. Waterproof,
88. Capes—
89. Convertible to,
90. Sweaters,
91. Mufflers,
92. Back and chest protectors,
93. Coats—
94. Hunters' and special-article carrying,
95. Combined with vest or shirt,
96. Front closures,
97. Linings,
98. Collars—
99. Springs,
100. Fasteners,
101. Putting-on accessories,
102. Vests—
103. Combined with shirt or dickey,
Waists—
104. Nursing,
105. Dress,
106. Blouses—
107. Garment supporting,
108. Jacket type,
109. Underwear—
110. Corset covers,
111. Infants',
112. Garment supporting,
Shirts—
113. Undergarments,
114. Bed garments,
115. Men's outer garments—
116. With attached collars,
117. With garment supporters,
118. Bosom structure—
119. Detachable,
120. Supporters and protectors,
121. Overlaps,
122. Yokes, patches, and facings,
123. Cuffs—
124. Detachable,
125. Sleeves—
126. Detachable,
127. Neckbands,
128. Closures,
129. Collars—
130. Combined with neckties,
131. Soft fold type—
132. Supporters,
133. Women's wear—
134. Supporters,
135. Waterproof,
136. Paper,
137. Necktie-engaging devices—
138. Easy-slide structure,

2.—APPAREL—Continued.
Body garments—
Collars—
139. Attaching to shirts—
140. Ends,
141. Closures,
142. Bindings,
143. Blanks and processes,
144. Neckties—
145. Attaching features,
146. Cut-fabric type,
147. Knit-fabric type,
148. Knot structure—
149. Made up—
150. Four-in-hand type,
151. Bow type,
152. Forms and retainers—
153. Four-in-hand type,
154. Bow type,
155. Band structure—
156. Attachments,
157. End structure.
Hand or arm coverings—
158. Mittens,
159. Gloves—
160. Attachments,
161. Workmen's,
162. Wrists,
163. Fingers,
164. Linings,
165. Welts,
166. Staying,
167. Materials—
168. Rubber,
169. Patterns and processes,
170. Wristlets.
171. Head coverings—
172. Flapped,
173. With masks,
174. Toilet,
175. Hats—
176. Ventilating,
177. Shade,
178. Brim bindings,
179. Bands,
180. Frames,
181. Sweats,
182. Ventilating,
183. Head-size adjustment,
184. Sewing,
185. Attachments—
186. Trimmings,
187. Covers,
188. Hangers,
189. Guard cords,
190. Linings or tips,
191. Extension brims,
192. Materials and processes—
193. Straw type,
194. Cloth or felt type,
195. Caps—
196. Convertible,
197. Adjustable size,
198. Women's wear,
199. Attachments,
200. Materials—
201. Knitted,
202. Hoods—
203. With mufflers,
204. Bonnet type,
205. Helmet type,
206. Face coverings,
207. Scarfs and veils,
208. Muffs—
209. Ear.

2.—APPAREL—Continued.
Nethergarments—
210. Bustles,
211. Skirts—
212. Combined bifurcated,
213. Convertible bifurcated,
214. Riding,
215. With pads or distenders,
216. Hoop,
217. Lifters and holders,
218. Placket closures,
219. Waist closures,
220. Waistbands—
221. Adjustable or elastic,
222. Edge bindings or protectors,
223. Supporters,
Bifurcated—
224. Underwear—
225. Reinforcing,
226. Elastic inserts,
227. Trousers or overalls—
228. Knee length,
229. Waist or shirt supported,
230. Suspender attachments,

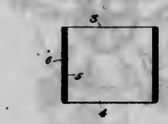
REISSUES

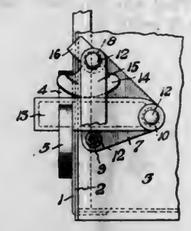
MARCH 11, 1924.

15,789. PROCESS OF MAKING ALDEHYDES AND OTHER OXIDATION PRODUCTS. CARLISLE H. BIBB, New Brunswick, N. J. Filed Oct. 1, 1923. Serial No. 666,040. Original No. 1,392,886, dated Oct. 4, 1921, Serial No. 333,633, filed Oct. 27, 1919. 11 Claims. (Cl. 260—138.)



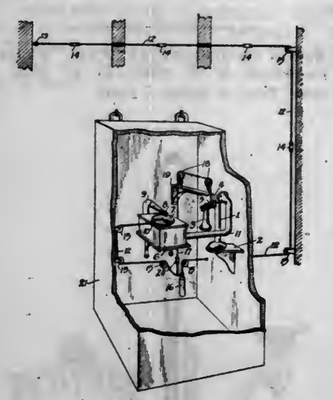
1. A process of converting hydrocarbons into alcohols, aldehydes and other oxidation products, comprising mixing hydrocarbon, oxygen and a gaseous catalyzer containing oxygen, said catalyzer being used in quantities substantially less than the quantity of hydrocarbon, heating the mixture, and separating the alcohols, aldehydes and other oxidation products from the mixture.

15,790. UNIT FOR TRACK BELTS. EDWARD GRUBER, Lyndhurst, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Jan. 23, 1922. Serial No. 531,270. Original No. 1,359,499, dated Nov. 23, 1920, Serial No. 286,265, filed Mar. 31, 1919. 8 Claims. (Cl. 305—10.)



1. A track belt unit comprising three metal members arranged side by side and connected together, viz, a middle member having along its side edges vertical longitudinally extended side rails, and two side members each having a vertical longitudinally extended rail which is secured to a rail of the middle member, the rails which are so secured together being in contact at their front and rear ends and being spaced apart between said contacting ends, the upper edge of one of said spaced apart rails being formed with a horizontal flange which overlies and engages a part of the upper edge of the associated rail.

15,791. KNICKERS. PHILIP LEIKEN, Brooklyn, N. Y., assignor to The Peerless Smoking Jacket Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 17, 1924. Serial No. 686,030. Original No. 1,423,668, dated July 25, 1922, Serial No. 509,393, filed Oct. 21, 1921. 5 Claims. (Cl. 2—122.)



1. As an article of outer wearing apparel, a knickerbocker of woven material, each leg thereof being provided with a cuff extending substantially below said leg and comprising a continuous length of elastic tubular knitted material, doubled back upon itself and secured to form a lower folded edge, said knitted material being permanently secured to said leg.

15,792. CAR-DOOR LOCK. WILLIAM E. WINE, Toledo, Ohio. Filed Jan. 28, 1924. Serial No. 689,136. Original No. 1,472,540, dated Oct. 30, 1923, Serial No. 528,245, filed Jan. 10, 1922. 10 Claims. (Cl. 105—308.)

1. A door locking device comprising a body plate having posts formed thereon, said posts extending beyond the opposite sides of said plate, a latch pivotally secured to one of said posts, and a dog pivotally secured to another of said posts, the lowermost post forming a lower limit of movement for said latch.

15,793. AUTOMATIC FIRE ALARM. WILLIAM J. LUSE, New York, N. Y. Filed Mar. 17, 1922. Serial No. 544,635. Original No. 1,344,701, dated June 29, 1920, Serial No. 263,293, filed Nov. 20, 1918. 12 Claims. (Cl. 179—5.)

1. In an automatic fire alarm, a cable adapted to hold a weight in suspension, a fusible link positioned in said cable, whereby when the link is disrupted by heat the weight falls, a phonograph, a telephone in proximity thereto, means whereby the falling of the weight releases a brake on the phonograph, thereby permitting it to operate and, simultaneously lifts the receiver of the phone whereby the message of the phonograph is sent into the phone and means for subsequently restoring the receiver to hung-up position.

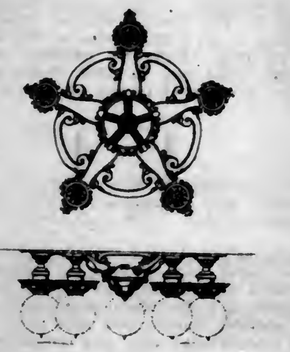
DESIGNS

MARCH 11, 1924.

64,157. SPOON OR SIMILAR ARTICLE. GEORGE E. BALL, Bridgeport, Conn., assignor to Whiting Manufacturing Company, Bridgeport, Conn., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 5,852. Term of patent 3½ years.

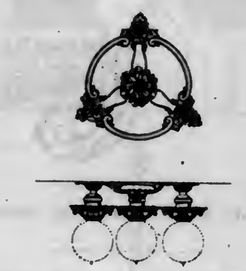
The ornamental design for a spoon or similar article, as shown.

64,158. SPOON OR SIMILAR ARTICLE. WILLIAM CODMAN, Providence, R. I. Filed Jan. 15, 1924. Serial No. 8,323. Term of patent 7 years.



The ornamental design for a spoon or similar article as shown.

64,159. TRAY OR SIMILAR ARTICLE OF MANUFACTURE. MARTHA H. CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Oct. 9, 1923. Serial No. 7,433. Term of patent 3½ years.



The ornamental design for a tray or similar article of manufacture as shown and described.

64,160. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 860. Term of patent 3½ years.

The ornamental design for a ceiling light for lighting fixtures, as shown.

64,161. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 861. Term of patent 3½ years.

The ornamental design for a ceiling light for lighting fixtures, as shown.

64,162. CHANDELIER FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 862. Term of patent 3½ years.

The ornamental design for a chandelier for lighting fixtures, as shown.

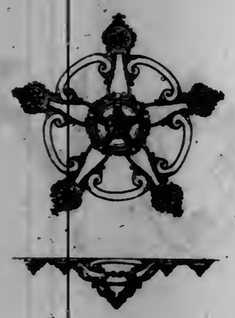
64,163. CHANDELIER FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 863. Term of patent 3½ years.

The ornamental design for a chandelier for lighting fixtures as shown.

64,164. BRACKET FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 864. Term of patent 3½ years.

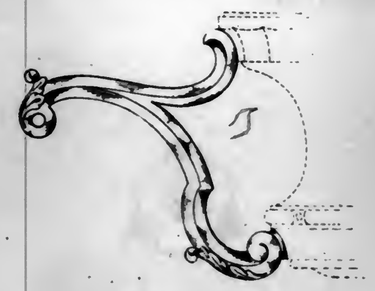
The ornamental design for a bracket for lighting fixtures as shown.

64,165. BRACKET FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 865. Term of patent 3½ years.



The ornamental design for a bracket for lighting fixtures, as shown.

64,166. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 869. Term of patent 3½ years.

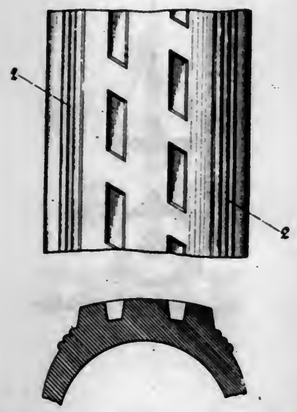


The ornamental design for a plate for lighting fixtures, as shown.

64,167. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1922. Serial No. 870. Term of patent 3½ years.

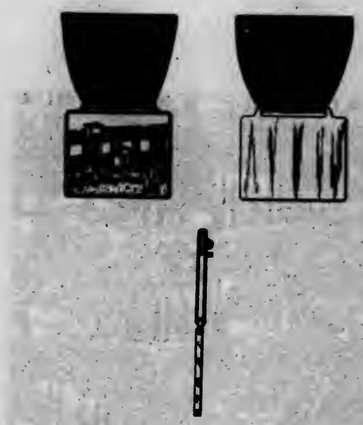
The ornamental design for a plate for lighting fixtures as shown.

64,168. ARM FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed Oct. 2, 1923. Serial No. 7,381. Term of patent 3½ years.



The ornamental design for an arm for lighting fixtures, as shown.

64,169. GLASS BOTTLE. WILSON D. EDWARDS, Terre Haute, Ind., assignor to Turner Brothers Company, Terre Haute, Ind. Filed Oct. 5, 1923. Serial No. 7,407. Term of patent 3½ years.



The ornamental design for a glass bottle, as shown.

64,170. TIRE TREAD. SAMUEL T. EHRLICH, Newark, N. J., assignor to Hudson Tire Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed May 2, 1923. Serial No. 6,038. Term of patent 14 years.

The ornamental design for a tire tread, as shown.

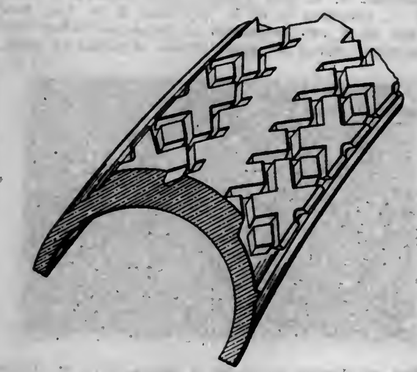
64,171. MEDALLION. EDWARD S. GLAVIS, Philadelphia, Pa., assignor to La Societe des 40 Hommes et 8 Chevaux, Seattle, Wash., a National Fraternal Organization. Filed July 3, 1922. Serial No. 2,923. Term of patent 14 years.

The ornamental design for a medallion, as shown.

64,172. GARTER CLASP MEMBER. GEORGE B. GLIDDEN, Dighton, Mass., assignor to George Frost Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 11, 1922. Serial No. 3,675. Term of patent 14 years.

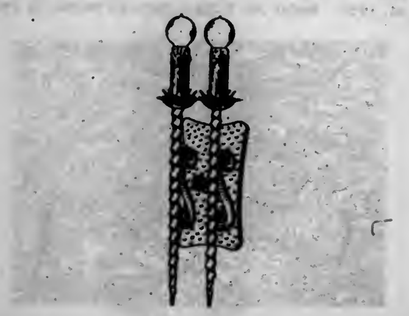
The ornamental design for a garter clasp member, substantially as shown.

64,173. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Dec. 1, 1923. Serial No. 7,934. Term of patent 3½ years.



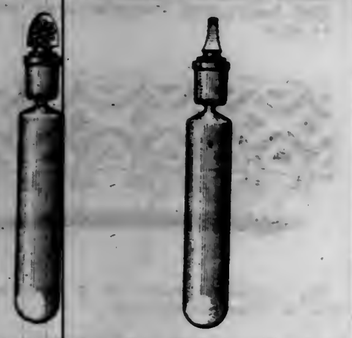
The ornamental design for a textile fabric or similar article as shown and described.

64,174. TREAD FOR PNEUMATIC TIRES. THORNTON G. GRAHAM, Kent, Ohio, assignor to The Mason Tire & Rubber Company, Kent, Ohio, a Corporation of Ohio. Filed Jan. 23, 1923. Serial No. 4,971. Term of patent 14 years.



The ornamental design for a tread for pneumatic tires, as shown and described.

64,175. VEHICLE TIRE. TULLY GRAYBILL, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Dec. 29, 1923. Serial No. 8,184. Term of patent 14 years.

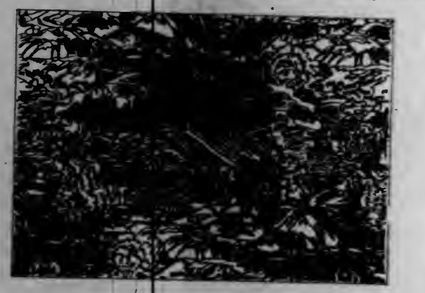


The ornamental design for a vehicle tire as shown.

64,176. ELECTRIC-LIGHT WALL BRACKET. MADGE GRIFFIN, San Francisco, Calif. Filed Nov. 6, 1923. Serial No. 7,700. Term of patent 7 years.

The ornamental design for an electric light wall bracket, as shown.

64,177. PERFUME CONTAINER. GEORGE GRUNBERG, New York, N. Y. Filed Dec. 14, 1923. Serial No. 8,032. Term of patent 3½ years.



The ornamental design for a perfume container, as shown.

64,178. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1923. Serial No. 8,007. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

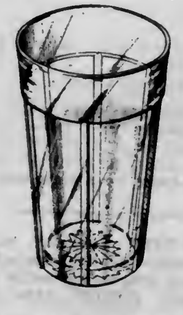
64,179. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1923. Serial No. 8,215. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

64,180. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1923. Serial No. 8,216. Term of patent 3½ years.

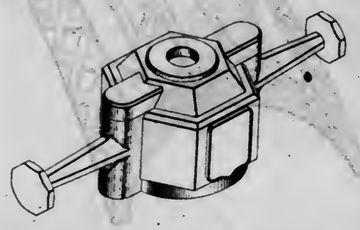
The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

64,181. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1923. Serial No. 8,217. Term of patent 3½ years.



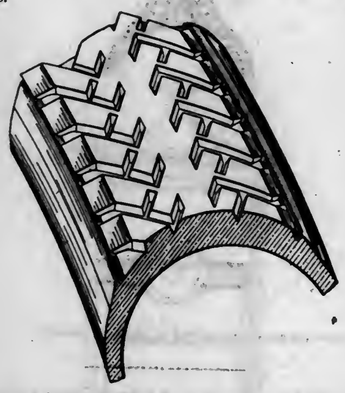
The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

64,182. PENDANT. WALTER F. HEEREN, Pittsburgh, Pa., assignor to Heeren Brothers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 30, 1922. Serial No. 1,449. Term of patent 3½ years.



The ornamental design for a pendant, as shown.

64,183. TUMBLER. T. CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed May 24, 1923. Serial No. 6,264. Term of patent 14 years.



The ornamental design for a tumbler, as shown.

64,184. RADIATOR CAP. JULIUS A. HORVITZ, New Bedford, Mass., assignor to Crown Automotive Co., Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1923. Serial No. 8,198. Term of patent 7 years.

The ornamental design for a radiator cap as shown.

64,185. VEHICLE TIRE. EDISON G. HULSE, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Dec. 22, 1923. Serial No. 8,130. Term of patent 14 years.

The ornamental design for a vehicle tire as shown.

64,186. RING. HARRY G. KAUFMAN, New York, N. Y. Filed Jan. 7, 1924. Serial No. 8,264. Term of patent 3½ years.

The ornamental design for a ring as shown.

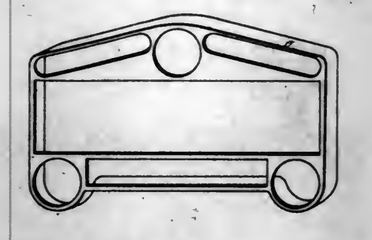
64,187. RING. HARRY G. KAUFMAN, New York, N. Y. Filed Jan. 7, 1924. Serial No. 8,265. Term of patent 3½ years.

The ornamental design for a ring as shown.

64,188. RING. HARRY G. KAUFMAN, New York, N. Y. Filed Jan. 7, 1924. Serial No. 8,266. Term of patent 3½ years.

The ornamental design for a ring as shown.

64,189. RING. HARRY G. KAUFMAN, New York, N. Y. Filed Jan. 7, 1924. Serial No. 8,267. Term of patent 3½ years.

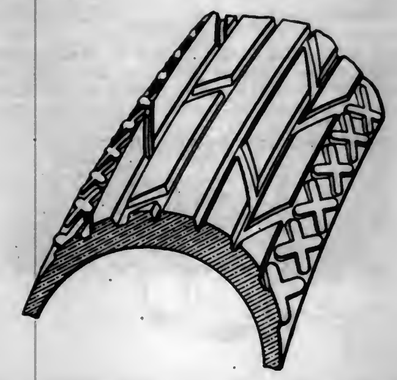


The ornamental design for a ring as shown.

64,190. RING. HARRY G. KAUFMAN, New York, N. Y. Filed Jan. 7, 1924. Serial No. 8,268. Term of patent 3½ years.

The ornamental design for a ring as shown.

64,191. AUTOMOBILE SIGNAL-LIGHT CASING. HENRY M. LIND, Los Angeles, Calif. Filed May 1, 1923. Serial No. 6,022. Term of patent 3½ years.

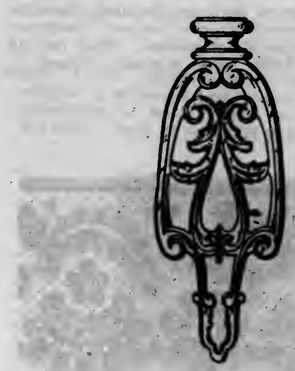


The ornamental design for an automobile signal light casing, substantially as shown.

64,192. FINGER RING. ELLIS W. MACALLISTER, Providence, R. I., assignor to Irons & Russell Company, Providence, R. I., a Corporation of Maine. Filed Dec. 15, 1923. Serial No. 8,055. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

64,193. VEHICLE TIRE. THOMAS C. MARSHALL, Mount Savage, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Dec. 22, 1923. Serial No. 8,129. Term of patent 14 years.

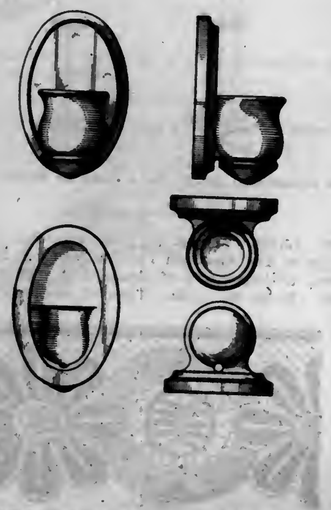


The ornamental design for a vehicle tire as shown.

64,194. CAST ARM FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 10, 1923. Serial No. 7,463. Term of patent 3½ years.

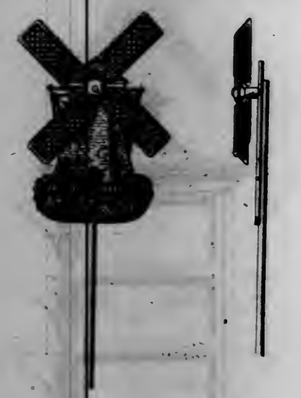
The ornamental design for a cast arm for lighting fixtures as shown.

64,195. LOOP FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 10, 1923. Serial No. 7,464. Term of patent 7 years.



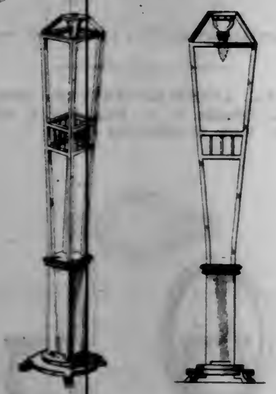
The ornamental design for a loop for lighting fixtures as shown.

64,196. TRAFFIC LIGHT. LOREN W. MCOMBER, Peoria, Ill. Filed Dec. 10, 1923. Serial No. 8,000. Term of patent 14 years.



The ornamental design for a traffic light, as shown.

64,197. WALL LIGHTING FIXTURE. HOWARD J. D. MONTEITH, Trenton, N. J. Filed Nov. 8, 1923. Serial No. 7,720. Term of patent 14 years.



The ornamental design for a wall lighting fixture, as shown.

64,198. PINWHEEL. FREDERICK C. MONKHOUSE, Rochester, N. Y. Filed Dec. 12, 1922. Serial No. 4,578. Term of patent 3½ years.

The ornamental design for a pinwheel, as shown.

64,199. LAMP. ULYSSES S. PAGE and JULIUS C. PAGE, Fall River, Mass. Filed Nov. 9, 1923. Serial No. 7,725. Term of patent 3½ years.

The ornamental design for a lamp as shown.

64,200. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 13, 1923. Serial No. 8,026. Term of patent 14 years.

The ornamental design for lace substantially as shown.

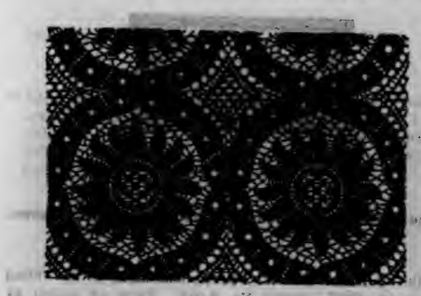
64,201. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 15, 1923. Serial No. 8,053. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,202. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 15, 1923. Serial No. 8,054. Term of patent 14 years.

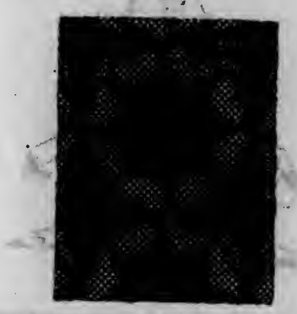
The ornamental design for lace substantially as shown.

64,203. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 18, 1923. Serial No. 8,075. Term of patent 14 years.



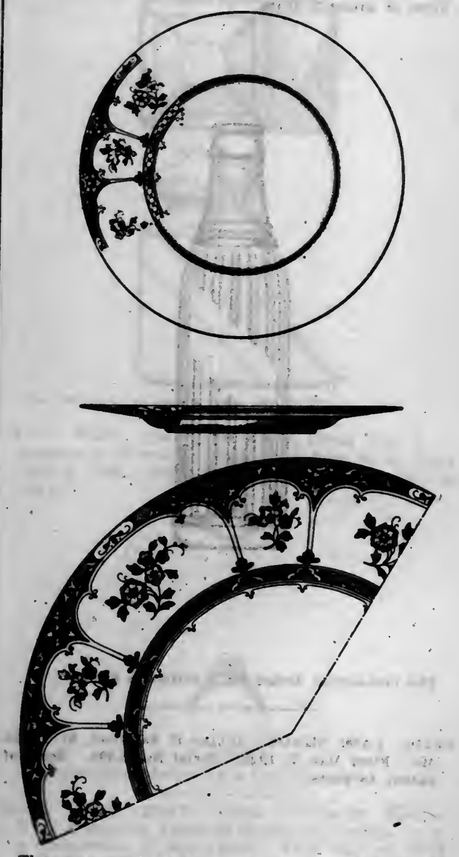
The ornamental design for lace substantially as shown.

64,204. GLASS GRADUATE. WILLIAM P. PARSONS, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Nov. 8, 1923. Serial No. 7,719. Term of patent 14 years.



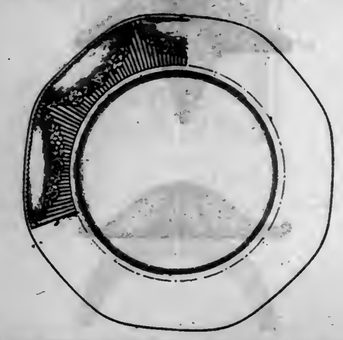
The ornamental design for a glass graduate, as shown.

64,205. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 15, 1923. Serial No. 8,051. Term of patent 14 years.



The ornamental design for lace substantially as shown.

64,206. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed Dec. 22, 1923. Serial No. 8,139. Term of patent 14 years.

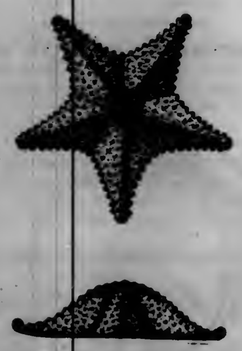


The ornamental design for lace as shown.

64,207. PLATE OR SIMILAR ARTICLE. EDWARD JOHN RIDGWAY, Staten Island, N. Y. Filed May 4, 1923. Serial No. 6,060. Term of patent 7 years.

The ornamental design for a plate or similar article as shown and described.

64,208. PLATE OR SIMILAR ARTICLE. EDWARD JOHN RIDGWAY, Staten Island, N. Y. Filed Aug. 1, 1923. Serial No. 6,913. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

64,209. BOTTLE. WILLIAM R. ROOT, Terre Haute, Ind., assignor to Southern Fruit Julep Company, Fort Worth, Tex. Filed Oct. 10, 1923. Serial No. 7,458. Term of patent 7 years.

The ornamental design for a bottle, as shown.

64,210. LAMP SHADE. JULIAN E. SAMPSON, St. Louis, Mo. Filed Mar. 7, 1923. Serial No. 5,395. Term of patent 14 years.

The ornamental design for a lamp shade, as shown.

64,211. RADIO CABINET. ALEXANDER SCHOPF, Camden, N. J. Filed May 7, 1923. Serial No. 6,098. Term of patent 14 years.

The ornamental design for a radio cabinet, as shown.

64,212. DOLL. MAY R. SMITH, Brooklyn, N. Y. Filed July 12, 1922. Serial No. 3,043. Term of patent 3½ years.

The ornamental design for a doll substantially as shown.

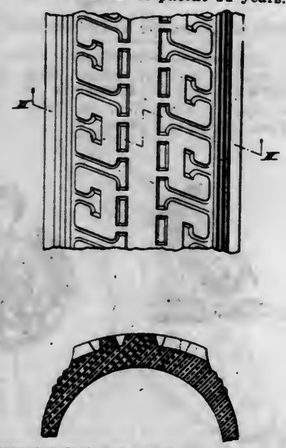
64,213. SANDAL. URDIX L. STAPLES, Haverhill, Mass. Filed Dec. 8, 1923. Serial No. 7,077. Term of patent 7 years.

The ornamental design for a sandal, as shown.

64,214. SPOON OR ANALOGOUS ARTICLE. FREDERICK WILLIAM STARK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 19, 1924. Serial No. 8,357. Term of patent 14 years.

The ornamental design for a spoon or analogous article substantially as shown.

64,215. JAR. EARL M. STEVENS, Chicago, Ill. Filed Nov. 3, 1923. Serial No. 7,670. Term of patent 14 years.



The ornamental design for a jar as shown.

64,216. RING. JOHN A. SWORBELL, Jersey City, N. J., assignor to Hyman Breslavsky, New York, N. Y. Filed May 2, 1923. Serial No. 6,025. Term of patent 3½ years.

The ornamental design for a ring, as shown.

64,217. TIRE TREAD. PETER D. THROPP, Trenton, N. J., assignor to Thermoid Rubber Co., Trenton, N. J., a Corporation of New Jersey. Filed May 17, 1922. Serial No. 2,297. Term of patent 14 years.

The ornamental design for a tire tread substantially as shown.

64,218. GAITER OR SIMILAR ARTICLE. FREDERICK H. TIMSON, Sharon, Mass. Filed Sept. 20, 1922. Serial No. 3,774. Term of patent 3½ years.

The ornamental design for a gaiter or similar article, substantially as shown.

64,219. WALL CUSPIDOR. JAMES VRAYLAS, Peoria, Ill. Filed June 30, 1923. Serial No. 6,633. Term of patent 3½ years.

The ornamental design for a wall cuspidor, as shown.

64,220. FLOWER DOLL. KATHERINE W. WADE, San Francisco, Calif. Filed Nov. 19, 1923. Serial No. 7,811. Term of patent 7 years.

The ornamental design for a flower doll, as shown.

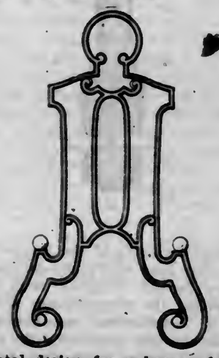
64,221. FLOWER DOLL. KATHERINE W. WADE, San Francisco, Calif. Filed Nov. 19, 1923. Serial No. 7,812. Term of patent 7 years.

The ornamental design for a flower doll, as shown.

64,222. PENDANT. ALBERT L. WHITE, Yuma, Ariz. Filed Sept. 13, 1923. Serial No. 7,193. Term of patent 3½ years.

The ornamental design for a pendant, as shown.

64,223. PHONOGRAPH CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed Aug. 1, 1923. Serial No. 6,912. Term of patent 7 years.



The ornamental design for a phonograph cabinet, substantially as shown.

64,224. HANGER FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 13, 1923. Serial No. 7,750. Term of patent 7 years.

The ornamental design for a hanger for lighting fixtures, as shown.

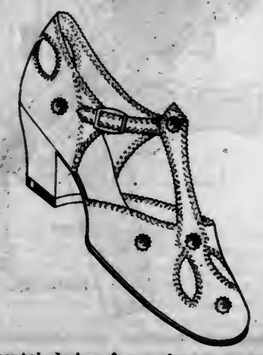
64,225. HANGER FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 13, 1923. Serial No. 7,751. Term of patent 7 years.

The ornamental design for a hanger for lighting fixtures, as shown.

64,226. LAMP STANDARD. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 13, 1923. Serial No. 7,752. Term of patent 7 years.

The ornamental design for lamp standard, as shown.

64,227. GLOBE HOLDER FOR LIGHTING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 13, 1923. Serial No. 7,753. Term of patent 3½ years.

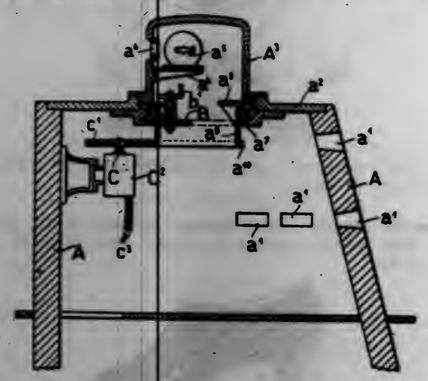


The ornamental design for a globe holder for lighting fixtures, as shown.

64,228. SHOE. HARRY SMOLEN, Brooklyn, N. Y. Filed Jan. 24, 1924. Serial No. 8,386. Term of patent 3½ years.

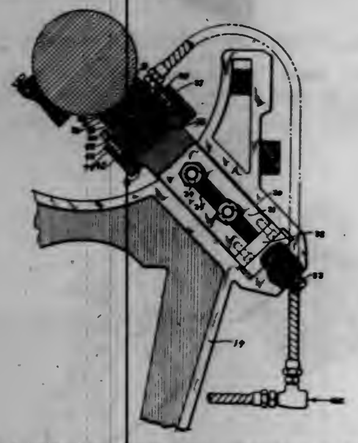
The ornamental design for a shoe as shown.

64,229. SHOE. HARRY SMOLEN, Brooklyn, N. Y. Filed Jan. 24, 1924. Serial No. 8,387. Term of patent 3½ years.



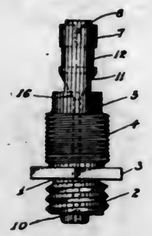
The ornamental design for a shoe, as shown.

PATENTS



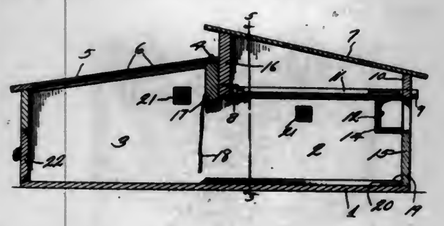
GRANTED MARCH 11, 1924.

1,486,114. CONNING TURRET. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 3, 1921. Serial No. 434,633. 4 Claims. (Cl. 89—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. An arrangement of the class described comprising a conning turret, a rotatable cupola mounted upon said turret, a sighting device and stabilizing means therefor supported in said cupola, means for rotating said cupola and rotating therewith, and means initiated by the rotation of said cupola for laterally training guns.

1,486,115. BALANCING-MACHINE BEARING. ROBERT C. ALLEN, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 3, 1921. Serial No. 434,604. 11 Claims. (Cl. 64—24.)



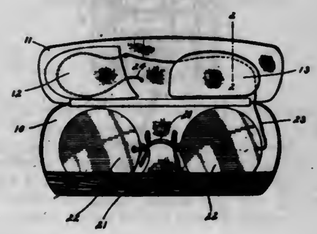
1. In a balancing machine, the combination of an element limited to one degree of freedom of motion, a supporting bearing carried by the element for supporting the body to be balanced including a plurality of rocker segments having bearing faces adapted to cooperate with the journal portion of a body to be balanced, and means for supplying oil to the faces of the segments, the segments adapted to rock upon rotation of the body, whereby circumferentially-extending, load-sustaining wedge-shaped oil films are formed between the journal portion of the body and the bearing faces.

1,486,116. AUTOMATIC VALVE. JAMES B. ANDERSON, Pittsburgh, Pa., assignor to Pumpless Blow Torch Company, Pittsburgh, Pa. Filed Apr. 12, 1923. Serial No. 631,557. 7 Claims. (Cl. 251—127.)

1. In an automatic valve of the character described, a valve-body; a valve-head of cylindro-conical shape; a plurality of guides formed integrally with the valve-body and partly engaging the circumference of said valve-head for guiding the longitudinal movements thereof, and means for simultaneously preventing the rotation of said valve-head and limiting the longitudinal movements thereof.

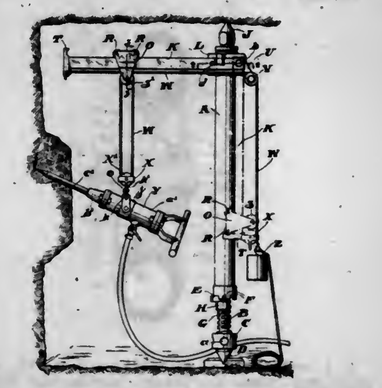
1,486,117. CHICKEN BROODER. RICHARD ASCHENBACH, Sheboygan, Wis. Filed Apr. 12, 1923. Serial No. 631,614. 2 Claims. (Cl. 119—34.)

1. The combination with a brooder chamber, said chamber being formed by walls and a floor, of a U-shaped member disposed within the chamber in engagement with the floor and walls, the inner sides of the U-shaped member being bevelled and inclining downwardly and inwardly.



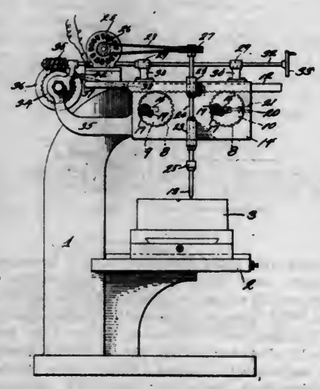
2. A brooder comprising a body member having a brooder compartment and a runway compartment, a removable cover carried by the brooder compartment, said cover being provided with a U-shaped pipe having its arms extending through the outer wall of the cover, a centrally disposed pipe carried by the U-shaped pipe in parallel relation to the arms thereof, a lamp receiving casing carried by the centrally disposed pipe, said casing when the cover is positioned on the body member being received in a casing carried by the end wall of the body member.

1,486,118. FOLDING SHOE-POLISHING STAND. JAMES HERBERT BAIN, West Cheshire, Conn. Filed Sept. 12, 1922. Serial No. 587,671. 1 Claim. (Cl. 15—265.)



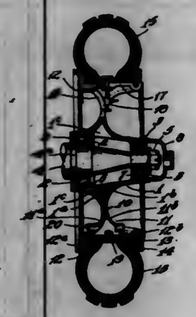
In a folding shoe-polishing stand, the combination with a foot-plate provided at its forward end with a pair of forwardly-raked and laterally-spread, depending, integral mounting-arms and at its rear end with a complementary pair of rearwardly-raked and laterally-spread, integral, depending mounting-arms, each of the said arms having a horizontal perforation, a positive stop and a retaining-boss, the said stop and boss of each arm being located below the perforation thereof; of one-piece rear and forward wire-supports, each comprising a bottom-reach and two inwardly-inclined yielding arms, the latter terminating at their upper ends in inwardly-turned trunnions entering the perforations of the mounting-arms, the stops and bosses whereof are spaced apart so as to receive between them the upper ends of the yielding arms of the supports when the same are in their open or raked positions.

1,486,119. EYEGLASS CASE. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 18, 1923. Serial No. 646,076. 3 Claims. (Cl. 206—5.)



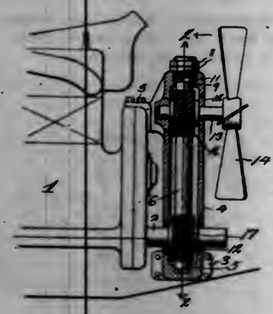
1. An eyeglass case of the character described, comprising a body portion, a top hingedly secured thereto, a retaining member for the eyeglass holding means mounted in the top adjacent one end thereof, and a chain receiving member secured to the top, said chain receiving member being formed of superimposed plates, the outer one of which has its peripheral edges extending beyond those of the inner plate.

1,486,120. MOUNTING FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 28, 1923. Serial No. 635,383. 4 Claims. (Cl. 255—53.)



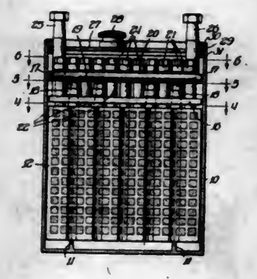
4. The combination with a vertically adjustable column, a block pivotally mounted theeron, a bar pivotally connected to the block, means for locking the bar at right angles to the column, of a mounting for a rock drill, comprising a traveler movable longitudinally along the bar, sheaves mounted on the traveler, a pulley adapted to be attached to the rock drill, a cable secured at one end of the bar and passing around the sheaves and pulley, and a counter-balance weight adapted to be attached to the cable, whereby the rock drill may be supported at any desired vertical height below the level of the bar.

1,486,121. DIESINKING MACHINE. FRANK O. BECKNER, South Bend, Ind. Filed Jan. 3, 1922. Serial No. 526,677. 6 Claims. (Cl. 90—15.)



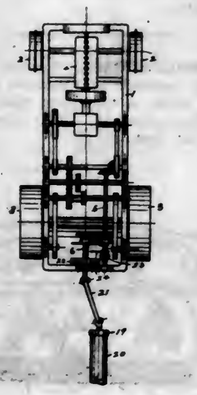
1. A die sinking machine comprising a frame, spaced gears carried by said frame, a rack bar meshing with said gears, a member pivotally connected to the gears at points spaced from their centers, a cutting element carried by said member, and means for moving the rack bar longitudinally, said means comprising a rotatable member, and a connecting bar connecting the rotatable member to the rack, said connecting bar being connected to the rotatable member at a point spaced from its center.

1,486,122. WHEEL. MERTON H. BLANK and ARTHUR H. EDGERTON, Cleveland, Ohio, assignors, by mesne assignments, to Aluminum Manufactures, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed July 3, 1919. Serial No. 308,483. 6 Claims. (Cl. 301—65.)



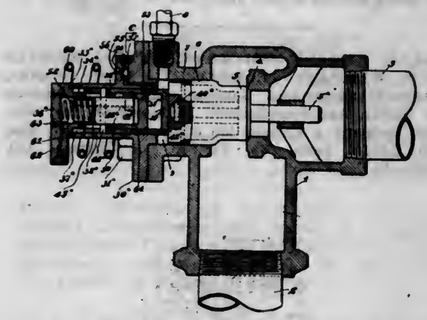
1. A cast metal wheel having a hub with outwardly converging inside and outside sections, an annular web joining the converging hub sections at their junction, a felly with inside and outside disc sections diverging outwardly from their junction with the outer edge of the web, said hub, web and felly parts being cast in one, and a metal rim surrounding the felly and engaging directly with the said diverging sections, the rim and felly forming a hollow structure substantially triangular in radial section.

1,486,123. ENGINE COOLING FAN. JOSEPH L. BOLBY and BURRIS E. FELTS, King City, Mo. Filed Apr. 6, 1920. Serial No. 371,595. 1 Claim. (Cl. 230—1.)



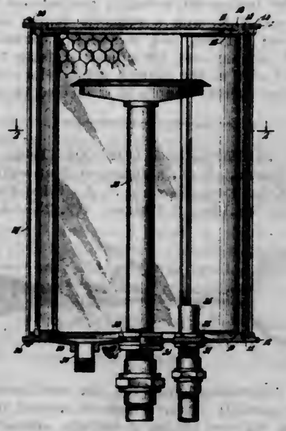
A cooling fan being provided with a horizontally disposed shaft, said shaft rotatably mounted in bearings of a segmentally shaped casing, a rotatable shaft rotatably mounted in a second segmentally shaped casing, a vertically disposed shaft rotatably mounted in bearings of a vertically disposed casing, the rotatable shafts carried by the segmentally shaped casings and provided with gear connections with the vertically disposed shaft, means for securing said segmentally shaped casing to the vertically disposed casing, anti-frictional means for supporting the ends of the vertically disposed shaft, adjusting means cooperating with one end of a vertically disposed shaft and forming means whereby wear may be taken up, the upper anti-frictional bearing being disposed in an opening in the casing of greater size than the gears carried by the vertically disposed shaft, thereby allowing said shaft and its gears to be removed from the casing through said opening.

1,486,124. STORAGE-BATTERY CONSTRUCTION. CLARENCE H. BONG and CARL P. SORENSEN, Chicago, Ill., assignors to Bong Battery Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 4, 1921. Serial No. 489,924. 11 Claims. (Cl. 204—29.)



1. Storage battery construction, comprising a jar having negative elements and positive elements within said jar, connecting means for electrically connecting and holding all of said negative elements together, and connecting means independent of said first mentioned connecting means for electrically connecting and releasably holding all of said positive elements together, whereby one of said sets of elements may be removed without disturbing the other set of elements, said connecting means being located within said jar.

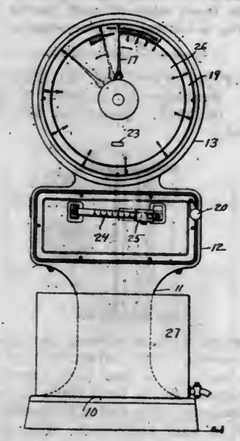
1,486,125. MACHINE FOR UNITING PIPE SECTIONS. JESSE E. CROCKETT, Humble, Tex. Filed Aug. 2, 1920. Serial No. 400,812. 2 Claims. (Cl. 81—57.)



1. In apparatus for screwing together sections of pipe, a driving member adapted to be placed in operative connection with a source of power, a pipe engaging head, a driven member in operative connection with said head, a clutch whereby said driving member may be placed in operative connection with said driven member and arranged to deliver only a predetermined amount of power from the former to the latter, and a driving connection by which said driving member may be positively placed in operative connection with the driven member.

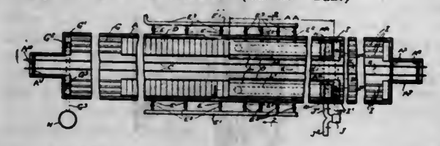
1,486,126. SAFETY-VALVE RETARDING MECHANISM. PHILIP G. DARLING, Bridgeport, Conn., assignor to Manning, Maxwell & Moore Inc., New York, N. Y., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,194. 13 Claims. (Cl. 137—53.)

1. In combination with a safety valve for steam boilers, a controlling device for such valve comprising a movable element, and means whereby water of condensation from boiler steam is automatically admitted to one side of said element whereby to retard the movement thereof.



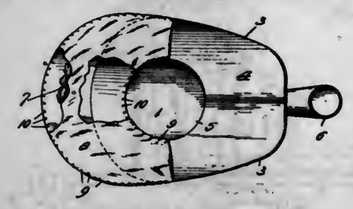
1,486,127. VISIBLE TANK FOR GASOLINE PUMPS. ARTHUR E. DAVENPORT, Brooklyn, N. Y., assignor to The Texas Company, a Corporation of Texas. Filed June 11, 1919. Serial No. 303,442. 4 Claims. (Cl. 220—82.)

1. A visible measuring tank for dispensing liquids comprising a fluid-tight chamber having a metal head with an annular groove formed therein near its edge, a spaced ring or circular frame having a corresponding annular groove, and a plurality of cylindrically curved segments, some of which are glass, sealed into the grooves, and a glass top plate seated on the ring or frame.



1,486,128. ON-AND-OFF WEIGHING SCALE. EARL R. DIEMER, Pittsburgh, Pa., and LOUIS A. OSGOOD, Dayton, Ohio, assignors to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Nov. 20, 1920. Serial No. 425,418. 7 Claims. (Cl. 265—62.)

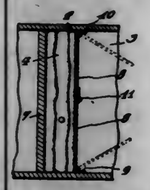
1. In a weighing scale, in combination with a scale beam, automatic counterbalancing means and a movable weight indicating device, of fixed complementary dials cooperating with the indicating device and a supplemental manually operable counterpoise arranged to act



cumulatively with the load to shift the indicating device towards the zero of one dial and away from the zero of the other dial.

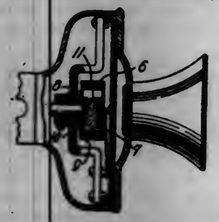
1,486,129. METHOD OF AND APPARATUS FOR FLASHING BRICK. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1920, Serial No. 382,003. Renewed July 17, 1923. 5 Claims. (Cl. 25—142.)

1. The method of flashing brick in a continuous muffle heated kiln which consists in passing fuel and air for its partial combustion into a high temperature portion of the kiln chamber to thereby maintain a reducing gas atmosphere in said kiln chamber portion and in the portion of the cooling zone of the kiln in which the brick are at a temperature high enough to result in surface oxidation if exposed to an oxidizing atmosphere.



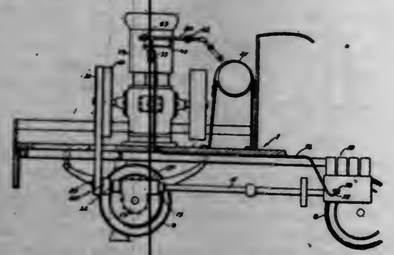
1,486,130. RECEPTACLE. MARY C. DU BOSE, Gainesville, Fla. Filed Nov. 2, 1922. Serial No. 598,634. 2 Claims. (Cl. 4—113.)

1. A receptacle of the class described in the general form of a scoop and embodying a transversely curved member forming the bottom and side walls of the receptacle, the front edge of said member being rounded and having its side edges sloping upwardly and rearwardly, a vertical rear wall at the rear edges of said curved member having a rearwardly extending inlet tube, and



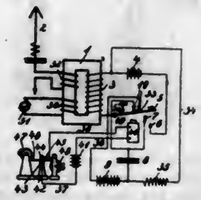
a rearwardly and upwardly sloping top wall of concave form and having its front edge rounded and spaced inwardly of the front edge of said curved member, said top wall having a central circular opening.

1,486,131. APPARATUS FOR SALVAGING SUNKEN VESSELS. STEPHEN A. DUTTON, Philadelphia, Pa. Filed Sept. 16, 1921. Serial No. 501,133. 1 Claim. (Cl. 114—54.)



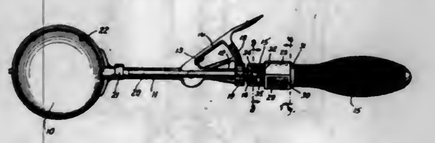
In combination with a vertical partition or wall of a ship's state-room, of an inflatable bag held collapsed against said wall by a two part partition hinged at its top and bottom, means for locking the parts together, and means connected with the bag extending through the exterior wall of said state-room, whereby air may be forced into said bag to force the water from the state-room to raise the ship, should it be sunk.

1,486,132. TELEPHONE-TRANSMITTER BUTTON. HENRY C. EGERTON, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,323. 1 Claim. (Cl. 179—122.)



A telephone button comprising a cup formed of phenol condensation product, said cup having a bottom responsive to sound vibrations, a substantially rigid marginal wall integral with said bottom, and a flexible cover of similar material, said cover having a threaded flange integral therewith and engaging the wall of the cup to secure said cover thereto.

1,486,133. PORTABLE COMPRESSOR UNIT. LA RUE B. ELLIOT and JAMES P. KILROY, Chicago, Ill. Filed May 13, 1922. Serial No. 560,572. 2 Claims. (Cl. 180—53.)

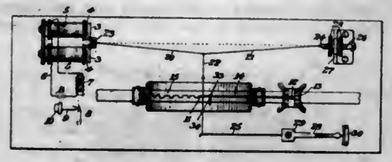


1. The combination with a motor vehicle having a main drive shaft, a housing enclosing the rear end of said shaft and having an open rear end, the rear end of said shaft being externally screw-threaded; of a power attachment comprising a stud shaft having an internally threaded bore at its forward end adapted to receive the screw-threaded rear end of the main shaft, a sleeve arranged to be secured upon the rear end of the housing, and a bearing in said sleeve for the stud shaft.

1,486,134. MEANS FOR TRANSMITTING SIGNALS FOR WIRELESS TELEGRAPHY. HANS GERDIEN, Berlin-Schmargendorf, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 30, 1921. Serial No. 518,846. 3 Claims. (Cl. 250—19.)

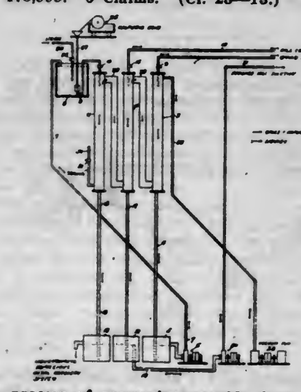
1. Means for transmitting radio signals through an antenna, comprising an iron core having a coil, connected into the antenna circuit, a generator adapted to permanently supply radio frequency currents, a second coil on said iron core connected to said generator for supplying current to the antenna, a direct current coil on said iron core, means for supplying low potential direct current to said coil to vary the saturation of said core for tuning and detuning the antenna during the signaling operation, and a separate source of high potential direct current, and means for connecting it to said direct current coil for quickly raising the saturation of said core to the desired point before the low potential direct current supply is connected to said coil.

1,486,135. DISPENSING-SCOOP COUNTER. FRANK A. HAGEL, Newark, N. J., assignor of four-tenths to Walter H. Dickenhorst, Newark, N. J. Filed Dec. 1, 1922. Serial No. 604,130. 2 Claims. (Cl. 235—91.)



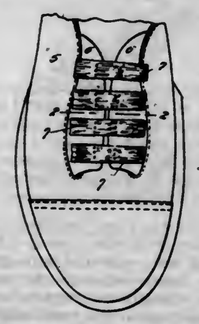
1. In a dispensing apparatus, the combination with a handle, a partially rotative element carried thereby and a counting register having a spindle extending at one end, of a pair of opposed prongs projecting outwardly from said spindle, means carried by said element adapted to engage said prongs near the limit of its movement to transmit a partial rotary motion to said spindle, and means actuated by said spindle for advancing said counting register.

1,486,136. INDICATOR. RAY EDWIN HALL, Chicago, Ill. Filed Jan. 8, 1920. Serial No. 350,162. 11 Claims. (Cl. 178—91.)



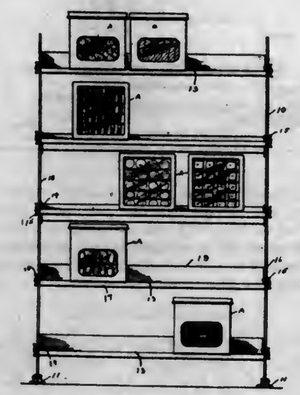
1. A receiving apparatus including a polarized electromagnet, an armature continuously attracted thereby; and means for varying the attraction of said electromagnet in accordance with the received signals, in combination with a flexible tension member stretched between the armature and a fixed abutment to restrain and limit movement of the armature toward the electromagnet

poles; and a delicately adjustable spring element laterally applied to deflect an intermediate portion of the



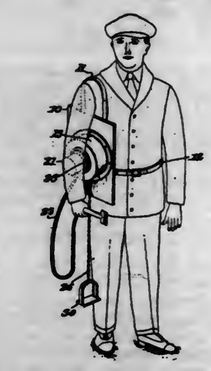
said tension member through a small angle and a non-resilient indicating element acuated by the magnified motion of the deflected portion of the tension member.

1,486,137. PROCESS OF RECOVERING CYANIDE. ARTHUR L. HALVORSEN, Perth Amboy, N. J., assignor to The Merrill Company, San Francisco, Calif., a Corporation of California. Filed June 20, 1921. Serial No. 478,995. 6 Claims. (Cl. 23—13.)



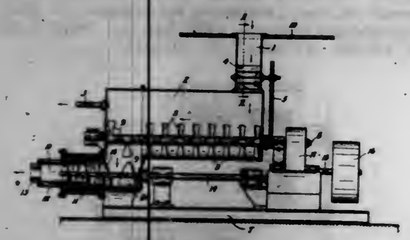
1. A process of recovering cyanide from cyanide-containing mill solution which comprises introducing a warm cyanide solution with sufficient acid to acidify the same, into a vacuum receptacle, and allowing the same to boil therein, bringing the resulting gases and vapors, while under pressure below atmospheric, into contact with an alkaline absorbent liquor to absorb the hydrocyanic acid therefrom, bringing the remaining vapors containing steam into contact with ingoing mill solution, each of said steps being operated continuously.

1,486,138. CLOSURE FASTENER FOR SHOES. ALBERT CLARENCE HANSON, Fort Wayne, Ind. Filed Sept. 27, 1923. Serial No. 665,050. 2 Claims. (Cl. 24—140.)



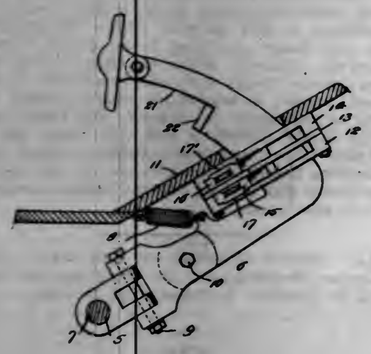
1. In a closure fastener for shoes, an elastic member having eye members attached to the under sides thereof inwardly of the ends of the same, said elastic member embodying a piece of elastic tape folded to provide a unit having three plies to simulate the appearance of a fold.

1,486,139. DISPLAY RACK. ROBERT Q. HERRING and ANDREW M. GRAY, Baltimore, Md., assignors to Maryland Biscuit Company. Filed Mar. 21, 1923. Serial No. 626,684. 2 Claims. (Cl. 211—14.)



1. A metal display rack comprising a pair of substantially inverted U-shaped uprights, shoes secured to the terminals of said uprights, shelves including depending side flanges and front flange secured between the uprights, removable means extending through the uprights and side flanges of the shelves adjacent the forward ends thereof to support the shelves between the uprights, an upstanding rear flange on said shelves, side attaching flanges formed on said rear flange and at right angles thereto, and means extending through said side attaching flanges and uprights whereby said shelves may be moved and held in different adjusted positions relative to said uprights.

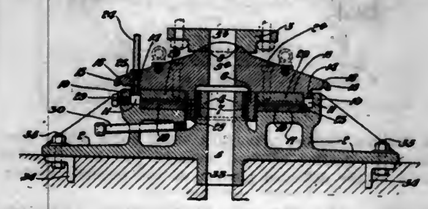
1,486,140. HEDGE TRIMMER OR THE LIKE. JOHN J. HICKEY, Washington, D. C. Filed May 21, 1923. Serial No. 640,500. 4 Claims. (Cl. 185—39.)



1. A hedge trimmer or the like comprising, in combination, a plate adapted to be supported upon the person of the user, a spring motor carried by said plate, a flexible shaft adapted to be operated by said motor, an implement upon said shaft, and means operable by the foot of the user for storing power for actuation of said motor.

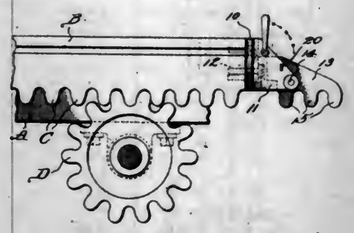
1,486,141. PROCESS OF TREATING PEAT. HENRY H. HINDSHAW, St. Paul, Minn., assignor to Hindshaw Engineering and Development Company, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 2, 1922. Serial No. 540,440. 4 Claims. (Cl. 44—27.)

1. The process of treating raw peat, which consists in agitating and mixing the raw peat in a substantially closed vessel to break up the air and moisture cavities therein, drawing air from said vessel, artificially to dry said peat and then compressing the peat into a compact mass to form the final product.



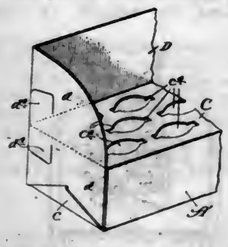
1,486,142. FOOT-OPERATED CLUTCH-RELEASE AND GEAR-SHIFT MECHANISM. ERNEST HOSCH, Ventura, Calif. Filed Aug. 29, 1923. Serial No. 659,949. 3 Claims. (Cl. 74—81.)

1. In combination with the usual transmission mechanism of a motor vehicle, wherein sliding of a pair of members in opposite directions effects change in forward speeds or reverse, a pair of slides, a depressible clutch pedal jointed to swing laterally, and means associated with said slides and with said clutch pedal for selectively changing said gears in response to a predetermined positioning of said clutch pedal by lateral swinging thereof.



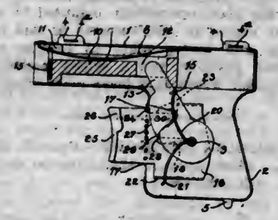
1,486,143. CENTER BEARING. OTIS E. HOVEY, New York, N. Y. Filed Mar. 24, 1923. Serial No. 627,441. 8 Claims. (Cl. 64—84.)

1. A center bearing comprising a housing composed of upper and lower box members, a centrally arranged cylindrical post formed integral with and projecting upwardly from the inside bottom face of said lower box member, a centrally arranged cylindrical hollow post formed integral with and depending from the inside top face of said upper box member and telescoping over said post on said lower box member, an annular bushing of anti-friction metal mounted around the post on said lower box member and adapted to form a bearing surface between said posts, an annular vertically extending flange formed on said lower box member adapted with said central posts to form an oil chamber, a pair of annular disks of anti-friction metal mounted in said housing, one of said disks being secured to the upper and the other of said disks being secured to the lower box member, radial



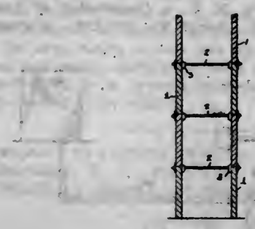
oil grooves formed in the contacting face of one of said disks, other oil grooves formed in the outer periphery of said annular bushing mounted on the post on said lower box, and means for supplying oil to said oil chamber and said grooves.

1,486,144. EXTENSION RACK. LEMUEL PIERCE JARRELL, North Birmingham, Ala. Filed July 25, 1923. Serial No. 653,797. 3 Claims. (Cl. 74—27.)



1. In combination with a planing machine table carrying a rack meshing with a drive gear; an extension rack structure comprising a bracket mounted upon the table, a yoke pivoted on the bracket, a rack member pivoted within the yoke and movable to form a continuation of the rack proper, and means for securing said rack member with respect to the yoke.

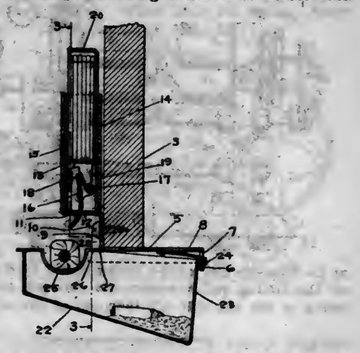
1,486,145. FOLDING PAPER CARTON. EDWARD W. JOHNSON, Chicago, Ill., assignor to Chicago Carton Company, Chicago, Ill., a Corporation. Filed Sept. 20, 1920. Serial No. 411,453. 3 Claims. (Cl. 229—29.)



2. In a carton of the class described, the combination of a blank section comprising panels forming the top, bottom, front and rear walls of a rectangular shell, and having end flaps interlocked with one another, another blank section comprising three panels, one of which folds up against the rear wall of the rectangular shell and has a flap at each end extending forwardly along and interlocked with the corresponding end of the rectangular shell, another panel of said section extending over the top of the shell, and the third panel of said section being extended downwardly along the front wall of the shell and having a flap at each end interlocked with the corresponding end flap of the first mentioned panel of the latter section.

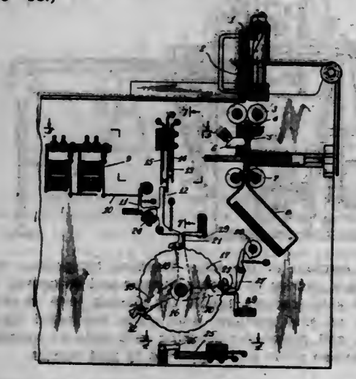
1,486,146. TOY PISTOL. ALFRED C. JONASSEN, New York, N. Y., assignor of one-fourth to Harold William Anderson, Auckland, New Zealand. Filed Nov. 21, 1923. Serial No. 676,058. 11 Claims. (Cl. 124—12.)

1. A toy pistol comprising a barrel, a plunger within said barrel, a pivotal actuating lever for said plunger, a member adapted to be moved relatively to said actuating lever, a spring associated with said actuating lever, means whereby said member is adapted upon an initial movement thereof to directly engage said lever and thereby to move the same into a cocked position and to impart tension to said spring, means whereby said actuating lever is adapted to directly engage said member when it is moved into its cocked position and thereby to mutually lock itself and said member in such position, and means whereby said member is adapted on further actuation thereof to further directly engage said actuating lever and thereby to move it into such a position that it may be freely actuated by said tensioned spring to effect the operation of said plunger.



1,486,147. COMBINED BRACE AND TIE ROD FOR CONCRETE FORMS. THOMAS KELLY, Cleveland, Ohio. Filed Mar. 28, 1923. Serial No. 628,208. 4 Claims. (Cl. 25—131.)

1. In a device of the character described, the combination with a rod; of a lock adapted to secure an end of such rod to the wall of a form or the like, such lock including a housing, a keeper movably mounted therein, said keeper and such rod-end being formed for hooking inter-engagement in one position of said keeper, and positively acting means for maintaining said keeper in such position.

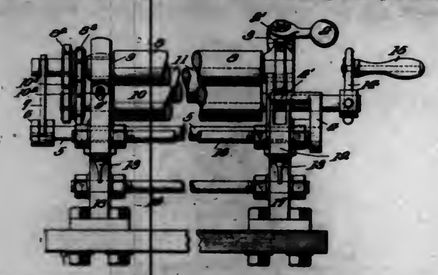


1,486,148. MATCH, CIGAR, AND ASH HOLDER. ARCHIE P. LAGO, Minneapolis, Minn. Filed June 6, 1921. Serial No. 476,267. 7 Claims. (Cl. 206—30.)

1. A device of the class described adapted to be attached to a vehicle instrument board and comprising a waste receptacle arranged beneath said board and extending in the front and the rear thereof, and removably connected thereto, the forward portion of said receptacle having an opening for the deposit of ashes and other waste, and said receptacle being mounted to direct such

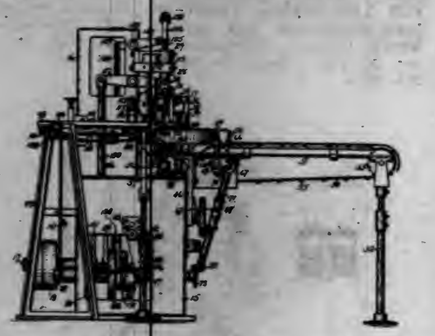
waste to a point under said board where it will be concealed from the vehicle riders and a match holder above and adjacent the forward portion of said receptacle.

1,486,149. SINGLE BRUSH AUTOMATIC CONTROL FOR TABULATING MACHINES. CLAIR DENNISON LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,869. 10 Claims. (Cl. 235—58.)



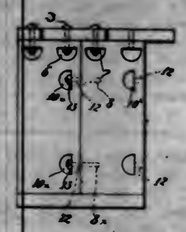
1. In a delayed action tabulator in which the result of a brush contact through one card is completed at a corresponding instant with reference to the next succeeding card, the combination with the means responsive to a brush contact for setting up the tabulator mechanism, and with the means for causing said set up mechanism to subsequently complete the operation corresponding to such brush contact, of circuit closing contacts, a motor control circuit which is controlled by such contacts and completed only when such contacts are not simultaneously closed.

1,486,150. SHEET-METAL-BENDING ROLL. CHARLES F. LANOUETTE, St. Albans, Vt., assignor to Foundry Manufacturing Co. Inc., St. Albans, Vt., a Corporation of Vermont. Filed Apr. 19, 1923. Serial No. 633,231. 4 Claims. (Cl. 153—61.)



1. In sheet metal bending rolls, the combination with a frame, a tilting roll having a rocking bearing at one end, half bearings at the opposite or lifting end, and a vertically and forwardly swinging locking cap having one of said half bearings for said lifting end, and means for locking the cap in place, of a rock shaft journalled in the ends of the frame below the rolls and provided at

one end with a forwardly projecting crank arm or cam in the downward path of the swinging cap and provided

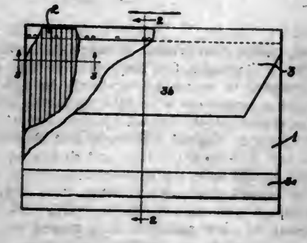


at its opposite end with a crank linked to the pivotal end of the lifting roll whereby the forward and downward swing of the cap will lift that end of the roll.

1,486,151. MACHINE FOR CLOSING THE ENDS OF CARTONS. REX W. MCINTYRE, South Manchester, Conn., assignor to The Orford Soap Company, Manchester, Conn., a Corporation of Connecticut. Filed Apr. 17, 1922. Serial No. 554,130. 32 Claims. (Cl. 93—55.)

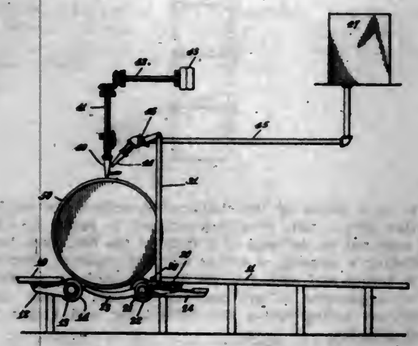
1. A machine of the class described comprising carton stations, a carrier to receive cartons and to convey them between said stations, means for placing ends on cartons at one of said stations and while supported by said carrier, and means for securing said ends at another of said stations while still supported by said carrier.

1,486,152. CONCRETE-SLAB BUILDING. NICHOLAS J. MASCIO, New York, N. Y. Filed Mar. 12, 1923. Serial No. 624,329. 2 Claims. (Cl. 72—16.)



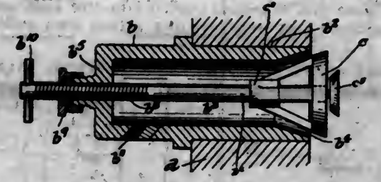
1. In a concrete slab building, a series of concrete slabs placed edge to edge, forming a wall construction, a bolt held by each slab and projecting from its side edge and also projecting into a side edge aperture formed in a contiguous slab, said contiguous slab having formed therein a side wall pocket into which said bolt projects, and a nut on said bolt and engaging a wall of said pocket.

1,486,153. LINGERIE CLASP. JAMES H. MILLIGAN, Highland Beach, R. I. Filed Oct. 29, 1923. Serial No. 671,389. 3 Claims. (Cl. 24—252.)



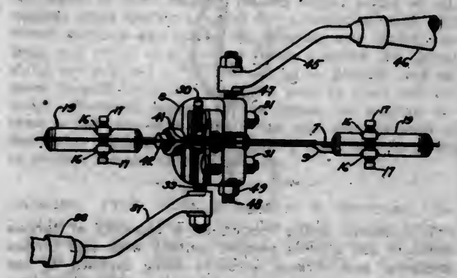
1. A lingerie clasp comprising a trough-shaped body, a back plate secured to said body and provided with an opening with laterally-extending hinge-receiving recesses, a spring plate operatively mounted in said body, a clamp lever hinged in said recesses in said back plate and engaging said spring plate to tension said lever when in closed position, and a raised member on said back plate against which said lever rests when closed.

1,486,154. MAILING ENVELOPE. PAUL F. MILNARIST, Joliet, Ill. Filed Aug. 7, 1922. Serial No. 580,275. 2 Claims. (Cl. 229—68.)



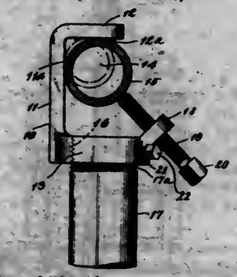
1. An envelope, comprising one wall formed of corrugated board, the other wall formed of flexible material fixed to said corrugated board so as to fold over and enclose one face of the latter, and supplemental reenforcing strips attached to the exterior of said board transverse of its corrugations.

1,486,155. BARREL-REAMING MACHINE. ARTHUR M. MORGAN, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Jan. 3, 1922. Serial No. 526,725. 4 Claims. (Cl. 144—93.)



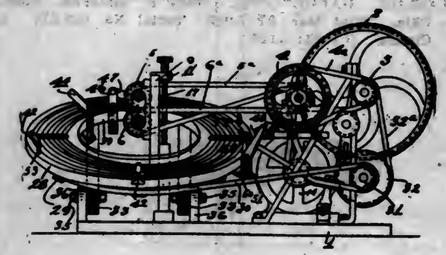
1. Apparatus for reaming the bung hole of a barrel comprising a reaming tool, driving means for operating the tool, rotatable rollers for positioning the barrel proximate to the tool, means for ejecting the barrel comprising a pair of arms positioned beneath the barrel, a lever for raising the arms to eject the barrel, and means for automatically applying a cleaning fluid to the reaming tool when said ejecting lever is operated.

1,486,156. HYDROCARBON BURNER. JOSEPH NEEDHAM, Passaic, N. J. Filed Aug. 13, 1919, Serial No. 317,251. Renewed Jan. 21, 1924. 1 Claim. (Cl. 299—136.)



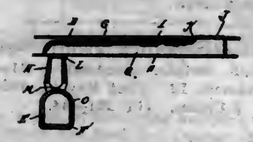
A hydrocarbon burner device provided with a fuel port or passage, means whereby a hydrocarbon mixture may be supplied to one end portion of said port or passage and discharged from the other end thereof, a valve device adjustable relatively to the discharge end of said port or passage and provided with an aperture, and a supplemental valve adjustable relatively to said aperture, said valve device and said supplemental valve being adapted to control the discharge of the hydrocarbon mixture from said port or passage.

1,486,157. SAW-TOOTH SHAPER. LOUIS OLSON, Minneapolis, Minn. Filed July 25, 1921. Serial No. 487,354. 5 Claims. (Cl. 76—60.)



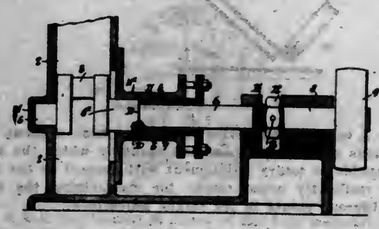
1. A saw-tooth shaper having a frame, means carried by the frame to attach the frame to a saw, a pair of co-operable dies mounted on the frame, said dies having convex tapered terminal working portions with their axes disposed in substantial parallelism with the plane of the saw, means to lock one die in adjusted set position, and means operable to move the other die to cause a saw-tooth to be pressed between the tapered portions and thereby to be shaped.

1,486,158. CLAMPING DEVICE. WILLIAM E. PRICE, Hartsdale, N. Y. Filed June 20, 1922. Serial No. 569,652. 5 Claims. (Cl. 287—54.)



1. In a device of the character described, a pair of spaced jaws, one of said jaws having an opening therein adapted to receive a connecting element, and an angular lug member extending from said jaw and a clamping member adapted to operate in said lug member.

1,486,159. BREAST-TRIMMING MACHINE. GEORGE C. REEVES, JOHN C. HINTZ, and REES REYNON, Chicago, Ill., assignors to Dryden Rubber Company, a Corporation of Illinois. Filed May 11, 1922. Serial No. 559,988. 10 Claims. (Cl. 164—63.)



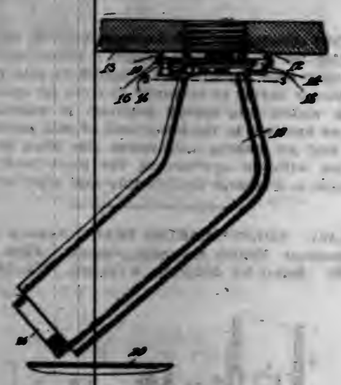
1. In the heel trimming machine, a rotary ring-like conveyer, means for adjustably supporting the same in inclined position, a plurality of rotary cutting elements supported within said ring-like conveyer, and means for operating said conveyer and elements for the purpose set forth.

1,486,160. GASLIGHTER. WILLIAM V. ROBINSON, Owosso, Mich., assignor to The Independent Stove Company, Owosso, Mich., a Corporation of Michigan. Filed June 12, 1922. Serial No. 567,638. 6 Claims. (Cl. 158—115.)

6. The combination with superposed ovens, of a hollow partition for separating the same, a burner arranged in the lower oven beneath and adjacent to said partition, said burner having an upwardly directed jet opening, and means within said hollow partition in communication with an aperture in the lower wall of said partition and with said jet opening, said means also being in communication with an aperture in the upper wall of said partition to discharge the jets into said upper oven.

1,486,161. SHAFT-BEARING SEAL. ARTHUR G. ROSS, Vancouver, British Columbia, Canada. Filed Oct. 11, 1922. Serial No. 593,932. 8 Claims. (Cl. 286—7.)

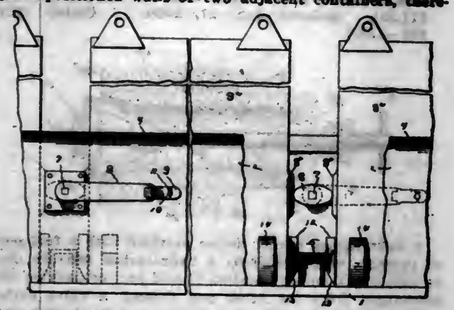
1. Means for sealing a shaft against leakage past it while its gland is being repacked, said means comprising the combination with a shaft and a bearing therefor which is gland-packed to prevent leakage past it and which is provided with a shoulder, said shaft having a shoulder adapted to seat against said shoulder in the bearing, and means on the outer end of the shaft for



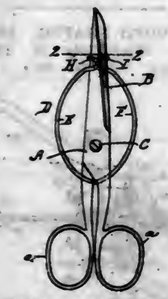
normally maintaining the shoulder of the shaft clear of the shoulder of the bearing and for drawing the shoulder of the shaft tightly into contact with the shoulder of the bearing.

1,486,162. GAUGE COCK. JOHN E. SHAFFER, Tulsa, Okla. Filed Mar. 31, 1923. Serial No. 629,017. 2 Claims. (Cl. 251—126.)

2. A gauge cock comprising a weighted handle provided with a cylindrical valve cavity therein and an elongated slot opening into said cavity, a spindle rigid with said handle and centrally positioned in said cavity, a valve loosely mounted on said spindle and provided with a radial flange adapted to bear against said handle about said cavity, a nut screwed on said spindle for clamping said flange against said handle whereby said valve is held suspended in said cavity without touching the walls thereof, and a steam discharge nozzle projecting in said elongated slot and adapted to bear against the periphery of said valve and to make indentations therein, and means for pivotally connecting said handle to said nozzle.



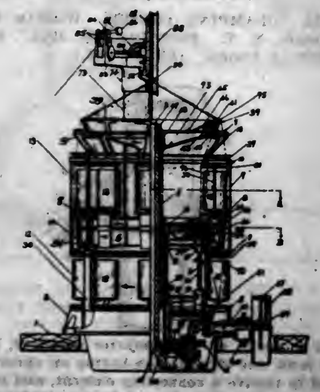
1,486,163. RAIL-SANDER SPOUT. FRANK SMELIK, Nokomis, Ill., assignor of one-half to Edward H. Hebenstreit, Nokomis, Ill. Filed May 21, 1923. Serial No. 640,504. 5 Claims. (Cl. 291—44.)



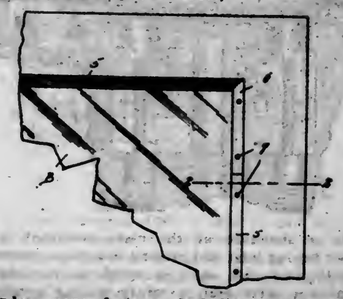
1. A rail sanding device including a base, a spout, connections between the base and spout by which the spout is capable of rotary adjustment with respect to the base, and resiliently urged means for maintaining the spout at different points in its rotary adjustment.

1,486,164. COMPARTMENT FREIGHT CAR. ALFRED H. SMITH, Chappaqua, N. Y. Filed Dec. 21, 1921. Serial No. 524,034. 9 Claims. (Cl. 105—366.)

1. The combination with a carrier having a platform, bulkheads extending vertically from said platform, containers on said platform back of said bulkheads, of means pivotally mounted on oppositely disposed bulkheads, and in locked position extending from one to the other of juxta-positioned walls of two adjacent containers, thereby spacing the containers apart and holding them against shifting and rocking on the platform.

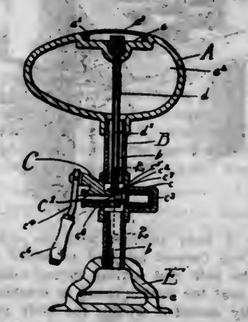


1,486,165. SCISSORS AND SHEARS. ALLAN W. SMITH, Brooklyn, N. Y. Filed May 5, 1920. Serial No. 379,004. 9 Claims. (Cl. 30—18.)



1. A shears spring comprising a plurality of torsion members and a cross member unitary with said torsion members, said torsion members being inclined to the length of said cross member and each torsion member being provided at its free end with a clip positioned in a different plane from the plane of the torsion member and engageable with a rear edge of a shears blade for twisting said torsion member and imparting a desired torque thereto.

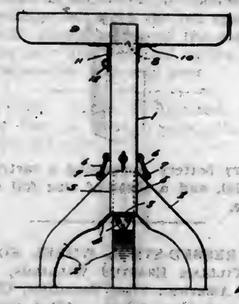
1,486,166. BRAIDING MACHINE. EDWARD K. STANDISH, Dorchester, Mass. Filed Dec. 16, 1922. Serial No. 607,429. 40 Claims. (Cl. 96—7.)



7. In a braiding machine having an inner and outer set of yarn supplies adapted to move in opposite directions; means permitting the yarn from said outer supplies to pass freely on either side of each inner supply during said movement; said means comprising rollers attached to the inner yarn supplies, pushing rollers contacting therewith, notches in the periphery of one set of rollers, discs with said rollers, notches in said discs, and a guiding plate moving with said inner yarn supplies.

1,486,167. WINDOWPANE FASTENER. PHILIP STEFAN, Moundsville, W. Va. Filed Feb. 26, 1923. Serial No. 621,450. 1 Claim. (Cl. 20—564.)

A window pane fastener including corner sections formed of angularly arranged portions of molded rubber triangular in cross section, molded rubber strips of triangular cross section adapted for association with said corner sections, and means for applying said corner sections and strips to a window frame whereby the corner strips are adapted to be first placed in position and secured to said frame for holding a pane in place and the strips afterward applied to the frame for holding the same so that the ends of the strips will abut the ends of the corner sections, said strips being adapted for cutting to various lengths for this purpose.



1,486,168. PUFF IRON. CLARENCE W. STRICKER, Cincinnati, Ohio, assignor to The Daly Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 394,959. 5 Claims. (Cl. 68—26.)

1. In a puff iron the combination with a head having a steam chamber therein and a steam spray discharge nozzle upon the face of the head whereby a spray chamber is formed between the head and the nozzle, of a tube extending through the steam chamber in the head and communicating at one end with the spray chamber, and a valve controlling the admission of steam to the tube.

1,486,169. TRESTLE. CHARLES M. TRAUTSCHOLD, Waco, Tex., assignor of one-half to Robert E. Pellow, Waco, Tex. Filed Sept. 9, 1922. Serial No. 587,120. 1 Claim. (Cl. 304—5.)

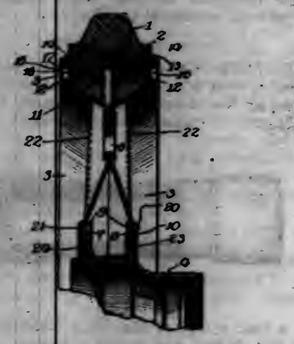
A trestle comprising a post, a plate connected with the bottom thereof, a leaf hinged to each edge of the plate, a leg at each side of the post having an inclined part below its inner end to which a leaf is attached, said inner end of each leg being beveled to engage the side of the post and each leg having a curved lower part, means

for holding the legs in extended position, a top piece hinged to the top of the post and a latch for holding the top piece in horizontal position.

1,486,170. FUSE. GEORGE R. TRUMBULL, Bantam, Conn., assignor to Volk Mfg. Co., Inc., Bantam, Conn., a Corporation of New Jersey. Filed May 17, 1921. Serial No. 470,257. 7 Claims. (Cl. 200—132.)

1. In a fuse, a tube of insulating material, a cap fixed at each end thereof and having a passage therethrough for a fuse strip, a screw hole in the end of said cap, a removable cap, a vent in the end of said removable cap, a baffle plate between the outer end of the fixed cap and the inner end of the removable cap, a screw for holding the removable cap in place, and a fusible element within said tube and secured at its ends by said caps, said baffle plate being seated on said fusible element and spaced thereby from said fixed cap, and a spacer between said baffle plate and said removable cap.

1,486,171. KNIT CAP AND METHOD OF MAKING SAME. WILLIAM E. WHITE, Milwaukee, Wis. Filed Jan. 14, 1924. Serial No. 686,116. 5 Claims. (Cl. 2—195.)

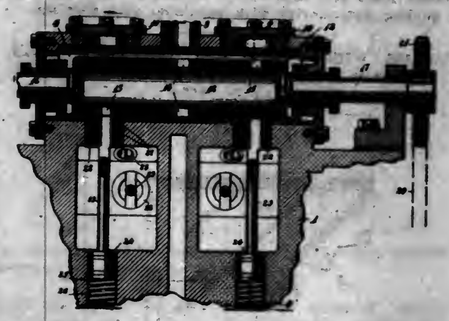


5. A knit cap formed of pieces of flat knit material comprising a body portion formed of a rectangular piece of material having side notches and having a front vertical seam joining portions of the upper edge of said rectangular piece, and having side vertical seams joining adjacent edges of said notches, and an auxiliary piece of material having its side edges secured in said side seams whereby all of said seams are hidden by said auxiliary piece of material.

1,486,172. PRIMARY BATTERY. HENRY WILHELM, Brooklyn, N. Y. Filed Mar. 22, 1920. Serial No. 367,692. 3 Claims. (Cl. 204—39.)

1. A primary battery comprising a cartridge, an electrolyte material, and a sheet of zinc foil rolled around such cartridge.

1,486,173. PRESSED-STEEL WHEEL FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 12, 1919. Serial No. 323,316. 5 Claims. (Cl. 301—64.)

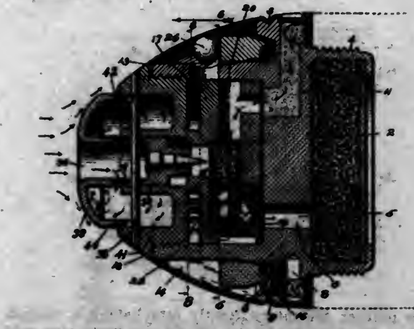


2. The combination with a hub and a broad relatively thick metal tread band centrally grooved peripherally and adapted to support a common metal tire base, of two wheel disks spaced at the hub, converging and joined together at some distance from the hub, diverging again, flanged inwardly over said band, bent marginally into said groove and integrally united by primarily fused metal filling the groove.

1,486,174. AUTOMOBILE WHEEL WITH DEMOUNTABLE RIM. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 19, 1922. Serial No. 595,592. 6 Claims. (Cl. 301—11.)

2. The combination with a pneumatic-tire rim having near one side of the tire seat a marginal gutter provided with a series of perforations, of a detachable side ring held in the gutter and having a series of perforations registering with those of the latter, a wheel body having an inclined peripheral flange fitting and detachably secured to the rear face of the gutter wall, lugs carried by the rear side of said flange, and bolts securing together the gutter, side ring, and lugs; whereby the rim and tire form a unit detachable from the body.

1,486,175. VALVE CONSTRUCTION. WYLIE GEMMEL WILSON, New York, N. Y., assignor to Sliding Valves, Incorporated, a Corporation of Delaware. Filed Mar. 3, 1920. Serial No. 362,082. 7 Claims. (Cl. 123—190.)

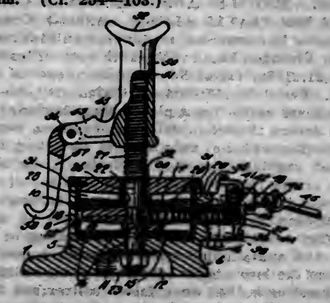


1. In a structure of the class described, a power chamber having inlet and exhaust chambers communicable therewith, and with each of which latter chambers is associated a valve seat, a rotary sealing member operable within each of the intake and exhaust chambers and cooperating with the seat associated therewith, the sealing face of said rotary sealing members being free from engagement with the walls of the chambers in which they operate, and means for effecting continuous resilient coaction between each rotary sealing member and its cooperating seat.

1,486,176. SAFE. CARL FREDRICK WOLTERS, Marietta, Ohio, assignor to The Safe-Cabinet Company, Marietta, Ohio, a Corporation of Ohio. Filed July 26, 1923. Serial No. 658,841. 1 Claim. (Cl. 109—2.)

In a safe, a body portion with an opening therein through the top thereof adapted to afford access to the interior of the safe and sealing means adapted to form a closure or seal for said opening in combination with a frame suitably mounted within the body portion of the safe to move in a plane perpendicular to that face of the safe in which is said opening, said sealing means mounted on and carried by said frame, means for operating said frame and sealing element comprising two shafts mounted at the base of the safe and carrying sprocket wheels mounted thereon, sprocket wheels, and a train of gears carried by said frame with endless chains interposed between said sprocket wheel and means to operate said train of gears to cause said chains to move in the same direction, and means carried by said chains to engage said frame so that the same will be elevated or lowered with the movement of the chains, said frame operating means being internal of the safe and operated by a crank arm externally of the safe through the medium of a shaft passing through a wall of the safe.

1,486,177. SUPERSENSITIVE FUSE. JOHN H. WOODBERRY, U. S. Army. Filed Dec. 10, 1918. Serial No. 266,147. 13 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

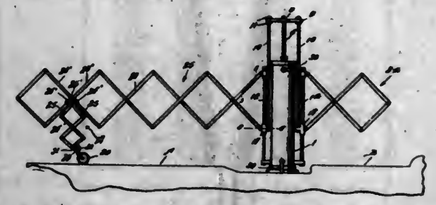


4. In a fuse for projectiles, a primer, and means for exploding the charge in a projectile, including a relatively stationary portion having a passage way or passage ways for communicating the detonating wave to the explosive in a shell, a relatively rotatable member provided with a passage way or passage ways adapted to be placed in alinement with the passage way or passage ways in the relatively stationary member, a detonator carried by the rotatable member, centrifugally releasable means for normally preventing alinement of the passage way or passage ways and means for normally locking such centrifugal means including means for priming the primer.

1,486,178. NOVELTY COIN CASE FOR BATHERS. GAETANO ANTELMI, Brooklyn, N. Y. Filed Jan. 29, 1923. Serial No. 615,554. 2 Claims. (Cl. 224—28.)

1. A bracelet of the class described comprising an annular threaded base portion adapted to form a coin receptacle; an annular threaded closure for the coin receptacle adapted for coin display when removed from the base; a washer interposed between the closure and the base; and a strap for attachment to the wearer's person.

1,486,179. LIFTING JACK. THOMAS JAMES BIRD, Seattle, Wash. Filed May 15, 1922. Serial No. 561,050. 1 Claim. (Cl. 254—103.)



A jack having a central chamber, a lift shaft passing entirely through said chamber and being rotatably mounted in the top and bottom of the chamber, a gear secured to said shaft within the chamber and having inclined upper and lower surfaces, and roller bearings arranged between the upper and lower surfaces of the gear and the top and bottom of the chamber respectively, said roller bearings occupying the full space within the chamber in both directions beyond the gear, and means carried by the jack and arranged beyond the chamber for driving cooperation with said gear.

1,486,180. PUMP. JAMES C. DICKENS, Goose Creek, Tex. Filed Mar. 1, 1923. Serial No. 622,065. 6 Claims. (Cl. 103—221.)

1. In a pump, a standing valve structure including a ring like seat, a cage, a valve confined within the cage and cooperating with said seat to open and close the same, a device mounted in the valve structure and formed to engage with said valve, a yieldable seat on which said device is mounted, said device when in engagement with said valve operating to hold said valve elevated above the seat.

1,486,181. FOLDING TRAFFIC GATE. JESSE H. FALES, Los Angeles, Calif. Filed Oct. 19, 1922. Serial No. 595,662. 4 Claims. (Cl. 39—7.)

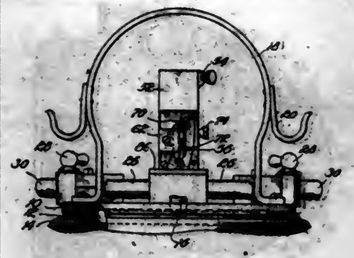
1. In automatic gates, a vertically disposed cylinder, having a piston freely movable therein; a rod carried by the piston and projecting outwardly of the upper end of the cylinder, a pair of vertically disposed rod members secured to the projecting end of the piston rod and being so connected to a pair of oppositely extending folding gate members as to actuate the same and an extensible roller carrying arm secured to one of the gate members and adapted to be extended to an operative position when the gate is open.

1,486,182. TEAT CUP. FRANK S. FROST, Chicago, Ill., assignor to Sears, Roebuck & Co., Chicago, Ill., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,408. 8 Claims. (Cl. 31—102.)

1. A teat cup for milking machines having, in combination, a tubular rigid casing, a collapsible or compressible tubular inflation fitting within said casing, an air-tight

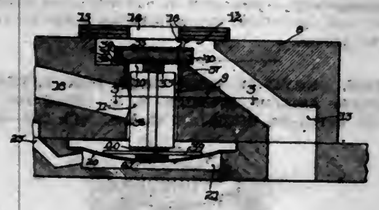
joint being provided between the respective ends of the casing and the inflation, means for connecting the interior of said inflation to an intermittent suction creating device, and means comprising a restricted opening which establishes constant communication between the

atmosphere and the space between said casing and said inflation but allows only a very gradual flow of air therethrough whereby the sudden collapse and expansion of said inflation is positively prevented, the atmospheric pressure being the sole agent by which external collapsing force on the inflation is effected.



1,486,183. TEAT CUP. FRANK S. FROST, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed May 14, 1920. Serial No. 381,328. 4 Claims. (Cl. 31—102.)

1. In a device of the class described, a casing, an inflation within said casing, the walls of said inflation extending up and over the upper edge of the walls of said casing, a connector to permit the delivery of suction to the interior of said inflation, and said casing having an aperture communicating directly with the atmosphere and permitting air to enter between said casing and said inflation.

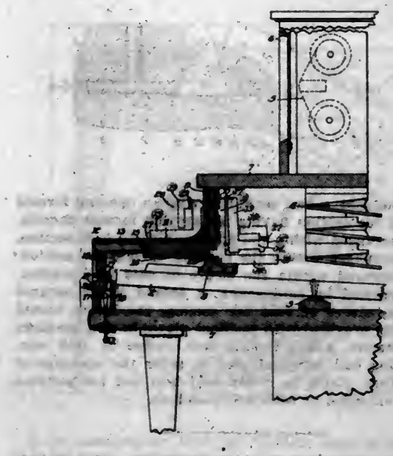


1,486,184. PULSATOR. FRANK S. FROST, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Dec. 3, 1920. Serial No. 428,107. 16 Claims. (Cl. 31—99.)

1. In a device of the class described, a reciprocatory valve plunger having a small end and a large end, means connecting the small end permanently to a predetermined vacuum, and means rendered effective by the movements

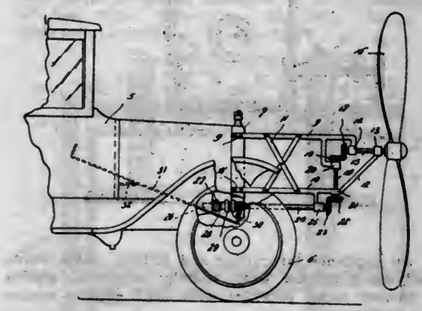
of the plunger for intermittently establishing a vacuum to act on the large end of the plunger and destroying said vacuum.

1,486,185. VALVE MECHANISM FOR PLAYER-PIANO ACTIONS. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen-Dickinson Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1918. Serial No. 259,614. 18 Claims. (Cl. 84—61.)



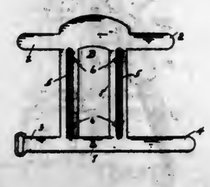
6. In a valve mechanism, a flexible diaphragm, a valve stem, a valve, a flexible compressible pad of a cross section less than that of said stem glued between said valve and the end of said stem and forming the sole connection therebetween, a flexible compressible pad at the other end of said stem, and a disc smaller than said flexible diaphragm and larger than the cross-section of said stem operatively disposed between said compressible pad and said diaphragm whereby the motion of said diaphragm is transmitted through said disc to said stem.

1,486,186. KEY-SLIP AND FALL-BOARD CONSTRUCTION FOR PLAYER PIANOS. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen-Dickinson Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1918, Serial No. 218,393. Renewed June 23, 1922. Serial No. 570,384. 1 Claim. (Cl. 84—80.)



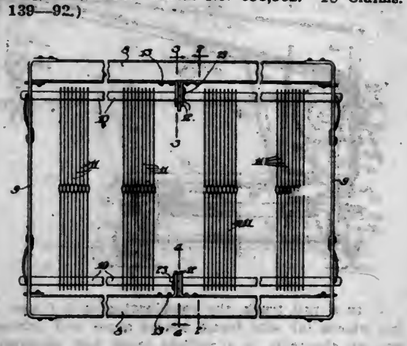
In a cover device for a player piano keyboard and the control levers thereof, a fallboard having a vertical leg and a horizontal leg of substantially equal length, a cover board of angular cross section having a horizontal leg hinged at its rear edge to the front edge of the fallboard and substantially as long as the horizontal leg of the fallboard, and a depending leg having an unfinished inner face and shorter than the vertical leg of the fallboard, and a key slip having an inner unfinished face hinged to the lower inner edge of said depending leg and of such a length that when folded will extend from said lower edge substantially to the under face of the horizontal leg of said cover board and in front of the inner unfinished face of said cover board, whereby said several

members are capable of completely enclosing the keyboard and control levers and of being nested into compact folded relation, and whereby when said members are in



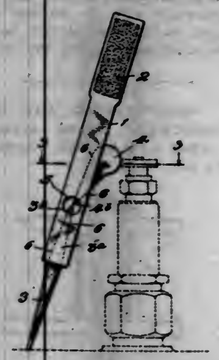
nested relation the inner surface of the depending leg of the cover board and the inner surface of the key slip are both hidden from view.

1,486,187. SNOWPLOW. ROBERT E. HAYNES, Poole, Nebr. Filed May 9, 1923. Serial No. 637,692. 1 Claim. (Cl. 37—43.)



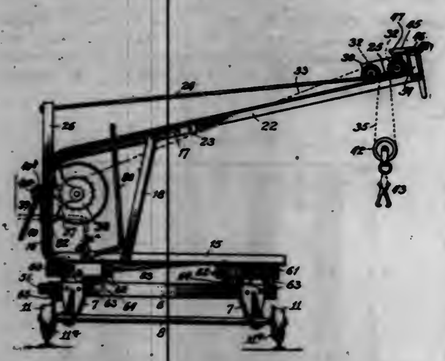
A snow plow attachment for motor vehicles including upper and lower frame members of triangular form arranged in parallel spaced relation, securing bars joining said frames together for holding them in spaced relation, the ends of the frame at the base portion thereof being formed with extensions adapted for removable attachment to the radiator of a motor vehicle for mounting said frame on the vehicle, the forward portion of the lower frame being formed with an upwardly inclined extension terminating in a horizontal bearing, the upper frame having a forward extension formed with a depending end portion terminating in a horizontal bearing in line with the first mentioned bearing, said upper frame member being also formed with a depending portion in the rear of said end extension terminating in a lateral extending end portion provided with a vertical bearing in line with the vertical bearing in the lower frame member, a propeller shaft mounted in the horizontal bearing, a vertical shaft rotatable in said vertical bearing, a propeller mounted on a horizontal shaft in front of the bearing carrying said shaft, gear connections between the horizontal and vertical shafts, said lower frame having a depending projection formed at the end with a horizontal bearing, a power shaft having a removable clutch connection with the crank shaft to the engine of said vehicle, and a gear connection with the vertical shaft, whereby rotative movement is transmitted thru said power shaft to said propeller shaft for rotating the propeller thereon.

1,486,188. ADVERTISING-CARD HOLDER AND MATCH SCRATCHER. FRANK JENSEN, Salt Lake City, Utah. Filed Apr. 9, 1923. Serial No. 631,000. 1 Claim. (Cl. 44—48.)



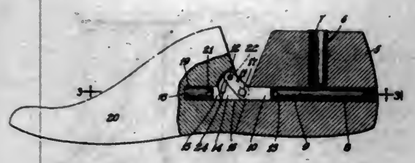
A match scratching device consisting of a sheet of metal having an elongated slot centrally therein, grooves struck into the metal adjacent said slot, card holding lugs struck from said metal and integral therewith, opposed straps extended from two corners of said sheet, and adapted to encircle the spoke of a steering wheel, another strap having a slit near its free end, and another integral strap extended from the opposite side edge of said sheet and adapted to be passed through the said slit and bent upon itself to secure said device on a spoke.

1,486,189. HEDDLE FRAME. JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1923. Serial No. 633,362. 18 Claims. (Cl. 139—92.)



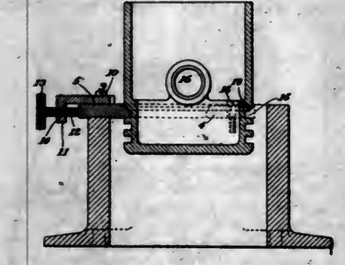
1. In a heddle frame, the means for supporting the heddle bars intermediate their ends comprising a bracket member secured to a portion of the frame, said bracket member having a vertically extending portion provided with a recess open toward the side and adapted to receive and support a heddle bar, and a slide member operatively associated with the vertically extending portion of said bracket member having a T-shaped recess the central portion of which is open toward the side and corresponds in width to the recess in the vertical extension of the bracket member, said T-shaped recess forming overhanging portions of said slide member above and below the central opening adapted to engage the heddle bar and thereby lock the same within the recess of the bracket member when said slide member is either in the upper or lower position.

1,486,190. SPARK-PLUG TOOL. JOSEPH LOPES, New York, N. Y., assignor to The Joseph Lopes Corporation, a Domestic Corporation. Filed Aug. 11, 1921. Serial No. 491,363. 3 Claims. (Cl. 7—1.)



3. In a tool of the character described, a handle of insulating material, a scraping blade member, and a spark-gap gage member associated with said handle, each of said members being formed of sheet material partially embedded in the material of the handle and frictionally retained therein.

1,486,191. RAIL TRUCK. FRANK H. MARSHALL, Kilbourn, Wis., assignor to Patrick H. Madden, Sparta, Wis. Filed Sept. 13, 1920. Serial No. 410,049. 13 Claims. (Cl. 212—11.)

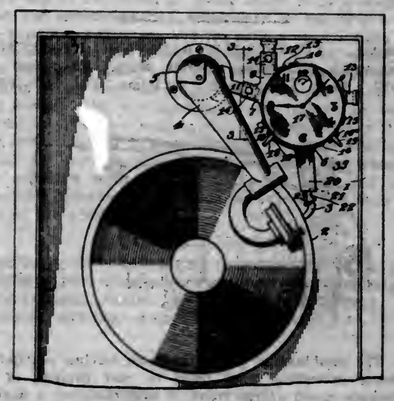


1. In a rail truck, the combination of a frame, carrying wheels for said frame spaced apart and arranged to run on the rails of a railway track and provided with means for retaining the truck on the track rails, a supporting structure sustained by said frame comprising vertically extending members disposed adjacent one side of the frame so as to leave clearance on the other side to permit rails to be laid on and supported by the frame between the carrying wheels and the track rails and an elevated supporting member projecting laterally from the vertical members over said clearance space and beyond the track rail at one side of the track, a rotatable connection between the frame and said structure whereby the latter may be swung to either side of the track vertically extending anti-friction devices to hold the supporting structure against bodily lateral movement on the truck, and rail-hoisting means whereby a load rail may be lifted from the ground at one side of the track and deposited onto the frame so it will be supported thereon between the track rails.

1,486,192. SHOE LAST. CLIFFORD KIRBY MACDONALD, Brockton, Mass. Filed Apr. 3, 1922. Serial No. 548,932. 1 Claim. (Cl. 12—136.)

In a shoe last, a heel section having an opening formed therein, a toe section having an opening formed therein, a sleeve arranged within the opening of said heel section, a sleeve arranged within the opening of said toe section, a shank secured within the sleeve of said heel section, an arm carried by said shank, a second shank secured within the sleeve of said toe section, the latter named shank being provided with resilient plates having openings formed therein, and a locking ball carried by said arm, said locking ball being adapted to enter the openings of said resilient plates to retain said heel and toe sections in either extended or collapsed positions.

1,486,193. APPLIANCE FOR CUTTING AND DRILLING PISTON HEADS. JOHN J. MCGUCKIN, Brooklyn, N. Y., assignor to Louis Schwab, New York, N. Y., doing business as Stevens & Company. Filed May 6, 1922. Serial No. 559,033. 4 Claims. (Cl. 82—4.)



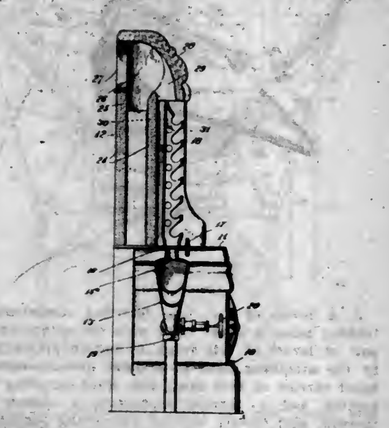
2. An appliance for cutting and drilling piston heads, embodying a tubular body, radially adjustable guides, one thereof being provided with drill guiding means, and an adjustable cutter.

1,486,194. MANUFACTURE OF CARTRIDGE SHELLS. MARTIN NEWCOMER, Perth Amboy, N. J. Filed Feb. 21, 1922. Serial No. 538,239. 1 Claim. (Cl. 29—1.3.)

The improvement in the manufacture of cartridge shells which consists in forming a rimmed cup or head, forming a shell body with a reduced end portion and an outwardly turned flange at its extremity, introducing the reduced portion of the body within the cup or head, and forcing the reduced portion of the body outwardly against the cup or head and the flange of the body into the rim of the cup or head.

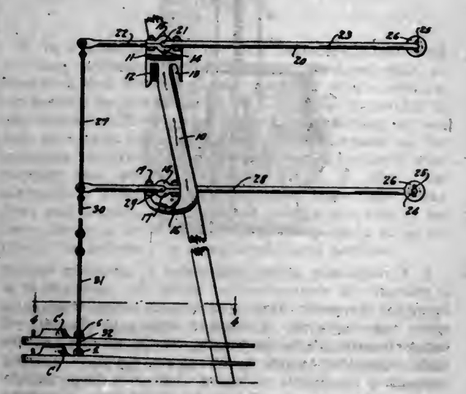
1,486,195. TIME-CONTROLLED PHONOGRAPH STARTING DEVICE. EMILIO PROVENZANO, Philadelphia, Pa. Filed May 10, 1923. Serial No. 637,979. 9 Claims. (Cl. 161—23.)

1. In combination with the winding lever of an alarm clock and the stopping lever of a phonograph; a frame for horizontally supporting the clock; a plunger horizontally movable in the frame adapted to move the stopping lever, and means on the frame actuated by the winding lever to move the plunger.



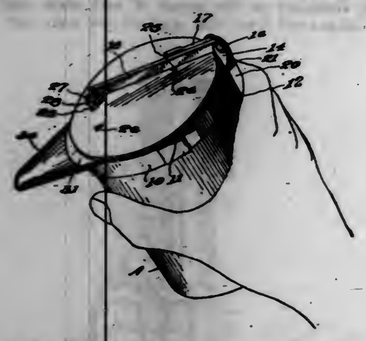
1,486,196. PHOTOGRAPHIC-PAPER HOLDER. CLIFFORD H. RUFFNER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 25, 1920. Serial No. 391,770. 10 Claims. (Cl. 88—24.)

1. In a bromide paper holder the combination of a base, with an L shaped margin gauge, the base having slots extending from one corner parallel to the sides of the base, the L shaped gauge being adapted to fit selectively into any of the slots to vary the position of the bromide paper relative to the base.



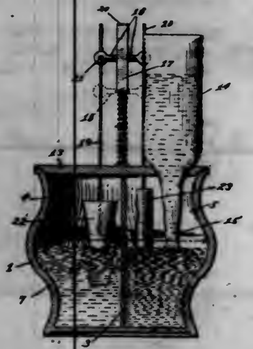
1,486,197. GAS HEATER. GUSTAVE F. SCHMIDT, Chicago, Ill. Filed May 11, 1922. Serial No. 559,991. 6 Claims. (Cl. 126—92.)

1. A gas heater of the character described, comprising a burner enclosing unit provided with an opening in its top, a main body unit superposed on said first unit and consisting of integral sides, top and back formed to provide a radiant-receiving recess on the front face thereof, the back consisting of integrally connected double walls spaced apart and having an outlet opening, while the sides are provided with aligned sockets adjacent to the top, a radiant-rest seatable in the top opening of the first unit on the tips of the burner, a plurality of radiants superposed on said rest and disposed vertically in the recess of said main body unit, the radiant-rest and back wall of the body unit being



so arranged as to permit all circulation intermediate of the radiants and the back wall of said main unit, and a single element adapted to pass through the upper ends of the radiants, while the ends of said elements are adapted to engage and interlock in the sockets in the sides of the main body unit and permit all of the radiants to be simultaneously removed.

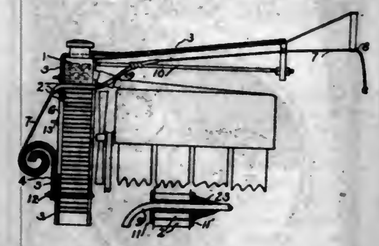
1,486,198. WRENCH SUPPORT FOR DRILLING EQUIPMENTS. GUY W. SEYBERT, Morris, Okla. Filed Jan. 8, 1923. Serial No. 611,336. 7 Claims. (Cl. 248—5.)



1. The combination with a supporting frame, of a bracket mounted thereon and having a bearing extending transversely of the supporting frame, a lever having intermediate its ends a laterally disposed cranked portion disposed in said bearing, one arm of the lever being disposed on one end of said cranked portion and the other arm of the lever being disposed on the other end of said cranked portion, a cable connected to the inner end of the lever and adapted to be connected to an implement to be manipulated, and counterweighting means engaged with the outer end of the lever.

1,486,199. COMBINATION PERFORATOR, CLOSURE, AND POURING ATTACHMENT FOR CONTAINERS. IRA T. SKILES, Long Beach, Calif. Filed May 19, 1919. Serial No. 298,030. 3 Claims. (Cl. 221—23.)

3. A device of the class described comprising an attaching band, a spout rigid with the attaching band, a pair of levers of bell crank formation pivotally carried by the attaching band at a point directly opposite the spout carried on said band, each lever including a handle portion and a portion supporting a closure member thereon, said closure member supporting portions of the levers being of different lengths, and spring means coacting in independent manner on said levers to normally urge the same in one direction.

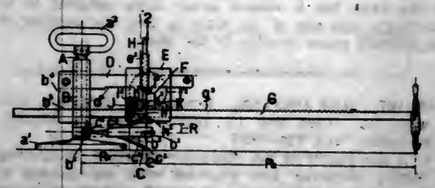


1,486,200. DISPENSING CONTAINER. MARY J. STEELE, San Francisco, Calif. Filed May 31, 1922. Serial No. 564,898. 8 Claims. (Cl. 221—95.)

1. A dispensing device comprising a container having a plurality of compartments; means for maintaining a liquid at constant level within each compartment; a spout communicating in common with said plurality of compartments; displacing means slidably mounted within each compartment; and means for moving the displacing means into the liquids contained within the compartments to raise the level of said liquids within their respective compartments whereby a portion of the liquids from each compartment may be simultaneously dispensed through the common spout.

2. A dispensing device comprising a container having a plurality of compartments; means for maintaining a liquid at constant level within each compartment; a spout communicating in common with said plurality of compartments; displacing means slidably mounted within each compartment; means for moving the displacing means into the liquids contained within the compartments whereby a portion of the liquids from each compartment may be simultaneously dispensed through the common spout; and means for independently adjusting the displacing means within each compartment to vary the quantity of liquid dispensed therefrom at each operation of the displacing means.

1,486,201. AUTOMOBILE RADIATOR PROTECTOR. FREDERICK C. SUTTER, Detroit, Mich. Filed Dec. 17, 1917. Serial No. 207,502. 7 Claims. (Cl. 257—132.)

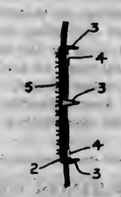


4. The combination with a radiator having ventilation passages extending from front to rear thereof, of an adjustable shield at the front of said radiator, a flexible member secured to said shield and passing through one of said ventilation passages, and a tube insertable in said ventilation passage and surrounding said flexible member to guide the same and prevent contact thereof with the wall of said ventilation passage.

1,486,202. SPRING OILER. WILLIAM S. SYLVESTER, Denver, Colo. Filed Sept. 11, 1923. Serial No. 662,056. 4 Claims. (Cl. 184—1.)

1. A spring oiler comprising a channel-shaped member of sheet metal, one end of the bottom of said member being longer than the sides, a pipe having one end flattened, said flattened end projecting through the oiler near the bottom thereof, a piece of felt within said member, and means for clamping the member to a spring.

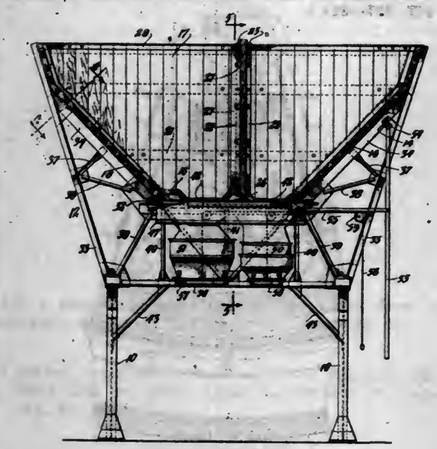
1,486,203. APPARATUS FOR THE MEASUREMENT OF PLANE SURFACES. HERMANN THUN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 7, 1920. Serial No. 429,027. 6 Claims. (Cl. 33—122.)



5. An apparatus for the measurement of plane surfaces comprising a tracer pin, means forming a pole or pivot, means connecting said tracer pin to said pivot whereby said pin is adapted for movement radially to said pivot and circumferentially about it, a registering device, a measuring wheel operatively connected to said device, an axially-elongated rolling body, circular in cross section and comprising a paraboloid, means supporting said body whereby its axis is maintained radial to said pivot and is controlled to swing about it in accordance with the circumferential movements of the tracer pin, the body being thus adapted for rolling upon a fixed surface and about the pivot, and means for so connecting said measuring wheel to a part of said pin-and-pivot-connecting means that the wheel will be maintained in rolling contact with the paraboloid and will be so bodily moved axially therealong, by the radial movements of the pin, as it is caused to trace the outlines of the area being measured, that the revolutions imparted to the wheel by the resulting rolling of the elongated body will be a quadratic function of the distance of said pin from the axis of the pivot.

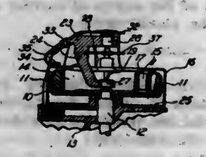
1,486,204. DEVICE FOR USE IN FORMING CONCRETE CONDUITS. DANIEL N. TRULLINGER and HERBERT A. TRULLINGER, Aurora, Oreg. Filed June 2, 1923. Serial No. 643,128. 6 Claims. (Cl. 25—127.)

1. A device for the purpose set forth comprising a longitudinally split cylinder having its side edges overlapping, divided heads fitted within the cylinder adjacent the ens thereof, means for holding the members of the heads normally together, and a spreader bar passing between the members of the heads and engaging the opposed edges of the same.



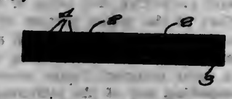
1,486,205. MATCH STRIKER. EDITH MAUD HAY LILLIAN TUFTS, Vancouver, British Columbia, Canada. Filed July 5, 1922. Serial No. 572,785. 3 Claims. (Cl. 44—48.)

1. A device of the character described comprising a disc of textile material having a coating of abrasive material on one side and means upon the opposite side for attaching the disc to a garment.



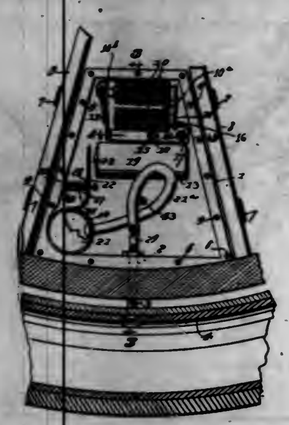
1,486,206. BIN. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 20, 1922. Serial No. 595,727. 30 Claims. (Cl. 20—1.2.)

1. A straddlingly mounted bin including supports separated to afford passage for vehicles between them under the bin, a containing shell, and sustaining framing for said shell comprising inclined members resting on said



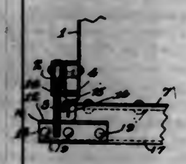
supports at an intermediate point in their length and braced together against rocking on said supports.

1,486,207. SPEEDMETER OR THE LIKE. CYRIL T. WALLIS, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 27, 1921. Serial No. 510,782. 9 Claims. (Cl. 264—18.)



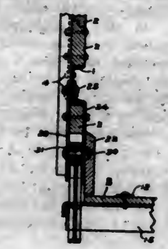
8. In a speedmeter or the like, the combination, with a rotary spring-controlled indicator provided with an abutment, and a frame-member provided with a removable bearing for the indicator, of a spring-strip pivoted to the frame-member between its ends and formed, at one end, as a stop to cooperate with said abutment on the indicator, the other end of the spring-strip normally overhanging said bearing and retaining it in place; the spring-strip being pivotably movable, when bent away from said bearing, to release the bearing and also to remove the stop from normal operative position so as to permit the indicator to move beyond zero position.

1,486,208. METHOD OF COLORING WHITE TRANSPARENT CRUSHED MARBLE, SILICA, OR THE LIKE FOR MAKING COLORED ART MARBLE, TERRAZA, OR THE LIKE. JACOB WEBER, Mansfield, Ohio. Filed Mar. 6, 1923. Serial No. 623,254. 7 Claims. (Cl. 18—48.8.)



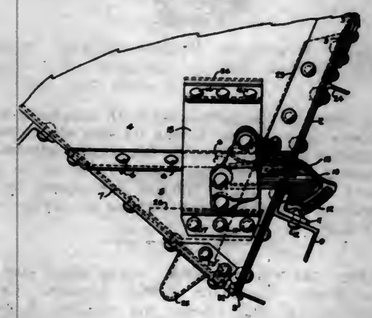
1. The herein described method, consisting in molding independent and artificially colored chips into an article form, and then finishing the surface of the article by removing the coloring from those portions of the chips at such surface.

1,486,209. AIR-PRESSURE ALARM DEVICE FOR PNEUMATIC TIRES. LOUIS F. WESCHE, Webb, Iowa. Filed Aug. 24, 1921. Serial No. 495,056. 6 Claims. (Cl. 177—311.)



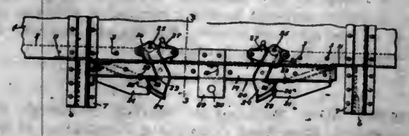
1. An air pressure failure indicating device comprising a support, a normally inflated flexible member mounted upon the support, a contractile band surrounding said inflated member and having an extension, a source of current having one terminal connected with an alarm device and its other terminal disposed in the path of said extension, the other terminal of the alarm device being grounded onto said support, a deflation of said inflated member permitting said extension to engage said second named terminal of the source of current to close the circuit through the alarm device.

1,486,210. DOOR ARRANGEMENT FOR RAILWAY CARS. WILLIAM E. WINE, Toledo, Ohio. Filed Jan. 12, 1922, Serial No. 528,654. Renewed Jan. 21, 1924. 13 Claims. (Cl. 105—308.)



1. In a door arrangement for railway cars, a door hinged to the car body and having one edge lying along the car side, a stiffening member secured to the outer face of the door, the same having a web outstanding from the door and having a marginal flange extending continuously and uninterruptedly along one edge of the web, the said stiffening member having an end projecting outwardly beyond the edge of the door and beneath the side of the car, the said projecting end being of reduced depth compared to that of the major portion of said member and said reduction in depth being effected along the edge of the member opposite to that carrying the said marginal flange, a local marginal flange secured along the edge of the projecting end of the stiffening member and arranged to lie substantially parallel with the said continuous marginal flange and bordering the edge of the web opposite that carrying said continuous flange, and a door supporting hook pivoted to the side of the car and arranged to seat beneath the said local marginal flange.

1,486,211. RAILWAY CAR. WILLIAM E. WINE, Toledo, Ohio. Filed July 29, 1922. Serial No. 578,312. 5 Claims. (Cl. 105—280.)

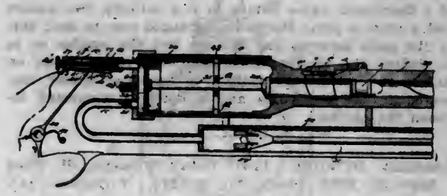


1. A railway car having a side sill with side planking arranged substantially in the same vertical plane as the side sill, a door hinged in the floor of the car and adapted to close against the lower edge of the car side, an arm extending outwardly beyond an edge of the door and beneath the side planking, a plate secured to the side planking and to the side sill thereof, the same carrying a pivoted door-supporting hook adapted to engage the said arm.

1,486,212. CAR-DOOR CONSTRUCTION. WILLIAM E. WINE, Toledo, Ohio. Filed Jan. 22, 1923. Serial No. 614,189. 5 Claims. (Cl. 105—249.)

1. A railway car having an inclined hopper sheet and a vertical hopper sheet extending downwardly from the foot thereof, a bracket lying in the exterior angle formed by said sheets and connected to at least one thereof, a door arranged to lie, when closed, with one edge near the said bracket, and door-supporting means operatively interposed between and cooperating with the said door and the bracket.

1,486,213. DOOR MECHANISM FOR RAILWAY CARS. WILLIAM E. WINE, Toledo, Ohio. Filed June 8, 1923. Serial No. 644,140. 16 Claims. (Cl. 105—280.)

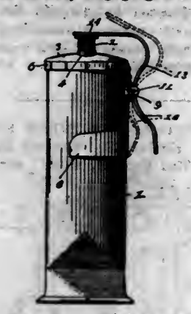


1. In car door mechanism, the combination with a hinged door provided with a marginal flange, of a flanged member rigidly secured to said door and overlappingly

engaging the marginal flange thereof, one of the flanges of said flanged member being disposed at an angle to the said door flange, an arm secured to said door and projecting outwardly beyond the said flanged member and door flange, said arm passing beneath and having engagement with the flange of said flanged member which is angularly disposed with respect to the marginal flange of the door, and means movably mounted upon the car body for cooperating with said arm to support said door in closed position.

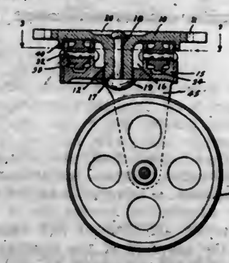
1,486,214. COMPOSITE REFRACTORY METALLIC BODY. GEORGE FRED YBSSLER, Port Chester, N. Y. Filed Feb. 28, 1920. Serial No. 362,074. 5 Claims. (Cl. 106—9.)

5. The process of producing composite refractory metallic bodies consisting of tungsten containing iron alloyed therewith and having refractory oxides homogeneously incorporated therein, the said bodies having a melting point lower than that of substantially pure tungsten, which consists in incorporating oxids of iron and difficultly reducible refractory oxides with tungstic oxides, subjecting the mixture to a reducing operation, producing reduced materials of different density, compounding a mixture of such reduced materials of different density, forming a compressed body from the said mixture, subjecting the compressed body to a preliminary formation by heating it to a moderately high temperature, and completing the formation by heating it to a high temperature.



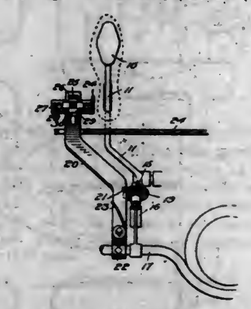
1,486,215. AIR GUN. LEIGH F. J. ZERBEE, Bellefontaine, Ohio. Filed Nov. 10, 1922. Serial No. 600,112. 4 Claims. (Cl. 124—8.)

1. In an air gun, a barrel, a chamber communicating immediately with the bore of the barrel at the breech end of the latter and being adapted to receive a pressure fluid, a valve controlling communication between the chamber and the bore of the barrel, and a piston operatively connected with the valve and adapted to reciprocate within the chamber, said piston having means to permit leakage of the pressure fluid therepast in a forward direction and being adapted to be actuated by excess pressure at the rear side thereof to prevent communication between the chamber and the bore of the barrel and by excess pressure at the forward side thereof to permit such communication, means for introducing pressure fluid into the chamber at the rear of the piston, whereby the piston will be moved forwardly within the chamber until the valve is in closing relation to the barrel, and means operable at will to permit escape of pressure fluid from the space within the chamber at the rear of the piston, whereby the piston will be moved rearwardly to open the valve.



1,486,216. CAP FOR COLLAPSIBLE METAL CONTAINERS. JAMES EARL ANDERSON, San Francisco, Calif. Filed Jan. 3, 1923. Serial No. 610,446. 6 Claims. (Cl. 224—60.)

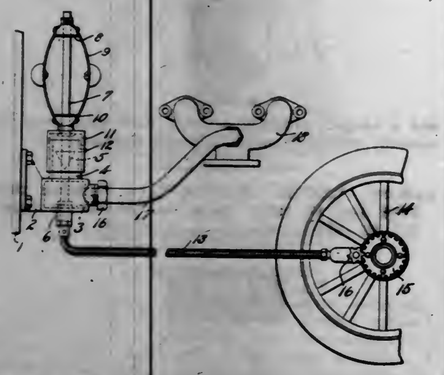
1. A cap for collapsible metal tubes and the like comprising a cover having a central aperture adapted to receive the dispensing tip of a tube, and provided with a flanged edge detachably engaging the top of said tube;



and a stopper pivotally mounted upon said cover for normally closing the opening in said dispensing tip.

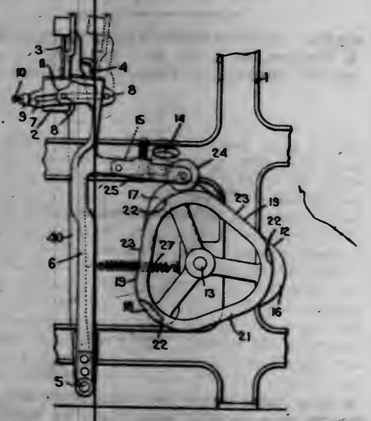
1,486,217. CASTER. FRANK A. BAUM, Hamilton, Ohio. Filed Aug. 17, 1922. Serial No. 582,483. 6 Claims. (Cl. 16—28.)

1. A caster of the character described comprising a plate, constructed for attachment to a truck or the like, a depending stem carried by said plate; a wheel bearing housing having a centrally arranged passage therethrough for receiving said depending stem, means for locking the housing and the depending stem rotatably together, a wheel rotatably mounted upon said housing; said housing also having a circular pocket therein surrounding said passage but separate therefrom, and a plurality of rollers within said recess or pocket, constructed to rotatably support the said plate.



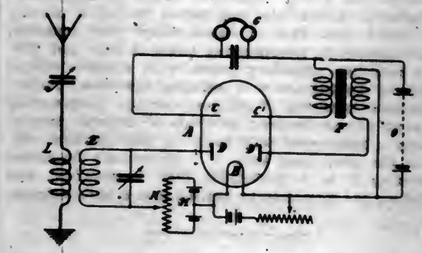
1,486,218. CLUTCH-PEDAL-LOCKING DEVICE. PETER B. BELCHER, St. Louis, Mo. Filed Aug. 6, 1923. Serial No. 656,119½. 8 Claims. (Cl. 74—81.)

1. In a motor vehicle, the combination with the lever operated gear shifting mechanism, of means for releasably locking said mechanism against movement from its neutral position, said locking means comprising a projection removably carried by one of the connections



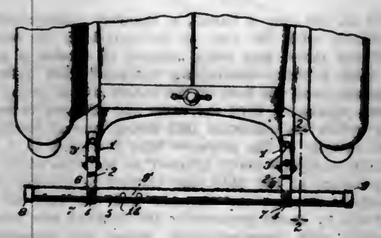
of said mechanism, said connection having a screw-threaded aperture therein for attachment of said projection, a catch pivoted at one side of said projection and movable toward and away from the projection, and means for yieldingly retaining said catch in the path traversed by said projection.

1,486,219. AUXILIARY AIR INLET FOR INTERNAL-COMBUSTION ENGINES. WILBER EARL ADAMS, Detroit, Mich. Filed Feb. 11, 1922. Serial No. 535,685. 2 Claims. (Cl. 123—124.)



1. An auxiliary air inlet device for the manifold of an internal combustion engine, comprising a bracket having an air chamber, a valve body on the air chamber of said bracket adapted to receive air, a conduit attached to the bracket air chamber and adapted to conduct the air to the manifold of the internal combustion engine, a valve slidable exteriorly of said valve body controlling the admission of air to the valve body, a governor shaft extending through said bracket air chamber and said valve body and governor means on the upper end of said shaft adapted to adjust said valve.

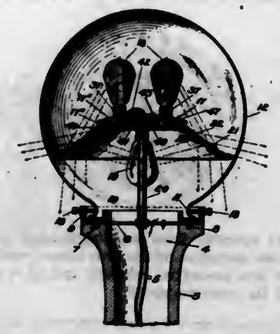
1,486,220. PILE-FABRIC LOOM. JOSEPH F. BENOIT, Sanford, Me., assignor to Sanford Mills, Sanford, Me., a Corporation of Maine. Filed June 4, 1923. Serial No. 643,287. 5 Claims. (Cl. 139—39.)



2. In a pile-fabric loom constructed to introduce pile wires in the shed at certain picks and filling in the shed at other picks, the combination with a lay, of a shuttle box supported independently of the lay, and lay-vibrating means operating to give the lay a greater amplitude of beating-up movement after the insertion of each filling pick than after the insertion of each pile wire, the shuttle box-vibrating means operating to give the shuttle box a uniform amplitude of movement.

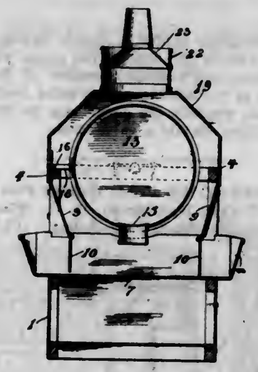
1,486,221. MEANS FOR CONTROLLING THE FLOW OF ELECTRONS IN ELECTRIC DISCHARGE DEVICES. EDGAR BERRY, Buenos Aires, Argentina, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 5, 1921. Serial No. 450,052. 7 Claims. (Cl. 250—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a receiver for wireless signals, the combination of a thermionic valve having in it a cathode, two anodes and a pair of plate electrodes arranged one on each side of the path between the cathode and the anodes so as to deflect the electrons emitted from the cathode on to the two anodes alternately, a receiving circuit connected to the electrodes and a detector connected between the anodes.



1,486,222. BUMPER. IRWIN BERRY, Wilmette, Ill. Filed Sept. 27, 1923. Serial No. 665,113. 7 Claims. (Cl. 293—55.)

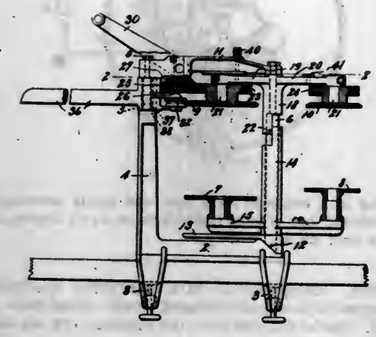
1. An automobile bumper comprising an elongated metallic member having a gasoline chamber therein, and means whereby gasoline may be placed therein and removed therefrom.



1,486,223. SAFETY-ISLAND LIGHT FIXTURE. FRANK BRUEGGEMAN, Chicago, Ill., assignor of one-half to William Ira Bell, Chicago, Ill. Filed Apr. 25, 1921. Serial No. 464,063. 5 Claims. (Cl. 240—25.)

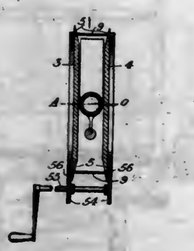
1. A safety island light fixture embodying therein a one piece globe having a single opening therein, means positioned within the globe for lighting same, a reflector positioned within the globe and dividing the globe into upper and lower isolated light compartments both adapted

to be illuminated by said means, said reflector being larger than said opening in the globe and being split to enable passage thereof through said opening.



1,486,224. STOCK-WATERING TROUGH. CHARLES W. BRUGGEMAN and CARL W. BRUGGEMAN, Farmington, Iowa. Filed Mar. 23, 1923. Serial No. 627,185. 2 Claims. (Cl. 119—73.)

1. A stock-watering apparatus comprising a supporting structure, a trough extending through the supporting structure, a drum rotatably mounted on the structure above the trough and having a single central spout adapted in one position to discharge into the trough and in another position of the drum to constitute a filling opening, a hood fitted on the supporting structure and housing the drum and provided in its top with a central filling opening, a collar engageable at either end fitted around said opening to rest upon the hood, and a funnel carried by said collar and projecting through one end thereof.

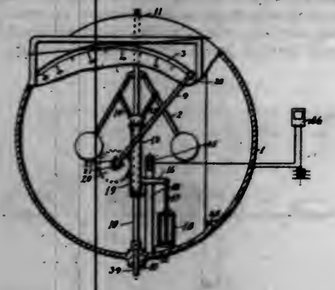


1,486,225. CAN-SEAMING MACHINE. FRANK W. BURPEE, Chicago, Ill. Filed Dec. 30, 1922. Serial No. 609,857. 6 Claims. (Cl. 113—23.)

1. A hand seamer for cans, comprising the combination with a suitable frame having provision for securing the same to a table or the like, a series of can supports rotatably mounted on the ends of arms radially projecting from a hub mounted to turn on a vertical axis, a series of can driving heads rotatably mounted in the ends of similar arms to be movable with the can supports about the same axis, each driving head and its can support being in axial alignment and supported at such distance from the common axis that the outer edges of the supports and driving heads are equidistant from the axis

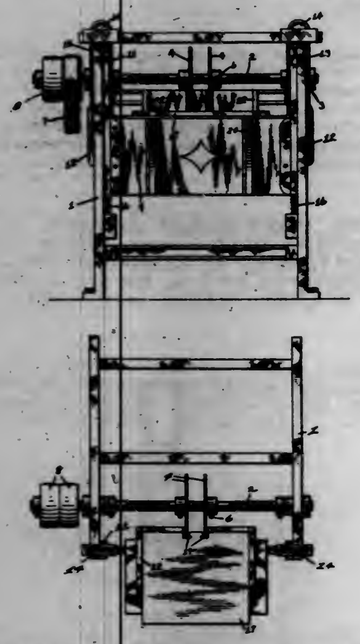
about which they move, a seaming roller rotatably mounted in the approximate plane of the driving head, means for securing any one of the driving heads and its can support in a position where the circumferential cover seam of a can between the support and the driving head may be engaged by the seaming roller, and means for rotating the driving head that is in such position.

1,486,226. MOTION-PICTURE APPARATUS. JOHN G. CAPSTAFF and NEWTON B. GREEN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 17, 1922. Serial No. 575,596. 15 Claims. (Cl. 88—16.8.)



1. Means for advancing motion picture film comprising two, spaced, co-axial discs, having the margins of their facing surfaces beveled so that the edges of a long strip of film may ride thereon, separate means on each disc whereby it may be turned, and driving means operating on said means to rotate said discs at the same speed, said common driving means being the only operative connection between the discs.

1,486,227. VEHICLE SPEED INDICATOR. FREDERICK W. CARTER, Lemon Grove, Calif. Filed Nov. 28, 1921. Serial No. 518,179. 4 Claims. (Cl. 235—95.)



1. A speed indicator for vehicles, including a case, a shaft journalled in said case, a centrifugal governor op-

eratively connected with said shaft, a radial indicator arm operatively connected with said governor, dials

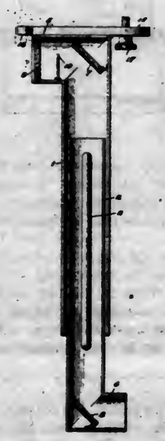
mounted in a series in said case, and pawls mounted at the extended end of said radial arm so as to engage and actuate said dials.

1,486,228. CARDBOARD-BOX-BOUTING MACHINE. EDMUND S. J. CHILD, Oakland, Calif. Filed Nov. 29, 1922. Serial No. 604,046. 12 Claims. (Cl. 93—58.)

1. A box routing machine comprising a routing disc having a plurality of knocking elements thereon; and means for rotating said disc to cause the knocking elements to engage and knock out die cut waste portions successively from a plurality of die cut blanks of cardboard boxes when moved into engagement therewith.

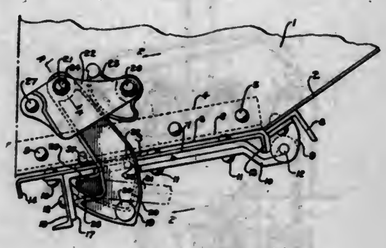
1,486,229. INTERRUPTER MECHANISM. HAROLD H. CLARK, Springfield, Mass., assignor to Wico Electric Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 25, 1920. Serial No. 391,606. 13 Claims. (Cl. 200—36.)

5. Interrupter mechanism, comprising, co-operating and relatively movable breaker points, rotary timing mechanism for controlling the opening and closing of said points, means operable from said mechanism at predetermined times to move said points into engagement at a speed independent of its rotative speed, and means



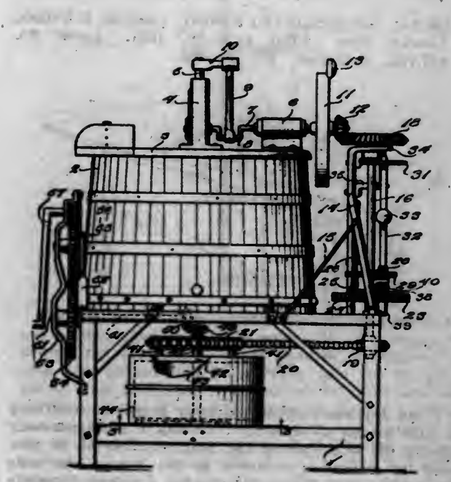
subsequently operable from said mechanism at a definite time after the operation of the first named means to move said points into separated relation and at a speed independent of its rotative speed.

1,486,230. TIRE-GAUGE HOLDER. DAVID H. COX, Roselle, N. J. Filed Mar. 15, 1923. Serial No. 625,335. 5 Claims. (Cl. 81—3.)



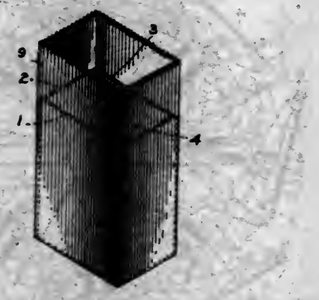
1. In a tire gauge holder, a handle having means fixedly secured therein for holding the gauge when applied to a valve stem, longitudinal movement of the gauge in one direction in the holding means being limited by said holding means, whereby the gauge may be forced in the opposite direction against a valve stem.

1,486,231. PERISCOPE ATTACHMENT FOR CAMERAS. WILLIAM C. COX, Washington, D. C. Filed June 16, 1920. Serial No. 389,514. 2 Claims. (Cl. 88—1.)



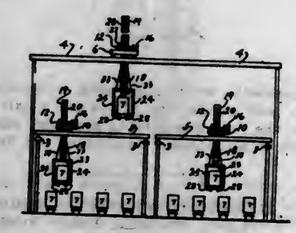
1. In combination with a camera, a periscope, a camera supporting shelf in fixed relation to the periscope, and means for adjustably fastening the camera to said shelf, the latter having indicating means to insure setting the focal axes of the camera and periscope in parallelism.

1,486,232. CAR-DOOR ARRANGEMENT. WILLIAM F. CREMMEAN, Toledo, Ohio. Filed Sept. 2, 1922. Serial No. 585,845. 12 Claims. (Cl. 105—308.)



7. In a car door arrangement, the combination with a drop door hinged to the car body, of a pair of door-supporting hooks pivoted to the car body and arranged to swing into supporting engagement with said door, one of the hooks being arranged to support the door in a partly closed position and the other being adapted to support the door in a fully closed position, and a ledge or boss formed upon the said hook that is adapted to hold the door in partly closed position, said ledge being formed and arranged to provide a fulcrum for a removable lever operable between said ledge and the door for prying the door from a partly closed to a fully closed position.

1,486,233. WASHING MACHINE. BERNARD C. CURRY, Kankakee, Ill. Filed Sept. 25, 1922. Serial No. 590,475. 3 Claims. (Cl. 185—37.)

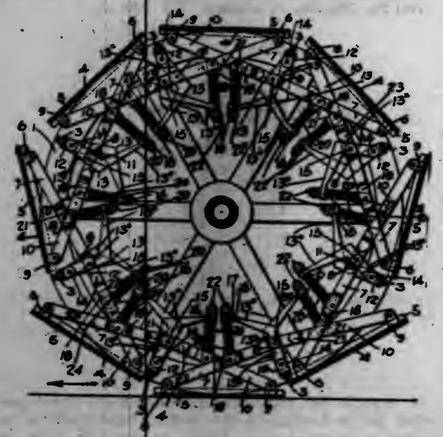


1. The combination of a crank shaft, operative connections between the crank shaft and a working element, a beveled gear carried by the outer end of the said shaft, a vertical shaft, a beveled gear carried by the upper end of said shaft below and meshing with the beveled pinion on the crank shaft, a spring motor arranged below the driven machine, and operative connections between the said motor and the vertical shaft for rotating the latter.

1,486,234. BOX. CROMWELL B. DICKEY, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 4, 1921. Serial No. 505,236. 2 Claims. (Cl. 229—55.)

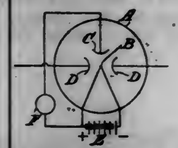
1. A paper box comprising a folding knock down pasteboard carton having its side walls hinged together and having overlapping flaps hinged to the side walls and forming an end closure and stiffener for the carton when the sides of the carton are brought into position of use at right angles to each other, and a flat bottomed bag rectangular in cross section of greater length than the carton, into which the carton fits snugly with its closed end in opposition to the closed end of the bag, the other end of the bag being folded down and secured over the other end of the carton and the box being adapted to be filled after inserting the carton into the bag.

1,486,235. DEVICE FOR TRANSFERRING RAILWAY CARS. HERBERT BRISTOL DWIGHT, Hamilton, Ontario, Canada. Filed July 1, 1922. Serial No. 572,191. 5 Claims. (Cl. 212—11.)



1. In a device for transferring railway cars the combination with a travelling crane adapted to lift a car bodily off the supporting rails, of car grappling elements carried by the crane and engageable with the running gear of a car to be lifted, inclined guide plates placed parallel with and on the outer sides of the rails, said plates being situated adjacent to and inclined downwardly towards the rails and adapted to engage the grappling elements as the crane is lowered to pick up a car.

1,486,236. TRACTOR WHEEL. WALTER GEORGE FISHER, Orangeville, Ontario, Canada. Filed June 19, 1922. Serial No. 569,205. 2 Claims. (Cl. 305—13.)



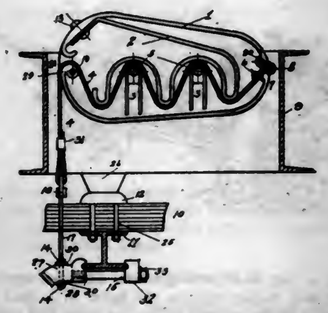
1. A tractor wheel comprising two wheel members, spaced apart, cross bars connecting the wheel members together and spaced suitable distances apart around the periphery of the wheel, tread plates located between each pair of bars, criss-cross levers pivotally mounted at

each end of the tread plate, an angular lever pivotally connected to each cross bar and intermediately of its

length to one of the aforesaid levers, and a yieldable connection between the opposite or outer end of the angular lever and the aforesaid criss-cross lever.

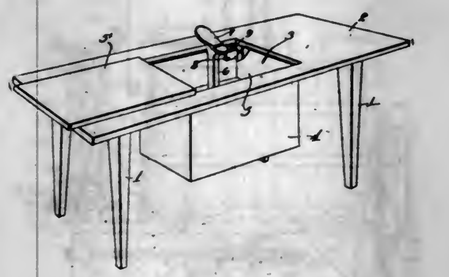
1,486,237. THERMIONIC DEVICE. JOHN AMBROSE FLEMING, London, England, assignor to The Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Nov. 6, 1919. Serial No. 336,029. 15 Claims. (Cl. 250—27.)

1. A thermionic device comprising a vacuous bulb, a filament, a pair of collecting plates and a pair of potential plates, the four plates being arranged substantially symmetrical to and closely surrounding the filament.



1,486,238. ELECTRICAL MEASURING INSTRUMENT. LESTER E. FRANCE, Cleveland, Ohio. Filed Aug. 18, 1919. Serial No. 318,106. 17 Claims. (Cl. 171—95.)

1. In an instrument of the class described, a dial plate, a permanent magnet, said magnet being yieldingly secured to said dial plate, and adjusting means for varying the distance of said magnet from said dial plate.



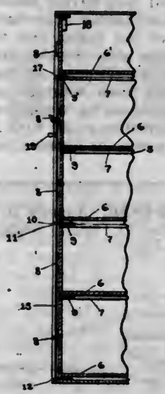
9. In an instrument of the class described, a frame comprising a stationary body portion and a yielding portion adapted to support a magnet, a magnet supported thereon, and means for varying the distance between said magnet and said stationary body portion of said frame.

1,486,239. SHOCK ABSORBER FOR AUTOMOBILES AND OTHER VEHICLES. CLAUDE M. GARLAND, Chicago, Ill. Filed Sept. 18, 1922. Serial No. 589,004. 5 Claims. (Cl. 267—10.)

1. In a device of the character described, a metallic case, means for rigidly attaching the said case to one of the vehicle parts to be controlled, a slot in each end of the said case, a flexible member passing through the said case and the slots therein, an enlargement in one end of the said flexible member whereby the enlarged end of the flexible member is held rigidly in the slot in one end of the said case, projections carried within the said case and adjacent to the said flexible member, resilient means tending to press the said flexible member between the said projections, and the opposite end of the said flexible member attached to the other vehicle part to be controlled.

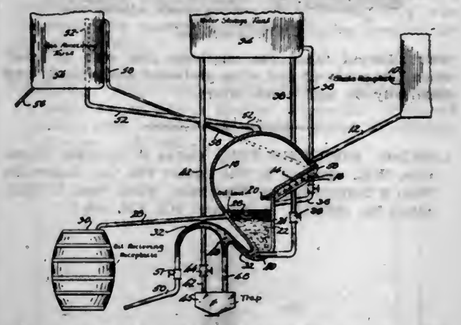
1,486,240. SHOE-SHINING STAND. CHARLES J. GEISER, Lander, Wyo. Filed July 26, 1921. Serial No. 487,703. 3 Claims. (Cl. 15—265.)

1. An apparatus of the character described comprising a table having an opening in its top, a cover normally closing the said opening and adapted to swing to open position, a housing attached to the top of the table around and beneath the said opening, a sliding receptacle within the said housing, a foot rest mounted within the receptacle and adapted to project upwardly through the opening in the table top when the receptacle is elevated, and means to maintain the receptacle in elevated position.



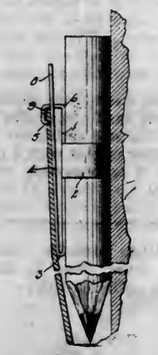
1,486,241. PNEUMATIC JACK. WILLIAM A. GIBSON, Detroit, Mich. Filed Mar. 13, 1922. Serial No. 543,230. 7 Claims. (Cl. 138—9.)

7. In a lifting device of the character described, the combination of an expansible fluid container, means for admitting fluid under pressure thereto, a base member, a hollow member slidable upon said base, said base and



hollow member together forming a tight expansible casing to completely enclose the expansible fluid container, and a lifting member upon said slidable hollow member.

1,486,242. TRUNK-DRAWER LOCKING MEANS. FREDERICK J. GREENE, Racine, Wis., assignor to Greene Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed May 15, 1922. Serial No. 560,918. 1 Claim. (Cl. 45—94.)

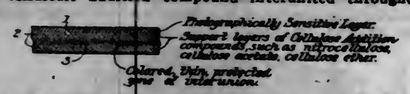


The combination with a trunk section having cross bars and drawers between some of said bars, of a means for locking the drawers in closed position, comprising an eyed arm projecting from a trunk part, an elongated slotted arm projecting from one of the cross bars and having a narrow entrance to its slotted portion, a locking bar extending in front of the drawers and entering the eye of the eyed arm and the slot of the slotted arm and having an upper downwardly turned hooked end which extends over and downwardly on the inner side of one of the cross bars, a medial portion of the locking bar being of less width than the other portion to permit the bar to lockingly enter the elongated slot of the arm and to be moved upwardly to locked position, and another trunk drawer having a locking means and positioned above the hooked end of the bar and having a front plate, the lower edge of which engages the bar to hold the hooked portion in locked position and is further provided with a bottom which is raised above the lower edges of the drawer sides and front plate to provide a space to permit the locking bar to be raised and disengaged from the cross bar and the arms when the said drawer is slightly withdrawn.

1,486,243. PROCESS FOR TREATMENT OF OIL SHALE AND APPARATUS THEREFOR. GEORGE C. HACKSTAFF, Denver, Colo. Filed Apr. 19, 1920. Serial No. 374,781. 6 Claims. (Cl. 196—25.)

2. A process for treating oil shale and the like, comprising feeding the shale along an incline, heating the same as it travels its inclined path, allowing it to fall after heating, and spraying it with water as it falls, collecting the shale water and resulting oil, and allowing the oil to accumulate on the surface of the water.

1,486,244. PENCIL HOLDER. ERICK O. HAMMERBERG, Chicago, Ill. Filed May 21, 1923. Serial No. 640,625. 1 Claim. (Cl. 24—11.)

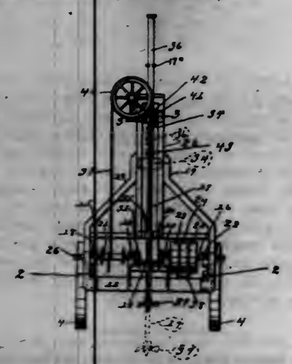


A pencil holder made from a single piece of material and comprising a body portion, clips carried by said body portion and adapted to yieldingly grip a pencil, a spring lever having an opening therein, and cloth engaging prongs projected through said opening and turned inwardly to determine the movement of said lever, and the distance to which the holder can enter the pocket, said prongs being spaced from each other so as to grip the cloth at spaced apart points to prevent said body portion from swinging with respect to the cloth, said prongs being adapted to enter the cloth to the depth of the prongs, the recess between the prongs preventing any further movement of the prongs into the cloth.

1,486,245. PHOTOGRAPHIC FILM WITH COLORED LAMINATED BASE. JAMES H. HASTE and ERWIN J. WARD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 26, 1922. Serial No. 609,026. 1 Claim. (Cl. 95—9.)

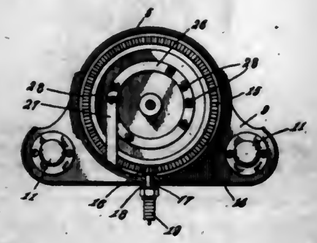
As an article of manufacture, a pretinted photographic film comprising a photographically sensitive layer, and a flexible light-transmitting laminated support therefor

which includes two relatively thick transparent layers of cellulosic addition compound interunited throughout



their adjacent faces, the relatively thin zone of interunion being colored and being protected mechanically and chemically by said thick layers.

1,486,246. FOUNTAIN PEN. OSCAR B. HJORTH, Janesville, Wis., assignor to The Parker Pen Co., Janesville, Wis., a Corporation of Wisconsin. Filed Sept. 1, 1922. Serial No. 585,815. 2 Claims. (Cl. 120—46.)



1. In a fountain pen, a self-filling mechanism comprising a pressure bar, a spring bar for operating the pressure bar, and means for operating said spring bar, said means comprising a hollow member formed with a plurality of resilient fingers whereby it is removably retained within a fountain pen barrel.

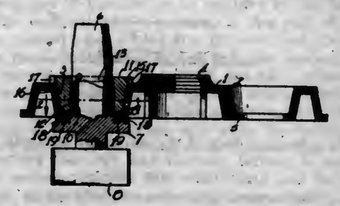
1,486,247. POSTHOLE DIGGER. DAVID S. HUNTER, Greensburg, Pa. Filed Mar. 7, 1919. Serial No. 281,170. 1 Claim. (Cl. 255—19.)

An earth boring machine comprising a frame, a vertically slidable shaft carried by said frame, the upper end of said shaft being slidably and rotatably mounted in a crosshead slidable in crosshead guides, the lower end of said shaft being slidably and rotatably mounted in spaced bearings, a bevel gear carried by said shaft and feathered thereon, driving mechanism for driving said bevelled gear, a drum located to one side of the bevelled gear carried by the shaft and operated through gear connections therewith, a pulley located adjacent the upper end of the shaft and carried by the frame, a cable connected to the crosshead and passing over the pulley and over the drum located adjacent the gear carried by the shaft, said cable forming means whereby the shaft may be lowered or raised as desired, a pin carried by the shaft above the crosshead for engaging the upper side of the crosshead and limiting the downward movement of the shaft, and an earth boring element carried by the lower end of the shaft.

1,486,248. SIGNAL. JOSEPH JEFFERY and HARRY SNYDER, Bangor, Me. Filed June 23, 1922. Serial No. 570,389. 2 Claims. (Cl. 116—43.)

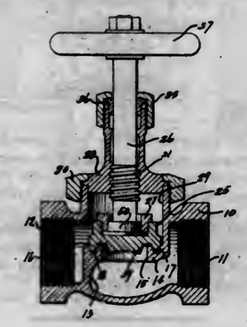
1. In a device of the character described, a casing including a cylindrical body having display openings at its front and rear, and having a straight base projecting beyond the sides of the casing and terminating in upwardly rounded ends, side members for the base extensions connected to the periphery of the casing, and said extensions providing lamp housings, an indicia bearing drum journaled in the casing, means for turning the same to bring indicia thereof in a line with the sight openings in the casing, and means for illuminating the lamps in the lamp housings.

1,486,249. CAN OPENER. ANDREW M. JENSEN, Stockton, Calif. Filed May 31, 1923. Serial No. 642,710. 1 Claim. (Cl. 30—3.)



A can opener having at one end of a handle a blade and a support, said blade having two cutting edges, said support having two fulcrums located adjacent to but in front of said blade, the lower fulcrum being spaced from the blade but in substantial alignment with the upper cutting edge of said blade, said fulcrum being adapted to cooperate with the lower cutting edge of the blade to produce the initial incision, the upper fulcrum being adapted to cooperate with the upper cutting edge of the blade to finish opening the can.

1,486,250. ELECTRIC CONNECTION. MELVIN C. KING, Chicago, Ill. Filed Sept. 26, 1921. Serial No. 503,215. 1 Claim. (Cl. 204—29.)

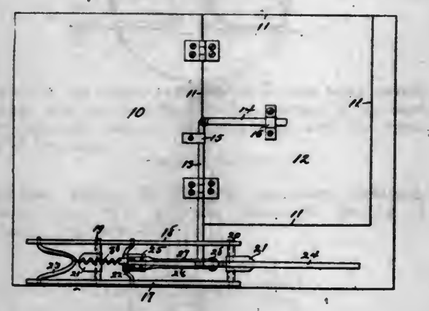


A device of the character described comprising a lead terminal member, a lead retaining nut, said terminal member and said nut being formed with a plurality of cooperating segmental threads of relatively low pitch on the contacting wall, whereby the terminal may be inserted into

the retaining nut and the latter moved into threaded engagement with said terminal when rotated less than a complete revolution, and means integral with said nut for

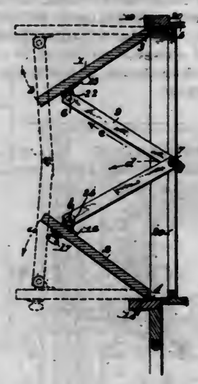
engaging the upper side wall of said terminal to occasion a liquid-tight contact between said nut and said terminal member.

1,486,251. VALVE. GEORGE KNIGHT, Sterling, Colo. Filed Dec. 31, 1921. Serial No. 526,136. 1 Claim. (Cl. 251—27.)



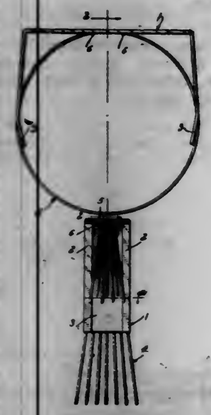
A valve comprising a body, a web partition mounted in said body including a horizontal seat provided with a passageway opening therein and having an annular groove concentric about said opening and upon the upper surface of said horizontal seat, said groove having a flat bottom surface and provided with upwardly extending diverging sides, a disc valve member of substantially the same material as said seat and including a depending annular extension providing a bottom surface and having upwardly diverging sides, and adjustable means mounting said valve disc member in said body for cooperation with said horizontal seat, and whereby the annular extension of said valve member may have the bottom surface and sides thereof in intimate contact with the bottom surface and sides of the groove in said seat, when said valve is closed.

1,486,252. LOCOMOTIVE WHISTLE. JOHN KRUTTSCHNITT, San Francisco, Calif. Filed Oct. 8, 1923. Serial No. 667,224. 3 Claims. (Cl. 116—137.)



2. A locomotive whistle comprising a bell member; a steam connection; a valve-chamber member intervening and communicating with both the bell member and the steam connection; a valve within said chamber controlling said communication; a piston within said chamber connected with and spaced from said valve and exposed at all times to the fluid pressure of the steam connection oppositely to the pressure on the valve; a bypass connection of the valve chamber member around said valve and piston; a stem carrying said valve and piston and projecting from the valve chamber member; a spring-controlled, linearly-movable valve-operating wire connected with said stem; and a housing member for guiding said wire.

1,486,253. TRAPDOOR-OPERATING MECHANISM. FRANK A. KUNKEL, Marion Township, Plymouth County, Iowa. Filed July 3, 1922. Serial No. 572,568. 3 Claims. (Cl. 268—3.)

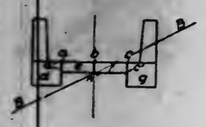


3. In a trap-door operating mechanism, the combination with a trap-door and a lever-operated rock-shaft slidingly engaging said door, of a frame adapted to be fixed to a floor in which the door is located and extending across said rock-shaft, spaced yokes pivoted in said frame, a clip carried by one yoke, a retractile coil spring connecting said clip to the other yoke, and twin rods connecting said clip adjustably to the lever.

1,486,254. LABIATE DOOR FOR PHONOGRAPH CABINETS. WILLIAM TROUPE LAKIN, Long, Md. Filed June 1, 1923. Serial No. 642,805. 6 Claims. (Cl. 274—2.)

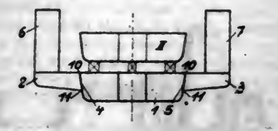
1. Labiate doors, means by which they are mounted, an arm mounted on each door, means by which a rigid relation may be established between the arms and said mounting means only one arm assuming such rigid relation to the door upon an opening movement, and connecting means for said arms adapted to push the other arm and door to a corresponding degree of opening movement.

1,486,255. WIRE CHOPPER, PIE-CRUST MIXER AND FLAKER. CLARA BIRCHARD LAMBERT, Pasadena, Calif. Filed June 21, 1923. Serial No. 646,932. 4 Claims. (Cl. 107—53.)



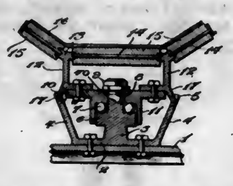
1. A pie crust mixer and flaker comprising a handle having a plurality of transversely alined laterally spaced mixers carried thereby, said mixers being bowed outwardly longitudinally and secured at their ends to said handle.

1,486,256. TREATMENT OF ORES. HUBERT MERRYWEATHER, Bethlehem, Pa., assignor to Bethlehem Steel Company, South Bethlehem, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1920. Serial No. 360,041. 7 Claims. (Cl. 75—18.)



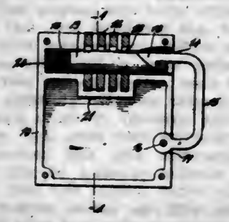
1. The method of treating an ore, which comprises submitting the ore in the presence of sulphur to a roasting temperature below the point of decomposition of the sulphates of the elements to be extracted, next leaching it and adding from the resulting solution to another charge of ore, then roasting and leaching the second-mentioned charge, whereby a larger proportion of one of the constituent elements contained in the second-mentioned and succeeding charge is recovered than from the first-mentioned charge.

1,486,257. FLOATING DOCK. MAX MÜLLER, Hamburg, Germany. Filed Mar. 30, 1922. Serial No. 548,232. 4 Claims. (Cl. 114—45.)



1. In a floating dock of the character set forth, side pontoons and an intermediate pontoon, the latter in rigid communicating connection with said side pontoons and its bottom face extending in a plane substantially higher than that of the alined bottom faces of said side pontoons.

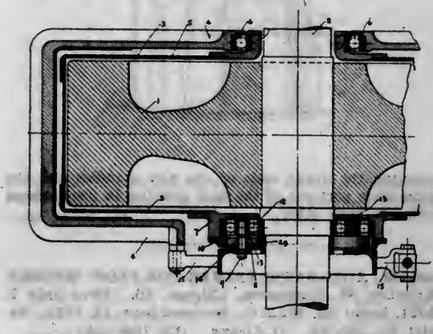
1,486,258. FLOATING DOCK. MAX MÜLLER, Hamburg, Germany. Filed Dec. 22, 1922. Serial No. 608,406. 5 Claims. (Cl. 114—46.)



1. In a floating dock of the character set forth, in combination, a central pontoon and two side pontoons, the latter of less draft than said central pontoon and the decks of the several pontoons normally all in horizontal alinement.

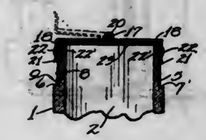
1,486,259. IDLER FOR BELT CONVEYERS. GUS NELSON, Douglas, Ariz. Filed Mar. 23, 1923. Serial No. 627,110. 3 Claims. (Cl. 198—192.)

2. In a belt conveyer of the type described, the combination of a main support, a turntable mounted thereon, centering devices on the support and the turntable, antifriction devices arranged between the turntable and the support and housed by the centering devices, fixed stops on the support at one side of the turntable, a projection on the turntable playing between said stops to limit the pivotal movement of the turntable, and belt-supporting members carried by the turntable.



1,486,260. LOCK. WILLIAM E. NIE, Fort Erie, Ontario, Canada. Filed Aug. 8, 1921. Serial No. 490,789. 1 Claim. (Cl. 70—112.)

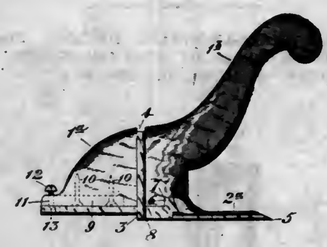
A lock comprising a casing of two half sections bolted or otherwise fastened together and presenting complementary portions co-acting to provide a bore extending parallel with the casing adjacent one end and a disc housing surrounding the bore intermediate the ends of the latter, said bore opening outwardly of the top face of the casing and the said casing having another and a smaller opening in the top face thereof arranged near the end opposite from that adjacent which the opening of the bore is located, a bearing pin mounted in the casing and extending crosswise of the latter immediately below the said other and smaller opening, a U-shaped shackle bolt having relatively long and short arms, the short arm of which extends thru the said smaller opening and is fulcrumed on the said bearing pin for swinging movement while the long arm is adapted to enter the opening of the said bore, said long arm having a barbed end and the said opening of the bore being enlarged to provide clearance for the said barbed end, a shackle-



retaining member consisting of a cylindrical block movable longitudinally of the bore and having a notched end, a spring for normally positioning said block in the bore with its notched end adjacent the enlarged opening of the bore and in position to be engaged by the barbed end of the said shackle bolt, lugs on the said shackle-retaining member, and a plurality of numbered discs arranged in the said disc housing and provided, respectively, with a central opening thru which the said shackle-retaining member extends, each of said discs having its central opening notched to provide clearance for the lugs of the said retaining member only when the notches of all of the discs are in alignment with the said lugs.

1,486,261. GYROSCOPIC AND OTHER ROTORS. CARL L. NORDEN, Brooklyn, N. Y. Filed Nov. 24, 1916. Serial No. 133,118. 9 Claims. (Cl. 74—78.)

1. The combination of a rotor, a surrounding casing concentrically mounted with the rotor, connections between the rotor and the casing adapted to control the ratio of speed and the direction of rotation between them, whereby the fluid friction of the rotor may be controlled.

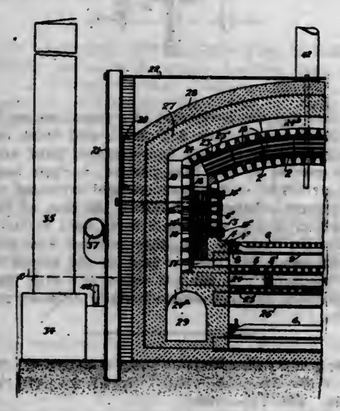


1,486,262. SALT AND PEPPER SHAKER. LUIS M. ORTIZ and SMITH E. GILMORE, Chama, N. Mex. Filed June 3, 1921. Serial No. 474,611. 1 Claim. (Cl. 65—45.)

A closure for a two compartment condiment container comprising a cylindrical member having a perforated closed end, and lugs projected upwardly from said end, two covers hingedly secured to said lugs and being adapted to swing independently of one another, a single spring adapted to swing said covers so that their outer surfaces abut one another, and spring clips carried by said covers and being adapted to engage with said closure to yieldingly hold said covers in closed position, whereby said spring is placed under tension, said spring being adapted to swing either of said covers, when released, into a superimposed position upon the other cover.

1,486,263. CHIPPING TOOL. FERDINAND PARCELLI, Mount Kisco, N. Y., assignor of one-half to Frank Pasquale, Mount Kisco, N. Y. Filed June 9, 1923. Serial No. 644,450. 3 Claims. (Cl. 145—24.)

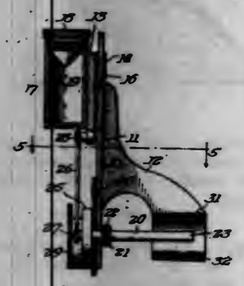
1. A device of the character described, comprising a cutter having an upper and a lower shoulder, with a reduced portion extending forwardly from the lower shoulder; a handle with a notch in its upper edge; and a securing band surrounding the handle with its upper end received into said notch, and with its lower end projecting below the handle sufficiently to receive the reduced



portion of the cutter, said reduced portion being passed through said downwardly projecting portion of the band with its under shoulder in engagement with the lower end of the band.

1,486,264. SEAL. EMANUELE J. PASSANISI, Cleveland, Ohio. Filed Nov. 29, 1922. Serial No. 603,914. 1 Claim. (Cl. 292—318.)

A seal of the character set forth comprising a strip of metal adapted to link the elements to be sealed and provided adjacent each end with an aperture, and a substantially rectangular hollow metal housing provided with an opening and having a latch positioned therein, said latch being formed from wire and having one end thereof fastened to said housing, said latch extending across the opening in said housing and along one side and across the wall opposite to said opening and thence forwardly and terminating in a hook, said hook contacting with the portion of said latch extending across said opening and adapted to engage in the apertures in the ends of said strip.



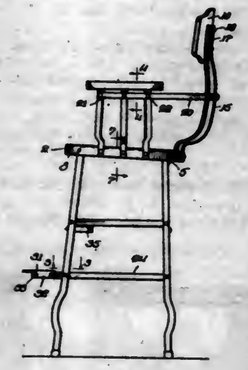
1,486,265. ANNEALING LEER OR FURNACE. ROBERT D. PIKE, San Francisco, Calif. Filed Oct. 25, 1922. Serial No. 596,732. 22 Claims. (Cl. 49—47.)

8. A glass annealing leer comprising a muffle, enclosed passageways formed in the walls of the muffle and communicating with the interior thereof, said passageways

being so arranged as to receive heat transmitted from the walls of the muffle so as to cause convection currents to be circulated over the articles within the muffle.

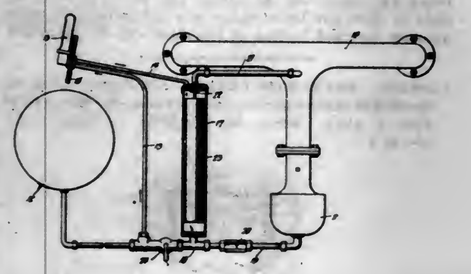
1,486,266. AMALGAM-MIXING DEVICE. JAMES S. ROSENBLATT, Chicago, Ill. Filed Jan. 25, 1922. Serial No. 531,598. 3 Claims. (Cl. 259—91.)

1. In an amalgam mixing device, the combination of a cylindrical container mounted for reciprocation in a direction along its length, a stationary closure head for an end of the container formed with a conical portion extending centrally into the cavity of the container and adapted to pierce and spread the material, and means for imparting reciprocation to the container; said closure head being removable without disassembling the reciprocating means.



1,486,267. ATTACHMENT FOR FURNITURE LEGS. JOSEPH SALOMON, Chicago, Ill. Filed Mar. 29, 1919. Serial No. 286,145. 3 Claims. (Cl. 16—42.)

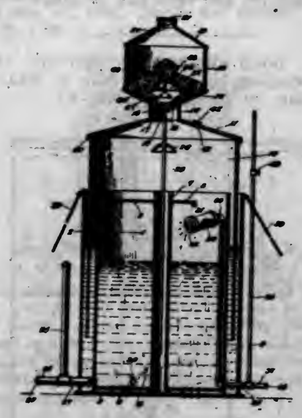
1. A shoe for the lower end of a furniture leg formed from a blank struck from flat metal, said blank embodying a substantially circular base portion, right angle extensions carried by the base portion, a right angle extension carried by each aforementioned extension and being of an area substantially half of the area of the first mentioned extension, said blank being bent at the points of connection between the base portion and the first named extension and further bent at the points of connection between the connected extensions with the adjacent extensions forming perpendicularly disposed gripping members.



1,486,268. METAL CHAIR. JOSEPH SALOMON, Chicago, Ill. Filed June 23, 1921. Serial No. 479,721. 7 Claims. (Cl. 155—194.)

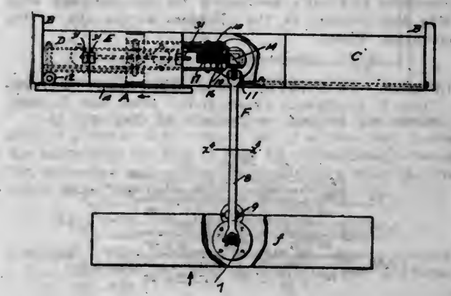
1. In a chair; a multiplicity of flattened resilient metal spindles attached to the sides of the chair seat, arms secured to the top of said spindles, flattened back spindles of resilient metal having their lower ends attached to the seat, a backboard attached to the free ends of said back spindles, and a unitary resilient tie bar attached to and

connecting the upper ends of the arm spindles and the intermediate portions of the back spindles in fixed spaced relation to each other.



1,486,269. AUTOMATIC PRIMER FOR FLOW METERS. RUDOLPH W. SCHROEDER, Chicago, Ill. Filed July 2, 1921, Serial No. 482,276. Renewed Sept. 13, 1922. Serial No. 588,084. 11 Claims. (Cl. 158—36.)

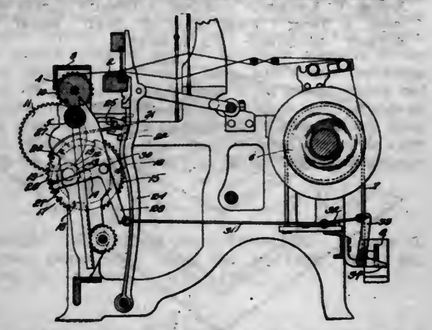
1. The combination with a liquid burning engine having a source of fuel supply from which fuel runs by gravity to said engine, of a flow meter in the fuel circuit situated at a point above the fuel level of said source of supply, and a connection with said engine for exhausting gaseous material from said flow meter.



1,486,270. ACETYLENE-GAS GENERATOR. EDGAR E. SPRINKLE, Fort Smith, Ark. Filed Sept. 2, 1922. Serial No. 585,964. 4 Claims. (Cl. 48—58.2.)

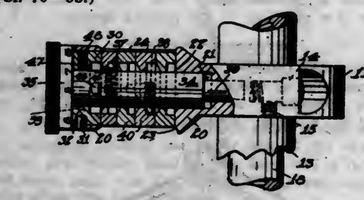
3. The combination of a generating chamber, a bell fitted over said chamber and sealed against the same, a hopper carried by said bell and having an opening in its bottom to establish communication with the bell, a valve normally closing the opening in the bottom of the hopper, a stem depending from said valve and adapted to impinge against the bottom of the generating chamber whereby descent of the bell will unseat the valve and ascent of the bell will permit the valve to seat, a supplemental hopper within the first mentioned hopper, a valve normally preventing discharge from the supplemental hopper and arranged in vertical alinement with the first-men-

tioned valve, and means whereby said second-mentioned valve will be opened by contact with the first-mentioned valve in an extreme low position of the bell.



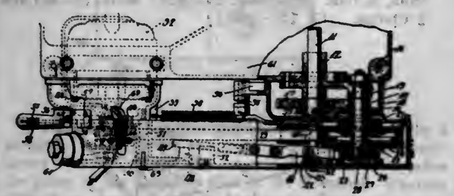
1,486,271. DOOR LOCKING, RELEASING, AND OPERATING MEANS. HARRY R. TSUTSUI, Los Angeles, Calif. Filed Apr. 12, 1918, Serial No. 228,215. Renewed Nov. 30, 1923. 1 Claim. (Cl. 268—8.)

In an automatic door operating mechanism, the combination with a slidably mounted door, of a rack carried by the door, an operating pinion for said rack and means for operating said pinion including a driving pinion operatively connected with said door rack operating pinion, a vertically shiftable actuating rack for engaging said driving pinion, a vehicle wheel-operated member located at one side of the door-way and adapted to be depressed, and a lever connecting said vertically shiftable rack and the wheel-operated member.



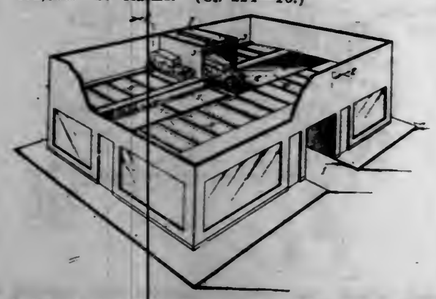
1,486,272. LOOM. JAMES A. ADAMS, Waltham, Mass., assignor to The Boston Manufacturing Company, 1901, Waltham, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1922. Serial No. 605,063. 15 Claims. (Cl. 139—24.)

6. In a loom, the combination with a takeup mechanism including a cloth beam and a train of gears through which the takeup movement is imparted to said beam, of a ratchet wheel secured to one of the gears of said train and rotating therewith, said ratchet wheel having teeth in its edge separated by smooth faces, a pawl riding on the edge of said wheel, and means for reciprocating said



pawl, whereby said pawl is operative upon engaging a tooth of said wheel to impart a quick takeup movement to said roll.

1,486,273. PERMUTATION LOCK FOR STEERING COLUMNS. CHARLES M. ALLISON, Worcester, Mass. Filed Jan. 15, 1923. Serial No. 612,603. 4 Claims. (Cl. 70—53.)

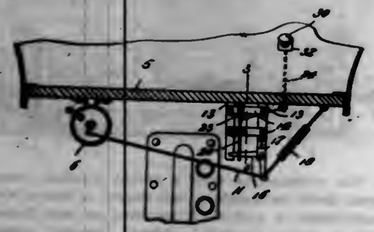


1. In a lock, the combination of a cylinder, a bolt extending through said cylinder and adapted to be projected therefrom to lock it, a collar in which said bolt is rotatably mounted and having a wall surrounding it, said wall being provided with a passage therethrough, the bolt having a series of staggered projections, one of which is adapted to enter said passage when the head is turned to a definite position to permit the bolt to be withdrawn, and a series of rings in said cylinder rotatably mounted on the bolt, each having a passage therethrough for one of the projections on the bolt.

1,486,274. DRIVING MECHANISM FOR SLICING MACHINES. RUDOLPH BACHMAN, Laporte, Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed July 22, 1922. Serial No. 576,681. 11 Claims. (Cl. 146—102.)

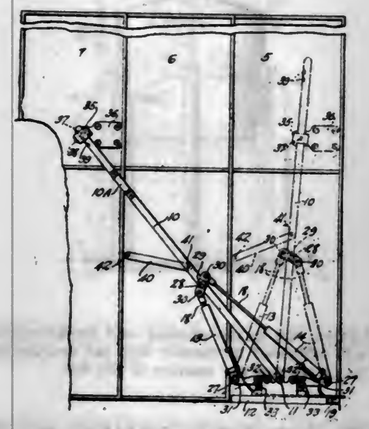
1. The combination with a slicing machine frame, of a drive shaft journaled in said frame, a motor mounted in said frame, a stud shaft mounted on said frame and having a sleeve journaled thereon, gearing connecting said drive shaft and sleeve, a pulley journaled on said sleeve, a friction clutch member splined on said sleeve, a belt connecting said motor and pulley, and a hand lever for controlling said friction clutch.

1,486,275. STORAGE AND HANDLING OF MOTOR VEHICLES. ALFONSE N. BECKER, Chicago, Ill., assignor to Alfonse N. Becker, Charles T. Jacobs, and Ernest V. Lundgren, trustees, Automatic Garage Systems, a Trust. Filed May 23, 1921. Serial No. 471,608. 13 Claims. (Cl. 214—16.)



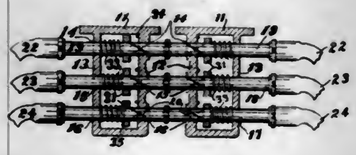
1. In a garage construction, the combination with two separated rows of individual parking spaces, of a transfer table positioned in the aisle between said rows and adapted to move lengthwise thereof, means arranged transversely to the aisle and between certain of the parking spaces for giving access to the table, and two loading spaces on said table either of which is adapted to move into alignment either with said means or with any one of a plurality of the parking spaces.

1,486,276. SKYLIGHT. BENJAMIN P. BLASKI, Chicago, Ill., assignor to Blaski Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1920. Serial No. 420,033. 6 Claims. (Cl. 108—31.)



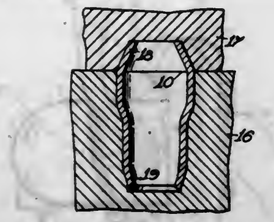
1. In combination, a supporting frame, closure means for said frame, means for moving said closure means relatively to said frame comprising a link pivoted at one end to said frame and at the other end to said closure means, means for swinging said link relatively to said frame, upwardly extending guide means associated with said frame, and means carried by said closure means and slidably engaging said guide means, for the purpose specified.

1,486,277. GAS-LINE CUT-OFF. CHRIS BORDEN, Burbank, S. Dak. Filed Mar. 27, 1923. Serial No. 627,969. 2 Claims. (Cl. 137—139.)



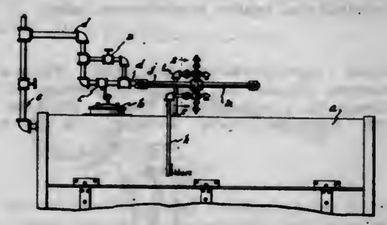
1. In a cut out for gas lines of motor vehicles, wherein the same is provided with a cut off valve, a bracket secured to the vehicle dash board, a bell crank pivoted to said bracket, a connection between one arm of said bell crank, and the said valve of the gas line, means for swinging said bell crank upon its pivot for closing said valve, and means for maintaining said valve crank in a position whereby said valve may be opened.

1,486,278. DOOR-OPERATING DEVICE. THOMAS BRADY, Woodcliff, N. J. Filed Nov. 3, 1919. Serial No. 335,542. 11 Claims. (Cl. 268—8.)



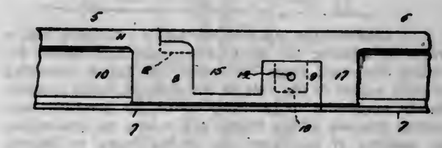
1. A door operating device, comprising a swinging lever arranged for connection with a door at one end, pressure operated power cylinders connected with opposite sides of said lever for swinging the same in opposite directions and valve mechanism for automatically trapping the pressure in the cylinders at the end of the operation thereof.

1,486,279. AUTOMATIC HOSE COUPLING. THEOPHILUS T. BURCHELL, Akron, Ohio. Filed Apr. 7, 1920. Serial No. 371,937. 1 Claim. (Cl. 284—6.)



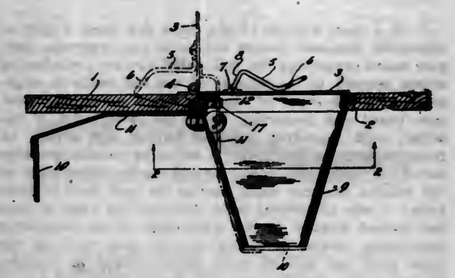
In combination with a car coupler, pipe supporting means attached to the underside thereof, said means comprising a box-like casing provided with spaced vertical parallel walls disposed at a right angle to said coupler, a horizontal bore extending through said walls, a pipe suitably mounted in said bore, the wall of the bore in the forward wall provided with a helically disposed groove, the pipe provided with a helically disposed flange adapted to fit in said groove, a collar positioned on said pipe between said walls, a spring mounted on said pipe between said collar and the rear wall of said casing, said spring adapted to normally hold said pipe in said bore with its outwardly extending end projecting beyond said coupler so that the same will be moved longitudinally in said bore upon being brought into contact with a like pipe similarly mounted, said pipe provided on its outwardly extending end with means to lock it to said like pipe when the said pipes are given a rotary movement by being forced longitudinally in said bore, a normally closed valve within said head and means adapted to automatically open said valve when the pipe is coupled to a like pipe.

1,486,280. METHOD OF MAKING CHUCK SLEEVES. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1922. Serial No. 602,636. 5 Claims. (Cl. 29—156.)



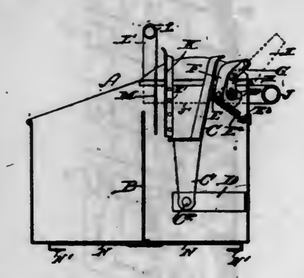
1. The method of making a hollow metal article having an open tapered end which consists in forming a tubular blank, forming an internal sharp shoulder near said open end, and then longitudinally compressing the metal blank in hollow dies, one of which has a conical cavity therein to bend inwardly the open end about said shoulder as a center.

1,486,281. STEAM-LINE CONTROL. EMMANUEL CHADWICK, Detroit, Mich. Filed July 19, 1923. Serial No. 652,656. 5 Claims. (Cl. 169—2.)



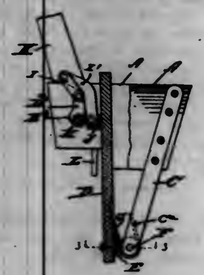
1. In apparatus for the purpose specified, the combination of a steam line, a waste line, a service line, means for controlling the flow of fluid by automatically closing the waste line and opening the service line when the live steam flows into the control device.

1,486,282. RAIL JOINT. MILES A. CROSBY, Glencoe, Pa. Filed Sept. 6, 1923. Serial No. 661,181. 2 Claims. (Cl. 238—235.)



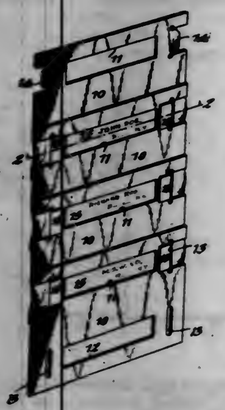
1. In a rail joint of the class described, a pair of rail sections, one of said rail sections having the end of its ball and web portions removed to leave the base thereof projecting, spaced integral upstanding block members formed upon said projecting base portion, one of said block members being extended from the web and ball portions of said rail sections and having a longitudinal groove in its upper surface, the other of said block members being disposed at the end of the projecting base portion and having a vertical socket opening through the top thereof, said socket being intersected by transverse openings, the other of said rail sections having the ends of its web and base portions removed to leave the ball portion thereof projecting the free end portion of said projecting ball portion being reduced at its under side for seating reception within the longitudinal groove, a relatively thick block member depending from the projecting ball portion of the second named rail section and located between the end of said projecting ball portion for seating reception between the block members of the first named rail sections, a plate like tongue depending from the projecting ball portion of the second named rail section inwardly of the depending block member thereof and adapted to snugly seat within said socket, said plate like tongue having a transverse opening adapted to align with the transverse opening in the socketed block member for reception of a bolt.

1,486,283. CUSPIDOR FOR VEHICLES. CALVIN O. DEIS, Dover, Ohio. Filed Oct. 20, 1922. Serial No. 595,792. 3 Claims. (Cl. 4—267.)



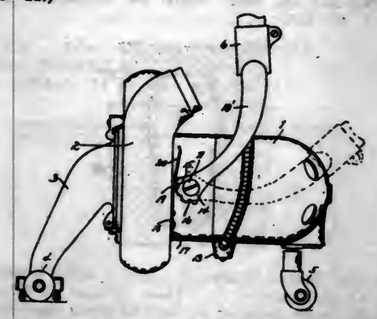
1. A cuspidor including an open ended casing, a hinged door normally closing the upper end of the casing, an angular arm rigidly fixed to the door and a lid rigidly fixed upon said arm for closing the lower end of the casing when the door is opened.

1,486,284. COMBINED MOP WRINGER AND PAIL. JAMES M. EIFFE, Fultonville, N. Y., assignor to White Mop Wringer Company, Fultonville, N. Y., a Corporation of New York. Filed May 24, 1923. Serial No. 641,116. 4 Claims. (Cl. 15—261.)



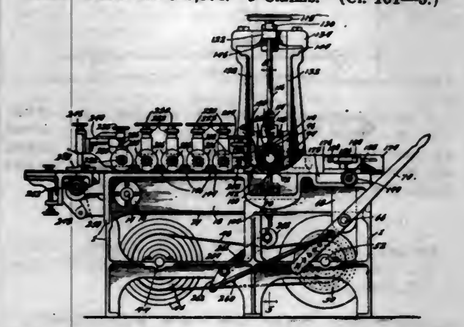
1. In a combined mop wringer and pail, a receptacle, a partition wall dividing the receptacle into two compartments with the upper edge of said partition wall below the plane of the inclosing wall of the receptacle, whereby a spout is provided for the discharge of water from one of said compartments, a mop wringer including a substantially vertical stationary pressure board, and a baffle plate located in spaced relation between one of the pressure boards and the partition wall and extending above the plane of the upper edge of the latter, whereby water expressed by the mop wringer may be directed into the compartment containing the wringer.

1,486,285. MOP WRINGER. JAMES M. EIFFE, Fultonville, N. Y., assignor to White Mop Wringer Company, Fultonville, N. Y., a Corporation of New York. Filed May 24, 1923. Serial No. 641,118. 2 Claims. (Cl. 15—261.)



1. In a mop wringer of the class described, a pair of oppositely disposed wooden end walls; a transverse pressure board connecting the end walls together; reinforcing straps secured to the outside of the end walls in alignment with the edges of the transverse connecting pressure board and projecting below the lower edge of the latter, said depending portions having lugs struck up from the body of the metal; a swinging wooden pressure board; a reinforcing strap secured to the lower edge of the wooden pressure board having its ends bent to form hubs; a pair of pivotal bolts securing the hubs of said last named member to the lower ends of the depending reinforcing straps; a spring sleeved upon each of the hubs with one end of each spring lodged in recesses formed in the movable pressure board, the other end of each spring being engaged by the lugs struck up from the body of the depending portion of the reinforcing straps, and means for actuating the swinging pressure board.

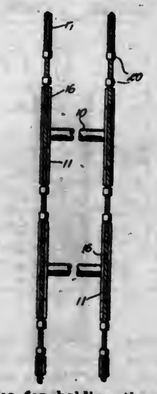
1,486,286. STENCIL. GUY J. EVANS, Buffalo, N. Y. Filed Dec. 11, 1920. Serial No. 429,884. 3 Claims. (Cl. 101—127.)



1. A stencil comprising two frame sections arranged side by side and provided with corresponding printing openings, and one of said frame sections being provided at opposite ends of its printing openings with locking openings, and the other frame section being provided at opposite ends of its printing opening with locking lips which engage with said locking openings, and a stencil sheet which is secured between said frame sections.

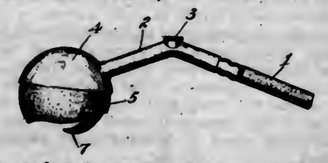
1,486,287. VACUUM CLEANER. ROBERT R. FIELD, Detroit, Mich., assignor to Eureka Vacuum Cleaner Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 5, 1921. Serial No. 449,779. 6 Claims. (Cl. 306—11.)

1. The combination with a vacuum cleaner having a motor casing and a fan casing, of a handle having a bifurcated end portion pivotally connected to said motor casing near its forward end, one of said furcations being formed of soft metal, a wear plate secured to one side of said furcation at the lower end thereof and corresponding in shape thereto, said wear plate having struck-out ears embedded in said furcation, and a latch mounted on said fan casing engageable with notches in said wear plate for holding said handle in different positions of rotative adjustment relative to said motor casing.



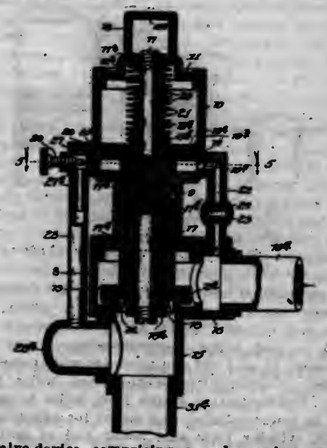
1,486,288. WOODWORKING MACHINE. WILLIAM H. FORSYTH, Chicago, Ill., assignor to Boynton & Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1923. Serial No. 620,874. 9 Claims. (Cl. 101—5.)

1. A woodworking machine having an embossing roll, a frame for guiding the work toward the roll, means for feeding the work alogn the frame, the frame extending at right angles to the axis of the roll and being approximately tangential to the roll, means for pivotally supporting one end of the frame, and means for controlling the position of the other end of the frame to thereby regulate the pressure of the embossing roll on the work.



1,486,289. LADDER. WILLIAM P. GREEN, San Francisco, Calif. Filed Apr. 2, 1923. Serial No. 629,474. 2 Claims. (Cl. 228—40.)

1. A ladder of the character described comprising spaced side members, each side member including a plurality of sections and a single length of cable folded upon itself, and formed to provide a loop at one end of the latter, each section having a groove about the edge thereof and adapted to receive the adjacent portions of the cable, rungs connecting the corresponding sections of the respective side members, said sections having spaced openings to receive the reduced extremities of said rungs, and reduced bores arranged at a right angle to one of the openings and opening into said groove, and dowel pins



received by said bores for holding the rungs associated with the sections, said pins being held in position by the cable, and means for holding the adjacent portions of the cable in contacting engagement between said sections for spacing the latter.

1,486,290. NASAL MASK. ALFRED LITTAUER, New York, N. Y. Filed Jan. 21, 1918. Serial No. 212,882. 5 Claims. (Cl. 128—206.)

1. A nasal mask comprising a hollow member provided with a nasal aperture having resilient edges freely curling on contact with the face to form a resilient seal therewith.

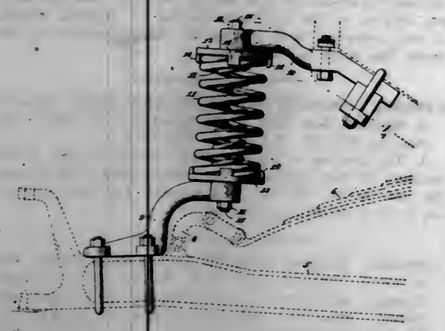
1,486,291. VALVE DEVICE. MICHAEL J. MCANENY, Denver, Colo. Filed Oct. 18, 1922. Serial No. 595,338. 7 Claims. (Cl. 137—98.)

1. A valve-device comprising a valve-casing provided with an inlet and an outlet, piston-mechanism having spring-raised piston and an inlet and an outlet, a valve seating in the casing against its outlet and having a stem passing loosely through and confining the piston against the spring, said piston-mechanism inlet having valved communication with the casing-inlet for controllably introducing fluid under pressure from the supply thereto to the piston-mechanism to initially unseat it and compress said spring for fully opening by its recoil the valve in the casing.

1,486,292. PROCESS OF DYEING RAW SILK. EUGENE L. MAUPAI, New York, N. Y. Filed Apr. 23, 1923. Serial No. 634,177. 5 Claims. (Cl. 8—5.)

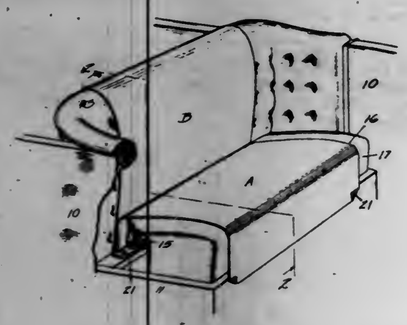
1. The process of treating raw untwisted silk, which consists in first dyeing it, then diazotising it to harden the gum in the silk and fix the color, and then subjecting it to a developing solution.

1,486,293. MINING SYSTEM AND APPARATUS. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed June 23, 1920. Serial No. 391,213. 60 Claims. (Cl. 262—1.)



1. In a system of mining, the combination with a series of roof supports each having an elongated base adapted to engage the floor of the mine chamber over a comparatively large area, of means for connecting each roof support to the next adjacent roof support, and mechanism mounted on each roof support for shifting longitudinally the position of the next adjacent roof support by means of such connections.

1,486,294. COMBINATION POCKETKNIFE AND FOUNTAIN-PEN HOLDER. ROBERT W. MORRIS, Waupun, Wis. Filed Dec. 5, 1922. Serial No. 604,998. 4 Claims. (Cl. 7—16.)

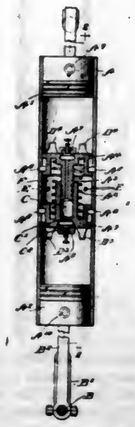


1. A device of the class described comprising a plate having recesses therein, one of said recesses being formed longitudinally of one face thereof, a hinged receiving member carried at one end of said plate in longitudinal alinement with said last-mentioned recess, an article carried thereby, and hinged means at the opposite end of said plate to secure said article in said longitudinal recess.

1,486,295. VEHICLE SPRING. CHARLES M. MULLEN, Kokomo, Ind. Filed Apr. 16, 1923. Serial No. 632,515. 2 Claims. (Cl. 267—28.)

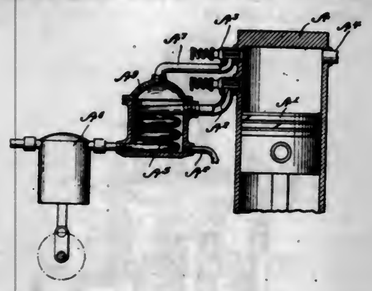
1. In a vehicle spring appliance, an arm attached to the axle extending inwardly toward the center of the vehicle, another arm attached to the body of the vehicle and extending outwardly so as to lie in substantially the same vertical plane as the before-mentioned arm, bearing-plates attached to said arms, a load spring having its opposite ends bearing against said plates, and a coil tension spring enclosed within the load spring and having its opposite ends anchored to said plates.

1,486,296. SEAT COVER FOR AUTOMOBILES. ORVILLE B. OLSON, Webster City, Iowa. Filed July 23, 1923. Serial No. 653,170. 3 Claims. (Cl. 155—182.)



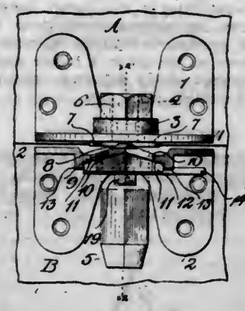
1. An automobile seat cover comprising a rectangular sheet of material having eyelets formed in its corners, a pair of intermediate flaps formed on said sheet of material and arranged on opposite sides thereof, said flaps having eyelets formed therein near their ends.

1,486,297. PROCESS FOR CONCENTRATING MIXED SULPHIDE ORES. ROLLIN A. PALLANCH, Victor, Colo., assignor, by mesne assignments, to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed July 7, 1922. Serial No. 573,436. 1 Claim. (Cl. 83—85.)



A process for separating lead sulphide from zinc sulphide in ores containing mixed lead and zinc sulphides which consists in submitting such ore to flotation separation in the presence of calcium sulfite to obtain a float concentrate of lead sulphide.

1,486,298. INTERNAL-COMBUSTION ENGINE. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Inc., Miles City, Mont., a Body Corporate. Filed Feb. 2, 1921, Serial No. 441,975. Renewed Aug. 17, 1923. 1 Claim. (Cl. 123—78.)



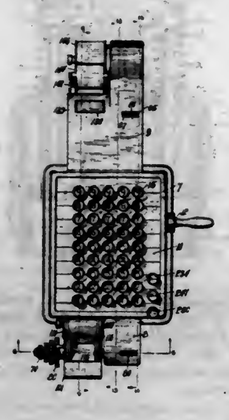
In an internal combustion engine, the combination of a power cylinder, a slidable power piston therein, a secondary piston having a male extension, a piston having a bore within which the said male extension slidably fits, operable check valves in said pistons, a spring, means whereby the pressure of said springs tends to force said pistons apart, means for introducing an explosive charge in the space between said check valves, means for intaking and compressing firing charges in the power cylinder, means for firing said charges by the heat of the exhaust of the minor compressed charge, and means for transmitting power to a crank shaft, substantially as described.

1,486,299. CARBURETOR. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Inc., Miles City, Mont., a Body Corporate. Filed Feb. 2, 1921, Serial No. 441,982. Renewed Aug. 17, 1923. 1 Claim. (Cl. 123—34.)

In an internal combustion engine, the combination of a power means, a power cylinder, a piston, operable intake and exhaust valves, an air compressor, a boiler, a coil in said boiler, communicating means from air compressor to said coil and to an operable valve on power cylinder, communicating means from boiler to a fuel supply, communicating means from boiler to an operable valve on power cylinder, and means for admitting charges to said cylinder from said boiler and of igniting them by highly compressed air from said coil, substantially as described.

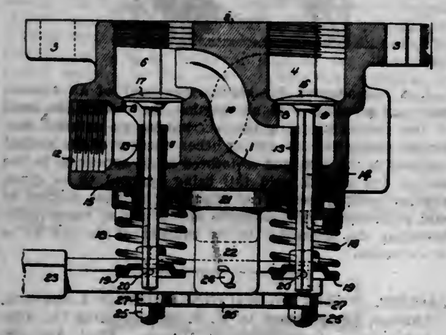
1,486,300. ALIGNING DEVICE FOR FLASKS. WILEY T. RABUN, Huntington Park, Calif. Filed Dec. 10, 1921. Serial No. 521,366. 2 Claims. (Cl. 22—100.)

1. A flask composed of sections, a plate fastened to one of said sections and supporting a vertical pin, a plate fastened to the other of said sections and formed with a slot to accommodate said pin, the under faces of the sides forming the slot inclining to the horizontal and constituting a slideway, a follower member operable in said slideway and having a cut-out portion and an elongated opening, and a wedge member in and operable laterally of said follower member, to move said follower member relatively to said pin and on the under side of said plate, and a means to connect said wedge and follower member.



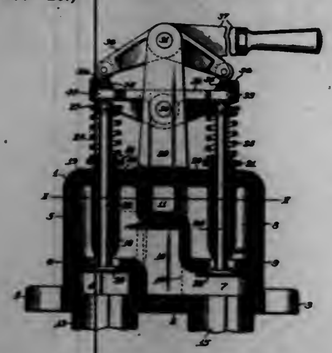
1,486,301. BOX. JOHN WESLEY RODGERS, Warrenton, N. C. Filed Jan. 17, 1923. Serial No. 613,216. 1 Claim. (Cl. 229—11.)

A box of the class described comprising a housing having open ends with a slot in one wall opening through one end, an inner member slidable in said housing on one wall thereof and normally extending throughout the length of the housing, said slidable member being in the form of a strip folded to provide an end closure for the housing with a flap in advance of said closure, the flap extending inwardly and engaging the other wall of the housing, the other end of said strip being folded to form parallel layers one of which is narrower than the other and adapted to lie flat upon each other when in closed position and forming a closure for one other end of the housing, said strip beyond said layers having a flap folded outwardly on the body portion of the strip and adapted to engage the slotted wall of the housing, said strip having an outstruck tongue adapted to extend through the slot in the housing, and a seal to extend over the slotted portion of the housing and hold the inner member encased within the housing.



1,486,302. AUTOMATIC TICKET STAMPING AND RECORDING MACHINE. EDWARD B. ROHMER and LOUIS C. MUHLLER, Toledo, Ohio. Filed Mar. 13, 1922. Serial No. 543,174. 35 Claims. (Cl. 101—68.)

1. In a machine of the class described, a set of keys selectively movable from normal to operating position, movable means limited as to permissible movement by each key when in operating position and capable of a different predetermined movement for each key, a movable printing element having a different designating mark for each key, means connecting the first means and element for imparting movement from one to the other to place in printing position a designating mark on the

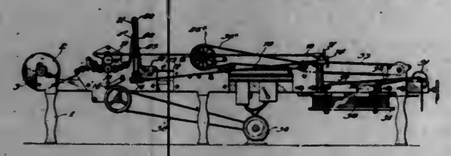


element, which mark corresponds to the key disposed in operating position, manually controlled means operable to move the first means, and means automatically operable to lock the first means and element in shifted position during a predetermined portion of the movement of the last means.

1,486,303. VALVE. CHARLES A. ROSS, Detroit, Mich. Filed May 7, 1920. Serial No. 379,510. 3 Claims. (Cl. 277—20.)

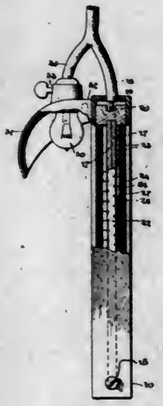
1. A valve of the type described comprising a rectangular body, having an intake chamber and an outlet chamber in each side portion thereof so that the arrangement of said chambers places the intake chambers in diagonal relation and the outlet chambers in diagonal relation, said body having ports disposed in parallel planes with each port connecting an intake chamber to an outlet chamber, said body having exhaust chambers adapted to be placed in communication with said outlet chambers, valves controlling the communication between the intake, outlet and exhaust chambers, means maintaining said valves normally closed, and operating means adapted for opening said valves.

1,486,304. VALVE. CHARLES A. ROSS, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,707. 14 Claims. (Cl. 277—20.)



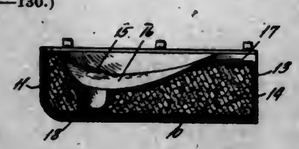
1. The combination of valves, a member adapted to operate said valves, and an operating member adapted to actuate the first-mentioned member, said members being arranged so that said members are automatically and positively held relative to each other by contact when in adjusted positions.

1,486,305. TRICK DEVICE FOR PERFORMANCES WITH ANIMALS. EDWIN SCHUBERT, New York, N. Y., assignor to Henry Grinbaum, New York, N. Y. Filed Dec. 14, 1922. Serial No. 606,886. 5 Claims. (Cl. 46—70.)



1. A box adapted for holding the body of an animal, such box provided with an opening thru which the head of the animal projects, the box having an exterior projection simulating the tail or other member of the animal confined in the box, and so located as to appear to be the tail of the animal, said tail being adapted to be given angular motion, means for imparting angular motion to said projection, and releasable means for so temporarily fastening the projection to the exterior of the box as to be concealed.

1,486,306. SHEETING MACHINE. HERMAN J. SCHULTZ, Chicago, Ill., assignor to W. F. Hall Printing Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1922. Serial No. 557,110. 10 Claims. (Cl. 164—68.)

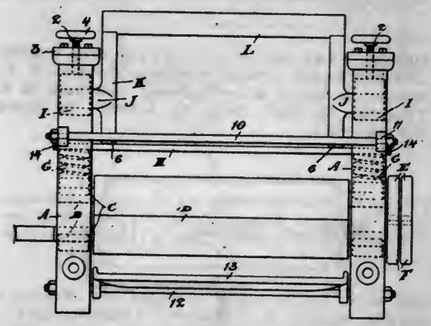


1. In a sheeting machine the combination with means for feeding a design printed paper sheet from a roll, of a severing mechanism for cutting the sheet into predetermined lengths, a speed regulator comprising two oppositely positioned belt driven cones operable to control the rate of travel of the sheet, a loop compensating mechanism comprising means for increasing or decreasing the size of paper loop for retarding or advancing the sheet to compensate for irregularities in the design, conveyor means adapted to carry the severed sheets from the cutting mechanism and gripping mechanism operable to deposit the severed sheets on the stack, a jogger mechanism for stacking the severed sheets delivered from the gripper mechanism in a straight sided pile.

1,486,307. FLYTRAP. CHARLES G. SEEFLUTH and JOHN BEBIOLKA, Pontiac, Mich.; said Bebiolka assignor to said Seefluth. Filed Mar. 1, 1923. Serial No. 622,116. 5 Claims. (Cl. 43—112.)

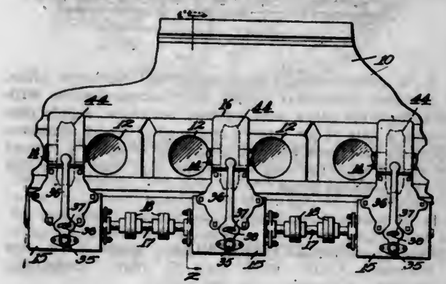
5. An electric fly and insect trap or destroyer of the class described comprising a channeled outer frame of insulating material, an inner frame of wood or other insulating material removably held therein and provided with a central groove in its inner walls, luring panels mounted in said grove, metal bars insulatingly supported in spaced parallel relation adjacent to the opposite faces of the inner frame, said metal bars having the intermediate portions thereof substantially Y-shaped in cross section and being disposed with the divergent arms thereof outermost to provide pockets adapted to receive bait, conducting distributors along the outer sides of the inner frame, conducting means connecting each distributor to alternate metal bars, and lead wires connected to said distributors.

1,486,308. KNEE PAD. THOMAS H. SHOOK, Mexia, Tex. Filed May 29, 1922. Serial No. 564,501. 1 Claim. (Cl. 2—130.)



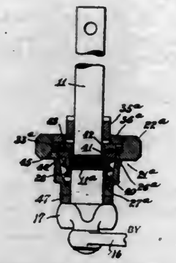
In a knee pad, a casing, a pad composed of a cover and filling material to maintain its configuration, said pad having a transverse supporting bridge at the rear and a concave portion extending forwardly therefrom to receive the knee cap with a further depression at the front of its base forming an air cushion and surrounded by an annular face disposed below the horizontal plane of said bridge to support the knee about the cap thereof, and means for securing the pad upon the leg of a wearer.

1,486,309. PLAITED BUTTON. NATHAN SPARER, Somerville, and MAX HALFERSON, Boston, Mass. Filed Jan. 18, 1923. Serial No. 613,530. 14 Claims. (Cl. 24—113.)



1. A button having a body portion and a face composed of unbolstered plaited material such as textile fabric.

1,486,310. SAFETY RELEASE FOR POWER-DRIVEN ROLLS OR CUTTERS. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada. Filed June 15, 1921. Serial No. 477,850. 1 Claim. (Cl. 68—32.)

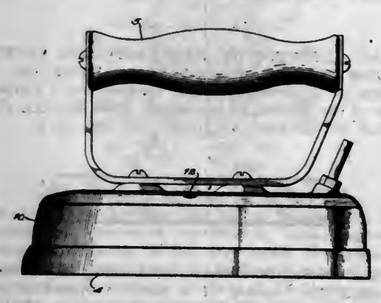


In combination a frame including end standards; a pair of rolls mounted to have bearing in said standards; a coiled-spring mounted in each of said standards to rest in contact with the upper of said rolls; a presser-bar resting upon said springs and adapted to be held in co-operative relationship to said standards; a box located within each of said standards near the top thereof; a screw associated with each of the said boxes and having threaded connection with the top of each of said standards, and pressure-exerting means journaled at each end in said boxes and normally in disengageable contact with said presser-bar the whole designed to co-act for the purpose set forth.

1,486,311. FURNACE FEEDING MECHANISM. IRVING A. TAYLOR, Worcester, Mass., assignor to Sanford Riley Stoker Co. Ltd., Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1919, Serial No. 278,472. Renewed Dec. 8, 1921. Serial No. 520,990. 6 Claims. (Cl. 110—109.)

5. In an underfeed furnace, a coal feeding ram, a crankshaft connected to reciprocate said ram, a driving shaft, change speed worm gear mechanism interposed between said driving shaft and said crankshaft, and controlling means by which said mechanism may be adjusted to drive said crankshaft continuously at a selected reduced speed.

1,486,312. STUFFING BOX, GLAND, AND PACKING THEREFOR. LOUIS ULLMAN, New York, N. Y. Filed Jan. 25, 1922. Serial No. 531,544. 5 Claims. (Cl. 286—7.)



1. A stuffing box for a movable shaft, comprising a casing provided with a stepped opening, a compressible packing ring marginally engaged with a step in said opening, a member movable with said shaft and relatively to the packing ring, and a yieldably supported sleeve disposed about the inner marginal portion of said packing ring, whereby the latter may be held in contact with the member.

1,486,313. SCORE-CALCULATING DEVICE. EDITH VAN ANTWERP, Burlingame, Calif. Filed Feb. 24, 1923. Serial No. 620,879. 4 Claims. (Cl. 235—87.)

1. A game score calculating device comprising an outer slotted cylinder having the number of doubles longitudinally arranged thereon adjacent the slot, an inner cylinder having the possible base scores preferably arranged thereon and a plurality of circumferential columns of doubles arranged at intervals, each of said columns being arranged so as to be positioned adjacent the before mentioned doubles on the outer cylinder, the numbers of the base scores progressively increasing and the numbers in the respective circumferential columns forming permutation series with related columns.

1,486,314. ELECTRIC FLATIRON. ALBERT E. WAGGONER, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,949. 6 Claims. (Cl. 177—311.)

6. In an electric flat iron, a casing, a plurality of plates, a heating element confined therebetween, one of said plates being provided with an opening to expose a

portion of said heating element and said casing being provided with a sight opening in alinement with said first named opening.

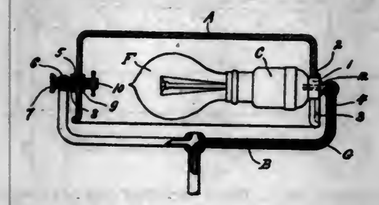
1,486,315. SNAP FASTENER. WILLIAM R. WILBY, Mount Clemens, Mich. Filed June 18, 1923. Serial No. 645,987. 5 Claims. (Cl. 24—208.)

1. A snap catch, having, in combination with a mushroomed head, an overengaging snap shell therefor, consisting of an apertured stamping having a straight edge on one side and an otherwise circular underturned edge constituting the remainder of its periphery, the points of union of the two portions of the edge of the stamping being formed as locking points for engagement under the edge of the mushroomed head, and that portion of the curved periphery of the stamping lying opposite its straight edge being provided with a similar locking point, said snap shell being adapted to be detached from engagement with said mushroomed head by being swung about the line joining said first named locking points as a center and being moved through a plane parallel with that of the mushroomed head.

1,486,316. COUPLING. HENRY J. ATTICKS, New York, and HENRY A. COUSSIRAT, Brooklyn, N. Y. Filed Apr. 26, 1922. Serial No. 556,643. 10 Claims. (Cl. 285—86.)

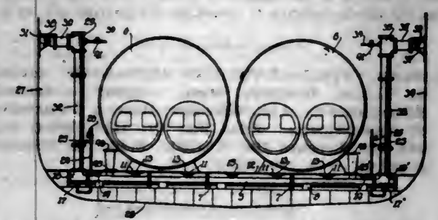
1. A hose coupling comprising a band having a compressible end portion, a clamp nut on the compressible end portion of the band, and a shank having a portion extending into the hose, the clamp nut cooperating with the shank and the compressible end of the band to compress a gasket between this end of the band and that portion of the shank which extends into the hose.

1,486,317. PROCESS OF MANUFACTURING SAFETY-RAZOR BLADES. JAMES F. BARRY, Dallas, Tex., assignor to Rival Safety Razor Corporation, a Corporation of the District of Columbia. Filed Mar. 21, 1923. Serial No. 626,549. 4 Claims. (Cl. 76—104.)



1. The process of manufacturing safety razor blades comprising the running of a strip or ribbon of steel through a punch to form central openings and adjoining end positioning slots or notches, tempering in a suitable bath, polishing on buffers, and finally sharpening on suitable hones.

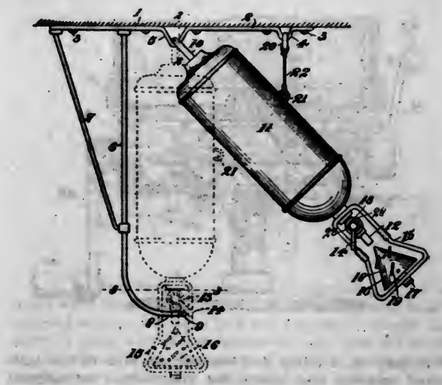
1,486,318. CARLINE. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1922. Serial No. 538,652. 7 Claims. (Cl. 108—5.6.)



1. A sheet metal carline whose middle portion is made in the form of a hollow rib that tapers in width and in depth from ridge to ends and whose lateral base portions widen from ridge to ends, each lateral portion comprising a hollow rib that extends inwardly from the end thereof.

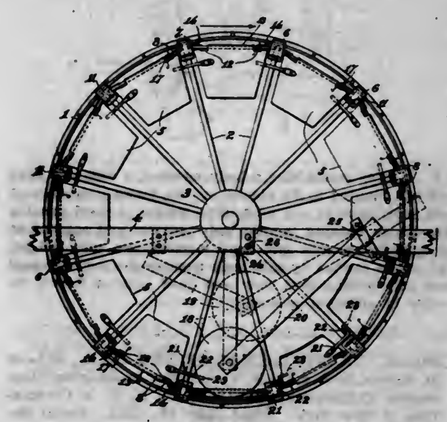
1,486,319. LAMP SHADE AND MEANS FOR MOUNTING THE SAME. AUGUST BOSTROEM, New York, N. Y., assignor to Samuel Robert Schwartz, New York, N. Y. Filed Nov. 23, 1920. Serial No. 426,068. 19 Claims. (Cl. 240—73.)

1. In a lamp, a shade, an opening in one end of the shade comprising a round portion and a slot portion and means on the other end of the shade whereby this end may be supported.



1,486,320. CONVEYER SYSTEM. CHARLES W. BROWN, Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,870. 3 Claims. (Cl. 302—28.)

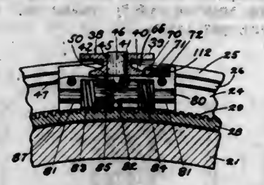
1. In combination, a pair of vertical discharge pipes, a common horizontal supply pipe communicating with said discharge pipes, said common horizontal supply pipe having a pair of air intakes and a plurality of admission openings therebetween, and means for creating a current of air through the common supply pipe and either one of the discharge pipes.



1,486,321. FIRE EXTINGUISHER. JAMES CASH, San Francisco, Calif. Filed May 27, 1922. Serial No. 564,009. 2 Claims. (Cl. 169—27.)

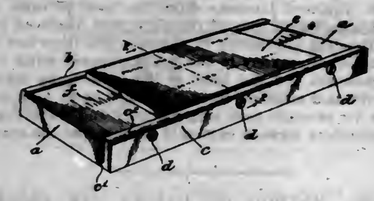
1. A fire extinguisher, including a closed elongated container provided at its upper end with a suspending yoke, a suspending bracket co-operating with the yoke permitting angular swinging movement of the container, a temperature controlled member connected with the container for suspending the same in an angular position, a discharge spout extending from the lower end of the container, a valve therein, a stem extending therefrom, an arm depending from said bracket for arresting the movement of the container on the release of said temperature

controlled member, and a finger extension at the lower end of said arm for operating said valve stem on said container assuming a substantially vertical position.



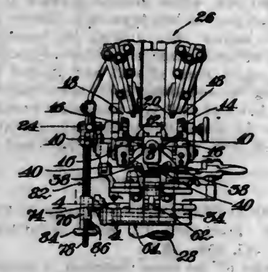
1,486,322. TREAD-INCREASING MEANS FOR TRACTION WHEELS. FREDERICK F. CHOITZ, Ellsworth, Kans. Filed Mar. 15, 1923. Serial No. 625,351. 8 Claims. (Cl. 301—48.)

1. A wheel including the spokes and rim, in combination with a series of wings hingedly mounted between the spokes adjacent the rim to swing outwardly from the wheel, a presser member for engaging the upper face of the lowermost wing when extended, and means on each wing for moving the succeeding wing into position to be engaged by said presser member, substantially as described.



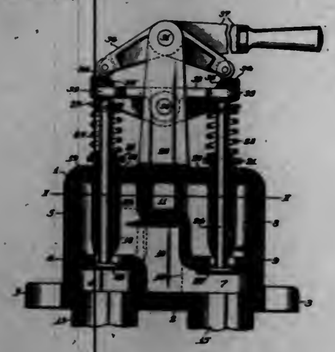
1,486,323. PRINTING-PLATE-SECURING MEANS. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Dec. 27, 1922. Serial No. 609,287. 89 Claims. (Cl. 101—388.)

1. In a traveling hook device, the combination of a body having a cavity extending throughout the width of said body and provided with slots opening into said cavity from the side walls of said body, and a rotatable



combined hook and wing-member comprising wings in said cavity arranged to project through said slots.

1,486,324. PRINTING PLATE. WILLIAM S. EATON, Sag Harbor, N. Y. Filed Dec. 13, 1921. Serial No. 522,016. 4 Claims. (Cl. 101—388.)

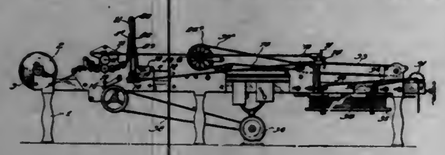


1. A printing plate embodying therein a thick metal base, a relatively thin metal face plate bearing an undersurface design thereon, means carried by said base and adapted to engage the edges of said face plate including therein a movable member, means whereby said member is adapted to have pivotal movement upon one edge of said base, and means whereby said movable member may be oscillated to permit it to be engaged with, or disengaged from the edge of the face plate to permit the mounting of a plate upon, or the removal of the plate from the base.

1,486,325. MACHINE FOR OPERATING ON SHOE BOTTOMS. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 8, 1920. Serial No. 386,284. 19 Claims. (Cl. 1—18.1.)

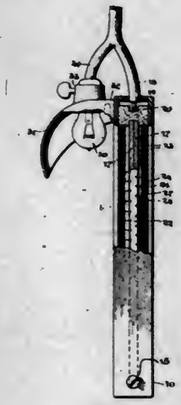
8. A machine for operating on the bottom of a lasted unsoled shoe having, in combination, tacker mechanism, means for engaging in the welt crease to position the shoe for the operations to be performed thereon, devices for engaging the counter portions of the upper on opposite sides of the shoe to support the shoe while being operated upon, and means for operating the tacker mechanism to drive tacks into the shoe bottom while the shoe is thus supported.

1,486,304. VALVE. CHARLES A. ROSS, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,707. 14 Claims. (Cl. 277—20.)



1. The combination of valves, a member adapted to operate said valves, and an operating member adapted to actuate the first-mentioned member, said members being arranged so that said members are automatically and positively held relative to each other by contact when in adjusted positions.

1,486,305. TRICK DEVICE FOR PERFORMANCES WITH ANIMALS. EDWIN SCHUBERT, New York, N. Y., assignor to Henry Grinbaum, New York, N. Y. Filed Dec. 14, 1922. Serial No. 606,886. 5 Claims. (Cl. 46—70.)



1. A box adapted for holding the body of an animal, such box provided with an opening thru which the head of the animal projects, the box having an exterior projection simulating the tail or other member of the animal confined in the box, and so located as to appear to be the tail of the animal, said tail being adapted to be given angular motion, means for imparting angular motion to said projection, and releasable means for so temporarily fastening the projection to the exterior of the box as to be concealed.

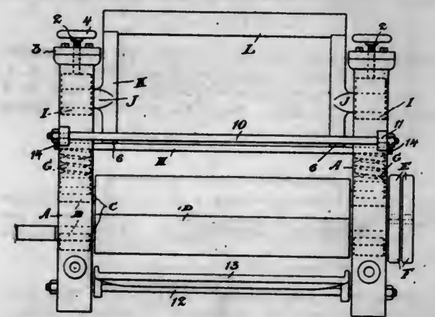
1,486,306. SHEETING MACHINE. HERMAN J. SCHULTZ, Chicago, Ill., assignor to W. F. Hall Printing Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1922. Serial No. 557,110. 10 Claims. (Cl. 164—68.)

1. In a sheeting machine the combination with means for feeding a design printed paper sheet from a roll, of a severing mechanism for cutting the sheet into predetermined lengths, a speed regulator comprising two oppositely positioned belt driven cones operable to control the rate of travel of the sheet, a loop compensating mechanism comprising means for increasing or decreasing the size of paper loop for retarding or advancing the sheet to compensate for irregularities in the design, conveyor means adapted to carry the severed sheets from the cutting mechanism and gripping mechanism operable to deposit the severed sheets on the stack, a jogger mechanism for stacking the severed sheets delivered from the gripper mechanism in a straight sided pile.

1,486,307. FLYTRAP. CHARLES G. SEEFLUTH and JOHN BEBIOLKA, Pontiac, Mich.; said Bebiolka assignor to said Seefluth. Filed Mar. 1, 1923. Serial No. 622,116. 5 Claims. (Cl. 43—112.)

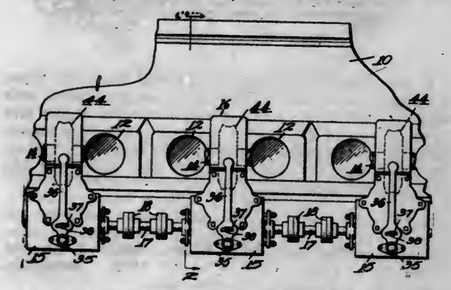
5. An electric fly and insect trap or destroyer of the class described comprising a channeled outer frame of insulating material, an inner frame of wood or other insulating material removably held therein and provided with a central groove in its inner walls, luring panels mounted in said grove, metal bars insulatingly supported in spaced parallel relation adjacent to the opposite faces of the inner frame, said metal bars having the intermediate portions thereof substantially Y-shaped in cross section and being disposed with the divergent arms thereof outermost to provide pockets adapted to receive bait, conducting distributors along the outer sides of the inner frame, conducting means connecting each distributor to alternate metal bars, and lead wires connected to said distributors.

1,486,308. KNEE PAD. THOMAS H. SHOOK, Mexia, Tex. Filed May 29, 1922. Serial No. 564,501. 1 Claim. (Cl. 2—130.)



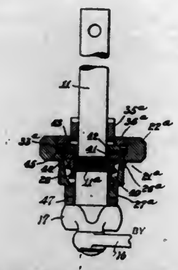
In a knee pad, a casing, a pad composed of a cover and filling material to maintain its configuration, said pad having a transverse supporting bridge at the rear and a concave portion extending forwardly therefrom to receive the knee cap with a further depression at the front of its base forming an air cushion and surrounded by an annular face disposed below the horizontal plane of said bridge to support the knee about the cap thereof, and means for securing the pad upon the leg of a wearer.

1,486,309. PLAITED BUTTON. NATHAN SPARER, Somerville, and MAX HALPERSON, Boston, Mass. Filed Jan. 18, 1923. Serial No. 613,530. 14 Claims. (Cl. 24—113.)



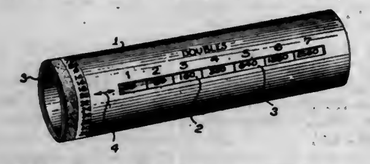
1. A button having a body portion and a face composed of unbolstered plaited material such as textile fabric.

1,486,310. SAFETY RELEASE FOR POWER-DRIVEN ROLLS OR CUTTERS. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada. Filed June 15, 1921. Serial No. 477,850. 1 Claim. (Cl. 68—32.)



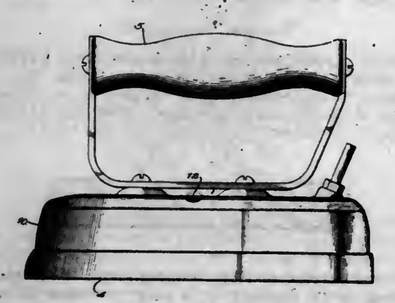
In combination a frame including end standards; a pair of rolls mounted to have bearing in said standards; a coiled-spring mounted in each of said standards to rest in contact with the upper of said rolls; a presser-bar resting upon said springs and adapted to be held in co-operative relationship to said standards; a box located within each of said standards near the top thereof; a screw associated with each of the said boxes and having threaded connection with the top of each of said standards, and pressure-exerting means journaled at each end in said boxes and normally in disengageable contact with said presser-bar the whole designed to co-act for the purpose set forth.

1,486,311. FURNACE FEEDING MECHANISM. IRVING A. TAYLOR, Worcester, Mass., assignor to Sanford Riley Stoker Co. Ltd., Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1919, Serial No. 278,472. Renewed Dec. 8, 1921. Serial No. 520,990. 6 Claims. (Cl. 110—109.)



5. In an underfeed furnace, a coal feeding ram, a crankshaft connected to reciprocate said ram, a driving shaft, change speed worm gear mechanism interposed between said driving shaft and said crankshaft, and controlling means by which said mechanism may be adjusted to drive said crankshaft continuously at a selected reduced speed.

1,486,312. STUFFING BOX, GLAND, AND PACKING THEREFOR. LOUIS ULLMAN, New York, N. Y. Filed Jan. 25, 1922. Serial No. 531,544. 5 Claims. (Cl. 286—7.)



1. A stuffing box for a movable shaft, comprising a casing provided with a stepped opening, a compressible packing ring marginally engaged with a step in said opening, a member movable with said shaft and relatively to the packing ring, and a yieldably supported sleeve disposed about the inner marginal portion of said packing ring, whereby the latter may be held in contact with the member.

1,486,313. SCORE-CALCULATING DEVICE. EDITH VAN ANTWERP, Burlingame, Calif. Filed Feb. 24, 1923. Serial No. 620,879. 4 Claims. (Cl. 235—87.)

1. A game score calculating device comprising an outer slotted cylinder having the number of doubles longitudinally arranged thereon adjacent the slot, an inner cylinder having the possible base scores preferably arranged thereon and a plurality of circumferential columns of doubles arranged at intervals, each of said columns being arranged so as to be positioned adjacent the before mentioned doubles on the outer cylinder, the numbers of the base scores progressively increasing and the numbers in the respective circumferential columns forming permutation series with related columns.

1,486,314. ELECTRIC FLATIRON. ALBERT E. WAGGONER, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,949. 6 Claims. (Cl. 177—311.)

6. In an electric flat iron, a casing, a plurality of plates, a heating element confined therebetween, one of said plates being provided with an opening to expose a

portion of said heating element and said casing being provided with a slight opening in alinement with said first named opening.

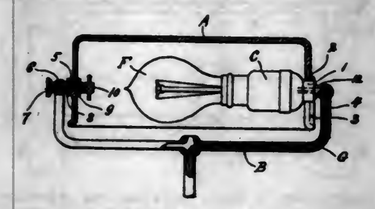
1,486,315. SNAP FASTENER. WILLIAM R. WILBY, Mount Clemens, Mich. Filed June 18, 1923. Serial No. 645,987. 5 Claims. (Cl. 24—208.)

1. A snap catch having, in combination with a mushroomed head, an overengaging snap shell therefor, consisting of an apertured stamping having a straight edge on one side and an otherwise circular underturned edge constituting the remainder of its periphery, the points of union of the two portions of the edge of the stamping being formed as locking points for engagement under the edge of the mushroomed head, and that portion of the curved periphery of the stamping lying opposite its straight edge being provided with a similar locking point, said snap shell being adapted to be detached from engagement with said mushroomed head by being swung about the line joining said first named locking points as a center and being moved through a plane parallel with that of the mushroomed head.

1,486,316. COUPLING. HENRY J. ATTICKS, New York, and HENRY A. CROSSIRAT, Brooklyn, N. Y. Filed Apr. 26, 1922. Serial No. 556,643. 10 Claims. (Cl. 285—86.)

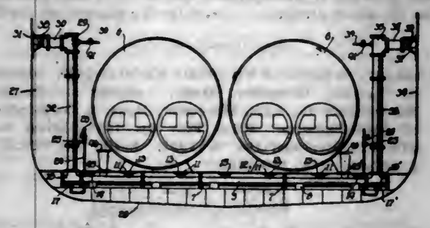
1. A hose coupling comprising a band having a compressible end portion, a clamp nut on the compressible end portion of the band, and a shank having a portion extending into the hose, the clamp nut cooperating with the shank and the compressible end of the band to compress a gasket between this end of the band and that portion of the shank which extends into the hose.

1,486,317. PROCESS OF MANUFACTURING SAFETY-RAZOR BLADES. JAMES F. BARRY, Dallas, Tex., assignor to Rival Safety Razor Corporation, a Corporation of the District of Columbia. Filed Mar. 21, 1923. Serial No. 626,549. 4 Claims. (Cl. 76—104.)



1. The process of manufacturing safety razor blades comprising the running of a strip or ribbon of steel through a punch to form central openings and adjoining end positioning seats or notches, tempering in a suitable bath, polishing on buffers, and finally sharpening on suitable hones.

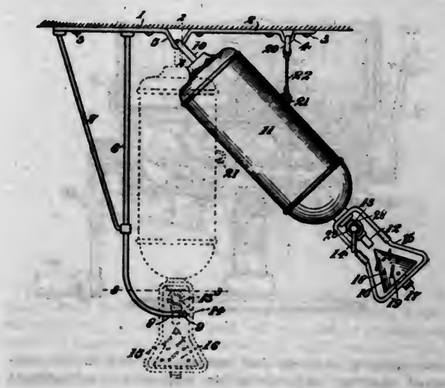
1,486,318. CARLINE. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1922. Serial No. 538,652. 7 Claims. (Cl. 108—5.6.)



1. A sheet metal carline whose middle portion is made in the form of a hollow rib that tapers in width and in depth from ridge to ends and whose lateral base portions widen from ridge to ends, each lateral portion comprising a hollow rib that extends inwardly from the end thereof.

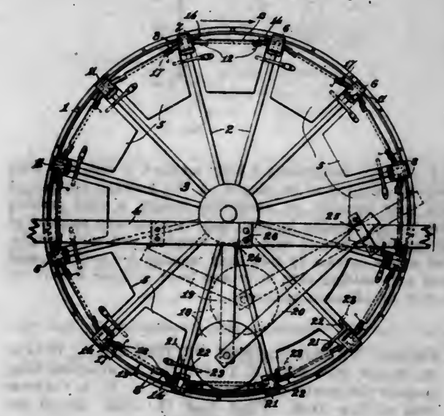
1,486,319. LAMP SHADE AND MEANS FOR MOUNTING THE SAME. AUGUST BOSTROEM, New York, N. Y., assignor to Samuel Robert Schwartz, New York, N. Y. Filed Nov. 23, 1920. Serial No. 426,068. 19 Claims. (Cl. 240—73.)

1. In a lamp, a shade, an opening in one end of the shade comprising a round portion and a slot portion and means on the other end of the shade whereby this end may be supported.



1,486,320. CONVEYER SYSTEM. CHARLES W. BROWN, Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,870. 3 Claims. (Cl. 302—28.)

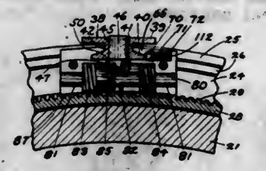
1. In combination, a pair of vertical discharge pipes, a common horizontal supply pipe communicating with said discharge pipes, said common horizontal supply pipe having a pair of air intakes and a plurality of admission openings therebetween, and means for creating a current of air through the common supply pipe and either one of the discharge pipes.



1,486,321. FIRE EXTINGUISHER. JAMES CASH, San Francisco, Calif. Filed May 27, 1922. Serial No. 564,009. 2 Claims. (Cl. 169—27.)

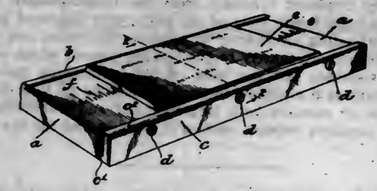
1. A fire extinguisher, including a closed elongated container provided at its upper end with a suspending yoke, a suspending bracket co-operating with the yoke permitting angular swinging movement of the container, a temperature controlled member connected with the container for suspending the same in an angular position, a discharge spout extending from the lower end of the container, a valve therein, a stem extending therefrom, an arm depending from said bracket for arresting the movement of the container on the release of said temperature

controlled member, and a finger extension at the lower end of said arm for operating said valve stem on said container assuming a substantially vertical position.



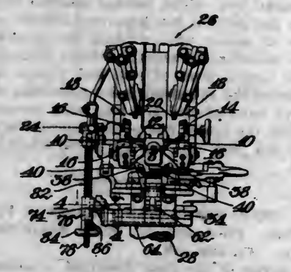
1,486,322. TREAD-INCREASING MEANS FOR TRACTION WHEELS. FREDERICK F. CHOITZ, Ellsworth, Kans. Filed Mar. 15, 1923. Serial No. 625,351. 8 Claims. (Cl. 301—48.)

1. A wheel including the spokes and rim, in combination with a series of wings hingedly mounted between the spokes adjacent the rim to swing outwardly from the wheel, a presser member for engaging the upper face of the lowermost wing when extended, and means on each wing for moving the succeeding wing into position to be engaged by said presser member, substantially as described.



1,486,323. PRINTING-PLATE-SECURING MEANS. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Dec. 27, 1922. Serial No. 609,287. 39 Claims. (Cl. 101—388.)

1. In a traveling hook device, the combination of a body having a cavity extending throughout the width of said body and provided with slots opening into said cavity from the side walls of said body, and a rotatable



combined hook and wing-member comprising wings in said cavity arranged to project through said slots.

1,486,324. PRINTING PLATE. WILLIAM S. EATON, Sag Harbor, N. Y. Filed Dec. 12, 1921. Serial No. 522,018. 4 Claims. (Cl. 101—388.)

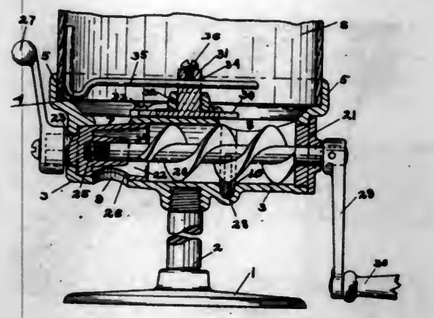
1. A printing plate embodying therein a thick metal base, a relatively thin metal face plate bearing an under-surface design thereon, means carried by said base and adapted to engage the edges of said face plate including therein a movable member, means whereby said member is adapted to have pivotal movement upon one edge of said base, and means whereby said movable member may be oscillated to permit it to be engaged with, or disengaged from the edge of the face plate to permit the mounting of a plate upon, or the removal of the plate from the base.

1,486,325. MACHINE FOR OPERATING ON SHOE BOTTOMS. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1920. Serial No. 386,284. 19 Claims. (Cl. 1—18.1.)

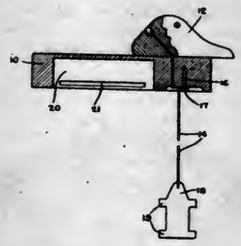
2. A machine for operating on the bottom of a lasted unsoled shoe having, in combination, tacker mechanism, means for engaging in the welt crease to position the shoe for the operations to be performed thereon, devices for engaging the counter portions of the upper on opposite sides of the shoe to support the shoe while being operated upon, and means for operating the tacker mechanism to drive tacks into the shoe bottom while the shoe is thus supported.

1,486,326. RADIATOR. LOUIS FABER and PHILIP SCHNEIDER, Chicago, Ill., assignors to Faber-Schneider Radiator Company, Chicago, Ill., a Corporation of Illinois. Filed May 16, 1921. Serial No. 469,774. 2 Claims. (Cl. 257—130.)

1. A radiator structure comprising a series of juxtaposed water carrying members, and a single separator plate interposed between each adjacent pair of such members, the edges of the separator plates being formed with portions displaced laterally from the longitudinally extending imperforate body of the plate, said displaced portions extending alternately in opposite directions and being attached alternately to the two juxtaposed water carrying members and the body of the plate being spaced from both said members in such manner as to form continuous air passages both longitudinally and transversely of the members between each said member and the spacer plate.



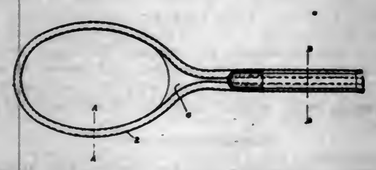
1,486,327. METHOD OF MAKING CAR TRUCKS. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 30, 1922. Serial No. 532,576. 3 Claims. (Cl. 29—164.)



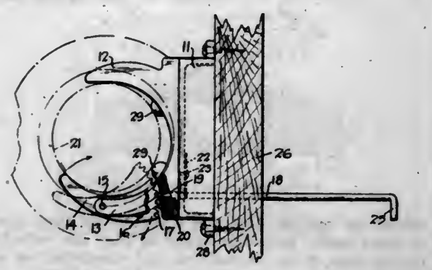
1. The method of making a six-wheel railway car truck including a side frame having two pairs of end journal box jaws, and two equalizing levers pivoted to said side frames on each side of said truck, one equalizing lever on each side having a pair of journal box jaws for an intermediate journal box, which method consists in first machining the end journal box jaws to a definite dimension from center to center, then drilling the equalizing lever pivot holes in said side frames a definite distance inwardly from the center lines of said end journal box jaws, then machining the equalizing lever jaws, and then drilling the pivot holes of said jaw equalizing levers an exact distance from the center line of the intermediate equalizing journal box jaws whereby all of the wheel axles will be parallel.

1,486,328. FOOD DISPENSER. ROBERT O. FRASER, Seattle, Wash. Filed Sept. 11, 1922. Serial No. 587,305. 3 Claims. (Cl. 259—43.)

1. In a device of the class described, a hollow body, a container, a seat for the container surmounting the body, an outlet opening through the seat and communicating with the container and the front portion of the body, an inlet opening through the seat and communicating with the container and the back portion of the body, a screw conveyor rotatably mounted in the body and having a spur projecting therefrom, means for actuating said conveyor, a discharge opening at one end of the body, means for closing said discharge opening and means for closing the adjacent outlet opening into the container, a sprocket wheel bracketed above the screw of the conveyor and adjacent the inlet opening in rotatable engagement with said spur, said wheel provided with a hub having a transverse opening, a mixer and scraper mounted in the last-named opening, and means for longitudinal adjustment of the mixer and scraper.

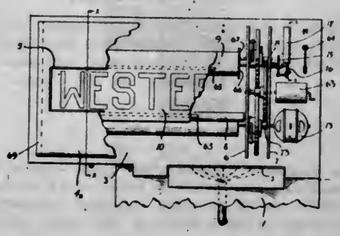


1,486,329. DECOY. GILBERT D. GEORGE, St. Paul, Minn. Filed Jan. 16, 1922. Serial No. 529,465. 5 Claims. (Cl. 43—3.)



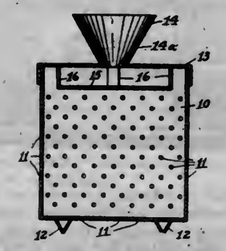
1. A decoy comprising a body member, a separate head member adapted to be placed on the forward portion of said body member, an anchoring weight, a cord passing through an opening in said body member and secured at its opposite ends to said head member and said weight, and means carried by said body member for securing said cord and holding said body and head member fixedly together in adjusted position.

1,486,330. TENNIS RACKET OR THE LIKE. ROLAND M. GLENN, New York, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed June 15, 1922. Serial No. 568,373. 3 Claims. (Cl. 46—24.)



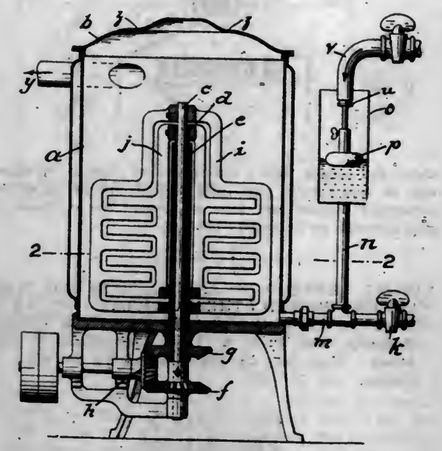
1. A tennis racket or like frame made of a section of magnesium having the requisite beam strength and rigidity as compared to the conventional ash frame of the same weight.

1,486,331. LOCKING DEVICE FOR MILK BOTTLES. HERMAN GOULD, FRANK ACKERMANN, and JOHN GEERING, New York, N. Y. Filed Feb. 3, 1923. Serial No. 616,685. 3 Claims. (Cl. 232—41.)



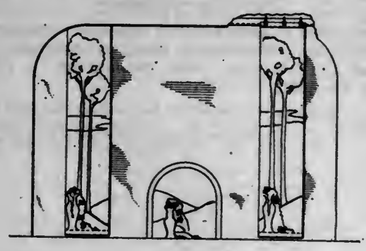
1. A locking device comprising a movable jaw, an opposed fixed jaw, said movable jaw being provided with a serrated edge, a rotatable lock bar adapted to engage said serrated edge, and means formed on said lock bar whereby the direction of movement of the jaw is limited depending upon the rotary position of said lock bar.

1,486,332. STREET-INDICATING DEVICE. JOHN F. HALVERSON, Madison, Wis., assignor of one-half to Charles E. Friday, Madison, Wis. Filed Oct. 10, 1921. Serial No. 506,741. 3 Claims. (Cl. 40—57.)



1. The combination with a vehicle of a belt carried thereby, said belt having names of streets and stations inscribed thereon, an electric motor for moving said belt, a trolley switch mechanism, an auxiliary two-way switch and a reversing switch, said auxiliary switch and reversing switch acting conjointly with said trolley switch mechanism for actuating said motor.

1,486,333. VEGETABLE AND FRUIT WASHER. ELLA HANFORD, Chicago, Ill. Filed Sept. 8, 1922. Serial No. 586,883. 14 Claims. (Cl. 146—200.)

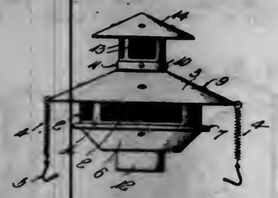


1. In combination, a receptacle cover having an admission opening permitting unconfined flow of a solid stream of liquid therethrough, and a spreader plate extending across the path of said stream and located sufficiently below said opening to prevent splash therefrom.

1,486,334. PROCESS AND MACHINE FOR WHIPPING CREAM. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 16, 1922. Serial No. 601,215. 11 Claims. (Cl. 259—7.)

1. The process of whipping cream, which comprises subjecting the cream to a whipping operation, continuously displacing whipped cream from the whipping zone, feeding additional cream to the whipping zone to replace the same weight of displaced whipped cream, and regulating the rate of feed to insure such displacement after conversion into whipped condition and before breaking into butter.

1,486,335. STAGE CURTAIN. HILER HARZBERG, Providence, R. I. Filed Mar. 10, 1922. Serial No. 542,631. 4 Claims. (Cl. 46—70.)

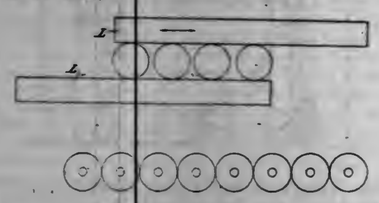


1. The combination with a stage curtain, of an adjustable decorative panel having means by which it may be detachably connected to said curtain whereby the panel may be adjusted to hang suspended in any desired position along the front face of the curtain to produce different decorative effects thereon.

1,486,336. MILK-CAN COVER. JULIUS HEUSSER, Clear Lake, Wis. Filed Feb. 21, 1923. Serial No. 620,534. 2 Claims. (Cl. 31—84.)

1. A milk can cover comprising an upstanding annular wall adapted to rest on and rise from a neck of a milk can, said wall having screened air inlet openings, a frusto-conical canopy secured to the upper edge of said wall and extending outwardly beyond said wall to exclude rain from said screened openings, said canopy having a central opening, an upright heat escape pipe

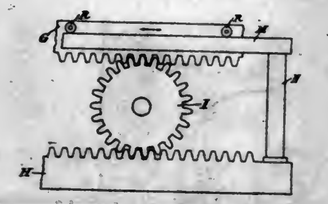
secured in said openings and extending from a point below said wall to a point above said canopy, the upper end of said pipe having screened air escape openings



above the canopy, and a second canopy closing the upper end of said escape pipe, said second canopy extending outwardly beyond said pipe to prevent the entrance of rain through its screened openings.

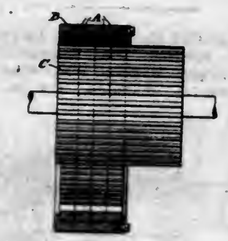
1,486,337. METHOD OF AND MACHINE FOR MAKING GAUGES AND OTHER ARTICLES. WILLIAM E. HOKE, St. Louis, Mo., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 28, 1918. Serial No. 242,482. 14 Claims. (Cl. 51—278.)

1. The method of reducing a series of similar blocks to identical sizes, the method consisting in arranging the several blocks in a group between two opposed flat laps, causing movement between the entire group of blocks and the laps, causing the blocks to simultaneously turn about individual axes, and positively limiting the relative approaching movement of the laps at a predetermined distance apart notwithstanding continued movement between the blocks and the laps.



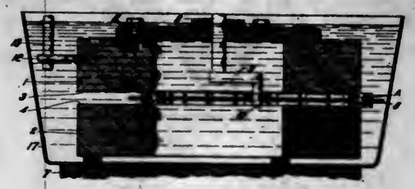
1,486,338. METHOD OF MAKING IDENTICAL ARTICLES. WILLIAM E. HOKE, Washington, D. C. Filed Aug. 30, 1918. Serial No. 252,073. 9 Claims. (Cl. 51—278.)

1. The method of making a multiplicity of identical articles which consists in simultaneously lapping a multiplicity of blanks, systematically interchanging the relative position of the blanks, and repeating the lapping until all and each of the articles are brought to the identical dimensions.



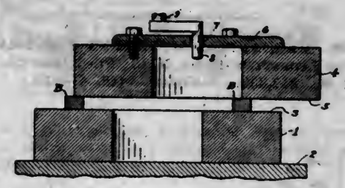
1,486,339. METHOD AND APPARATUS FOR MAKING GEARS. WILLIAM E. HOKE, Washington, D. C. Filed Mar. 20, 1919. Serial No. 283,868. 25 Claims. (Cl. 51—278.)

1. The method of finishing gears which consists in intermeshing a number of toothed gear blanks mounted on a common axis and held in frictional engagement, with a toothed lap having suitably shaped teeth, maintaining the lap and gear blanks in yielding engagement, causing relative longitudinally reciprocating movement between the lap and the gear blanks whereby the gear



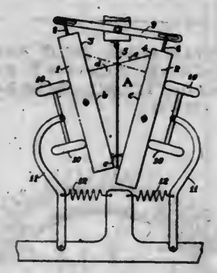
blanks are rotated, said gear blanks being also capable of other bodily movement except as they are restrained by the teeth of the toothed lap, and containing the lapping until the gears are brought to finished form.

1,486,340. METHOD OF MAKING GEARS. WILLIAM E. HOKE, Washington, D. C. Filed Mar. 20, 1919. Serial No. 283,869. 8 Claims. (Cl. 51—278.)



1. The method of making gears which consists in lapping a series of gear blanks by means of an intermeshed gear shaped lap, the lapping operation comprising repeated change in the position of the blanks relative to each other and to the lapping gear, and also relative longitudinal and rotative movements of the blanks and lapping gear.

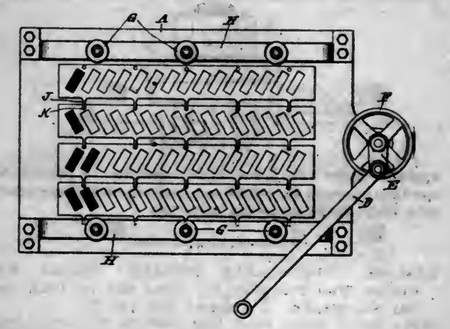
1,486,341. METHOD OF AND MACHINE FOR MAKING GAUGES AND OTHER ARTICLES. WILLIAM E. HOKE, St. Louis, Mo., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 12, 1919. Serial No. 289,591. 32 Claims. (Cl. 51—161.)



1. The method of reducing a number of similar blocks to produce parallel flat end faces and identical lengths, which consists in arranging the several blocks in a group between two opposed flat laps, force being applied to one of the laps to cause constant pressure between the laps and the blocks, causing movement between the entire group of blocks and the laps, and causing the blocks to simultaneously turn about individual axes perpendicular to the laps.

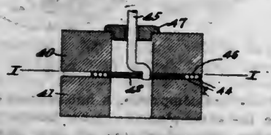
1,486,342. METHOD OF MAKING GAUGES AND OTHER ARTICLES. WILLIAM E. HOKE, St. Louis, Mo., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 8, 1919. Serial No. 309,450. 7 Claims. (Cl. 51—278.)

1. The method of reducing a number of similar blocks to produce parallel flat end faces and identical lengths, which consists in placing the several blocks with one end face of each in engagement with a flat surface plate, placing a flat lap in engagement with the opposite end faces of the blocks, permitting the lap to adjust itself as to parallelism with the surface plate in accordance with the lengths of the blocks, moving the lap with respect to the blocks to effect lapping, interchanging some of the blocks on the surface plate to symmetrically distribute variations in length, and repeating the lapping operation.



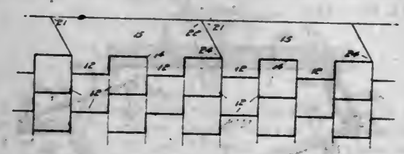
1,486,343. METHOD OF AND MACHINE FOR MAKING GAUGES AND OTHER ARTICLES. WILLIAM E. HOKE, St. Louis, Mo. Filed Mar. 13, 1920. Serial No. 365,458. 19 Claims. (Cl. 51—278.)

1. The method of reducing a number of similar but not necessarily identical blocks to produce opposite flat faces at identical angles to each other which consists in arranging the several blocks in a row with their relatively angularly disposed faces approximately in the same planes respectively and in engagement or approximately in engagement respectively with two relatively angularly disposed flat laps, permitting the laps to adjust themselves angularly in accordance with the angles between the block faces, and causing movement between the blocks and the laps to effect lapping while maintaining the blocks arranged in a row as aforesaid.



1,486,344. METHOD AND APPARATUS FOR FINISHING TAPER ARTICLES. WILLIAM E. HOKE, Baltimore, Md. Filed Aug. 10, 1920. Serial No. 402,603. 5 Claims. (Cl. 51—278.)

1. The method of finishing twist drills or the like which consists in subjecting a multiplicity of such articles to a simultaneous lapping between laps, one of which is freely floating, to which laps a relative movement of one lap with

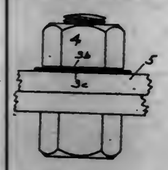


reference to the other is imparted, the articles to be lapped being arranged with their longitudinal axes at an angle to the direction of relative movement of the laps.

1,486,345. LAPPING MACHINE. WILLIAM E. HOKE, Baltimore, Md. Original application filed Aug. 30, 1918, Serial No. 252,073. Divided and this application filed Dec. 9, 1922. Serial No. 605,972. 5 Claims. (Cl. 51—111.)

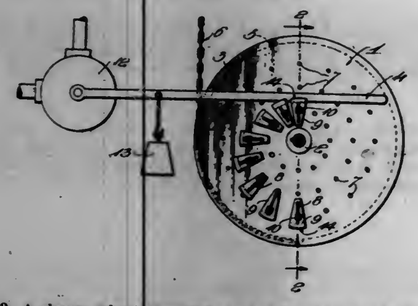
1. A lapping machine comprising a pair of discs having spaced lapping surfaces, a work carrier between said discs having a plurality of apertures therein, and means for effecting bodily movement between the work carrier and the laps in a substantially circular path, said machine having one lap unrestrained in movement and each of the openings in the work carrier being of a size to loosely hold a plurality of articles to be lapped.

1,486,346. METHOD OF MAKING ROOFING SLABS. CICERO HOSKINS, Quincy, Ill. Filed Jan. 6, 1923. Serial No. 611,089. 5 Claims. (Cl. 164—17.)



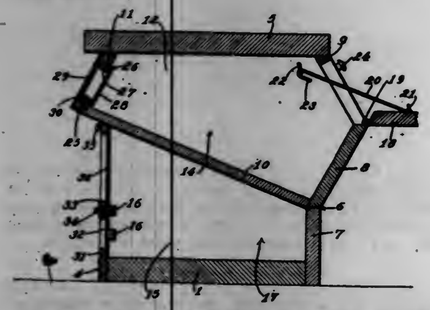
1. The method of severing a strip of prepared roofing material into units which consist in centrally severing the strip in a zig zag line to form two tabbed sections and in severing the sections into units by cuts making an angle other than a right angle with the edges of the strip.

1,486,347. LOCK WASHER. RICHARD THOMAS HOSKING, Wilmette, Ill., assignor to Shakeproof Screw & Nut Lock Company, Chicago, Ill., a Corporation of Delaware. Filed July 16, 1923. Serial No. 651,798. 3 Claims. (Cl. 151—31.)



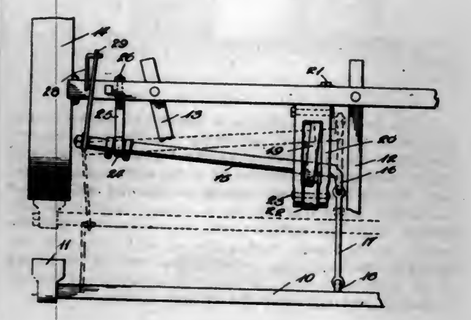
1. An annular washer of sheet metal formed to provide a plurality of radially disposed strips spaced apart cir-

cumferentially, each of said strips twisted axially at its middle, whereby to cause the middle parts of its diagonally



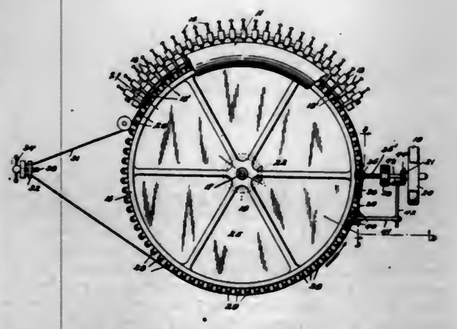
opposite upper and lower edges normally to project respectively beyond the upper and lower faces of the washer, said strips made of spring material.

1,486,348. ADJUSTABLE SHEAVE. NELSON ROY KINDER, West Frankfort, Ill. Filed May 10, 1923. Serial No. 638,056. 5 Claims. (Cl. 74—1.)



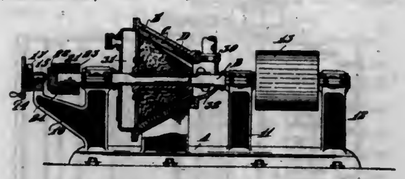
2. A sheave wheel comprising a hub-carried disk having a flat side in the same plane from the hub to its extreme peripheral edge, the other side of said disk having a peripherally grooved annular flange to receive a flexible operating element, said disk being formed with concentric rows of circumferentially spaced bolt holes, a plurality of segmental members for contact with any desired portions of said flat side, said segmental members having radial slots for registration with certain of said bolt holes, and clamping bolts passing through said slots and and holes to frictionally clamp said segmental members in place.

1,486,349. GROCERY AND VEGETABLE COUNTER, ERNEST R. KIPER and LAWRENCE B. KIPER, Gilbert, La. Filed Mar. 28, 1922. Serial No. 547,484. 2 Claims. (Cl. 211—11.)



1. In a device of the class described, a back comprising a vertical base strip, an intermediate strip outwardly inclined from the upper edge of the base strip, and an upper strip inwardly inclined from the upper edge of the intermediate strip, the upper strip having an opening; a base member disposed parallel to the base strip and of greater height than the base strip, an inclined platform projecting forwardly from the upper edge of the base member and extended rearwardly to the juncture between the base strip and the intermediate strip, a front located at the forward edge of the platform and inclined rearwardly, in approximate parallelism to the intermediate strip, and a top supported on the front and on the upper strip.

1,486,350. MECHANICAL MOVEMENT FOR BRAKES. HIGGINS LEDBETTER, Dome, N. C. Filed June 23, 1923. Serial No. 647,332. 3 Claims. (Cl. 4—110.)

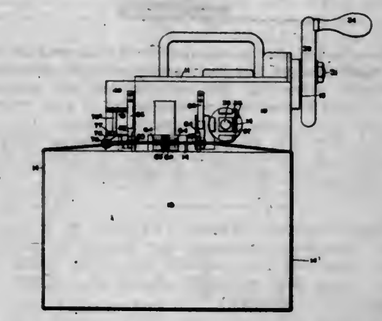


1. A mechanical movement for brakes, comprising, in combination, a shaft, means carried by said shaft adapted to be connected to brake mechanism, a cam upon said shaft providing quick initial and slow final pull upon said connection, a fixed abutment for said cam and means for causing rotation of said shaft and cam.

1,486,351. VEGETABLE AND FRUIT ROASTING AND CLEANING MACHINE. BENJAMIN F. MALONE, Monticello, Ga. Filed Oct. 15, 1921. Serial No. 508,016. 7 Claims. (Cl. 126—41.)

1. In a device of the class described, in combination, a heating chamber, a plurality of independently regulatable heating devices for heating said chamber, said devices being arranged longitudinally of the chamber, whereby the temperature of the chamber may be varied along its length, a rigid carrier, a plurality of rotatable articles supporting members mounted on said carrier, means for moving said carrier to cause said members to pass successively through said heating chamber, and means for rotating said members.

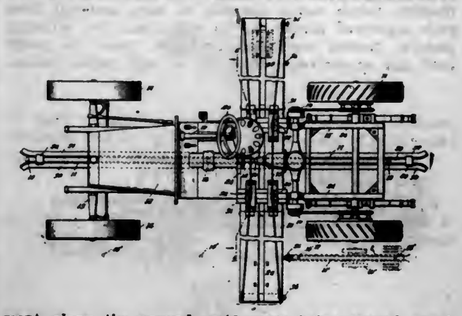
1,486,352. PULP GRINDER. GEORGE JAMES MANSON, Toronto, Ontario, Canada. Filed Mar. 15, 1919, Serial No. 282,781. Renewed Aug. 14, 1923. 2 Claims. (Cl. 92—27.)



1. In a pulp grinder, a grinding element formed of cement, sharp sand and combustible material adapted to produce voids therein.

1,486,353. PROCESS OF DYEING CLOTH WITH FAST COLORS. GEORGE J. MESS and GORDON B. MESS, Indianapolis, Ind. Filed July 22, 1922. Serial No. 576,810. 8 Claims. (Cl. 8—5.)

1. The process of dyeing cloth with fast colors including applying the colors to the cloth, passing the cloth with the colors in it through a heated solution of caustic soda, afterwards submerging the cloth in cold caustic soda, then washing the cloth in cold running water, and finally subjecting the cloth to a bath of cold water containing sulphuric acid.



1,486,354. BOX-STRAPPING MACHINE. WILLIAM G. MUELLER, Chicago, Ill., assignor, by mesne assignments, to Alec J. Gerrard, Cicero, Ill. Filed Dec. 31, 1920. Serial No. 434,310. 23 Claims. (Cl. 140—93.)

1. In a machine of the character described, the combination with means for holding one end of a wire, of means for tensioning the wire a predetermined amount including a driven shaft, rotatable means normally in clutched engagement with said shaft and having attached thereto the other end of the wire, and means to unclutch the last mentioned means from said driven shaft when the tension of the wire reaches the predetermined amount.

1,486,355. AGRICULTURAL PRECISION DEVICE. HOWARD J. MURRAY, Brooklyn, N. Y. Filed June 21, 1919, Serial No. 305,940. Renewed Aug. 4, 1923. 35 Claims. (Cl. 104—243.)

1. In the art of mechanical agriculture where it is desired to direct an agricultural vehicle provided with a self-guiding device having a definite length over the ground and along a present path, the process which includes the step of staking off the ground with a series of spaced apart posts adapted to be engaged by said guiding device automatically to guide the vehicle, positioning the posts in such a direction relative to each other that an imaginary line connecting said posts in order will indicate substantially the path which it is desired that the vehicle should traverse in its move-

ment along the ground, said posts being spaced apart a distance less than said definite length of the vehicle guiding device.

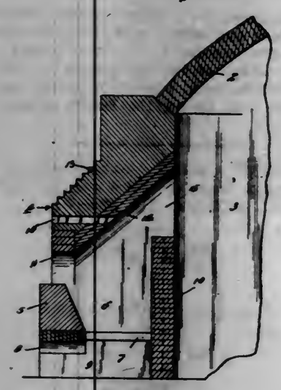
1,486,356. MOTOR-VEHICLE ATTACHMENT. PATRICK NAGLE, San Francisco, Calif. Filed Dec. 19, 1922. Serial No. 607,858. 4 Claims. (Cl. 224—29.)

2. An attachment for a motor vehicle having a radiator at its front end with a neck rising therefrom, comprising a flexible member and a hood formed to correspond to the shape of the top portion of the radiator bearing against the front edge of the latter and recessed to engage the neck having the flexible member secured thereto.

1,486,357. LAMP CASING. ALFRED AUGUSTUS SANDBROOK, London, England. Filed July 20, 1923. Serial No. 652,764. 4 Claims. (Cl. 240—7.)

1. A vehicle lamp comprising a rigid transparent element and a free opaque housing made of a material stiff enough to stand up and maintain its form under normal conditions, flexible enough to be bent out of shape without breaking under external pressure and resilient enough to resume its original shape when such external pressure is removed, said housing being of such shape and amplitude as to completely enclose and house a source of light in such manner that the source of light lies wholly within the confines of said housing.

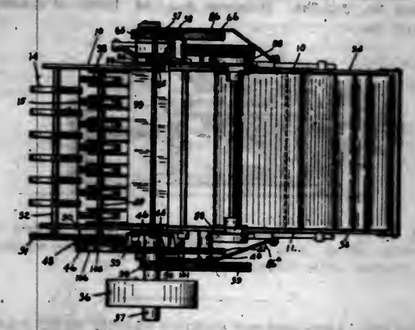
1,486,358. METHOD OF AND APPARATUS FOR CONDUCTING FURNACING OPERATIONS. LEWIS BAILEY SKINNER, Denver, Colo. Filed Feb. 19, 1920. Serial No. 359,955. 26 Claims. (Cl. 23—1.)



26. Furnace apparatus of the character described comprising the combination, with an elongated rectangular muffle hearth composed of refractory material and hav-

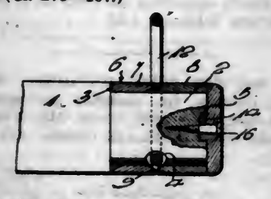
ing a roof composed at least in part of carborundum brick, said hearth having a depressed portion at one end sloping up to a main or calcining portion, of mechanical rabble means operable to move material from such depressed portion up to and along the calcining portion, driving mechanism arranged above the muffle roof and operatively connected to said rabble means,

firing means located at the end of said hearth farthest from said depressed portion, a stack, and flue means whereby hot gases from said firing means may be directed longitudinally of said muffle roof along its outer surface, thence wholly or in part under said depressed portion of the hearth and thence to said stack, without passing under said calcining portion.



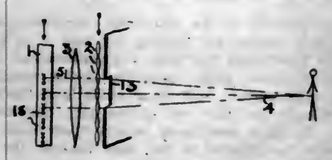
1,486,359. KILN. IKE BIVINS, Independence, Kans. Filed Feb. 26, 1923. Serial No. 621,216. 1 Claim. (Cl. 25—151.)

In a kiln, a pottery chamber having a top, an inclined arch extending to a point adjacent the upper end of the pottery chamber, a front wall having an opening therein arranged below the arch, a fire box below the arch, and a vertical baffle wall arranged between the fire box and the pottery chamber and extending above the opening, the crown being provided with a horizontally arranged sight opening above the baffle wall.



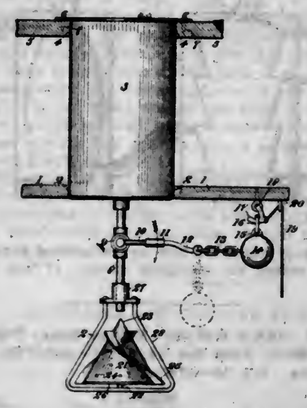
1,486,360. AUTOMATIC WIRELESS BALER. BRAZILTON T. BROWN, Indianapolis, Ind., assignor to National Automatic Wireless Baler Company, Indianapolis, Ind., a Corporation. Filed Jan. 10, 1922. Serial No. 528,170. 24 Claims. (Cl. 100—1.)

1. A baling machine for baling straw and the like, comprising a feeding mechanism for receiving straw and feeding it into said machine, a plurality of rollers through which the straw is fed for compressing it into a substantially uniform sheet, an endless belt positioned so as to engage the sheet and cause it to be rolled upon itself to form a substantially cylindrical bale, and a



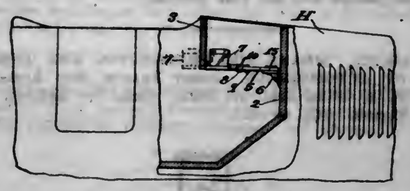
cut-off mechanism for cutting off the further feeding of straw into the machine upon said bale reaching a predetermined diameter.

1,486,361. HITCHING DEVICE FOR WHIFFLETREES AND THE LIKE. EVERETT N. BUTTERFIELD, Auburn, Nebr. Filed Oct. 12, 1922. Serial No. 594,080. 2 Claims. (Cl. 278—107.)



1. In a device of the class described, the combination of a whiffle-tree or the like having a notch extending transversely across one side adjacent one end thereof, a sleeve fitted and secured upon said end of said whiffletree, said sleeve having apertures in opposite sides in alinement with said notch, and a ring passing through said apertures and having a portion disposed in said notch and maintained therein by said sleeve.

1,486,362. OPTICAL SYSTEM. CHARLES W. R. CAMPBELL, Germiston, Transvaal, and FRANK G. A. ROBERTS, Parktown, Johannesburg, Transvaal, South Africa. Filed Nov. 30, 1915. Serial No. 64,327. 2 Claims. (Cl. 88—16.8.)



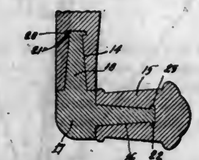
1. The combination of means for positioning a film, in a plane, a large stationary convergent lens positioned in front of the film plane with its axis at right angles to said plane, a group of smaller lenses positioned in a plane parallel with the film plane and in front of the large lens and with their axes at right angles to the film plane, said large lens and the group of lenses being so adjusted in regard to their distances perpendicular to the film plane as to be capable of producing in the film plane a group of images of an object in front of the system, one image for each small lens, which images are spaced from one another equally with their corresponding small lenses, and the film positioning means exposing a film area greater than that of a single image.

1,486,363. MANUALLY AND AUTOMATICALLY OPERATED FIRE-EXTINGUISHING APPARATUS. JAMES CASH and LESLIE F. RICHARDS, San Francisco, Calif. Filed June 10, 1922. Serial No. 567,329. 1 Claim. (Cl. 169—10.)

A fire extinguisher including a fixed fluid container provided with a controlled outlet, including a valve having a stem, a rigid arm detachably secured at one end to the end of said valve stem, a flexible connection secured at one end to the free end of said arm, a weight secured to the other end of said flexible connection, a fusible link carried by said weight, a pivotally suspended hook for passing through said fusible link for suspending said weighted member at a point beyond and in a plane substantially parallel with the end of said arm when said valve is closed, and means for operating the hook to withdraw the same from the link.

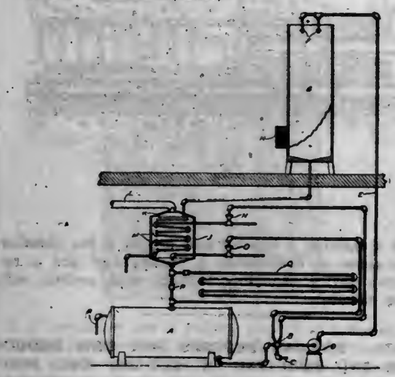
1,486,364. ADJUSTABLE SHELF. RICHARD B. CHAPMAN, Santa Barbara, Calif., assignor of one-half to Beverly C. Stephens, Los Angeles, Calif. Filed Dec. 29, 1922. Serial No. 609,671. 3 Claims. (Cl. 224—29.)

3. A carrying receptacle for attachment to automobiles comprising a shelf-like element having a spring hinge for attachment to the dash-board of an automobile, and a slidably mounted receptacle on said shelf-like element, whereby the shelf-like element is adapted to be depressed to permit the receptacle to be shifted from a concealed position on one side of the instrument board to an exposed accessible position at the inner front of the instrument board.



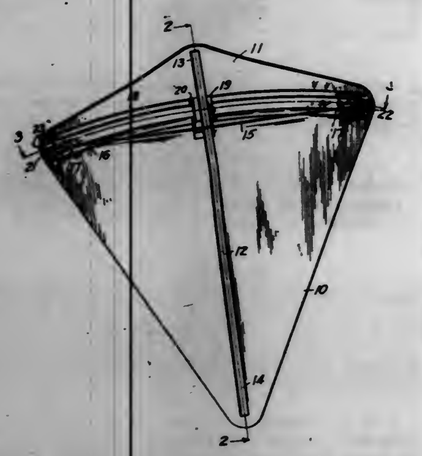
1,486,365. FORGING PROCESS. JOSEPH C. CUMMINGS, Detroit, Mich. Filed Nov. 30, 1920. Serial No. 427,276. 11 Claims. (Cl. 148—12.)

1. The process of forming articles from high-speed tungsten steel of the class described, which process includes working the cross-section of the metal of a billet to a thickness substantially that of the article to be made, and a width no greater than the maximum dimension of said article and exerting pressure substantially



at right angles to the face of said metal of reduced thickness and at right angles to the grain of said metal to produce the finished article.

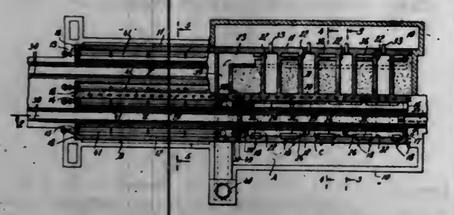
1,486,366. MANUALLY-OPERABLE CRANK. ALVIN A. DIETER, Melrose, Mass. Filed Apr. 19, 1923. Serial No. 633,283. 1 Claim. (Cl. 74—33.)



A crank comprising an arm having a socket in its outer end; a handle having a socket in its inner end; and an elbow including a body portion, a spindle projecting into and adapted to turn in the arm socket, and having an enlargement engaged with a groove in said socket to confine the elbow in engagement with the arm, and a wrist-pin projecting into the handle socket and having an enlargement engaged with a groove in the handle socket to confine the handle in engagement with the elbow, the handle being supported by the elbow substantially at right angles with the arm, and adapted to rotate on the wrist-pin, the elbow being movable to support the handle in an operative position, projecting outward from the arm, and in a non-interfering position projecting laterally in either direction from the arm.

1,486,367. METHOD OF CONTROLLING HUMIDITY OF WORKROOMS. MATTHEW E. DUNLAP, Madison, Wis. Filed Feb. 5, 1923. Serial No. 617,187. 1 Claim. (Cl. 183—121.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

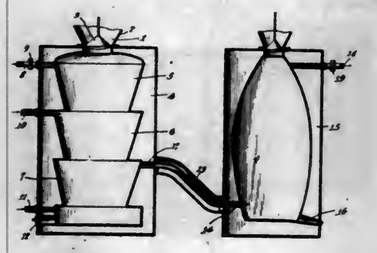
The herein described method of controlling the humidity of the air by bringing the air into close contact with a sprayed solution of calcium chloride, the density of which is automatically regulated by the addition to said solution of water when the humidity of the air drops below normal and by the partial evaporation of said solution when the humidity of the air tends to rise.



1,486,368. KITE. MAX ECKMANN, New York, N. Y. Filed Jan. 24, 1924. Serial No. 688,124. 15 Claims. (Cl. 244—22.)

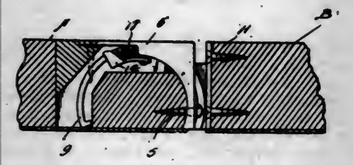
1. In a kite of the character described, a flexible sheet, a removable cross bow member adapted to brace said sheet, a flexible loop secured to said sheet, and adapted to have said member passed therethrough, and means secured to said sheet for bowing said member.

4. In a kite of the character described, a flexible body member, and a paper loop having an inturned fold for separating the sides of said loop, secured to said member.



1,486,369. CONTINUOUS HEATING FURNACE. WILLIAM HENRY FITCH, Allentown, Pa. Filed July 27, 1921. Serial No. 487,887. 12 Claims. (Cl. 263—28.)

1. In a furnace, a heating unit having a flue chamber for the gases of combustion, a cooling unit and a recuperative device extending through said cooling unit and flue chamber.



1,486,370. HOT-GAS PROCESS FOR THE REDUCTION AND SMELTING OF METALS. EMIL FLEISCHER, Dresden, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 10, 1917. Serial No. 190,664. 4 Claims. (Cl. 75—17.)

1. A method for the reduction of metal ores which comprises reducing the ores by means of hot-gas in a separate reducing furnace to the condition of spongy metal and gangue, mixing said spongy metal and gangue with suitable fluxing material, charging said mixture with coke into a metallurgical, hot-gas producer, and smelting the mixture to produce pig-iron and slag while

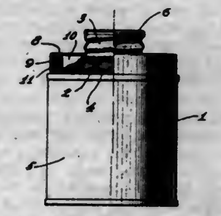
producing at the same time an amount of hot-gas sufficient to reduce an equivalent amount of iron from its ore.

1,486,371. DOOR HINGE. NELSON HARRY FORBES, Detroit, Mich. Filed Feb. 14, 1923. Serial No. 618,894. 4 Claims. (Cl. 16—178.)

1. A door hinge including a stationary member and a movable member, said stationary member being of substantially angular form having a side portion and edge portion to fit flush with the corresponding portions of the door jamb, and having an arcuate slot formed therein, the movable member being formed of a plate having an arcuate arm secured therethrough in spaced relation, said plates being mounted on the door and the arcuate arm slidably fitting in the slot of a stationary member for hinging the movable member and the door, and means for securing the stationary member to the door jamb at the side portion and the edge portion.

1,486,372. MEANS FOR PREVENTING THE THEFT OF AUTOMOBILES. LEROY FRANTZ, New Rochelle, N. Y. Filed Sept. 13, 1922. Serial No. 587,884. 2 Claims. (Cl. 40—2.2.)

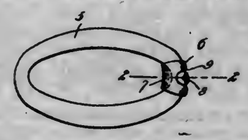
2. An automobile body provided with a chamber having an opening to the outside, combined with an adjustable structure within the chamber and having thereon a number or numbers corresponding to the chassis number or motor number or both and also having thereon a legend to indicate that the automobile has been stolen, the adjustment of the structure adapted to bring the numbers or legend into view, and a lock for locking said structure in its adjusted position exposing the legend indicating theft.



1,486,373. COMPOSITION OF MATTER TO BE USED FOR THE MANUFACTURE OF SALTS OF ACETYL-SALICYLIC ACID. OTTO GERNGROSS and HERMANN KAST, Charlottenburg, near Berlin, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 17, 1913. Serial No. 742,695. 3 Claims. (Cl. 167—7.)

1. A composition of matter comprising dry acetyl-salicylic acid, and a dry metal combination capable of reacting with acetyl-salicylic acid to form a metal acetyl-salicylate when brought into contact with a solvent.

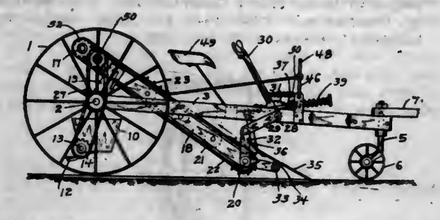
2. A composition of matter comprising dry acetyl-salicylic acid, a dry metal combination capable of reacting with acetyl-salicylic acid to form a metal acetyl-salicylate when brought into contact with a solvent, and a dry moisture absorbing material.



3. A composition of matter comprising dry acetyl-salicylic acid, and a dry metal combination of the alkaline-earth group capable of reacting with acetyl-salicylic acid to form a metal acetyl-salicylate when brought into contact with a solvent.

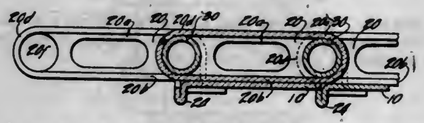
1,486,374. RECEPTACLE AND CLOSURE THEREFOR. WILLIAM H. GESELL, Montclair, N. J. Filed Apr. 26, 1922. Serial No. 556,701. 3 Claims. (Cl. 220—24.)

1. A device of the character described embodying a container provided at its top with an upstanding threaded outlet spout, projecting above the top of the body of the container, a threaded cap adapted to screw onto the outlet spout for the purpose of sealing the same and mounting the cap on the spout against inadvertent displacement, said cap being provided at its bottom with an outwardly extending substantially flat base flange, the outer periphery of which is provided with a depending skirt adapted to engage with the top of the container before the cap becomes fully seated on the spout thereof, whereby the bringing of the cap into fully seated position flexes the base flange and causes the skirt to be forced tightly against the top of the container.



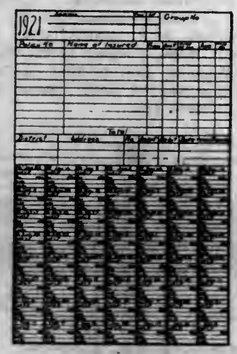
1,486,375. PROTECTOR FOR CHAIN LINKS AND THE LIKE. NICK HANSON, Prescott, Wash. Filed May 15, 1923. Serial No. 639,065. 1 Claim. (Cl. 59—84.)

In combination with a link element, a metallic plate formed with a pointed and yoked end, said metallic plate adapted to be positioned around said link at a desirable point thereon and in such a manner as to engage said pointed end between the legs constituting said yoked end.



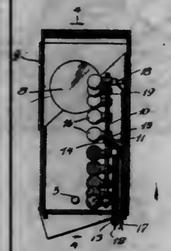
1,486,376. BROADCAST SEEDER. ELMER HASSELL, Crystal, N. Dak. Filed July 10, 1922. Serial No. 573,900. 5 Claims. (Cl. 111—13.)

1. A grain seeding machine having in combination, a wheel frame, a seed box extending transversely thereof, spaced seed spouts adapted to discharge grain from said box, spreading devices upon which said seed is discharged,



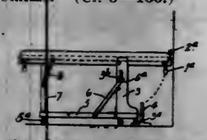
and means for lifting earth from in front of said machine, carrying it upward over said box and depositing earth on the said discharged seed.

1,486,377. TRACK BELT FOR TRACK-LAYING TRACTORS. CHRISTIAN F. HEINKEL, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 23, 1920. Serial No. 398,456. 9 Claims. (Cl. 305—10.)



1. A track belt unit consisting of a shoe, and two similar pressed metal link sides, each comprising an elongated cup having an end portion with a substantially continuous marginal flange having flat parallel top and bottom portions and approximately semi-cylindrical end loops, and means for securing said link sides in parallel relation upon said shoe.

1,486,378. DEVICE FOR KEEPING ACCOUNT OF INDUSTRIAL LIFE-INSURANCE PREMIUM COLLECTIONS AND THE LIKE. HARRY HIRSCH, New York, N. Y. Filed Mar. 16, 1921. Serial No. 452,656. 3 Claims. (Cl. 283—66.)

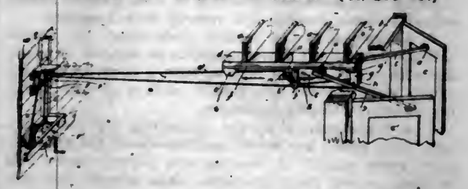


1. A device for use in keeping records of industrial life insurance premium collections, comprising a unitary sheet having a succession of identical severable tabs corresponding to the due dates of the successive instalments, each tab with appropriately designated blanks for entry of data thereon for authentic identification of that instalment collection by which the account was paid to the due date identifying the last unsevered tab on which the entry is made, whereby a multiplicity of the accounts may be readily classified according to the state of advance and arrears by superposition according to contours.

1,486,379. SPEED-INDICATING SIGNAL. MAXEY JACKSON, Portland, Oreg., assignor, by mesne assignments, to Motor Safety Indicator, Inc., a Corporation of Washington. Filed Feb. 11, 1922. Serial No. 535,686. 2 Claims. (Cl. 175—355.)

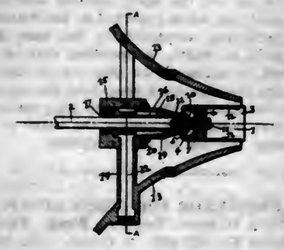
2. In a speed indicator signal, a rotary member, means for actuating the same in one direction or the other in accordance with the speed of the vehicle, and differently-colored means carried by the said member and arranged to display a differently colored light in accordance with the position of said member.

1,486,380. WALL OR RECESS BED. RUDOLF JACOBI, San Diego, Calif. Filed Apr. 21, 1921. Serial No. 463,380. 4 Claims. (Cl. 5—133.)



1. A bed of the class described adapted to be shifted to a vertical position adjacent a wall, including a spring frame, supports upon which said frame is pivotally mounted at its opposite ends intermediate its sides, and provided with rollers to facilitate the movement of said supports, stop members positioned a short distance from the wall adapted to engage the one side rail of the spring frame for tilting the same with the outward movement of the supports on the floor and means adapted to engage the wall of the room for retarding the movement of said frame on its pivotal mounting.

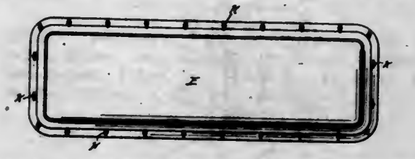
1,486,381. PISTON FOR DASHPOTS. LOUIS JANNICHEN, Detroit, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 5, 1922. Serial No. 579,865. 8 Claims. (Cl. 188—100.)



1. In a dash-pot, a cylinder, a piston therein having an opening to permit the passage of liquids, a valve to control the effective area of said opening, manually operable means to vary the position of the valve relative to said opening, and automatic means to vary the position of the valve relative to said opening independent of said manually operable means.

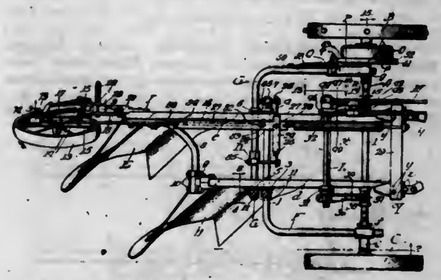
1,486,382. DOOR OPENING AND CLOSING MEANS. ERIK H. JOHNSON, Portland, Oreg. Filed Dec. 14, 1922. Serial No. 606,960. 1 Claim. (Cl. 268—9.)

A door opening and closing means comprising a supporting member adapted to constitute a guideway, a traveling block in said guideway, a keeper at one end of the supporting member, a latch bar pivoted to the traveling block and adapted to engage with said keeper, a spring holding said latch bar in its locking position, a cable element, one end of which is attached to said traveling block and the other being attached to said latch bar, said cable being arranged to effect the back and forth movement of the guide block, a drum on which said cable winds, a pulley on the forward end of said block, the end of said cable attached to said latch bar being led forward over said pulley and back under a second guide pulley located under the latch bar and secured to the block whereby a pull on that end of the cable will cause first the retraction of the latch bar from engagement with the keeper which will thus release the block and the continued pull will cause the retraction of the latter.



1,486,383. ROTARY OIL BURNER. JESSE C. JOHNSON, Oakland, Calif. Filed Dec. 7, 1922. Serial No. 605,470. 3 Claims. (Cl. 158—77.)

1. In combination with a rotary atomizing cup, a spider member, of cup-shaped contour, having a base and a contiguous body portion, said body portion being provided with a plurality of helically disposed slots and terminating in grooves through the said base.

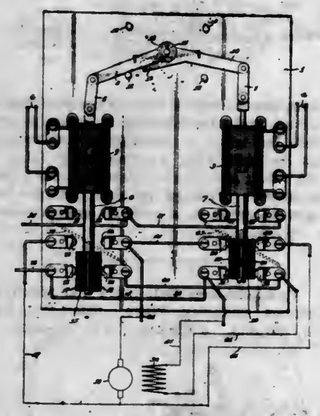


1,486,384. CASKET SEAL. JAMES A. KING, near New Paris, Ohio. Filed Oct. 11, 1922. Serial No. 593,704. 1 Claim. (Cl. 27—17.)

In combination with a sheet metal burial casket comprising a body, a horizontal face portion extending outward horizontally from around the upper edge of said body, a molding extending from the outer edge of said face portion to the body and united therewith at a point below said face portion, a lid for said body, a face portion extending out horizontally from the lower edge of said lid and adapted to contact flat with the face portion of the body, a molding extending from the outer edge of the face portion of the lid and secured to the lid at a point above said face portion of the lid, there being channels formed in each of said face portions which channels register with each other and extend entirely around the casket, an endless rubber band which is round in cross section resting in both of said channels and being of such

diameter in cross section as to normally space said faces from each other, and a plurality of thumb-screws by which said face portions may be clamped toward each other to compress said rubber band, all substantially as shown and described.

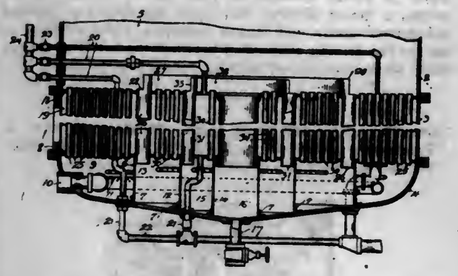
1,486,385. TRACTOR PLOW. ALVARO S. KROTZ, Janesville, Wis., assignor, by mesne assignments, to General Motors Corporation, a Corporation of Delaware. Filed June 29, 1916. Serial No. 106,562. 32 Claims. (Cl. 97—73.)



1. In a plowing machine, the combination of a plow and beam therefor, a caster wheel having mechanism for raising and lowering the plow at the rear end thereof, oppositely arranged land-side and front-furrow wheels, a rotatable crank axle extending between said land-side wheel and said front-furrow wheel, a bail having its forward ends mounted on said axle, bearings to pivotally support the transverse rear end portion of the bail on the plow beams, a clutch operated by the land-side wheel to rotate said crank axle, devices operated by said crank axle to raise and lower the forward end of the plow beam and thereby to move the plow into and out of the ground, a controller for said clutch, connections operated by the tilting of said bail to operate said mechanism, and means mounted on the plow beam to operate said devices without rotation of the crank axle; said devices including a pair of toggle joint connections for the opposite end portions of said crank axle to permit lifting of the plow over obstructions in a furrow.

10. In a plowing machine, two plow beams arranged alongside one another, a pair of bail sections pivotally mounted on said beams and which sections are independent of one another so that each may move independently of the other, said bail sections extending transverse to said plow beams and having bearings adjacent their free lower ends; a transversely extending crank axle rotatable in said last mentioned bearings; two lifting mechanisms intermediate said crank axle and said plow beams and which lifting mechanisms are yieldable so as to permit movement of each plow beam upward independently of the other, and means for imparting successive half rotations to said crank axle and for arresting the movement of the same at the ends of said half rotations.

19. In a plowing-machine, a plow, means including wheels to support the plow, and mechanism supported by said means and having an adjustable hand-lever to raise and lower the plow, said mechanism having a stop to support the plow against downward movement and being provided with yielding means to permit upward movement of the plow over an obstruction while said lever remains stationary in the adjusted position thereof.



25. A structure as specified in claim 24, said crank having a shoulder to bear upon the top of said link, and having means to engage the bottom of said link, thereby to limit the movement of the link relatively to said crank.

1,486,386. ELECTRIC CONTROLLER. NORMAN B. LAING, Detroit, Mich. Filed Jan. 17, 1923. Serial No. 613,135. 10 Claims. (Cl. 172—179.)

1. In a circuit controller, a direct current motor, a forward operating circuit for said motor, a reverse operating circuit for said motor, a circuit for effecting a dynamic braking action for each forward and revese operation of said motor, movable switching elements adapted to be actuated by an external force to make and break such circuits, and means articulating said switching elements to cause either a coaction or independent action of said switching element under various circuit conditions.

1,486,387. EVAPORATOR. CLARK D. LEBERMUTH, Donaldsonville, La. Filed Jan. 17, 1920. Serial No. 352,113. 2 Claims. (Cl. 159—27.)

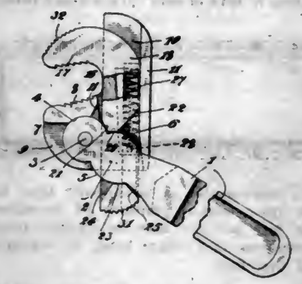
1. An evaporator comprising means for holding separate bodies of liquor under treatment, upper and lower tube sheets, tubes for each of said holding means arranged between said tube sheets and in which the liquor from said holding means is adapted to rise to the upper tube sheet, the tubes from one of said holding means being disposed concentrically relatively to those from an adjacent holding means, tubes larger than said first mentioned tubes between said tube sheets, adapted to receive

the liquor which rises from one of said holding means and to return it to another of said holding means whereby the liquor circulates progressively from one of said holding means to another, and means for heating said tubes in the same vapor or steam phase.

1,486,388. AEROPLANE. SUETO NONAKA, Naoiri Gun, Oita Ken, Japan. Filed Aug. 16, 1922. Serial No. 582,140. 6 Claims. (Cl. 244—12.)

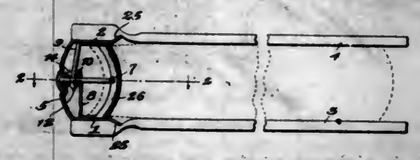
2. An aeroplane having a main wing provided with a plurality of air passages adapted to produce a current of air within the wing, a plurality of members pivoted in openings in said wing and normally lying in the plane of the wing, and means adapted to be acted upon by the air current produced by said passages to cause said members to swing to a position approximately perpendicular to said wing.

1,486,389. VARIABLE-SPEED DRIVING MECHANISM. JOHN OCKFEN, Spanway, Wash. Filed Oct. 30, 1922. Serial No. 597,823. 4 Claims. (Cl. 74—26.)



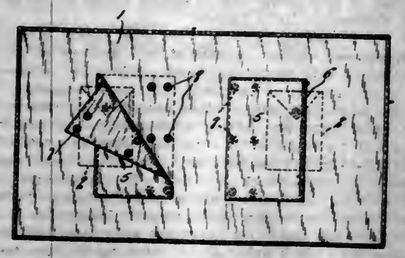
1. A transmission mechanism comprising in combination, a driving shaft, a driven shaft, a conically shaped, rotatably mounted bell, means for effecting a driving connection between the bell and the driven shaft, a friction wheel keyed for longitudinal shifting on the driving shaft and adapted to frictional driving contact with the interior of the said bell, means for shifting the friction wheel to obtain different driving speeds, means for effecting a direct driving connection between the driving and driven shafts and means operating automatically to release the driving connection between the bell and driven shaft when such direct driving connection is made.

1,486,390. COLLAPSIBLE FISH TRAP. TROELS J. PEDERSEN, Jersey City, N. J. Filed Apr. 11, 1923. Serial No. 631,253. 2 Claims. (Cl. 43—105.)



1. A device of the class described comprising a plurality of annular straps, legs extending from said straps, the legs of one member being adapted to telescope into the strap of the adjacent member, means for slidably guiding said legs into the strap of the adjacent member, and pins engaged in said guide means for locking the legs in extended position.

1,486,391. WRENCH. THOMAS H. ROSS, Brooklyn, N. Y., assignor of one-half to Robert K. Story, New York, N. Y. Filed Apr. 8, 1922, Serial No. 550,766. Renewed Jan. 31, 1924. 9 Claims. (Cl. 81—128.)



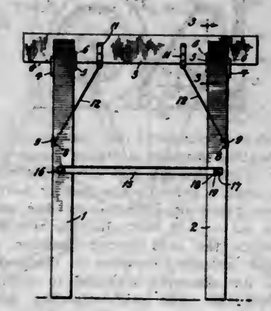
1. A wrench comprising a stock, a pivot carried thereby, a jaw mounted on the pivot, and a complementary jaw slidably mounted on the stock, behind the pivot, the stock having peripheral bearing surfaces in separate transverse planes respectively through the pivot and rearwardly thereof, which coact directly with the jaws to apply gripping leverage thereto.

1,486,392. LOOSE-LEAF LEDGER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership. Filed Sept. 19, 1922. Serial No. 589,080. 7 Claims. (Cl. 129—17.)

1. In a loose leaf ledger, angular back sections, a rod pivotally connecting the sections, latch members secured to the back sections and being disposed to substantially aline when the ledger is in closed position, one of the latch members having a substantially U-shaped free end formed with a lateral stop and the other latch member having a catch formed to engage with the stop, the second named latch member having a slot located adjacent to said rod, and a releasing member rigid on the rod and movable in the slot to engage said U-shaped end of the latch member to disengage same from the catch and having its movement limited by engagement with said stop.

1,486,393. ROBE. RUTH R. SMITH, Mack, Colo. Filed July 31, 1922. Serial No. 578,570. 2 Claims. (Cl. 2—80.)

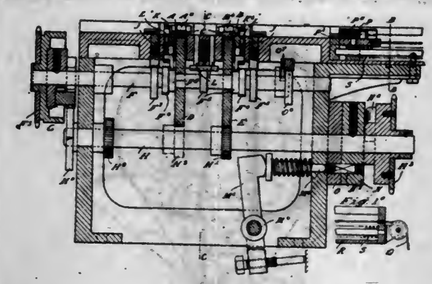
1. In combination with an automobile lap robe comprising an elongated body, means for retaining said robe in position upon the user comprising a relatively small flap having one side edge permanently attached to the



elongated body inwardly of the edges of the latter and having its other side edge detachably connected to said body inwardly of the edges of the latter, the top and bottom edges of the flap being free from connection with the body.

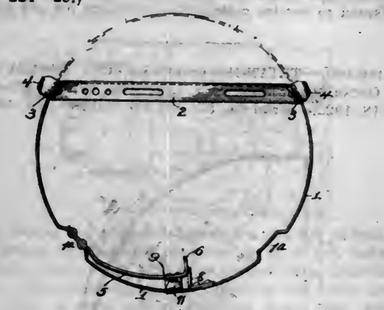
1,486,394. FOUNTAIN BRUSH. WILLIAM M. A. SMITH, Dallas, Tex., assignor of one-half to (Mrs.) Rose Barnett, Dallas, Tex. Filed Dec. 11, 1922. Serial No. 606,244. 1 Claim. (Cl. 151—137.)

In combination with a container having an internally and externally threaded neck, a brush head having a threaded portion for engagement with the external threads of the container neck, the internal portion of the neck being of conical formation whereby paste tubes having different sized threaded necks may be detachably engaged therewith for filling the container.



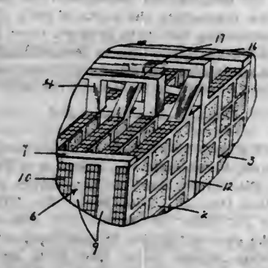
1,486,395. SCAFFOLD HORSE. WALTER SMITHERS, Brooklyn, N. Y. Filed Sept. 23, 1921. Serial No. 502,821. 7 Claims. (Cl. 304—5.)

1. A scaffold horse comprising two pairs of legs with a free space between the upper ends of the members of each pair, crossing plates connecting said members at their outer and inner edges and disposed in different horizontal planes and a detachable body fitting between and engaged by the upper ends of said pairs, said body and the edges of said plates having respectively notches for establishing interlocking engagement between said body and said plates.



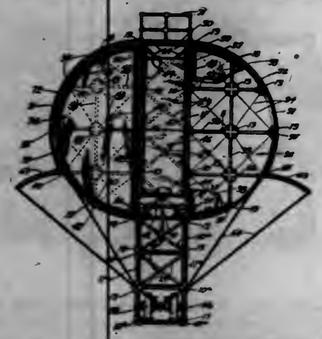
1,486,396. BINDING OR TYING OF BOXES, BALES, OR THE LIKE. ERNEST ALBERT INGOLD, London, England, assignor to the Firm W. & C. Pantin, London, England. Filed Mar. 13, 1923. Serial No. 624,838. 8 Claims. (Cl. 140—93.)

1. An apparatus for binding or tying boxes, bales or other packages with hoops of wire, comprising a plurality of slotted twisting pinions journalled in axial alignment, means for rotating said pinions in alternately opposite directions, and means automatically operating



to disconnect the twisting pinions from said rotating means when a predetermined amount of twist has been imparted to the binding wire.

1,486,397. TIRE CARRIER FOR AUTOMOBILES. CHARLES C. STEEL and THOMAS H. LYNN, Williamsport, Pa. Filed Oct. 15, 1921. Serial No. 507,885. 7 Claims. (Cl. 224—29.)



1. In a tire carrier, the combination of a supporting member having a plurality of rim supporting saddles, and a yielding support for one of said saddles the said support being carried by the supporting member.

1,486,398. STORAGE BATTERY. GEORGE F. TOWNSEND, Oakland, Calif., assignor, by direct and mesne assignments, to T. & T. Storage Battery Co., Inc., Los Angeles, Calif., a Corporation of California. Filed Oct. 6, 1921. Serial No. 505,699. 8 Claims. (Cl. 204—29.)
